"The mountaineers do not need some one to build churches and give them; they do not need to have money turned into their county coffers from some external source; but they do need to have some forces at work that will take the sons and daughters of the people who live on the frazzled edge, wielding an influence that is retarding and often criminal, and give them a different point of view—make them over into cooperative allies instead of hostile enemies. Such boys and girls, as they return from a brief residence at a school like Berea, will exert an influence that will enter quietly into the lives of these honest, common folk who walk the middle ground and give them a wider horizon, raise their thoughts above the dead level of community thinking, develop in them the power of initiative.

"In response to our invitation children of the rudest families came over unbridged streams and long distances, and if we can take care of them now they will reenforce every good cause in our land in the next generation."

IS ITOLAND IN AMERICA?

THE TRAGIC LOT of the Jews in having no homeland among the nations of the earth is once more brought to mind startlingly by Israel Zangwill in a speech lately delivered before the London Union of Jewish Literary Societies and published in part in *The American Hebrew* (New York). According to Mr. Zangwill, only the gipsies share with the Jews the quality of homelessness. The conquered red Indians have their reservations; and the Eskimos live their own life in their own land. But while the gipsies are nomads by choice, and wilfully remain outside civilization, the Jews desire to penetrate into some civilization, "however different it be from their own, however destructive to their own." Itolism, or Territorialism, as practical politics is the stated subject of Mr. Zangwill's discourse and he offers this definition:

"Itolism, or Territorialism, is the conception of a Jewish territory in which this abnormal condition of being in the minority would be replaced by the normal condition of being in the majority. The majority, mark you, not the totality. No nation is made of one race, and the idea that Itolism aims at the creation of a glorified Ghetto is a caricature. . . . Itolism is an abstract conception. It does not specify the particular country. It says . . . give me a place where I may stand, and I will make myself again a people. Unlike Zionism, it does not believe that this renaissance is possible only in Palestine."

But the limitations of the territorial solution of the Jewish problem, in whatever part of the world, Mr. Zangwill shows to be almost if not quite definitely prohibitive. More striking still is his statement that there is no immediate necessity for Itoland, now that the bogey of a closed America has been banished; and he thus declares himself on the room and the reasons for the Jews in the United States:

"We hear a great outcry about the rejection of Jews at the ports of America: well, let us look at the figures. For the year ending June, 1912, 80,595 Jews were admitted and 1,064 rejected, or about 1¼ per cent. But against 31,566 Greeks admitted, 1,396 were rejected, i.e., the percentage of Greeks rejected is about 3½ times that of the Jews. The Irish, with 33,922 admissions to 576 rejections, or nearly 1½ per cent., are treated considerably worse than the Jews, despite the immense Irish influence in the United States. As for the English, they are almost twice as badly off as the Jews, with 1,117 rejections out of only 49,689 admissions.

"No, America will not close her ports to the Jews, because a continent can not behave like a country—especially an empty continent. Seventy times the size of Great Britain, the United States has only double her population. One State (Nevada), as large as Britain, has only the population of Brighton. Without emigrants the emptier States can not possibly develop at the rate they desire, and if they shut out emigration a great cry for labor would soon go up to heaven and Washington.

"Now they could not possibly shut out the Jew without shutting out all the other white races. The two million votes of the Jews already in possession would be solid against an injustice like that. Nor is there any probable literacy or health test that myriads of Jews could not overleap. Moreover, if emigration were shut out, a fatal blow would be struck at the shipping interests. Without steerage passengers to America, the bulk of the steamers could not afford to run, the first-class passengers would have to pay far higher rates, and even the millionaires would be seriously discommoded by the infrequency of steamers. Despite the most democratic of Presidents, the shipping interests will have their influence in Congress. In short, America will remain open to the Jew because it pays all around. You have no need to rely on the Christian kindness of America, nor on the statue of Liberty that dominates New York harbor and welcomes the weary refugee. These count for something. But there is a solid basis—the almighty dollar. In the wise words of Andrew Carnegie: 'It would pay us to give a premium for every able-bodied man and woman of good character that could be induced to come here.'"

An effort has been made to turn the Jewish immigration away from New York to the Southwest, but it has not been very successful:

"It is precisely because I soon discovered that Itoland could not be an immediate practical refuge, if only because of the years necessary to find it, that the Ito, while making the quest of such a land its central line of activity, established also a branch line to America in the shape of the Galveston work. This, too, had behind it the fear that America, provoked by the congestion of Jews in New York and the Eastern cities, close her ports to them, and it was thought that if the flow could be diverted inland, west of the Mississippi, the arguments of the restrictionists would be silenced. But quite apart from its dubious tactical reasons, it was a good move economically. In the small rising towns of the West, life was healthier and labor better paid than in the slums of the East, and a new and vast region was thus opened up for Jewish emigration. The *modus operandi* consisted mainly in teaching the Russian Jew that Galveston was the best port of entry, and from Galveston distributing him scientifically to towns where work could be found for him. Now, not only is this branch line infinitely more important as immediate practical politics than the central line—not only will it become increasingly important with the opening of the Panama Canal—but it carries within itself a secondary solution in the event of the primary proving impossible.

"For America has ample room for all the six millions of the Pale; any one of her fifty States could absorb them. And next to being in a country of their own, there could be no better fate for them than to be together in a land of civil and religious freedom, of whose constitution Christianity forms no part, and where their collective votes would practically guarantee them against future persecution. The drawback to this solution is that the masses could not afford to emigrate from Russia, and it is forbidden to pay their fares. But this very Galveston work, with the experience it gave me of the emigrants who must be the material of Itoland, made it clear to me why Itoland will not attract any large number of Jews while America remains open.

"For despite the better labor conditions in the great West, and altho a spontaneous movement Westward has now set in from the Eastern seaboard as well as from Russia, New York remains the giant magnet of the race. It is not merely because of its synagogues, Kosher restaurants, Yiddish journals, and theaters, but because kinsman goes to kinsman and the million Jews already there radiate out lines of communication all over Russia. Only those without relatives or townsmen in New York, or those who have already failed in New York, will turn to the West. And I am compelled to the conclusion that Itoland, which I had imagined would have all the Russian Pale to draw upon, will in reality appeal only to that very limited class which is without relatives or kinsmen in New York, to which should even be added Canada or the Argentine. The migration of the Jew follows, in short, what may be called the family line."

MOTOR CARS

THE RETURN OF THE WIRE WHEEL.

A CURRENT topic in many motor publications is the revival of interest in the wire wheel. Several prominent manufacturers have already adopted this wheel, either as a standard wheel or as an optional one. *The Horseless Age* looks for an extension of its use in the near future to many other cars. It is curious that the wire wheel should have been used in the early days of the motor-car and then practically eliminated, only to be once more employed now, with a prospect of becoming a permanent type of wheel. It is explained in *The Automobile* that the constructional methods employed for this wheel many years ago "were not along lines that were adapted to the peculiar road conditions required by motor-cars." The superiority under such conditions of the wooden artillery wheel forced out of use the wheel with wire spokes. In recent years, however, marked changes have been made in construction. What is known as the "triple spoke" type of wheel has contributed most to the success of the present revival. A writer in *The Automobile* explains in an article with diagrams, here reproduced, what this change in construction has effected:

"The vertical section, Fig. 1, shows the arrangement of spokes usually followed. It will be noticed that the outside set of spokes A is considerably dished, while the inner set C lies practically in a vertical plane. There are two reasons for this disposition of the spokes. First, the plane of tread is brought well over the inner end of the hub, thus keeping the wheel track small, and in the case of the front wheels

preventing the dangerous strains that would follow on a large overhang of the steering knuckles; and, second, the wheel itself is thereby rendered capable of resisting a great lateral shock. This latter point is brought in Fig. 2. Supposing the lower part of the rim to be subjected to a blow in the direction of the arrow, as when the car is brought up abruptly against the curb, practically the whole of the shock is taken in tension by the outer set of spokes A, the dished position of which renders them peculiarly fitted to receive it. The spokes B and C, owing to their position are incapable of resisting such a blow to any great extent. Their function is almost wholly confined to driving and braking, altho the slightly oblique position of the

ROAD THROUGH LAUREL CANYON, NEAR LOS ANGELES, CAL.

degrees corresponding to their respective functions. Thus the outer spokes A depart only slightly from a strictly radial lay-out, Fig. 1, and are not intended therefore to contribute to the drive from hub to rim. The spokes B and C are, on the other hand, arranged tangential to a circle almost as large as the hub flange to which they are attached. By this arrangement half of each set are in the best tensional position to take the driving strains, while the other half, issuing in the opposite direction from the hub, deal in a similar manner with the braking strains. This point is illustrated in the right-hand view, Fig. 1, in which the upper half of the wheel is shown only partially assembled, the spokes issuing in one direction not being shown.

"The strains to which tangential spokes are subjected in practice is indicated in the diagram, Fig. 2. Here, two spokes are shown in the position they occupy in the wheel. When driving the hub in the direction indicated the existing tension of the right-hand spoke is increased by a pull in the direction of the arrow, while the same turning force produces an opposite effect in the case of the other spoke, reducing its tension by the same amount. One of these

spokes B also offers resistance to lateral shock in the opposite direction. In automobile driving, however, a blow from the inside is rarely encountered.

"All three sets of spokes radiate tangentially from the hub, but at different

spokes transmits the drive and the other offers the necessary resistance to braking strains. The function of each is quite dis-

rim and in large measure annul the very advantage to secure which the wire wheel is being adopted. There is a suspicion that the use of demountable rims upon artillery wheels has not been particularly advantageous in point of tire economy, because of the greater rim weight resulting from the addition of the demountable parts, and it seems reasonable that the full economic advantage of the wire wheel may not be obtained unless its rim is kept as light as structural considerations permit.

"It will be interesting to observe whether the prestige which the demountable rim possesses and the impetus which it has attained will be sufficient to secure its general adoption upon wheels of the wire type or whether it will generally be discarded in favor of the demountable wire wheel, because the economic advantages of the latter method prove themselves to be of a substantial character."

From "Motor Age."

TRAILER ATTACHED TO A SMALL RUNABOUT.

tinet, one of them being out of action at all times."

One of the results which may follow the adoption of the wire wheel—indeed one of the influences making for its adoption—is the possibility of transporting with a car an extra wheel of this type, which, in the case of injury to a tire, can be substituted without the annoying delay incident to a change made under the older conditions. It is true that separate extra wheels of the artillery type have been introduced and to some extent used by motorists, but their use "has never assumed any considerable proportions in this country." Among the objections to them have been their appearance and their weight. There has also been some feeling of suspicion as to the possibility of using them conveniently and safely. A writer in *The Automobile* says:

"The question as to whether or not the adoption of the wire wheel will bring about a change of American practice from the demountable rim to the demountable wheel affords ground for interesting speculation. Increased tire economy, resulting from re-

ROAD NEAR ARIENS INCLUDED IN THE COURSE OF THE GRAND PRIX FRENCH RACE.

ELECTRIC CARS ON THE INSTALLMENT PLAN

For at least a year past, there has been a growing increase in the use of electric pleasure cars. This has been commonly attributed to improved garages, including an increase in the number of centers from which power could be obtained. Early in the present year, one of the large electric companies in New York voted to appropriate \$30,000 in aid of the establishment of an up-to-date garage that could be used exclusively for electric cars, probably one big modern garage will be secured by it and fitted up with the best obtainable apparatus for charging cars. The plans, however, have not yet been fully worked out. Meanwhile, it is announced that one of the largest department stores in New York is making arrangements for the sale of electrics. This house formerly sold gasoline cars, but has given up that branch of its trade and will now introduce electrics instead. The plan includes not only receiving payments outright for cars, but another arrangement outlined as follows by *Motor World*:

"Suppose a man wants a car, but

doesn't want to 'plunk out' the whole price in a lump, for any one of a hundred conceivable reasons. Suppose, further, that he doesn't know the difference between a battery and a bulb horn, and doesn't want to. Suppose he is of an indolent disposition and hasn't the slightest desire to do a single thing but drive the car—that he detests bothering with garage arrangements, abhors discussions as to what's the matter with the car, hates being told what it's going to cost to fix things up, and, in short, wants to wash his hands of everything but pushing the levers, turning the wheel—and paying the bills.

"Well, this house will fix all that for him. The automobile department will sell him a car on the easy-payment plan, and will sell with it a year's service—of course, for a proper price. Also, arrangements will be made to house and care for the car in the garage nearest the purchaser's residence, to pay all the garage bills, watch the car and see that it is kept in perfect condition, washed, charged, oiled, and so on, and to attend to repair work. This house will do everything that needs to be done, except actually drive the car—and no doubt the little matter of hiring, training, and installing a driver could be arranged without any particular difficulty. Of course, if a tire blows out on the road, or if the car meets with an accident and is damaged, the house can not be expected to foot the bill; the owner has to do that, for it is outside the service covered by his monthly payments. But he need not be subjected to any of the bother outside of the immediate inconvenience of being held up on the road and having to get home. And perhaps arrangements will even be made whereby the disabled car will be towed home to its garage under the service plan.

"The store, big as it is, will not be the headquarters for the new campaign.

From "Motor Age."

COMMERCIAL AND PLEASURE VEHICLE COMBINED.

duced rim weight, is the chief advantage which is claimed for the wire wheel, and the assertion is made, with considerable show of reason, that the use of the demountable rim upon this type of wheel would greatly increase the weight at the

tho of course it will be used as a selling place. A whole floor of the new building, which is being erected in Long Island

(Continued on page 1070)

TRAIN LOAD OF ONE MAKE OF CARS THAT RECENTLY LEFT A FACTORY IN DETROIT.

In April manufacturers in Detroit were reported as shipping from 250 to 300 car-loads of automobiles per day. April is the busiest shipping season in the whole year for Detroit manufacturers. The output this year was materially larger than in January or February, but in those months shipments were large—20,000 in January and 25,000 in February. It is believed that the average number of automobiles shipped in each freight car is four. On this basis, the output in April was running as high as 1,000 or perhaps 1,200 cars daily. It is believed that the month will show for Detroit total shipments of between 30,000 and 40,000 machines.

Franklin Balanced Construction Makes Possible This Powerful, Economical "Little Six"

LOOK where you will in all the highways and byways of the automobile world, you will not find a car that, detail for detail, fact for fact, equals the Franklin "Little Six."

All motor-car authorities agree that the six cylinder engine is the last word on smoothness and flexibility. The Franklin "Little Six" engine is as able in every way, in the light Franklin, as the heavy engines in the heavy cars. It will safely and comfortably travel roads that the average motorist would like to avoid. These are demonstrable facts.

In size the Franklin "Little Six" fits into a special niche. It is made for those who do not want a big, heavy machine with its heavy up-keep expense, but a small and powerful car. It is just large enough. It is just small enough. Your requirements of fine lines, rich upholstery, choice fittings are generously met in every detail.

Franklin Construction is famed for its lightness and strength. This degree of lightness and strength spells long life, safety and highest efficiency. It commands the highest skill and efficiency in the men who produce it. Franklin cars cost enough to assure us and you of the best.

But with Franklin first cost, the Franklin "Little Six" is the cheapest car in its class to own that travels the road today.

Its lightness, 2993 lbs., fully equipped, filled ready for the road, is not due to a diminished size. It is a comfortable five-passenger car.

Franklin lightness comes from "Balanced Construction," a proportional reduction of weight in every part; we have effected economies in weight with actual increases in strength that are astounding. For instance, the Franklin direct-cooled engine and the Franklin frame—where others use heavy, unresilient steel, we use a three-ply laminated wood frame. It costs more than steel. It weighs only half as much. Its use with four full elliptical springs adds a buoyancy to the Franklin that multiplies riding ease both for passengers and *for the engine*. This last means increased engine life and a great decrease in engine troubles.

This construction absorbs road shocks that the average motorist accepts as a necessary evil. We *eliminate* the average kind. They do not reach the body of the car nor the engine. The heavy jolts we reduce to almost nothing.

Particularly notice the refined forward lines in the Franklin.

Engine Patented July 2, 1908
Other patents pending

Franklin Little Six "30," a light, medium size 5-passenger car \$2900

Franklin light weight, in this "Little Six," plus the Franklin principle of "right-sized" tires (4½ inches) cuts the cost of tire up-keep *squarely in two*. This is an absolute, demonstrable fact. Franklin owners during 1912 reported an average of 10,746 miles per set of tires.

Franklin light weight plus the Franklin direct-cooled engine cuts the cost of fuel expense *squarely in two*. This is another absolute fact. The Franklin holds the record for fuel economy. We have the actual figures.

The Franklin Direct-Cooled Engine

Patented July 2, 1908. Other patents pending.

What is direct cooling? It is sending a steady stream of fresh air directly over and around the cylinders, which does away with the air-cooled water radiator, water pump, jackets, pipe and hose. Into our flywheel is built a sirocco fan. This draws fresh air in at the front of the hood over the cylinders and down through the metal sleeves that surround each cylinder and its radiating fins. When the water in the radiator of a water-cooled motor boils, there is no further check on the heat and the temperature of the cylinders goes up with a rush. The Franklin direct-cooled motor has no water to limit its efficiency. It is the only motor engine that can be consistently used with success in hot climates, sandy and mountainous sections.

The Fact-Backed Franklin "Little Six" is equipped with the simple, efficient Entz Electric Starting and Lighting System. The Entz Starter makes it impossible for the engine to stall.

Does not this array of facts convince you that it will be worth your while to visit the Franklin dealer in your city? If no Franklin dealer is near you, write for our catalog and full information.

MOTOR-CARS

(Continued from page 1068)

City for the housing of the various manufacturing processes incident to the carrying on of the big store will be devoted to the electric pleasure-car business, and there are more or less misty visions of a huge area for the indoor demonstration of the silent-running machines, with little clumps of foliage here and there, like oases in a desert, sheltering dainty tea-tables, where the ladies—and their husbands, if they care to come along—will be taken care of while they are being told about the polished cars sitting about on the floor. For it is almost unnecessary to say that the electric is a vehicle for the fair sex, and it is unlikely that anything that will help to make pleasant the process of introducing prospects to their possible purchases will be neglected. However, the exact details of this part of the plan still are in process of development, and it remains to see what time will bring forth."

THE COMING OF THE CYCLE-CAR

About a year ago a new vehicle called the cycle-car made its appearance in Europe. *The Automobile* declares that it has already been received with so much enthusiasm that the British Isles, parts of Germany, and some other European countries are "motor mad over it." So great has been the use made of it that the phrase "new motoring" has been adopted to indicate a movement which is "infusing new life, not only into motorists themselves, but into many manufacturers." This car is a light-weight machine for two passengers and is of moderate price. It is intended for the man who has \$800 to pay for a car, but not enough money to maintain present-day machines with their high consumption of gasoline and heavy tire wear. European owners have always been more particular than Americans about the cost of maintenance, the main reason for this being that with them income is generally more fit as well as smaller; hence they desire "the lightest car that will meet their requirements, the speediest car, and the cheapest to maintain." It is said that the demand for cycle-cars in England has become so great that many factories during the recent Olympia Show promptly sold out their entire output for 1913. The cycle-car had its beginnings in England, but it soon spread to the Continent. In Germany it met with the warmest kind of a reception. *The Automobile* says further of it:

"The exact status of the cycle-car has been largely dictated by the buying public. It wants a two-passenger car, with a space in the rear of the seat on which packages can be carried if necessary. A small motor is desired, the popular design being a four-cylinder block type, with a gear-box a unit with it. Cylinder dimensions rarely exceed 2.5-inch bore, and 3.5-inch stroke, so that 25 to 30 miles per gallon can be obtained in regular use and speed possibilities of 40 to 50 miles also within reach. The wheel-base averages 86 to 90 inches, tires are generally 28 inches, and carried on light bicycle-type wire wheels.

"All of these cycle-cars are four-wheel designs. There is no demand for a three-wheeler. The farmer and market gardener, who are to-day buying these cycle-cars in large quantities, want a real miniature car. It must have four wheels; it must have a steering wheel, and the body must be along standard lines. The three-wheeler is not meeting with success, altho at one time it was looked upon with favor.

"The side car attachment for motor-

cycles is not considered because the buyer objects to its general arrangement.

"The present construction of cycle-cars favors a three-speed selective-type gear-box with shaft drive to a bevel-driven rear axle. Once again must be noted the desire for a real miniature car. Belt transmission was advanced by a few makers as a satisfactory system for a cheap car of this nature, but it has not met with ready response, so that few manufacturers are even considering it to-day. Friction drive, which has been taken up by several French concerns, was looked upon as a coming type of cycle-car, but it, too, has failed to meet with acceptance by the buying public. Again, what is needed is the smallest, lightest, most economical, speediest, miniature car that can be marketed at approximately \$900.

"This cycle-car movement offers a fruitful field for the American maker who considers the export field. At present there are several European representatives traveling through America in search of agencies for cycle-cars and the first inquiry with all of them is: Why has not the American builder taken up the cycle-car movement?

"While America occupies a unique place in the cheap-car field, there is still much room for the cycle-car movement, which is bound to come, and which when it does come will serve as a feeder to the present low-priced car industry. Cycle-cars will have to be produced in large quantities in order to be sold at a sufficiently low price to compete against regular cars of American build, and should the price of fuel increase in America, buyers will begin to give more consideration to the cost of maintenance and consequently will not object to a fairly high original investment, providing they are assured of good fuel economy and low mechanical maintenance."

When the cycle-car was first exploited in England, it was believed that its influence would be strong in resisting the force of the invasion of American cars. It was believed also to give promise of displacing the noisy motor-cycle. Accounts differ somewhat as to the extent of the success it has enjoyed in England. The American consul at Birmingham, Albert Halstead, has made a report from which the following is taken by *Automobile Topics*:

"The cycle-car, a small motor vehicle that is a cross between a motor-car and a motor-cycle, with more of the features of the latter than the former, but having four wheels, and which was developed largely to meet the competition of the cheaper American automobiles, has not as yet reached the popularity anticipated, altho a great many machines have been sold and are on the roads. At a recent trial of these cycle-cars in the Midlands only 2 out of 20 succeeded in making non-stop runs, only 1 gaining full marks. According to *Motor Cycle* of February 27, this result has evidently caused some prospective purchasers to waver in their opinions concerning the reliability of the cycle-car as a type, but the suggestion is made that it is questionable whether trials should not be confined to roads marked on ordnance maps as second-class roads instead of selecting, as in this case, one freak hill, a by-lane, and a hairpin corner, requiring consummate skill to negotiate without stopping.

"One of the difficulties in connection with running cycle-cars, it is stated, is their tendency to overturn at corners, which is due to their very light weight compared to the speed of which they are capable. It does not appear, at present at least, that these cars would seriously compete with the lower-priced American

(Continued on page 1072)

You - as a tire bill payer - now demand a vise-like rim grip with no cutting or breaking above the rim - and here it is →

It's the *rim* as much as the *road* that wears out your tires.

So we said to our Engineers:

"You must build us a tire with Perfect 3-Point Rim Contact."

They did—and they also added the No-Pinch Safety Flap for inner tube protection in

Then we called in our Chemists and said:

"Tire buyers are demanding a tough, flint-like, but resilient tread—a tire made of lustrous young rubber—a tire giving the utmost mileage at no additional expense."

And the answer is

Vitalized Rubber

Diamond {No Clinch} Tires

Perfect 3-Point Rim Contact

Here is a No-Clinch tire that appeals to the hard-headed, shrewd tire buyer—the man who insists on easy riding comfort and a good liberal mileage.

Each point of rim contact in a tire is a point of support. Where the points of rim contact are not perfect, undue pressure is brought to bear at an unsupported point of the tire.

Then what happens? The result is a terrific strain on the tire that results in rim troubles, breaking above the bead and separation of the tread from the carcass.

So this time buy Diamond Vitalized Rubber Tires—you can get them to fit your rims at any of the

25,000 Diamond Dealers
always at your Service

All this is overcome in the Diamond No-Clinch because the three points of rim contact are absolutely *mechanically perfect*—the annealed steel cable wire bead holds with a vise-like, rim-grip.

Add to this the No-Pinch Safety Flap for inner tube protection, the Vitalized Rubber advantage, the famous Diamond Safety (Squeegee) Tread and you have bought rubber shod mileage that has no equal at any price.

**Diamond Safety
(Squeegee) Tread for
Automobiles,
Motorcycles, Bicycles**

The guarantee on Diamond tires becomes null and void when the tire is used in connection with any substitute for air, or when fitted in rims not bearing one of these inspection stamps or having had its serial number removed in whole or part.

“Loo-ok!”

That's good advice.

Look when you buy corn flakes.

Look for the “Sweetheart of the Corn” on the package that has the sweet hearts of the corn inside—look for this signature

W.K. Kellogg

The original has this signature

These things are worth looking for.

Then when you get home you can look for Kellogg flavor—good with milk as well as cream—and Kellogg freshness that makes everybody like these flakes.

Look!

MOTOR-CARS

(Continued from page 1070)

automobiles, and one careful student of motor conditions has suggested that even if the cycle-car should be successful, American manufacturers of the low-priced automobiles which have such popularity in England at present, and have stood up to their work so well, would make and place on the market a little better car than the cycle-car, and selling at the same or a slightly lower price, which would be about \$485. It does not appear either as if the cycle-car had seriously interfered with the sale of the motor-cycle with the attractive side cars which are now being offered for sale.

FEBRUARY EXPORTS

Exports of automobiles from this country in February last reached high-water mark. The number of cars which left our shores in that month were valued at \$2,839,000. The parts, exclusive of motors and tires, were valued at \$468,500. The value of the motors sent out of the country was placed at \$253,999; the value of the tires at \$276,253, and the automobile leather, \$9,922. With these items included, the grand total of parts, tires, leather, etc., was \$3,837,246. February, it is to be remembered, was a short month, having only twenty-eight days. The following table gives a comparison of exports to different foreign countries for February this year and February, 1912.

	February—		February—	
	1912	1913	1912	1913
	Quantities	Quantities	Values Dollars	Values Dollars

MOTOR FUEL FROM MEXICO

It is believed that Mexico has become newly important as a producer of oil from which gasoline may be made. In the year 1912, oil fields of that country produced 15,200,000 barrels. While some of the Mexican oil is not of refining grade, three at least of the great producing fields are producing large quantities of oil that can be refined. The output last year was about one-sixth of the available output of all the wells in Mexico. A letter from Tampico printed in *The Automobile* contains the following:

“It is claimed that there are enough producing wells capped, owing to the fact that there is not at this time a means of transporting the oil to market, to have brought up the yield for the year to perhaps six times what it was. In proof of this statement it may be cited that two of the wells which afforded, during the year the bulk of the total yield were only permitted to flow a small portion of their capacity and that had these two wells alone been thrown wide open they would have given a total output aggregating, it is said, probably fully 90,000,000 barrels of oil. Of course, this is not taking into consideration the possibility that their flow might have been exhausted had this been done.

“In the Juan Casiano field a company has eight capped wells which have an aggregate capacity, it is pronounced, of more than 16,000 barrels daily. It is now drilling several oil wells in that field. This company and another had in storage on January 1, 1913, approximately 7,000,000 barrels of oil. Their contracts during 1912 called for a daily delivery of 30,000 barrels, and the two companies entered the new year with outstanding contracts aggregating 60,000,000 barrels, of which 35,000,000 barrels are for consumption in Mexico and 25,000,000 barrels for consumption in the United States. The average selling price of the product is 50 cents gold per barrel. During 1912 the sales of these two companies were approximately 8,700,000 barrels, or about 700,000 barrels per month. This is just double the sales of the two companies for the year 1911.

“One company is having constructed and will place in service during the first 6 months of 1913 six oil-tank steamers, two tugs, two barges, and other floating equipment. The cost of providing this fleet of oil-carrying vessels, which will have an aggregate capacity of about 275,000 barrels, will be about \$2,000,000. The company has also adopted plans for erecting a refinery at Tampico for the production of naphtha and light gasoline distillate at a cost of about \$300,000.

“During the year 1912 another company completed the construction of an additional oil pipe line from Juan Casiano to the loading racks at its deepwater shipping point. It also finished the construction of a private narrow-gauge railroad giving the oil field a transportation outlet of this character. It is now constructing a railroad from Cerro San Geronimo to Cerro Azul, and is laying pipe lines from Juan Casiano to Cerro Azul and to Tres Hermanos.

“This company was also active during the year in exploiting other localities and it carried on some small development work in its original field at Ebano, where it has a small refining plant that is devoted chiefly to the production of asphaltum residue that is used largely in street paving in Mexico.

“Several of the large oil-producing and pipe-line concerns of the United States acquired oil land holdings in different districts around Tampico during the year and are actively engaged in the preliminary exploitation of same. Some of these companies have already established lines of vessels between Tampico and ports in the United States and are engaged in the regular business of transporting the crude oil to those foreign markets.

“There were added approximately 300,000 acres to the oil-producing territory in the Tampico region during the year 1912. The gravity of the oil of the different fields is as follows: Ebano, 11 degrees; Baumé; Panueo, 12.5; Caracol, 12.5; Topila, 15; Juan Casiano, 20.5; Potrero del Llano, 20.5; Tanghuijo, 20.5; Furbero, 28; Isthmus of Tehautepec, 40. Ship-

Twenty-five millions of dollars

To this extent the American people have set
the seal of approval upon the 1913 Cadillac

This evinces such an overwhelming preference in favor of a single high type of motor car as against any one of more than two hundred other makes that it practically obviates the opportunity for comparison.

It means that more than twelve thousand motor car buyers after a critical analysis have recognized that the elements vitally essential to a real motor car are the dominant characteristics of the Cadillac.

It means that more than twelve thousand motor car buyers after a critical analysis have recognized in the Cadillac:—

- A car that is *manufactured* and not merely an assembly of components.
- A car whose maker is one of reputation and of stability.
- A car whose parts are thoroughly standardized and thoroughly interchangeable.
- A car of unsurpassed mechanical accuracy.
- A car of dependability and of durability.
- A car possessing a factor of safety so liberal that it withstands far more than should reasonably be expected of any car.
- A car of luxury, a car of comfort, a car of convenience.
- A car of elegance and of refinement.
- A car of simple and of easy operation.
- A car of minimum depreciation and of maximum value as a used product.
- A car with which there is obtainable a real "service," both from the maker and from the dealer.
- A car which offers the maximum of efficient service for the maximum time at the minimum cost.
- A car which is "different" and which by reason of the "differences" commands a position uniquely its own.
- A car whose merit is not confined to one or a limited few "talking points," but rather a car of super-excellence in its entirety.
- A car which will uphold in abundant measure the wisdom of those who have honored it with their seals of approval.
- A car whose distinctive characteristics are obtainable only in the Cadillac itself.

**The Noiseless
North East
Electric Starting and Lighting System**

for three years has been solving problems whose importance has never been fully appreciated until now.

Last year, the only questions asked were:—
Will it really crank the engine?
How fast will it spin the engine?

There are a number of self-starters now that will crank most engines, but—
Today the important questions are as follows:—
What is the current demand of the system upon the battery?
How near does it approach the critical speed for starting?
Is it free from troublesome complications and noise?
Is it a simple, integral part of the "power plant"?

Why clutter your car with several machines, adding weight, complications and extra expense for upkeep, when the North East System—a simple, single motor-generator all in one—answers every one of these questions more satisfactorily than any other starting and lighting system, and at a minimum of current consumption and expense?

The North East System cannot be installed on cars now in use. You can secure its advantages, however, by specifying

A North East System for Your New Car

ments of oil during the closing months of 1912 from all the oil fields were at the rate of about 1,500,000 barrels per month."

A FLOURISHING MOTOR CLUB

The Treasurer of the Automobile Club of America, according to *The Horseless Age*, has recently made a report showing "a very flourishing financial condition in the club." During the year 1912, there were net earnings of \$76,782. This result was achieved, moreover, in conditions which had led to distinct losses in several departments. The club already had a surplus of nearly \$400,000; the total surplus now is \$473,343. The assets of the club are placed in the report at \$807,376; what debts there may be does not appear from the article in *The Horseless Age*. Other items which are named include the following:

"In the income table the garage and supply departments show a net profit of \$122,968.07. The machine shop made \$3,491.72, and was the only department to be run at a profit. The Bureau of Tours lost \$22,552.96, and the club-rooms \$12,059.22.

"The club journal, which took in more than \$25,000 showed a loss for the year of \$264.44. Other items of loss were \$1,954.06 on the café, and \$3,074.28 on the grill-room. Altho the social features of the club were abandoned or in abeyance for a considerable time, they appear to have cost heavily while they were going.

"Committee expenses of the club amounted to \$13,899.52, and office salaries, etc., came to \$11,344.17 more. Insurance and other such matters added about \$13,240 more to the expenses. Deductions for taxes, depreciation, interest on the bonded debt, etc., came to approximately \$70,000. Membership dues were considerable items in the expenditures, amounting to nearly \$97,000 in the year.

"The book balance on March 1, 1913, is about \$70,000 greater than was the balance of March 1, 1912. As recently announced, the club is looking for new club quarters distinct from its garage."

"MOTOR SPIRIT" AND HORSE-POWER

Among the tests which have been made of "motor spirit," in order to determine its horse-power as compared with gasoline, is one reported last month from North Dakota, where a 40-horse-power tractor engine, when using "motor spirit," showed an increase of 10 per cent. in power. No adjustments were necessary in making the change from gasoline to "motor spirit." *The Automobile* explains in detail this test:

"In a two-cylinder tractor engine rated by the factory at 40 horse-power, 'motor spirit' developed 46.23 horse-power on the brake, while on gasoline, only 41.93 horse-power could be realized. The object of the tests was to determine the relative thermal value of 'motor spirit' as compared with gasoline as fuel for internal-combustion engines; to determine the relative maximum power of gasoline engines using 'motor spirit' and gasoline; to determine the relative consumption of both fuels; to determine the changes and adjustment necessary in gasoline motors and carbureters for 'motor spirits' and the flexibility in power and speed and the ease of starting the motor with 'motor spirit' as compared with gasoline. Also,

TIMKEN

AXLES & BEARINGS

Twenty Timken Veterans

Having outlived one set of cars, these axles are starting on another 75,000-mile campaign

The twenty cars are gone—literally worn out in the hardest kind of service, that of the taxicab.

Dashing over uneven pavements, around corners, over cobblestones and car tracks—rushing to make a train—out into the suburbs and back—hurry calls at every hour of day and night, where speed might mean life or fortune—

These long years these cars stood the killing pace and then they were discarded with the honors of war.

The veteran Timken-Detroit Axle Co. were mustered out—but they have re-enlisted!

In all these twenty times 75,000 miles there wasn't a broken gear or Timken Bearing!

The axles are in perfect condition!

And now their owner, The Wabash W. Shaw Livery Company of Chicago, is building twenty new cars, under which these Timken veterans will serve for years to come!

The Shaw Company have kept in the taxicab business for five years. They keep accurate records. They know values of every part. The first three years Paul H. Geyer, Manager of the Mechanical Department, tried out cars with various types of axles and bearings. Since then he has used only Timken.

There are big reasons—and mighty interesting stories—back of Timken records of service. You'll find them in the Timken Flyers C-1 "On the Anatomy of Automobile Axles" and C-2 "On the Care and Character of Bearings." Send for, postpaid, from either address below.

WANTED—RIDER AGENTS

IN EACH TOWN
and district to
ride and ex-

hibit a sample 1913 Model "Ranger" bicycle furnished by us. Our agents every-

where are making money fast. Write at once for full particulars and special offer.

NO MONEY REQUIRED until you receive and approve of your bicycle. We ship to anyone, anywhere in the U. S. without a cent deposit in advance, *freight prepaid*, and allow **TEN DAYS' FREE TRIAL** during which time you may ride the bicycle and put it to any test you wish. If you are then not perfectly satisfied or do not wish to keep the bicycle you may ship it back to us at our expense and *you will not be out one cent*.

LOW FACTORY PRICES We furnish the highest grade bicycles. It is possible to make a small profit above actual factory cost. You save \$10 to \$15 middlemen's profit by buying direct of us and have the manufacturer's guarantee behind your bicycle. **DO NOT BUY** a bicycle or a pair of tires from anyone at any price until you receive our catalogue and learn our unheard of *factory prices and remarkable special offer*.

YOU WILL BE ASTONISHED when you receive our beautiful catalogue and study our superb models at the *wonderful low prices* we can make you. We sell the highest grade bicycles at *lower prices* than any other factory. We are satisfied with \$1.00 profit above factory cost. **BICYCLE DEALERS**, you can sell our bicycles under your own name plate at *double our prices*. Orders filled the day received.

SECOND HAND BICYCLES—a limited number taken in trade by our Chicago retail stores will be closed out at once, at \$3 to \$8 each. Descriptive bargain list mailed free.

TIRES, COASTER BRAKE rear wheels, inner tubes, lamps, cyclometers, parts, repairs and everything in the bicycle line at *half usual prices*. **DO NOT WAIT**—but write today for our *Large Catalogue* beautifully illustrated and containing a great fund of interesting stories and useful information. It only costs a postal to get everything. Write it now.

MEAD CYCLE CO. Dept. S 172 CHICAGO, ILL.

Waltham Watches As a Combination Wedding Gift

This Waltham innovation creates a new wedding gift, appealing equally to the Bride and Bridegroom and bestowing on the giver a happy sense of avoiding the commonplace.

These "Bride-and-Groom" sets combine high grade Waltham movements (for ladies and gentlemen) in cases which are identically engraved or enameled. Corresponding spaces are left for the initialing.

Exquisite leather boxes are provided for these combinations as in the photograph above. (The man's watch shown in the illustration is open-face but the back of the

case is shown to indicate the engraving). We are offering five of these combinations ranging in price from \$100 to \$400 for the sets complete.

We believe you will agree with us that no gift to the bride and groom could be more true to sentiment or more permanently welcome than these symmetrical watches.

If your jeweler has not yet secured for display these sets kindly write to us and we will arrange for you to see them without any trouble or obligation on your part, and we will also send you the "Bride-and-Groom" booklet which gives complete information.

For a graduation gift do not forget the gift of the Waltham (Bride-and-Groom) Watch.

Waltham Watch Company
Waltham, Mass.

MOTOR-CARS

(Continued from page 1074)

it was intended to discover the effect of the new fuel on the engine in the matter of heating, preignition, carbonization, and fouling of the spark plugs.

"No adjustments were made in the motor in changing from one fuel to the other, and the only necessary adjusting on the Rayfield carburetor was in raising needle valves slightly—about one and three-quarter turns and increasing the lift of the needle. The results of the tests follow:

Test No.	ON GASOLINE			Time, Minutes
	R.P.M.	B.H.P.		
1	487	42.31		10
2	481	42.10		12
3	466	41.37		15
Av.	478	41.93		12
ON MOTOR SPIRIT				
1	491	46.48		15
2	491	45.00		15
3	473	46.00		12
Av.	485	46.23		14

"The engine behaved in every way as well when 'motor spirit' was used as fuel; there was no noticeable difference in the running of the engine with the change in fuel after carburetor adjustments were made, except a slight amount of gray smoke from exhaust only occasionally. The comparative flexibility of motor with the different fuels was difficult to determine. The difference was slight, and owing to the cold weather could not be ascertained with any degree of certainty. It was found that the cold weather affected the running of the engine in this respect. The engine when warm started equally well on both fuels, but a cold engine which has been standing outside overnight had to be primed with high-test gasoline.

"This also was the practise when the ordinary gasoline was used in the same engine, so little effort was made to start the cold engine on 'motor spirit.' No difference in the temperature of the cooling water was perceptible with the change of fuels; the temperature was not ascertained accurately for either fuel, but did not exceed 180 deg. Fahrenheit.

"There was no knock or preignition at any time with either fuel. The spark-plugs were removed after the first two tests on gasoline and also after the two tests on 'motor spirit' were made, and it was found that slightly more carbon had accumulated on the plugs during the tests with 'motor spirit.' This was in the form of soft soot, and was almost imperceptible after these short tests."

MOTOR VEHICLES IN OHIO

Statistics have been compiled in Ohio to show the number of motor vehicles owned in different counties of the State. Figures are given for gasoline cars and electrics, and with these the total number for both. It appears that in the entire State, 63,117 cars are owned, of which 59,507 are gasoline cars and 3,610 electrics. The county having the largest number is Cuyahoga, in which lies Cleveland, where the total is 11,063. The next highest is Hamilton, in which lies Cincinnati, where the total is 4,352. Several other counties have more than a thousand cars. No county is entirely without a car. The one having the smallest number is Vinton, where the total is twenty. The next smallest is Noble with sixty-one. These figures are printed in the Cleveland *Motorist*.

KEROSENE AS A MOTOR FUEL

At Indianapolis late in April a series of tests of a new carburetor were made by

The Autoglas

PATENTED MAY 22, 1911

This glass is the only comfortable goggle and only efficient eye protector made.

WITHOUT rims, hinged at the center, it is neat and inconspicuous. Conforms to the contour of the face and at the same time affords absolutely unobstructed vision.

Price, with plain amber lenses, \$5.00
Or with wearers correction, \$9.00

Any Optician, Sporting Goods or Motor Supply House can equip you. If your dealer hasn't them, write to us. We will see that you get them. Over 12,000 now in use.

F. A. HARDY & CO.
Department D. CHICAGO, ILL.

And make them hard to change. You can prevent rust and rim-cutting—save time, temper and tires with

THOMAS' ANTI-RIM-RUST COATING

Should Be In Every Auto Kit

A new, scientific compound of pure para rubber and graphite for use on rims and rim bolts as a rust preventive and on spring leaves as a perfect lubricant and squeak silencer.

Makes tire changing easier and tire life longer. Applied in a couple and dries in five. \$4.00 buys a can from your Dealer or direct from us, by Parcel Post—enough to coat eight rims. You need it now—order today.

The Anti-Rust Paint Company
163 South Main St., Akron, Ohio

Motor Age. They included a road run of 225 miles, the fuel being a well-graded kerosene. Other tests were made as to economy and speed with kerosene as fuel. Two grades of kerosene were used and comparisons were drawn with gasoline and motor spirit. *Motor Age* declares that the results obtained "are of utmost importance in that they show how low-grade fuels can be employed successfully in the motor-car industry. They also show that kerosene can be employed in the new carburetor that was used in these tests and without requiring adjustment. The following are some points from a letter from Indianapolis printed in *Motor Age*:

"The new carburetor is arranged so that a large part of the exhaust gas passes around the venturi tube; that is, the pipe that surrounds the spray nozzle is in the path of the exhaust gas. The same car and carburetor were used throughout the tests. The carburetor was Harroun's new design and 1 1/4-inch size. It is exhaust-jacketed and the primary air is heated, tho the secondary air, which is by far the greater proportion when the motor is running at normal speeds, is not heated. A means is provided for raising and lowering the needle valve by a little lever on the dash. This is not a special feature, as it is a part of the older type of Harroun carburetor.

"The car was a five-passenger touring car, with four-cylinder motor 4 inches bore and 4 1/2 inches stroke, cooled by thermosyphon water circulation, and fitted with electric cranking and lighting system. On the running board is a small tank which holds two gallons of gasoline. This is connected through a foot valve at the dash to the intake manifold and is used to run the motor until the exhaust warms up the fuel.

"A road test under average touring conditions was the first event staged. The course was from Chicago to Indianapolis, Ind., by way of Logansport and Kokomo. At the beginning of the test the fuel tank was drained of its contents and filled with kerosene at a garage. This was 44 degrees Baumé gravity oil, the kind that is sold the country over at 10 cents retail. The total distance recorded was 224.2 miles and the consumption of kerosene for the run was 17.25 miles per gallon."

PLAIN COMMON SENSE IN MOTORISTS

The value of good sense which was insisted upon by Descartes as one of the most valuable assets of a human mind is referred to by a writer in *Motor Age* as particularly applicable to motorists. Special reference is made to the French philosopher's remark that "those who travel very slowly may yet make far greater progress, provided they keep always to the straight road, than those who while they run forsake it." In the use of none of man's luxuries is good sense of more value than in the operation of a car, for it means everything that lies between success and failure, between economy and extravagance, between good-will from others and scorn. It is due to a lack of good sense on their part that so many motorists have brought ridicule upon themselves and upon motor-cars in general. The writer says:

"Lack of good sense has brought about a host of antimotoring regulations, many of which have been crowding out other useful measures in our legislatures during the present session. The apparent lack of good sense on the part of a Pennsylvania industry has resulted in certain sections of the State banding together to exorbitantly

Your oil must reach *all* friction points

The friction-points in a steam engine are reached with lubricants through special mechanical appliances, and separate oil cups.

In the automobile motor, they are all reached through one lubricating system. Your car, therefore, requires:

An oil whose "body" or thickness is suited to your feed system—an oil that will properly feed to all the friction points.

If you use an oil whose "body" is unsuited to your feed requirements, or whose lubricating qualities will not properly withstand the demands of service, you will get one or more of the following results:

- (1) Escape of the compression and explosion past the piston rings.
- (2) Unlubricated cylinder walls at the upper end of the piston stroke.
- (3) Imperfect lubrication of many of the bearings.
- (4) Excess carbon deposit. (Due to the oil working too freely past the piston rings and burning in the combustion chamber.)
- (5) Excessive oil and fuel consumption.
- (6) Worn wrist pins.
- (7) Unduly-rapid deterioration in your motor.
- (8) Loose bearings.
- (9) Noisy operation.

The average motor has 1500 parts. In different motors, these parts differ both in measurement and construction. No one oil can possibly meet the feed requirements of all motors.

To establish a sound guide to correct lubrication we have therefore taken a step of the utmost importance to the motorist.

Each season we carefully analyze the motor of each make of car.

Based on this analysis, and on practical experience, we specify in a lubricating chart, printed in part on the right, the grade of Gargoyle Mobiloil we have found best suited to each of the various models.

This chart represents the professional advice of a company whose authority on scientific lubrication is unquestioned the world over—the Vacuum Oil Company.

If you use oil of less-graded "body" or of lower lubricating quality than that specified for your car, incomplete or inefficient lubrication is certain to follow. Unnecessary friction, and ultimate serious damage must result.

If your car does not appear in the partial chart on this page, we will mail on request a booklet containing our complete chart together with points on lubrication.

The various grades, refined and filtered to remove free carbon, are:

- Gargoyle Mobiloil "A"
- Gargoyle Mobiloil "B"
- Gargoyle Mobiloil "D"
- Gargoyle Mobiloil "E"
- Gargoyle Mobiloil "Arctic"

They are put up in 1 and 5 gallon sealed cans, in half-barrels and barrels. All are branded with the Gargoyle, which is our mark of manufacture. They can be secured from all reliable garages, automobile supply store, and others who supply lubricants.

VACUUM OIL CO., Rochester, U. S. A.

BRANCHES: DETROIT BOSTON NEW YORK CHICAGO PHILADELPHIA INDIANAPOLIS
Ford Bldg. 49 Federal St. 39 Broadway Fisher Bldg. 4th & Chestnut Sts. Indiana Pythian Bldg.

Distributing warehouses in the principal cities of the world

Explanation: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil the dealer should use. For example, "A" means Gargoyle Mobiloil "A." "D" means Gargoyle Mobiloil "D." For all entries, select the car Gargoyle Mobiloil "A." The recommendations cover both passenger and commercial vehicles unless otherwise noted.

Model "Gee! I'm Glad I Have On B. V. D."

THAT's what the cool, comfortable, *coated* man is thinking, while the cross, comfortless, *coatless* ones are eyeing him enviously. Don't you be caught without B. V. D. when warm days "put you on the griddle." B. V. D. weather is here—B. V. D. is sold everywhere.

To get genuine B. V. D. get a good look at the label. On every B. V. D. undergarment is sewed

This Red Woven Label

(Trade Mark Reg. U. S. Pat. Off. and Foreign Countries.)

B. V. D. Coat Cut Undershirts and Knee Length Drawers, men's, 24-34, \$1.00 and \$1.50 the garment.

B. V. D. Union Suits (Pat. U. S. A. 4-30-07), \$1.00, \$1.50, \$2.00, \$2.50 and \$3.00 the suit.

The B. V. D. Company, New York.

increase registration fees for the supposed maintenance of good roads, altho the State has not the power at present to appropriate any such funds for such a purpose. Here is a very apparent lack of good sense by both parties.

"The motorists of other States are continually setting at naught rational road regulations, that is, the more reckless class, and every time accidents result because of such lack of good sense vigor is added to the antimotoring ranks. Every time a motorist, lacking good sense, endeavors to escape from the scene of an accident in which he has played the major part, an unnecessary load is placed on all other motorists; and every time the remaining good motorists fail to ally themselves with the authorities in the punishment of such creatures, there is a lack of that good sense which an industry so young as the motor one requires.

"There are many other examples of the lack of good sense in the motoring ranks. It is only of late that the good-sense motorists have insisted on uniform hotel rates to take the place of the raised prices that constituted the rule whenever a motoring party registered. The motorists were themselves to blame. At the first they rather enjoyed the higher prices; there was an air of exclusiveness connected with it; they imagined, Pharisees-like, that they were not as other men. This was satisfactory at the start, but when conditions went from bad to worse they realized the sum they had to pay for their whistle. They started objecting and displaying good sense; many of them have been objecting ever since."

But it is not alone owners and drivers of cars that need a larger stock of good sense, but makers and sellers as well. The writer proceeds:

"Not a few of our manufacturers have been deplorably lacking in that good sense which Descartes sought so unceasingly to obtain. The American motor industry was largely an industry of imitation; in fact, it is largely so to-day. Imitation rarely shows that desired good sense which Descartes sought. Our makers imitated without studying environments. They reasoned what would do in one place would do equally well in another. They all went together. When they wanted more horse-power they made larger cylinders, or added more of them. To-day they find they have too much horse-power, and the trimming process has begun. Had these makers started out consistently to analyze the field and the industry rather than imitate, they would not to-day be confronted with the problems with which they are face to face. Had they studied individually, their travel might have been very slow, but yet their progress would have been greater 'than those who while they run forsake the straight road.' The history of the motor industry contains many examples of running and forsaking the straight road. A few years ago the pages of history were replete with such. It was a case of face east in 1907, face west in 1908, face north in 1909, and face south in 1910, sowing to the four winds and expecting to reap a satisfactory harvest.

"Glance at the history of one or two European concerns that have shown the rare good sense that Descartes pedestalled. Their progress was slow, but along a definite line. A few years ago they were not making as much money as some other concerns, but to-day while other companies are curtailing outputs and using other exigency methods, these good-sense companies are going steadily on, traveling slowly but always keeping to the straight road and reaping the harvest that must follow such effort, while rival concerns with perhaps brighter minds but susceptible to aberrations have operated at higher speeds but not in a definite direction."

New and old motorcyclists will appreciate the COMFORT features of the 1913

Indian Motorcycle

The roughest road seems smooth—because the new **Cradle Spring Frame** completely absorbs all shocks. No jarring, jolting or vibration. Only motorcycle with the automobile system of spring suspension. Complete abolition of the old spring devices.

The addition of **Foot Boards** is another comfort feature. Choice of two comfortable positions with separate brake controls. Pedals may be used merely for starting the motor. 11 new features and 29 minor refinements make the 1913 **INDIAN** more than ever a big leader in motorcycle design and construction.

Most popular motorcycle for touring. Nearly 40% of all motorcycles in America today are **INDIANS**. Higher second hand valuation than any other motorcycle. Wonderfully economical in gasoline and general upkeep.

Free demonstration at over 2,000 Indian dealers establishments throughout the country.

LIGHT HOUSE-DELIVERY WAGONS

A writer in *The Commercial Vehicle* presents the results of an inquiry as to the time required to deliver small packages under typical conditions by light gasoline motor vehicles. His statements are based on operations in suburban towns, one of these being Newark. New York is not regarded as a typical field. Some of the points contained in the writer's articles are given below:

"Both gasoline and electric vehicles are used for this kind of delivery, and several firms who have had considerable experience with motor-trucks have been known to state that the light gasoline vehicle is not suited to house-to-house delivery except where the runs from stop to stop are long. They claim that the electric vehicle operates most economically in house-to-house work where the average number of stops per mile is high and the day's mileage is small. In deciding this question, one of the most important factors is the length of the stop. Altho the mileage that the truck is to cover may be estimated, it can not be correctly estimated nor a true delivery route laid out without taking into consideration the number of stops, the length of each stop, the average amount of time required to deliver one package—either a C.O.D. or a paid or charge delivery—and the average number of packages delivered per stop.

"In order to find just what the length of time of a delivery stop was, trips have been taken with horse-drawn, electric, and light gasoline vehicles engaged in house-to-house delivery. The average length of a stop for the delivery with the horse-drawn wagon was 1.5 minutes. On the other hand, the average amount of time required for a delivery with the two electric wagons was 7 minutes for the parcel vehicle and 5 minutes for the bulk truck.

"The length of time required for the stop has nothing to do with the operation of the vehicle itself. If either of the electric vehicles had been operating on the route that was covered by the horse-drawn wagon the length of time of the stop would have remained the same. Nor could the use of a horse wagon on the route covered by the electric cars change the length of the stop. For the deliveries from the horse wagon were made at the ground floors of private houses while the deliveries from both of the electrics were made in a different section of the city in apartment-houses, where the boy had to climb several flights of stairs or wait for a dumb-waiter or a slow-moving freight elevator.

"In New York City alone are these apartment-house deliveries to be found. The ground-floor delivery in private-house work is more typical of conditions in other towns and cities.

"In order to discover the average and actual amount of time required for delivery in conditions more truly typical trips were taken with two light vehicles making house-to-house deliveries in suburban New Jersey, and also with a light gasoline vehicle making similar deliveries in the suburban districts of Long Island. Tabulations were made covering the number of stops, the number of deliveries—whether there were one or more houses called at from the one stop—the number of packages, that the driver or boy had to collect for, the length of the stop in minutes, and the time record.

"Nine Autocar 3,000-pound capacity vehicles fitted with pneumatic tires are used by a firm in Newark, N. J., to deliver dry-goods throughout the suburbs of New Jersey. Horse-drawn vehicles are used for the local deliveries, and as these vehicles have to make two trips each day, they are loaded first each morning. The

Face this fact fairly. Clap-trap luggage doesn't pay. It never did and never will. The bump-bump your trunks get from the porter, express man and train-hand means short life unless every part is durable.

For 69 years we have produced luggage that asks no favors of the luggage-man. Family pride keeps quality in all our products.

"Likly" Luggage lives to a ripe old age.

"No Wrinkles" is the motto of all "Likly" Wardrobe Trunks. This midget model is a husky little brother.

Its interior is unusually simple. The "Likly" Single Strap Follower (patented) keeps everything in place. No interfering dewdangles—you can get the fifth garment just as easily as the first.

The foundation box is of three-ply basswood veneer—light and tough. Covering is of the heaviest duck. First it's given three coats of paint, then two coats of carriage varnish. Bound with rawhide. Wardrobe side is lined with green fabric leather. Drawers are lined with Irish linen. Prices \$60.00 to \$97.50. (Add \$5 to these prices west of the Mississippi.)

Our catalog shows 100 other "Likly" Wardrobes to select from. Sent on request.

(No. 681 Wardrobe Trunk)

(No. 6 Steamer Trunk)

Roughing it with flying colors is easy work for this "Likly" Steamer Trunk.

It is chock full of "Likly" quality. Has vulcanized hard fibre binding and centre bands. Stout, sure corner caps and bottom protectors. All the rivets are hand driven. Prices \$16.50 to \$20.50. (Add \$2.50 to these prices west of the Mississippi.)

Over 40 other "Likly" steamer trunks are described in our catalog. Sent on request.

(No. 132 Suit Case)

This suit case is a collection of "extras." It is extra deep, extra strong, extra handsome.

Notice the way the handle is attached. The heavy corners are sewed on. There are light set-in basswood ends. Comes in several leathers. Lined in either cloth or leather. Guaranteed for five years. Prices \$16.50 to \$29.00.

(No. 260 Overnight Bag)

This "Likly" Overnight Bag makes a specialty of short trips. Slip one under your berth next time. Its frame is hand-sewed. Has plaid lining. Guaranteed for five years. Six leathers to choose from.

Probably the most popular bag ever designed. You won't wonder why when you own one. Prices \$17.50 to \$27.50.

If you've any travel in mind, you ought to send for one of our 128-page catalogs. It describes in detail the most varied line of luggage made today. And we'll tell you where to see "Likly" Luggage in your town.

The DUTCH PIONEERS of NEW AMSTERDAM

The UNITED STATES GOVERNMENT,
through the Census Bureau, has proclaimed

The ANGELUS The PIONEER PLAYER-PIANO

"In 1905, Messrs. Wilcox & White, of Meriden, Conn., began manufacturing an interior attachment, and in February, 1907, built their first 'Angelus,' a cabinet piano player. This instrument, the invention of E. H. White, may be regarded as the parent of the various similar attachments that have since been placed on the market." From the Official Census Report.

This leadership of the Angelus has been maintained by the possession of exclusive features absolutely essential to the playing and enjoyment of real music, including the wonderful

PHRASING LEVER

(Patented)

By the mere pressure of one finger on this marvelous device you can play any piece of music ever written and impart to it every desired delicacy of shading. Thus the Angelus is not only the power, but the simplest of all Player-pianos.

Other exclusive Angelus features are the Melodist—which gives distinctiveness to the Melody; the Sustaining Pedal device, the Graduated Accompaniment and the Melody Buttons.

Knabe-Angelus
Grands and Uprights

Emerson-Angelus
Grands and Uprights

Angelus-Piano—An upright built expressly for the Angelus
In Canada—The Guelley Angelus and Angelus Piano

Any of these instruments may be played by hand in
the usual manner

light gasoline cars are due at the store at 8 o'clock for their loads; the helpers, arriving at 7.30 o'clock, sort the loads according to towns and stops, and loading is begun at the minute the truck arrives. These trucks carry both bulk and parcel goods, and to keep them separate a wooden screen is placed amidships of the body. Otherwise the jolting of the vehicle when on the road would cause the bulk to be shaken in with the parcels, necessitating frequent sorting. The bulk is loaded from the back of the truck and is usually put on the wagon first, the parcels being loaded from the front, over the seat.

A table is printed, giving "a complete record of the first day spent in house-to-house delivery" by a light gasoline wagon in neighborhoods suburban to Newark. It shows total deliveries of 72; total packages delivered, 115; total e. o. d. deliveries, 63; actual running time from first stop to return to Newark, 1 hour and 32 minutes; average amount of time per package delivered, based on time of stop, 1.4 minutes; eliminating lunch time, average amount of time per delivery, 2.5 minutes; approximate mileage for the day, 25 miles, based on running time. Following is the table giving details:

RAPID GROWTH OF THE TRUCK INDUSTRY

The April reports from the motor industry indicated notable acceleration in its growth. One estimate is that the year's production will show a total of nearly \$100,000,000 in value. The total last year was less than half that—\$42,942,828. What is still more significant is the fact that the value of the trucks produced in 1911 was only \$22,292,000, and the value of those produced in all previous years only \$22,485,000. From this it appears that the output this year of trucks valued at nearly \$100,000,000, means a larger production in this one year than in all previous years since the industry began. Commenting further on aspects of the industry, the *New York Evening Post* says:

"Analysis of the reports shows that the largest and most rapid increases in numbers have been made in the 1,000, 1,500, 3,000, 4,000, 6,000, and 10,000-pound capacities in gasoline vehicles, and in the 1,000, 2,000, 4,000, and 7,000-pound sizes in electric vehicles.

"There has been a notable tendency to change models, particularly among the gasoline-vehicle makers. Taking account only of companies making full reports for both years, 1912 and 1913, it is found that 35 models have been dropped by the gas-car makers and 44 new models added, while the electric-vehicle makers have dropped 12 models and added 5. The changes are most pronounced in the 2,500, 3,000, 5,000, 7,000, 8,000, and 12,000-pound sizes in gasoline vehicles, and in the 1,500, 2,000, 3,000, and 7,000-pound capacities in electrics.

"The mean average price of all the commercial vehicles produced in 1912 was \$1,957.37; that of the gasoline cars \$1,868.95, and of the electric vehicles \$2,465.18. In 1911 the average value of all gas trucks sold appeared from the records to be \$2,079.16, and for all preceding years combined was \$1,955.70, while in 1911 the average price of all electrics reported was \$2,759.66, and for all preceding years was \$3,309.72.

"Fluctuations in prices of the various sizes of both gas and electric vehicles over a period of years show that the prices of the 1,500, 3,000, 4,000, 8,000 and 10,000-pound sizes of gas vehicles have decreased materially, while the prices of the 2,000 and 6,000-pound sizes have increased notably. In electric vehicles the average prices of the 1,000, 2,000, 4,000, 8,000, and 10,000-pound sizes have been reduced, while in the 1,500, 3,000, 7,000, and 11,000-pound sizes they have increased."

By the end of this year it is believed in some quarters that more than 100,000 commercial vehicles will have been produced in this country. The production for 1912 was 24,133 complete trucks. It is predicted, as the result of a canvass among manufacturers, that the output this year will reach 56,744. Further items on this subject are contained in an article in *Automobile Topics*:

"The total output of commercial vehicles of all kinds and types reported for the year 1912 by 170 companies was 21,939, as compared with a total of 10,655 reported for the year 1911 by 85 companies, and 10,374 reported for all preceding years combined up to the end of 1910 by the same 85 companies. It is believed these companies represented about 75 per cent. of the total production of the country, while the 170 companies reporting for 1912 and 1913 probably represent about 90 per cent. of the total output.

Saved!

Weed Tire Chains enable you to safely make sharp turns and quick stops when a momentary loss of control means loss of life.

The above picture illustrates one of the numerous situations in which you may be placed during bad road weather—when suddenly someone appears directly in your path and in a fraction of a second you must make a sharp turn and apply the brakes. It is then you require a firm unfailing grip on the road which can only be obtained by equipping all tires with

Weed Anti-Skid Chains

The Only Device That Absolutely Prevents Skidding

No matter how expert and careful you are when driving on wet pavements and muddy roads the treacherous bare tires are a handicap that defeats your very best efforts to prevent a skid. This is unanimously conceded by famous motorists who are recognized as authorities in motordom. For instance, Fred J. Wagner, the Official Starter in all big motor races, said in a recent issue of "House Beautiful":

"Chains, according to nearly every motorist, are superior to any other form of non-skidding device. I have seen substitutes for chains skid, and skid badly, too, when traction was vitally important to keep the car out of a ditch. There is no such thing as a 'non-skidding' tire. Ask any legitimate manufacturer and he will admit that no matter what sort of a tread the casing may have, it will slip to some extent when the road surface is covered with slippery mud or slime. What can be claimed however, for certain treads is that they skid a deal less than ordinary smooth treads."

The memory of one accident deters future enjoyment in the use of a car. Why run the risk of such accidents and why forfeit the pleasures of motoring forever after, when safety can surely be yours

by equipping all four tires with WEED CHAINS?

WEED CHAINS cannot injure tires because "they creep." Easily put on in a jiffy without the use of a jack or other tools. Directions packed with every pair.

Sales and Showrooms also in New York, Chicago, Philadelphia, St. Louis, Boston and Toronto.

"By adding to the totals reported in each case estimated productions to account for the unreported balance of the industry, the following totals have been compiled; the total productions up to the end of each year reported being carried out to show the practical doubling of outputs for each of the three past years:

Reported output prior to 1911.....	10,374
Plus 25 per cent.....	2,594
	12,968
Total.....	12,968
Reported output during 1911.....	10,855
Plus 25 per cent.....	2,664
	13,519
Total.....	26,287
Reported output during 1912.....	21,939
Plus 10 per cent.....	2,194
	24,133
Total.....	50,420
Estimated output during 1913.....	51,586
Plus 10 per cent.....	5,158
	56,744
Total.....	107,164

"With the exception of a dozen or fifteen companies, all of those that failed to send in reports are relatively new companies that produced few or no vehicles last year, or are older companies whose individual output probably did not reach fifty vehicles in any case. On the whole, the estimates of production for 1913 are believed by the statisticians to be fairly conservative, as nothing was to be gained by any manufacturer in exaggerating his figures, because the census was a secret one in which names of companies were not to be attached to the reports.

"Reports received from the 170 companies are classified as follows: Gasoline-vehicle makers, 140; electric, 20; mixt system, 3; gasoline fire apparatus, 7; tractors, 3; tractors, 2; steam, 1. The gas-electric vehicles and the tractors are made by the electric-gas vehicle makers."

Only an Instance.—"A former train robber is becoming prominent in Oklahoma politics."

"Oh, well, that's no sign that train robbers never can be persuaded to be good."—*Chicago Record-Herald.*

Publisher's Notice.—Uncle Samuel is keeping a fatherly and watchful eye on the newspaper boys. Just why the old gentleman has any more right to poke his venerable nose into the private affairs of a man who runs a newspaper than he has to interfere with a grocer, a butcher, a dry goods man or a manufacturer has not yet been explained. As will be noted by the statement published this week, a paternal government has been given some weighty and important information about *The Record*—and it is hoped the country has thereby been saved.

While Uncle Sam is prying into private affairs that are none of his business perhaps it might be in order to inform him that *The Record* man is a brunette and a Republican; he has a pretty bad corn on his left foot and his hair shows signs of falling out; he has only one good eye and walks a little splay-footed; he has a wife, a daughter, a couple of grandchildren, an alleged automobile, a horse, a Jersey calf, and a peg-legged cat. He thought he was running for the legislature last fall, but he found out he wasn't even walking. He hopes to be able to keep on making an honest living without having to stop every little while and answer important questions, as he is neither a criminal nor a dependent.—*Bushnell (Ill.) Appeal.*

CURRENT POETRY

A MERICAN poets are inferior to those of England in at least one respect—the making of light verse. Sometimes the defense is made that this is not the work of poets, but of clever journalists. But it is frequently true, on the other hand, that the best *vers-de-société* is written by the poet who can produce also poems of dignity and splendor. The English weeklies (particularly *Punch*) print a large amount of verse with no serious message, but of almost perfect craftsmanship. The poets of England, it seems, are not so consistently serious as those of America. But America has not always been lacking in artists able and willing to give exquisite form to evanescent moods. The late H. C. Bunner excelled in work of this sort, and among contemporary writers Mr. Clinton Scollard is distinguished for his graceful treatment of slight and familiar themes.

"Lyrics from a Library" (George William Browning) is the attractive title of Mr. Scollard's new book of verse. He has written poems memorable for high thought and sonorous phrasing, but in this little volume he has included chiefly work of a lighter, simpler type. He praises his favorite authors, the comforts of his library, his first editions, and other rare volumes with the sympathy and enthusiasm of a true lover of books and with the skill of an accomplished artist in words. There have been many poems written in honor of Theocritus—those of Wilde and Dobson are memorably lovely—but this does not interfere with the appeal of the first poem which we reprint. The second poem is tender and sincere, and expresses beautifully that pathos which clings to the volumes of forgotten authors on the shelves of second-hand bookshops.

On a Copy of Theocritus

BY CLINTON SCOLLARD

Theocritus, we love thy song,
Where thyme is sweet and meads are sunny,
Where shepherd swains and maidens throng
And bees Hyblean hoard their honey.

Since ancient Syracusan days
It year by year has grown the sweeter,
For year by year life's opening ways
Run more in prose and less in meter.

And than this quario, vellum-clad,
You could not wish a rarer setting;
Beholding, you must still be glad,
If you behold without forgetting.

Manutius was the printer's name
(A *Publisher* was then unheard of—
A fellow of some worthy fame,
If history we take the word of.

Think when its pages first were cut,
And eager eyes above them hovered,
Our proudest dwelling was a hut—
America was just discovered!

Then Venice was indeed a queen,
And taught the tawny Turk to fear her;
Now has she lost her royal mien,
And yet we could not hold her dearer.

SPRINGTIME is here! The woods and streams, the young folks at play—everywhere, everything—offer delightful opportunities to the amateur photographer. Betwixt these covers there is bound
A charm that needeth no completion;
A golden atmosphere is found
At once Sicilian and Venetian.So, while our plausive song we raise
And hail the bard whose name is famous,
Let us for once divide the bays,
And to the Printer cry—*Laudamus!***A Forgotten Bard**

BY CLINTON SCOLLARD

In a dim nook beneath the street
Where Pine and noisy Nassau meet,
This little book of song I found
In scarred Morocco quaintly bound.
Each musty and bearded leaf
Bespeaks long years of grime and grief;
Long years—for on the title-page
A dim date tells the volume's age.Ah, who was he, the bard that sung
In that dead century's stately tongue
In those vanished days of yore?—
An empty name—I know no more!
Yet, as I read, will fancy form
A face whose glow is fresh and warm,
A frank, clear eye wherein I view
A nature open, genial, true.Mayhap he dreamed of fame, but fate
Had barred to him that temple's gate:
He loved—was loved—for one divine
An answered passion in his lines;
He died, ah, yes, he died, but when
He ceased to walk the ways of men,
Or where his clay with mother lay
Commingle sweetly, who can say!In pity will I give his book
A not too lonely study nook,
Where kindly gleams of light may play
Across it of a wintry day;
And I will take it down sometimes
To con the prim and polished rhimes,
Will thus, when the gray years have fled,
Some book of mine be housed and read?The verse of James A. Mackereth has
been highly praised by British critics, but
his new volume, "Iolaus: The Man That
Was A Ghost" (Longmans, Green & Co.)
is not likely to increase his audience. His
verse is very beautifully made, but his
thoughts are so lofty, his images so fantas-
tic, and his idiom so subtle as to repel the
general reader. He is at his best in some
of his skillfully turned sonnets, in which
the exactness of the form keeps his fancy
from wandering too far afield. Of the two
which we reprint the first is remarkable
for the successful suggestion of the idea
by the sound of the words and the second
for the passionate humanity of its spirit.**The Soul and the Sea**

BY JAMES A. MACKERETH

I hear the shouting of th' exultant sea.
Its reel and crash along the shuddering strand;
Through muffling mist the wide reverberant
landIn thunderous labor laughs exultantly;
The restless wind's tumultuous revelry
Whips into whirling clouds the blanched sea-
sand;The primal powers in grim convulsion grand
Strive, straining agonists, frenzied to be free.And in the lapses of the roaring gale
I hear the cries of lives that rage and weep,
That sow for ever, and that never reap;
Brave hearts that travail with all hopes that fail
Break with the breakers; with a wandering wall
Files sorrow with white lips along the deep.**ORDER A BOX of these HAVA-

The Voice of the Millions

BY JAMES A. MACKERETH

Bound to one triumph, of one travail born,
Doomed to one death, in one brief life we morn;
The pangs that maim us and the powers that
spoil

Are common sorrows heired from worlds outworn.
Alike in weakness, time too long hath torn
Our mother, Patience, and our father, Toll,
Brothers in hatred of the fates that foil,
Say not in vain we murmur and we mourn!

Oh, by the love that lights our mother's eyes,
By hearth and home, by common hopes and
fears,

By all sad sweetness of the human years,
Partings and meetings, by our infants' cries—
One are we, through the heart's divine allies,
In long allegiance to eternal tears!

Harper's Magazine prints this richly
colored picture of the glories of spring.
There is a charming idea in the close of the
last stanza.

May is Building Her House

BY RICHARD LE GALLIENNE

May is building her house. With apple blossoms
She is roofing over the glimmering rooms;
Of the oak and the beech hath she builded its
beams,

And, spinning all day at her secret looms,
With arras of leaves each wind-awayed wall
She pictureth over, and peopleth it all
With echoes and dreams,
And singing of streams.

May is building her house. Of petal and blade,
Of the roots of the oak is the flooring made,
With a carpet of mosses and lichen and clover,
Each small miracle over and over,
And tender, traveling green things strayed.

Her windows, the morning and evening star,
And her rustling doorways, ever ajar
With the coming and going
Of fair things blowing,
The thresholds of the four winds are.

May is building her house. From the dust of
things
She is making the songs and the flowers and the
wings;

From October's tossed and trodden gold
She is making the young year out of the old;
Yea! out of winter's flying sleet
She is making all the summer sweet,
And the brown leaves spurned of November's
feet.

She is changing back again to spring's.

The Bellman prints the following vigor-
ous lines. Their strong, virile phrasing is
suggestive of Kipling.

Breaking the Road

BY LEWIS WORTHINGTON SMITH

With the captain's eye on the compass and the
captain's hand on the wheel.

They sailed from the port of Palos till they felt
their senses reel,

Till the stars seemed the devil's torches aflame on
the road to hell,

And only the heart of the captain still dreamed
that all was well;

But they kept the sails full-bellied to the winds
that drove them west;

Not theirs was the home-returning, not theirs
was the dream-led quest;

GREAT BEAR SPRING WATER.
50c per case of 6 glass stoppered bottles

*Barrett
Specification
Roofs*

After the Fire

STRIKING proof of the fire re-
tardant qualities of a Barrett
Specification type of roof appears
almost every time there is a city or
factory fire. The photograph here-
with shows a typical instance.

The Prichard Building, Newark,
N. J., was completely gutted by
fire. The building is isolated so that
the firemen could not get to work
on the roof, and in consequence
the roofing received practically no
protection by water.

The roof, although it had acted
as a blanket over the flames, showed
only trifling damage at two or three
small points where the support was
completely destroyed. If it were not
for the necessity of replacing the
roof boards beneath, which were

badly burned from inside, the roof
could have been put in first-class
condition at very little cost.

There are thousands of instances
like this, where Barrett Specification
Roofs have withstood severe ex-
posure to fire, and thousands of
buildings are saved every year from
exterior fire exposure by these fire
retardant roofs.

*The Barrett Specification will be
sent free on request. Every archi-
tect and engineer and property
owner should have a copy on file.*

Is \$1.00 insurance too much for your car?

MOTOR AGE

for a dollar bill can insure you 100% efficiency and enjoyment out of this season's motoring.

Doctors! Lawyers! Businessmen!

When we need medicine we come to you. When we need law we come to you. When we are in the market we patronize you. We come to you for what you KNOW in your respective fields of endeavor.

We don't pretend to know much about law, about medicine, about the channels of trade. WE DO KNOW ABOUT MOTOR CARS—their care, their repair, their latest improvements—nor things in the way of routes and touring that you want to know.

Isn't it about time that WE began to serve YOU?

MOTOR AGE sells for 10 cents a copy. But we will send it to you all through four great motoring months, June, July, August and September—17 issues for one dollar.

\$1.70 worth of MOTOR AGE for a dollar bill

Send your dollar with the coupon below, at our risk, and send it now. Your subscription begins with the issue of June 5th.

It will mean a \$1.00 investment for the best motoring season yet.

For the high-souled lords of the morning who seek the sea's far spell
Need the true, unselfish service of the nameless sons of toil

With the captain's eye on the compass while the murky night came down,
They drove through the waves and the wind-spume over deeps where a world might drown,
Till a light sprang out of the distance and a cry leaped up to their lips.

And the heart of the dullest seaman grew mad, as in some eclipse.

When the wonder of earth's great shadow thrown darkening across the moon

Is as sweet as the sunset splendor of a rose-breathed night in June

But the crew, with their homesick hunger and their hopeless toil with the sails—

For them is the end full guerdon, a torch-light that flares and pales?

One man with the breath of a runner cries out for the untrod road.

The sledges and men are gathered, and the dogs shall carry the load.

The whips are cracked and the lashings set forward the eager pack:

But only the one who drives them is praised when they bring him back.

Ah, forgotten shall be the heroes who answer another's call.

They are servitors, dumb, if loyal, to be nothing—now one and all;

But the roads can not be broken except through the helping hands

Of the nameless, unthanked toilers who do, but their lord's commands.

Few poets of this generation are as successful as Dr. Gales in reproducing the spirit of the folk-song. His experience as a translator of old Provençal ballads has helped him in this, but he has, in addition, a naive vigor excellently suited to this sort of composition. We take this poem from "The Vineyard."

The Holly Hedge of Paradise

BY THE REV. R. L. GALES

(The legend is that Dismas, the Penitent Thief, came from Bethlehem)

The holly hedge of Paradise, oh! it grew thick and green.

The king could not enter, nor more could the queen;

Oh! it grew strong and lusty, it stood stout and tall.

It went round the Garden like a flaming wall.

Since Adam first had sweated and Eve first shed tears,

It had kept the Garden with its ring of spears.

The king could not enter, howe'er he bent his mind,

There was no gap nor opening for any man to find

None had seen the Garden that behind it lay;

All men came unto it, but all must turn away.

They could not pierce the thicket, they could not cleave or climb,

They could not find an entrance by riddle or by rime.

It was a Thief of Bethlehem that first a passage made,

And broke thro' the holly hedge with tools of his trade;

He first found the place again where none pine or grieve,

And came into the Garden upon the Easter Eve.

TIRE-DOH

Money Back, 100% guarantee. The only complete \$1.00 Outfit of Tire-Doh Cement and Tire-Doh.

Save 9/10 of Your Tire Repair Expense

For 2 cents you can permanently repair any puncture in an inner tube—5 cents will repair the worst tear or blow-out you ever saw. Easier, quicker and better than vulcanizing. No heat or tools needed—just your two hands and a dollar Tire-Doh outfit. Do it anywhere—in the shop or on the road—time 15 minutes. Easy as inserting new tube. Saves carrying extra tubes. Also you can repair casing cuts with Tire-Doh Outfit and make casings last longer.

Try a genuine Tire-Doh Outfit at our risk. Your supply dealer has it—the white enameled can with two little cans inside. Price \$1.00. Only outfit guaranteed by money back. Don't judge it by others. Look for name TIRE-DOH. Try it. We return your money if you say the word. Shipped express prepaid upon receipt of \$1.00. See your dealer or send \$1.00 now.

PERSONAL GLIMPSES

BEULAH MILLER AS A SCIENTIST
SAW HER

TEN-YEAR-OLD Beulah Miller, of Warren, Rhode Island, seems to be the most interesting psychical mystery since Madame Eusapia Palladino made her trip to this country and her mystic powers were said to have been exposed. Prof. Hugo Münsterberg, who held a number of seances with the Italian woman and afterwards pronounced her a fraud, recently investigated the case of Beulah, and his findings, written for *The Metropolitan Magazine*, make a readable as well as an informing story. There was a great contrast between Beulah Miller's surroundings and the setting in which the psychologist found Palladino. The latter was in a cheap lodging-house in a section of New York City where palmists and mediums live. It was midnight, the room was dimly lighted and the woman was in a trance at a table surrounded by spiritualistic believers. When he went to the Miller home, he found the child among her toys in her mother's kitchen, and the general surroundings could not have been simpler and more peaceful. Everything breathed sincerity and naïveté and the absence of fraud. But mere assurance had little effect upon the scientist; he proceeded to ascertain and examine the facts. He writes:

The claims are very simple. Here is a school child of ten years who is able to read in the mind of any one present anything of which he is thinking. If you take a card from a pack and look at it, and still better, if several people look at it, and best of all if her mother or sister look at it, too, Beulah will say at once which card it is, altho she may stand in the farthest corner of the room. She will give you the date on any coin which you have in hand; in a book she will tell you the particular word at which you are looking. Indeed, a sworn affidavit reports still more surprising feats. Beulah gave correctly the name of the reporter, whom nobody else knew, and the name of the New York paper for which she is writing. At school she reads words written on the blackboard with her back turned to it. At home she knows what any visitor is hiding in his pocket.

The serious-minded man who is disgusted with spiritualistic charlatans and their commercial humbug is naturally inclined here, too, at once to offer the theory that all is fraud and that a detective would be the right man to investigate the case. When the newspapers discovered that I had begun to study the girl, I received from many sides letters with suggestions to look for certain devices with which stage performers carry out such tricks, such as marked cards and the equipment of the magician. But whoever thinks of fraud here misunderstands the whole situation.

The psychical powers of Beulah Miller were not brought before the public by the child or her family; there was no desire for

FEDERAL

The Truck Triumphant

1000 Federal Owners
Have a Message For You

We have the detailed story of every Federal truck that ever left the Federal factory—the story of the man who bought it and the story of the man who drives it.

We have a detailed report of the hauls, of the cost of upkeep—for we build character and integrity into the Federal truck.

We have a detailed report of the efficiency, of the economy of transportation affected by the Federal—for that is Federal service.

We will give you the reports, the unbiased testimony of these one thousand business men and manufacturers who have bought Federal trucks and repeated their orders to improve their own service and to save their own money.

That was our purpose in perfecting this system of tabulated reports from one thousand Federal Owners. We offer you Federal evidence before we offer you Federal Trucks.

These are a few of the one thousand representative firms who have bought and are reordering Federal trucks and, through us, will tell you why:

WYCKOFF LUMBER & MFG. CO., 408 Wyckoff Street, Ithaca, New York

of the same figure are much larger than would appear from the mere calculation of probabilities. Yet even if we make the largest possible concession to happy coincidences, there cannot remain the slightest doubt that the experiments carried on under standard conditions yielded results the correctness of which endlessly surpasses any possible accidental outcome.

We may take a typical illustration. I drew cards which she could not possibly see, while they were shown to the mother and sister sitting next to me, Beulah sitting on the other side of the room. The first was a nine of hearts; she said nine of hearts. The next was six of clubs, to which she said first six of spades; when told it was not spades, she answered clubs. The next was two of diamonds; her first figure was four; when told that it was wrong, she corrected herself two, and added diamonds. The next was nine of clubs, which she gave correctly; seven of spades she called at first seven of diamonds, then spades; jack of spades she gave correctly at once, and so on. One other series: We had little cardboard squares, on each of which was a single large letter. I drew any three, put them into the cover of a box, and while the mother, Gladys, and I were looking at the three letters, Beulah, sitting beside us, looked at the ceiling. The first were R-T-O. She said R-T-I. When told it was wrong, she added O. The next were S-U-T; she gave S-U, and then wrongly R-P-Q, and finally T. The next were N-A-R; she gave G-N-A-S-R. The following D-W-O, she gave D-W, but could not find the last letter. It is evident that every one of the cards gave her fifty-two chances, and not more than one in fifty-two would have been correct, if it were only guessing, and as to the letters, not more than one among twenty-six would have been chosen correctly by chance. The given example demonstrates that of five cards she gave three correctly, two half correctly, and those two mistakes were rectified after the first wrong guess. The second experiment demanded from her four times three letters. Of these twelve letters, six were right at the first guess and five after one or two wrong trials.

I leave entirely out of consideration the marvels of mind-reading which were secured by the judge and the minister, the male and the female newspaper reporters, before I took charge of the study of the case. I rely only on what I saw and of which I took exact notes. I wrote down every wrong letter and every wrong figure, and base my calculations only on this entirely reliable material. Nevertheless, I must acknowledge it as a fact beyond doubt that such results as I got regularly could never possibly have been secured by mere coincidence and chance. As chance and fraud are thus equally out of the question, we are obliged to seek for another explanation.

There is one explanation which offers itself most readily. We saw that in order to succeed, some one around her, preferably the mother and sister, who stand nearest to her heart, have to know the words or the cards. Those visual images must be in some one's mind, and she has the unusual power of being able to read them there. Such an explanation even seems to some a very modest claim, almost a kind of critical and skeptical view—a mere "ease of mind-

When Touring, Look for This Sign

IT INDICATES unfailingly garages where you will receive courteous, efficient service and where you can get Texaco Motor Oil. It blazes the main highways from Tampa to Bangor; from New York to Philadelphia, Chicago, St. Louis. From the Mississippi, East, it acts as a friendly, helpful guide.

TEXACO MOTOR OIL

and a good garage go together. When you find one you find the other. For the garage man who has the interests of his customers at heart gives them the best of everything regardless of profit or price.

Texaco Motor Oil gives *maximum power with minimum consumption*. Many tests conducted during long, hard runs

have shown an *entire absence of carbon accumulation*.

Perfect lubrication is obtained at all times in any type of car. You will find that your gasoline consumption is reduced from 15 to 30 per cent. by the use of Texaco Motor Oil. This means considerable saving in the course of a year.

For sale in 1 and 5 gallon cans at most good garages and supply shops. For instructive and interesting booklet, "Maintaining a Motor Car," address Dept. D, 4 Washington Street, New York City.

reading." The judge and the minister, for instance, in accepting this idea of her powers, felt conservative, as through it they disclaimed any belief in mysterious clairvoyance and telepathic powers. In the newspaper stories, where the mysteries grew with geographical distance from Rhode Island, Beulah was said to be able to tell names or dates or facts which no one present knew. It was asserted that she could give the dates on the coins which any one had in his pocket without the possessor himself knowing them, or that she could give a word in a book on which some one was holding his finger without reading it. No wonder that the public felt sure that she could just as well discover secrets which no one knows and be aware of far distant happenings. It is only one step from this to the belief in a prophetic foresight of what is to come. For most unthinking people mind-reading leads in this fashion over to the whole world of mysticism. In sharp contrast to such vagaries, the critical observers like the judge and the minister insisted that there was no trace of such prophetic gifts or of such telepathic wonders to be found, and that everything resolved itself simply into mere mind-reading. Some one in the neighborhood must have the idea in mind and must fixedly think of it. Only then will it arise in Beulah's consciousness.

The psychologist says mind-reading is done by observing, either consciously or subconsciously, the changes of facial expression or other physical movements of the person whose thoughts are being read. There are many little signs which are visible only to the expert. He goes on to explain:

In the case of this parlor trick and the stage performance, the one who claims to read the mind of the other is more or less clearly aware of those unintended signs. He feels those slight movement impulses which he follows. But we know from experiences of very different kind that such signs may make an impression on the senses and influence the man, and yet may not really come to consciousness. Even those who play the game of mind-reading in the parlor and who are led by the arm movements to find the hidden coin, will often say with perfect sincerity that they do not feel any movements in the wrist which they touch. This is indeed quite possible. Those slight shocks which come to their finger-tips reach their brains and control their movements without producing a conscious impression. They are led in the right direction without knowing what is leading them. The physician finds the most extreme cases of such happenings with some types of his hysteric patients. They may not hear what is said to them or see what is shown to them, and yet it makes an impression on them and works on their minds, and they may be able later to bring it to their memory and it may guide their action, but on account of their disease those impressions do not really reach their conscious minds. We find the same lack of seeing or hearing or feeling in many cases of hypnotism. But it is not necessary to go to such extreme happenings. All of us can remember experiences when impressions reached our eyes or ears and yet were not noticed at the time, altho they guided our

actions. We may have been on the street in deep thought or in an interesting conversation so that we were not giving any attention whatever to the way, and yet every step was taken correctly under the guidance of our eyes. We saw the street, altho we were not conscious of seeing it. We do not hear a clock ticking in our room when we are working, and yet if the clock suddenly stops we notice it. This indicates that the ticking of the clock reached us somehow and had an effect on us in spite of our not being conscious of it. The scientists are still debating whether it is best to say that these not-conscious processes are going on in our subconscious mind or whether they are simply brain processes. For all practical purposes, this makes no difference. We may say that our brain gets an impression through our eyes when we see the street, or through our ears when we hear the clock, or we may say that our subconscious mind receives these messages of eye and ear. In neither case does the scientist find anything mysterious or supernatural.

I am convinced that all the experiences with Beulah Miller may ultimately be understood through these two principles. She has unusual gifts and her performances are extremely interesting, but I think everything can be explained through her subconscious noticing of unintended signs. Where no signs are given which reach her senses, she cannot read any one's mind. But the signs which she receives are not noticed by her consciously. She is not really aware of them; they go to her brain or to her subconscious mind and work from there on her conscious mind.

KARL HAGENBECK

THOUGH a fishmonger by trade, Karl Hagenbeck's father gave some of his attention to exhibiting wild animals in a small way. Fifty-five years ago, when Karl was twelve, the elder Hagenbeck asked him whether he intended to be a fishmonger or a dealer in wild beasts. He advised the boy to sell fish for a living, because it was far less precarious. "I'll try wild beasts," replied Karl, and before he was a year older, the youngster was not only in charge of his father's collection, but was increasing it. When he died the other day, he was the most renowned animal collector and dealer in the world. He stocked nearly all the circus menageries and zoos on the three continents. P. Chalmers Mitchell, Secretary of the Zoological Society of London, recently described his first meeting with Hagenbeck, and the *New York Times* quotes him as follows:

There called on me a tall, lean man, with a bony, weather-beaten face, shaven lips, and a short grizzled beard of the kind known as a "chin-fringe." His shrewd and kindly face, slow speech with nasal intonations, and general air of confident but watchful friendliness, made the impression of an individuality very unlike the composite photograph I have in my mind of the Germans I know. But for the presence of a

At Your Service—Instantly

Detroit Electric owners use their cars constantly from early morning until bedtime because they are always ready to go *without effort*.

It is easier to jump into a Detroit Electric, for even two or three blocks through congested traffic, than to walk. There is no annoying gear shifting required to obtain the various speeds or to heed the stops and starts of traffic officers.

One simple movement of the hand gives you any one of five speeds *instantly*. You do not need to "accelerate" your motive power before

changing speeds,—nor is there any danger of stalling.

Electric self-starters and lighting systems on other types of cars have awakened the public to the real advantages of the *electric* automobile. Why not secure *all* of the advantages of electricity throughout your car.

When you buy a Detroit Electric you get the benefit of *one* system—electricity—not a complication of several systems.

The Detroit Electric has many exclusive features such as one-sheet aluminum roof, aluminum body panels and "closed-in" fenders.

This adds strength and lightness to the car and permits of a beautiful finish which will not warp nor crack.

Illustrated catalog sent upon request.

New York, New Haven & Hartford R.R.

German accent and the absence of the tobacco habit, Karl Hagenbeck might pass for a New England ship captain.

He is, in the first place, a business man with a strong spirit of adventure that must have led him into many losses, and as he has none the less built up a great and successful business, it must be supposed that he also knows how to make profits. But those who deal with him soon learn that they may rely implicitly on his directness and candor in arranging a purchase or sale, and on his scrupulous carefulness in carrying out his share of the bargain.

He has been a notable pioneer in the handling of wild animals. He is an able man and sees that the crude methods do not pay; he is a naturalist with a genuine affection and sympathy for animals and in all his handling of them he sees to it that their health and general condition are the first care.

Hagenbeck kept his animals in a large park at Stellingen, near Hamburg, where the general system of caring for animals is a model for the whole world. During his later years, he never journeyed far from home and his adventures with dangerous beasts were few. *The Times* proceeds:

But year in and year out the intrepid hunters ventured into jungle and forest and steppe in search of new treasures. And it is fortunate that, a few years ago, Hagenbeck sat down to write a history of himself and his business, in which the exploits of these daring men are chronicled in most generous terms of admiration. This book, entitled "Beasts and Men," was translated into English and published in England and here by Longmans, Green & Co.

By the time that Hagenbeck decided to venture into the domain of writing his business had grown to huge proportions, and his headquarters was one of the prime sights in Hamburg. He took a census just before writing his book, according to which Stellingen Park was inhabited by more than 2,000 animals of all descriptions.

As early as 1864, Karl Hagenbeck had closed a contract with Cassanova, a famous animal hunter, whereby the latter agreed to sell whatever animals he should bring to Europe for a definite price—thus becoming the first of the long list of mighty hunters who devoted years to ranging the haunts of big game throughout the world in the interests of the Hagenbeck firm. Cassanova's first contribution consisted of two elephants, several lions, and a number of hyenas, panthers, antelopes, gazelles, and ostriches.

A few more such consignments placed Hagenbeck on a secure footing as the world's great dealer in animals. In the early seventies he and Phineas T. Barnum were doing a thriving business with each other. On his first visit to Hamburg, Barnum bought \$15,000 worth of animals. Said Hagenbeck:

"He was touring Europe, he told me, in search of new ideas, and as I was able to supply him with some such (among other things I told him about the racing elephants of India and of the use of ostriches as saddle animals), he paid me the compliment of inviting me to join him in his enterprise, with a one-third share of the profits. I preferred, however, to remain in Hamburg,

and develop my own business. After this Barnum obtained his animals exclusively from me and his successor, Mr. Bailey, continued this arrangement until 1907, when he disposed of his business."

The largest consignment of African animals that Hagenbeck ever received came to him way back in the seventies, when the Dark Continent was simply alive with big game. He received a dispatch from Cassanova, saying that he and another Hagenbeck traveling agent called Migoletti were on their way to civilization from the interior of Nubia at the head of huge caravans of captured animals. Cassanova added that he was dangerously ill and asked Hagenbeck to come to Suez in person and take charge of the animals.

Hagenbeck, accompanied by his younger brother, journeyed to Suez and there came face to face with an extraordinary sight. He afterward wrote:

On entering the station at Suez we were greeted by some of our prospective pets, for in another train opposite we saw several elephants and giraffes, who pushed out their heads to welcome us. This, however, scarcely prepared us for what met our gaze when we reached the Suez Hotel. I shall never forget the sight which the courtyard presented. Elephants, giraffes, antelopes, and buffaloes were tethered to the palms; sixteen great ostriches were strolling about loose; and in addition there were no fewer than sixty large cages containing a rhinoceros, lions, panthers, cheetahs, hyenas, jackals, civets, caracals, monkeys, and many kinds of birds.

It was naturally no easy matter to transport this immense collection of wild beasts to Europe. The amount of food required was enormous. Besides the hay, bread, and sundry other vegetable foods which were needed for the elephants and other herbivores, we also took along with us about a hundred nanny-goats in order to provide the young giraffes and other baby animals with milk. When these goats were no longer able to supply us with milk they were slaughtered and given to the young carnivores to devour.

The journey to Alexandria, where we were to embark for Trieste, was by no means uneventful. On the way to the station the ostriches escaped, and were only recovered after considerable delay. Then one of the railway trucks caught fire, endangering the entire menagerie; and, finally, we were furnished for the last part of the journey with a drunken engine-driver who nearly burst his boiler. Moreover, the poor creatures were so closely packed together that it was impossible to feed them. We traveled all through the night and arrived in Alexandria at 5 A.M. Here we joined forces with Migoletti's caravan. The whole of the next day was occupied in feeding and in general attendance upon my unfortunate beasts, which had suffered considerably from their long train journey.

However, at last they were all safely deposited on deck and the passage to Trieste was accomplished without serious mishap. Our arrival at that port caused great excitement among the townsfolk. And small wonder! No such collection of wild beasts had ever before been seen in Europe. The united caravans of Cassanova and Migoletti included, apart from the smaller creatures, five elephants, fourteen giraffes, four Nubian buffaloes, a rhinoceros,

The Howard Watch

THE Chemist has a vital place today in American industries representing a yearly product of Fifteen Billion Dollars.

The scientist in his laboratory works with instruments of great precision, with the most delicate reactions, and with *HOWARD time*.

For the man in any line, who plans to achieve, who expects to

win high place in his chosen calling, there could be no better investment than a HOWARD Watch. Living with a HOWARD is the surest way to absorb the accuracy, the punctuality, and practical time-saving that America's successful men demand as a matter of course.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is fixed at the factory and a printed ticket attached—from the 17-jewel (*double roller*) in a Crescent Extra or Boss Extra gold-filled case at \$40, to the 23-jewel at \$150, and the EDWARD HOWARD model at \$150.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigsbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it. Drop us a post card, Dept. O, and we'll send you a copy.

The Standard Dictionary is needed in every American home where education and culture are truly esteemed.

Income on Investments

A wise investor, in considering investment securities, will first satisfy himself as to their soundness. Unless he is buying for long time investment he will next make sure of their marketability. The third consideration, and one which, while of importance, should be secondary to the others, is the income.

We have prepared a circular which describes several corporation, short term, and railroad securities that possess the first two qualifications and that yield incomes of from 4.65% to 6%. We will be glad to supply this circular to you if you are interested.

Ask for Circular E-444

twelve antelopes and gazelles, two wart-hogs, four aardvarks, and no fewer than sixty carnivores. Among the latter there were seven young lions, eight panthers and cheetahs, thirty hyenas, and many smaller representatives of the cat tribe. There were also twenty-six ostriches, of which sixteen were full-grown birds. One of these a female, was the largest specimen I have ever seen. This hen could easily reach a cabbage which I placed eleven feet from the ground.

Pretty nearly the whole population of Trieste must have turned out to watch us unload. And whenever an elephant or a giraffe came sprawling across in the crane a roar of delight would go up from the multitude on shore. It was truly marvelous that we ever reached the railway station without an accident, for the crowd in the streets was enormous, and we had the greatest possible difficulty in making our way through. We traveled to Hamburg via Vienna, Dresden, and Berlin, and as some of our possessions found new homes in the Zoological Gardens in each of those cities, our numbers were greatly reduced by the time we finally arrived at our destination.

A good idea of the magnitude of some of Hagenbeek's business deals may be gained from this story taken from *The Times*:

In 1905 the German Government asked him whether he could secure 1,000 dromedaries, provide each with a suitable saddle, transport them from East Africa to German Southwest Africa, a distance of thousands of miles, and deliver the first shipment, to consist of between 300 and 400 beasts, within the short space of three months.

"I can," said Hagenbeek.

He set to work without losing a moment. His two sons, together with several of his most trusted veterans, including Josef Menges, were rushed to East Africa to secure the dromedaries there. In the meantime, Hagenbeek practically invented a suitable saddle, as none of the makes available was quite what was needed, and ordered one thousand of them from Hamburg saddlemakers.

Next he chartered a steamer outright, built stalls in it for the beasts, filled it with suitable fodder, and sent it full steam ahead to East Africa. At the various ports to which the dromedaries secured by the Hagenbeek agents had been rushed the steamer picked up a total of 403 of the animals, and proceeded to Swakopmund in German Southwest Africa. On its arrival, well within the stipulated three months, only six of the beasts had perished in transit—an amazingly low number, which spoke volumes for the excellent system of the Hagenbeek organization. The other shipments followed in due course. The German Government was eminently satisfied with the handling of this remarkable order by Hagenbeek and the quality of the "goods" delivered that it promptly ordered another thousand, as per sample.

Hagenbeek was indefatigable not only in buying and selling animals but in training them, developing new methods of caring for them and looking out for every conceivable kind of novelty in the animal kingdom. One of his last achievements before his death was the creation of a model ostrich farm, where he obtained very successful results. Emperor William of Germany,

The Baldwin Camp Lamp

Gives white, penetrating light. Large 3 1/2 inches high, weighs (ready for use) 5 ounces. Burns acetylene gas. Can be fastened to cup or left, carried in hand or stood upon table.

Will not blow out—absolutely safe. No oil or grease. The Baldwin Camp Lamp with pleasure and safety to camping, canoeing, canoeing, fishing, hunting and wooding. paid a visit to this unique place and personally inspected the ostriches, big and little, which inhabited it.

NICK CARTER'S FATHER

D'ARTAGNAN, Dumas' hero, who is generally recognized as the greatest of all fictitious adventurers, appears in a long series of novels, but as compared with *Nick Carter*, the daredevil detective, the intrepid Frenchman had a sadly limited career. We have it from Frank M. O'Brien, writing in the *New York Press*, that Frederick Van Rensselaer Dey has written forty million words about *Nick*. But this character whose adventures are followed by thousands of boys—and a goodly number of men of distinction—is by no means the only one Mr. Dey has used as a hero. It is said that he writes forty thousand words a week, enough to make a novel of ordinary size, and it is not unusual for him to reel off three thousand an hour. He has used a typewriter so much that the muscles of his back and shoulders are abnormally developed. Last May Dey dropt *Nick*, supposedly for good and all, but it is not improbable that he will pick him up again, as he was compelled to do in the case of *Dr. Quartz*. *Quartz* was run down in Kansas City by *Nick Carter* and the book ended with his body dangling from the gallows. Ten years later the publishers sent for the author and said: "The public wants more of *Dr. Quartz*; go to it." Dey assured them that it was quite out of the question, because *Quartz* had long ago expiated his crime. But the publishers would not take no for an answer, and in a few days there came from the presses a story of how a cyclone had struck the city on the night after *Quartz* was hanged, lifted the roof off the dead-house, and whisked the old fend into the river. The doctor was picked up and carried ashore and it was discovered that life was not extinct. The rescuer revived him, and, as a reward for his kindness, he was slain by the old villain. Here are some of Mr. O'Brien's facts about the author, his methods and his works:

In winter he does his writing in a little office on Fifth Avenue, and you sha'n't know the number. His name isn't on the door and he doesn't welcome callers. He sits there eight hours a day and writes and writes, without ever stopping to scratch his head for an idea or a plot.

"Where do you get your plots?" he was asked.

"Everywhere. One day I was sitting in a window of the Elks' Club, when it was at Columbus Circle. I saw a man, evidently a workman, come from the direction of the Park and stop at the fence that encircles the monument. He made some marks on a picket and ran away. Five

AutoStrop Safety Razor Co.

345 Fifth Avenue

TORONTO

New York

LONDON

NOTICE!

In the fall of 1912 we announced the policy of Guaranteeing 500 Shaves from each package of 12 Blades.

This guarantee is entirely reasonable, because the self-contained stropping feature in the AutoStrop Safety Razor makes stropping so simple and efficient that a shaver cannot resist the temptation to use it. The stropping assures long life to the blade in addition to smooth, cool shaving.

Past experience has shown that the 500 shave Guarantee is conservative.

We take this opportunity of again calling the nature of this Guarantee to the attention of the public:—"Should anyone fail to get at least 500 Shaves from each package of 12 Blades he will, upon mailing them to us, receive in return enough new blades to make good his shortage."

Creasing glasses and lenses of solid diamond, with brass chucks, tempered springs and polished hard wood handles. Shirts included with your order. Price \$4.50. Illustrated circular on request. Address: **Modern Specialty Company**, 9th Street, Bader, Wis.

minutes later another man appeared, made marks and hurried west into Fifty-ninth Street. A third man came along and did the same thing. I went down and examined the marks, which were made with chalk of different colors. I think there was a motormen's strike on at that time and these were strikers' signals. That was enough material with which to start a new story. Of course I made the plot more important than a motormen's strike. I used a South American revolution.

"Another time I was on a Fulton ferry-boat. The tide swept on up river, and as we passed under the Brooklyn Bridge an envelop came fluttering down at my feet. Some woman had tossed it out of a street car, no doubt. There was nothing in the envelope, but there was enough in the incident to form the first chapter of a thriller entitled 'A Clue from the Clouds.'

"But I never in my life have had a complete plot in my head when I sat down to write a story. I plunge into the story and let it take me wherever it naturally drifts. Each character works out his or her own destiny.

"My first long story was written for Beadle & Adams about 1884. It was 'Green Mountain Joe,' a detective story about 80,000 words long. In 1885 I wrote for *The American Magazine*, which Edward W. Bok had just started in Brooklyn, a story called 'Perfume from a Withered Bouquet.' Soon after Frank Tousey engaged me to write a series of Handsome Harry stories. These were on the lines of the Jack Harkaways, then so popular in England."

The first *Nick Carter* story was written in 1889, and the title was "Nick Carter, Detective; by a Celebrated Author." He took a contract to turn out one story a week, and kept it up, except for two short intervals, for over twenty years. "I found that I could write one story a week, all right; and I managed to make gains, besides, so that at one time I was twenty-six stories ahead of the publishers. This gave me leeway for vacations, typhoid fevers, and other pleasures," he told me.

The *Nick Carters* were at one time published serially in six-thousand-word instalments. If the readers liked them they were stretched a bit. Perhaps the most popular *Nick* was "Trailed Across the Atlantic." He wrote 90,000 words of it, and then turned his attention to other trails. But the readers wouldn't have it stop. *Nick's* adventures in the European capitals, where he was disguised as everything from the Czar to a gipsy girl, delighted them and they howled for more. The story had to be stretched, and before it was wound up it was nearly 200,000 words long.

Mr. Dey wrote, altogether, 1,076 *Nick Carter* stories. They totaled approximately forty million words, and *Nick* was in every chapter of it. Some authors let their heroes go away to eat or sleep, while villains plot and heroines are bound and gagged, but Dey knew that his readers wanted the detective close at hand all the time and he kept him there.

You might think that forty million words about one character was enough of a job for one man, but it did not satisfy Dey. While trying to kill time in between the *Nicks* he dashed off a few of the lady novels that were published under the name of Bertha M. Clay, Marian Gilmore, and

FUNK & WAGNALLS COMPANY, New York

others. He wrote short stories under forty different names. Many of these appeared under the pseudonym of Dirk Van Doren. Mr. Dey had an ancestor named Dirk Dey, who is said to have driven the first nail ever hammered into the island of Manhattan or a board thereof; and another one who preached the first sermon ever delivered in English in old New Amsterdam.

Mr. Dey has also written under the name of Ross Beekman and Frederic Ormond, and signed his own name to two novels which have sold in large numbers. He says many of the incidents in his "thrillers" are utterly impossible; he only expects them to be entertaining. He thinks detective-story writing is the art of being reasonably unreasonable. He works six days a week, and his average is eight thousand words a day. The rest of the interview follows:

"I would rather write than read. I enjoy writing a story—well, perhaps better than my readers enjoy reading it. Summer or winter I am up at daylight, and as soon as I have eaten a steak or two I am ready for the battle. In summer, when I get up at four o'clock or so, my day's work is usually ended by noon; sometimes I am done before noon. In winter I always write until noon anyway. I can't have a moment's peace of mind until the day's work is done. All I need is my faithful typewriter and a window from which I can look out upon the water, if that is possible.

"I used to dictate my stuff, but I don't any more. I did have at various times stenographers who were useful to me. I had them trained so that, when writing a Nick Carter story, a snap of my fingers indicated a paragraph mark. But these useful employees would drift away, and I got so sick of trying to break new ones in that I decided to do all the work myself. I can type without looking at the machine, and very nearly as fast as I can dictate—and with very little more fatigue. When I am prest to it I can write fiction at the rate of 3,000 words an hour or fifty words a minute. I find that from constant training my brain, or my subconscious something, keeps about 600 words ahead of the machine. The mind is blazing the trail and paying no attention to the work of the hands. Typewriting has many advantages over writing by hand. I make a capital G with one touch of the finger. Writing it with a pencil requires about five motions.

"What do I read? Everything. I have always been an omnivorous reader. Nowadays I try to read almost everything in the way of fiction that is published, but I'm sorry to say that I find very few that are so interesting that I can finish them.

"I have read 'Charles O'Malley' every year for twenty years. I like all of Lever's. I also confess a great fondness for 'The Count of Monte Cristo.' Among the standard writers Thackeray is my favorite. The books of Isaiah and Job can't be beaten very much.

"I read modern stories because they are in line with my work. They teach me what the public wants to read. I think, however, that the average writer has forgotten how to bring a story to a close. It seems to be the fashion to leave the characters in the air and the reader in the dark. Still, there is an improvement over the old-

IMPORTED OLIVE OIL THE BEST IS UNDILUTED AND UNMIXED

Your physician will tell you that everybody above forty should regularly use pure olive oil. Italian olive oil is generally recognized as the best and has the rich amber yellow color. It is heavier than the French oil of the greenish tint. The part of the Italian country which produces the choicest olives is Lucca, and it is this oil which has the highest nutriment value.

Many of the American oils are mixed and diluted, but even when pure cannot be as good as the pure Lucca oil for the very simple reason that the American trees have all been transplanted from abroad and cannot therefore produce "virgin" oil, which is always in a class by itself.

Because of the extreme richness of pure Lucca Italian Olive Oil, it has been found desirable to put it up in grape capsule form so that the oil might be taken easily and tastefully. Only the highest quality of the oil is contained in these grapes; the absolute purity and superior quality of the oil in them has been maintained by the Italian maker for the past ten years. They are made by the Grape Capsule Company of 108 Fulton Street, New York (who are also the makers of Ricinol Grape Castor Oil), in boxes of twenty-four, for twenty-five cents, and one hundred for a dollar. For trial purposes they offer to send a liberal sample and their literature for ten cents to cover cost of postage. These grape capsules are known as

Olive Oil & Grape
In Capsule Form
"Nature's Food"

fashioned novel, in which you have to wade through half a dozen chapters before anything at all happened.

"My other amusements? Sailing and fishing. I discovered the Sunapee trout, and I once held the record for casting three flies on a nine-foot leader. As a collector, my specialties are elephants and editors."

Mr. Dey was admitted to the bar in the same class with Judge Warren W. Foster, who is a great friend of the author, but Dey found literature more alluring than the law. He gave up practice in 1887.

Nick Carter has had some celebrated readers.

"While on a train bound for Washington some years ago I came across Senator Hoar reading one of my latest," said Dey.

"He confest he was a regular subscriber, and I sent him some autographed copies bound in morocco. Thomas B. Reed was another constant reader of the Carters, and I was always sure of an audience with him when he was Speaker of the House if I sent in that name.

"When Mr. McClellan was mayor he called me into his office one day and told me that he and his friend, Cass Ledyard, read the stories with delight and never missed an issue. I had his name entered upon the complimentary subscription list at once. He told me, long afterward, that he never started for his home in Princeton without a Nick Carter in his pocket. Lieutenant William Kennell has figured, by the way, as one of Nick's chosen friends and helpers."

A HUMAN DUMMY

WAX figures that represent human beings are plentiful everywhere, but men who pose as wax dummies are rare. Jay O. Turner is one of the few men who make a living that way. He poses in show windows, and it is said that he can stand for hours and hardly "bat an eyelash," even when passers-by resort to all sorts of devices to make him laugh or move. He told a reporter for the *Kansas City Star* that he would give a comparatively large sum of money to any one who could make him laugh when he did not want to. Turner lives in New York most of the time, but has posed all over the country, from New York to San Francisco and from Duluth to New Orleans. We read in *The Star*:

Turner gets \$75 a week for posing in store windows as a man of wax, and the work day is four and one-half hours. Sometimes Turner has worked as long as six and one-half hours when he was feeling good, but that is a long time to remain motionless or rigid, and he does not attempt it for that length of time unless conditions are favorable. Since he began posing as a wax figure and mechanical man he has not taken a drink of liquor, nor a chew of tobacco, nor has he smoked a cigar except in the performance of his act. Steady nerves are needed for work of this kind, and Turner says he is afraid if he does any of these things his nerves will go back on him and he will lose his

At Last! A Perfect Vacuum Cleaner

at a Price within the Reach of All

YOU can now buy an efficient Vacuum Cleaner at a small price. The "Household" Vacuum Beater will clean your rugs and carpets as effectively as higher-priced machines of any style or type. A powerful suction gathers every speck of dirt into a dust-proof bag concealed within the machine. The "Household" is light, easy to use and has no cumbersome hose, nozzles or other extra parts. A child can operate it.

The "Household" Vacuum Beater is equipped with "beaters" (our exclusive patent), which loosen the dirt and bring it to the surface of the carpet where it is sucked into the machine. Machines fully guaranteed. Money back if you are not entirely satisfied. Order today and make house-cleaning easy. Or write for free catalog and further particulars. \$75 a week. Also when he is working as a wax figure he sleeps regularly and allows nothing to interfere with his rest. Eight hours of sleep he requires, and never fails to get it.

Turner was born in St. Joseph, Mo., and has been in the theatrical and business allied to it all his life. He began his career as an usher in the Tootle Theater in St. Joseph, for which he received no pay, but got two passes each week. He was then thirteen years old.

Altogether Turner has been twenty-five years before the public. Leaving St. Joseph he went to New York and for years he was with Barnum & Bailey's Circus and made trips abroad with amusement enterprises. He has been an announcer, an expert whistler in the band, and can whistle two notes above a brass band. He has been with amusement enterprises at Coney Island and Brighton Beach and other resorts around New York. He appeared in *poses plastiques* in the "Creation," in Dreamland, at Coney Island.

Turner got the idea that he could impersonate a wax figure one day in New York nine years ago as he stood in front of the display of a photograph gallery. There was an enlarged photograph in the collection with particularly set features and staring eyes, a perfectly rigid pose. Turner had heard of Frozo, the originator of the stunt, and he had heard of another man in California who was doing a similar performance, but as a profession it had never occurred to him to go into it. The photograph set him thinking, however, and he decided that a real man who could look like that photograph would make a real sensation. Turner did not spend a long time in practice, but started out to get an engagement, altho he had never done the act. When he got his original engagement and went into that window he was so nervous for the first five minutes that he felt himself getting white. After five minutes he said to himself, "Old chap, you are as good as anybody who ever did this act." He never has had any trouble since. Turner says that to some extent the secret of rigidity is the control of mind over matter, the will to do the thing. In preparation for going into his wax-figure state, Turner throws all of his muscles into a rigid position. Long practice has given him perfect control of every muscle, including those of the eye, which are the most important of all, for during his act Turner must not permit his eyeballs to move a hair's breadth. If he did it would cause him to wink and the illusion would be dispelled. Turner says there are "Frozos" who can do the act perfectly, with the exception that they must "bat" their eyes. These are "would-bes," he says. There are only about twenty-five of these wax-figure men in the world, Turner says.

Show-girls and circus showmen usually do a whole lot of things to their faces before going before audiences, but making up is to them a light task compared with what it is to Turner. To proceed:

It takes Turner an hour and forty-five minutes to make up, and it takes him from forty-five minutes to an hour to remove his make-up. First, he applies cold cream and then three kinds of grease paint and two kinds of theatrical make-up pow-

der. Over the whole he sprays cold water, which congeals the paints and converts them into wax. After the wax is hardened and his face dries the surplus powder is dusted off and the wax effect is obtained, and he goes into the window. Turner says he is the only "Rigo" who does not wear a wig. He has a secret process he says which makes the hair in his head and around his eyes appear to be embedded in wax. Turner's face with his make-up off appears almost ashen, due to the application of the make-up through many years.

Turner does two kinds of wax acts. One is a demonstration act in a store window, in which it is necessary for him to lift his arms with a jerky effect, and to throw his head forward and backward in a bumpy way like a wax doll. Another is to sit motionless for hours holding some article in his hand in a natural position. For example, one of Turner's stunts is to sit at a soda fountain with a glass clasped in one of his hands, which rests upon the marble counter. This is the human-dummy act. He will sit there for an hour and never move a muscle. Persons will come in and say, "Don't sit there; that is a dummy there."

On one occasion a wax museum at Brighton Beach had the wax figure of a policeman in front of its place. As a jest, Turner walked up in front of the policeman, placed one hand of the wax figure on his shoulder in an attitude of arrest. A woman and two children came by. "Oh, mother, see the funny wax policeman arresting the wax man," one of the children said. Just as the woman turned Turner fell forward in his peculiar, staring, bumping way. The woman fainted.

Turner is able to make up as a wax figure, and start himself into a crowd as if he had been wound up. He will walk with his legs perfectly rigid as a wax doll might, and he can walk into a crowd without batting an eyelash. The crowd always parts and make way for him. There is something uncanny about the performance that always gives him the right of way.

On one occasion in a Kansas City drug-store Turner was behind the counter finishing his make-up when a doctor came in. Turner was motionless and the doctor walked up to him and inquired for some article. Then the doctor saw that he had addressed a dummy, and asked the clerk what he was doing with a dummy behind the counter.

"It's a wonderful imitation," said the doctor. After making his purchase the doctor walked to the door and looked around, when Turner waved his hand at him. The doctor's face was a study.

"I have had them tell me all kinds of funny stories in order to make me laugh and break my pose," Turner says. "They have even tickled my bare feet. I have had them hold lighted matches as close to my eyes as it is possible to do without burning the wax or my eyelashes. But it can't be done. I won't smile or wink. The secret of this is that I simply concentrate my mind on one word. That word is 'no.' I have that word on the tip of my tongue; I think of nothing else. I keep repeating it over and over in my mind. If for one instant I should stop, and my mind should grasp the trend of the story, I would laugh. But I never permit myself to get that one word out of my mind."

After an hour and a half, Turner can

rest for ten minutes, and after this relaxation he can go at his work again.

One of Turner's stunts is to smoke a cigar as a wax figure, lifting the cigar to his lips with the jerking, bumping, irregular motion of a wax arm. He can smoke the cigar without the twitch of a muscle by a process of suction. The smoke he expels without the movement of a muscle, while the hand drops by degrees as if it had been wound up.

Turner says the ability to impersonate a wax figure is a gift of nature; that human wax figures are born, not made.

THE SPICE OF LIFE

A Diplomat.—**SHE**—"Jack, when we are married, I must have three servants."

HE—"You shall have twenty, dear—but not all at the same time."—*Answers.*

Clever.—"I had a poet on one side and a millionaire on the other."

"What did you talk about?"

"I talked to the poet about money and to the millionaire about the intellectual life."—*Life.*

Her Reason.—**CURATE**—"I am glad to see you come so regularly to our evening services, Mrs. Brown."

"Yus. Yer see, me 'usband 'ates me goin' hout of a hevening, so I does it to spite 'im."—*Punch.*

Obliging.—**KNICKER**—"Did you move to the country in order to bring your children up to play on the grass?"

SUNBURN—"No; so that the real-estate agent could bring his children up decently in the city."—*Brooklyn Life.*

One Chance Left.—"What a lively baby!" said Flaherty. "Have ye had his picture took yet, I dunno?"

"Not yet," said Fogarty, the proud father. "We thried to, but afther an hour's lost labor the photygrafter rayferred us to a movin'-picture studio."—*Lippincott's.*

More Ancient.—"They say that chess is the oldest game," remarked the Old Fogey.

"Poker is older than chess," said the Wise Guy.

"How do you know?" asked the Old Fogey.

"Didn't Noah draw to pairs on the Ark and get a full house?" replied the Wise Guy.—*Cincinnati Enquirer.*

A Keen Thrust.—"Edward Everett Hale," said a lawyer, "was one of the guests at a millionaire's dinner."

"The millionaire was a free spender, but he wanted full credit for every dollar put out. And, as the dinner prograst, he told his guests what the more expensive dishes had cost. He dwelt especially on the expense of the large and beautiful grapes, each bunch a foot long, each grape bigger than a plum. He told, down to a penny, what he had figured it out that the grapes had cost him apiece. The guests looked annoyed. They ate the expensive grapes charily. But Dr. Hale, smiling, extended his plate and said:

" 'Would you mind cutting me off about \$1.87 worth more, please.' "—*Chicago Record-Herald.*

You can tell the Genuine

by This Wood Core.

There is only one "Compo-Board."

It's the only "wall-board" made with wood slats as the center core. There is none other like it.

"Compo-Board" is not a generic name for all Wall Board; it's our trade name.

Unfortunately other substitutes for lath and plaster sometimes are accepted as "Compo-Board."

"Compo-Board" is easy to get as it is sold by dealers in every town.

It is easy to be sure you get "Compo-Board" because you can easily identify the wood core.

Just this little precaution will make a wonderful difference in the finished job.

It is stronger, more durable than lath and plaster, or any of its substitutes. Impervious to cold, heat and moisture. Its smooth surface can be decorated with paint, kalsomine or wall paper—with or without panels. It's the only wall board on which you can safely use wall paper.

Send for Sample

Send for actual sample of Compo-Board, put it to any test that you wish in comparison with other wall boards. Sold in strips four feet wide and one to eighteen feet long by dealers everywhere.

Chats with Children of the Church

By Dr. James M. Farrar, of Brooklyn

To stimulate the attendance of children at church, Dr. Farrar has organized a junior congregation with special services adapted to boys and girls. The plan is remarkably successful and has received wide commendation. This book contains 52 of the delightful sermonettes which Dr. Farrar has addressed to his junior congregation. Pastors, church organizers, mothers, and others interested in church and in children should find them entertaining and helpful. \$1.20 net; by mail \$1.30.

A Lasting Contribution to Political Literature

By **Factions—Tactics—Tacticians—Delegates—Resolutions—Debate—Oratory—Platforms—Steam—Rollers—Candidates—Cartoons—Leaders—Rules—Proceedings—ALL THINGS** that go to make up the excitement, the success or failure, of great political conventions, are noted and treated in the new book,

(C) Underwood & Underwood

A Tale of Two Conventions

By **William Jennings Bryan**. This book is an account of the recent Democratic and Republican Conventions at which he was present, with an outline of the National Progressive Convention. In addition to Mr. Bryan's lively comment on the daily proceedings of the conventions, the book contains the platform of each party, the important convention speeches, etc., etc., and forms a work well worth preserving.

12mo, Cloth. Illustrated.
Price \$1.00 net; postpaid \$1.10

Give Your Boys and Girls

the knowledge of sex they would demand from you could they but know the dangers which confront them.
Before they obtain wrong and incomplete impressions from sources outside the home, give them the proper viewpoint by placing in their hands

The Mysteries of Life Series

Four widely commended volumes by ISABELLE THOMPSON SMART, M. D.

They tell with proper delicacy and restraint, yet simply and plainly, the story of the mystery of life; and impart with powerful subtlety an abhorrence of all that tends toward even the slightest lowering of the highest sex ideals.

Warmly recommended by Judge Ben B. Lindsey of Denver, Edward Bok, of the Ladies' Home Journal, Rev. C. H. Parkhurst,

New York: Rev. Francis E. Clark, Pres. United Society for Christian Endeavor; Charles W. Eliot, ex-President of Harvard; and many other eminent authorities.

Four Volumes: What a Father Should Tell His Little Boy; What a Father Should Tell His Son; What a Mother Should Tell Her Little Girl; What a Mother Should Tell Her Daughter.
Place these in the hands of your children and they will reap a lasting benefit.

Small 12mo. Cloth. Price 75c. per volume. All Four for \$2.50.

FUNK & WAGNALLS COMPANY, Publishers, NEW YORK and LONDON

Proof.—**MARIE**—"Are they in love?"
MAZIE—"They must be; she listens to him describe a ball game and he listens to her describe a gown."—*New York Telegraph.*

Hint to the Married.—**STELLA**—"Some say the high cost of living is due to lack of producers."

BELLA—"I find the best way to make 'em produce is to go home to mother."—*New York Sun.*

Too Practical.—"Never count your chickens before they are hatched."

"Of course!" sneered Mr. Crosslots. "You're another of those people who want to take the chief pleasure out of the poultry business."—*Washington Star.*

Disappointed.—"Come in and have it charged," was the inviting sign in front of a place of business in a Jersey town. A stranger, being somewhat low in funds, walked in briskly.

"I understand that I can get things charged here," he said, addressing one of the employees.

"Only storage batteries," replied the other man.—*Judge.*

His Kind.—A traveler who believed himself to be sole survivor of a shipwreck upon a cannibal isle hid for three days, in terror of his life. Driven out by hunger, he discovered a thin wisp of smoke rising from a clump of bushes inland, and crawled carefully to study the type of savages about it. Just as he reached the clump he heard a voice say: "Why in hell did you play that card?" He dropped on his knees and, devoutly raising his hands, cried:

"Thank God, they are Christians!"—*Everybody's.*

Particularizing.—A witness in a particular case had been examined by the lawyer of the plaintiff and was turned over to the lawyer for the defense for cross-examination.

"Now, then, Mr. Smith," began the legal one, "what did I understand you to say that your occupation is?"

"I am a piano finisher," answered the witness.

"Yes, I see," persisted the lawyer; "but you must be more definite. Do you polish them or do you move them?"—*Philadelphia Telegraph.*

Sad Ignorance.—Assistant District Attorney Clark was conducting a case in the Criminal Court. A large, rough-shouldered negro was in the witness-chair.

"An' then," said the witness, "we all went down in the alley, an' shot a few craps."

"Ah," said Mr. Clark, swinging his eyeglass impressively. "Now, sir, I want you to address the jury and tell them just how you deal craps."

"Wass that?" asked the witness, rolling his eyes.

"Address the jury, sir," thundered Mr. Clark, "and tell them just how you deal craps."

"Lemme outen heah," said the witness, uneasily. "Firs' thing I know this gem-man gwine ask me how to drink a sandwich."—*San Francisco Argonaut.*

Its Job.—One-half the world spends half its time trying to find out how the other half lives.—*Cincinnati Enquirer.*

A Dead Shot.—"I never saw a girl that could hit anything she threw at."

"Well, you never saw my girl throw a hint."—*Indianapolis Star.*

No Time.—"Have you ever had nervous prostration?"

"No. I work for a salary which stops when I'm not on my job."—*Chicago Record-Herald.*

Discarded.—Women who spend most of their time trying to improve their complexions never think of the old-fashioned method of steaming it over a washtub.—*Chicago News.*

Catty.—"My husband," she said, "always wants me to look my best, no matter what the cost."

"Well," her friend replied, "one can hardly blame him for feeling as he does."—*Chicago Record-Herald.*

Strangers.—"I suppose you are well acquainted with the star of your company?"

"Never met him," replied the press agent. "A successful press agent must be an idealist, not a realist."—*Washington Star.*

A Bible Story in Slang.—Evangelist "Billy" Sunday, who has been conducting a series of revival meetings in Wilkesbarre, Pa., recently gave his version of the encounter between David and Goliath as follows:

Saul and all of his sons except David went off to war; they left David at home because he was only a kid. After a while David's ma got worried. She wondered what had become of his brothers, because they hadn't telephoned to her or sent word. So she said to David, "Dave, you go right down there and see whether they are all right."

So David pikes off to where the war is, and the first morning he was there out comes this big Goliath, a big, strapping fellow about eleven feet tall, who commenced to shoot off his mouth as to what he was going to do.

"Who's that big stiff putting up that game of talk?" asked David of his brothers.

"Oh, he's the whole works; he's the head cheese of the Philistines. He does that little stunt every day."

"Say," said David, "you guys make me sick. Why don't some of you go out and soak that guy? You let him get away with that stuff." He decided to go out and tell Goliath where to head in.

So Saul said: "You'd better take my armor and sword." David put them on, but he felt like a fellow with a hand-me-down suit about four times too big for him, so he shook them off and went down to the brook and picked up a half dozen stones. He put one of them in his sling, threw it and soaked Goliath in the coco between the lamps, and he went down for the count. David drew his sword and chopped off his block, and the rest of the gang skiddooed.

Evangelist "Billy" apparently believes the plain people want rag-time salvation.—*Chicago Record-Herald.*

Niagara Falls is in your pathway

THE Beauty, Grandeur and Power of Niagara attract visitors from every part of the earth.

Have you seen Niagara Falls, with its wonderful gorge and exciting whirlpool?

When you travel Westward or Eastward by way of the New York Central Lines, Niagara Falls is in your pathway.

Special privilege is cheerfully granted to all our passengers.

An illustrated booklet with a most comprehensive map of the Niagara Falls district is mailed free for the asking. Address: Travel Bureau Room 2014 Grand Central Terminal, New York.

A Perfect Sectional Bookcase at a Moderate Price

We have long been striving to perfect a Sectional Bookcase that should be good in quality, attractive in appearance and satisfactory in use, and at the same time, be made in price—now which should have all the advantages of the most costly and yet be within the reach of modest pocketbooks.

The Melton-Rhodes Sectional Bookcase is made with the utmost care of the finest quarter-sawn oak or mahogany, with mending glass doors that let in light and keep the dust out, but which slide easily and cannot break.

Price per unit Section  **\$2.75** Freight Prepaid

Your choice of Mahogany, Walnut, Early English or Weathered oak or mahogany. Top Section (unit 1) with mending glass door, \$1.95. Middle Section (unit 2) \$2.25. Base with glass doors \$2.50. Total per unit \$4.50. Unit 4 (Double Section) \$3.25.

Sympathy.—"Madam," said Plodding Pete, "I once had a wife and family, but I couldn't be contented, so I left home."

"Well, here's a chicken sandwich for you. Mighty few husbands are so considerate."—*Chicago News*.

Different Make-Ups.—"All the world's a stage," said Mr. Stormington Barnes.

"Yes," replied Senator Sorghum. "About the only important distinction to be noted is that some of us have to make up our minds instead of our faces."—*Washington Star*.

Blaming Underwood.—"I'll never vote the Democratic ticket again," said the pessimist.

"What's the matter?" asked the Optimist.

"Why, they have decided to reduce the tariff on plush photograph albums to 25 per cent."—*Cincinnati Enquirer*.

Even.—AFFABLE PASSENGER—"Indeed, and you are a music-hall artiste! I am a banker, and I think it must be at least twenty years since I was in a music-hall."

MUSIC-HALL ARTISTE (regretfully).—"And I am quite certain, sir, it's twenty years since I was in a bank."—*Sacred Heart Review*.

CURRENT EVENTS

Foreign

April 24.—Austria, in a note to the Powers, says they must compel the Montenegrins to give up Sarajewo or she will do it alone.

Director Hugenberg, speaking for the Krupp interests, denies Dr. Liebknecht's charges that the company corrupted German war officials in order to increase its sales of war materials. He says that if any bribing was done, the company knew nothing of it, and the briber spent his own money.

April 28.—The Five-Power loan agreement is accepted by the Chinese Government.

April 29.—Austria tells King Nicholas that if the Montenegrins do not evacuate Sarajewo by May 1, war will be declared.

Domestic

WASHINGTON

April 26.—Senator Kern's resolution for a Federal investigation of the West Virginia coal strike is reported favorably.

April 27.—The Senate Committee on Education and Labor agrees to report favorably the nomination of Charles P. Neill to be Commissioner of Labor Statistics. Early in the session Neill's nomination was rejected by the Democrats in the senate.

April 29.—The Senate Canal Committee postpones further consideration of the Panama toll question until the regular session of Congress.

GENERAL

April 25.—The Bethlehem Steel Company buys the Fore River Shipbuilding Company's plant at Quincy, Mass., and, press dispatches say, will enter world competition as a builder of complete battleships.

Forty-one persons are recognized by the Carnegie Hero Fund at Pittsburgh.

The striking miners in the Paint Creek district of West Virginia accept terms proposed by Governor Hatfield.

April 27.—A break in the Mississippi River levee at Kansas, La., causes 900 square miles to be inundated and 20,000 people to be driven from their homes.

April 28.—Secretary of State Bryan addresses the California Legislature, advising delay on the proposed antialien land law to allow the State Department to make a new treaty with Japan or the appointment of a commission to treat the subject with President Wilson.

April 30.—The California Senate passes an antialien land bill against the advice of Secretary Bryan.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnall Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"M. C. M." Carlisle, Pa.—"Kindly give me the pronunciation of the Irish names *Synge* and *Deidre*; *Synge* being the name of the dramatist, *Deidre* the name of a poem by Mr. Yeats."

The name *Synge* is pronounced just as the English verb *singe*. *Deidre*, as a Gaelic (or Welsh) word, would be pronounced dayee'-dray (*ayee* being the sounds heard in *day* and in *red*, pronounced close together as a diphthong. This diphthong is the vowel of the first syllable, and receives the accent).

"O. C." Manati, Porto Rico.—"Kindly tell me what the private name of George V. of England is."

In the Brockhaus "Konversations-Lexikon," under the term *Wettin*, one finds the statement: "From this, i. e., from a castle in the Merseburg region of Prussia, the *Wettin* family took its name, from which . . . the royal houses of Great Britain, Belgium, and Portugal . . . are descended." The family-name of George V. is, therefore, *Wettin*.

"C. M." New York, N. Y.—"What is the best opinion to-day concerning the propriety of terminating a sentence with a preposition?"

A preposition is a good word to end a sentence with—as good as any other word of its weight or force. A writer or speaker is at liberty to end a sentence with a preposition provided that such arrangement does not lead, at the close of the sentence, to an unpleasant or weak accumulation of unstressed syllables. Occasionally, it will be found that (with euphony being assumed) the arrangement which ends with a preposition is less dignified than another; but more frequently it will be found that it is more forcible because more natural to let a relative clause end with a preposition: "He was betrayed by the very thing that he trusted in."

"E. H. S." Chicago, Ill.—"What is the correct form, when writing, to address a cabinet officer of the United States?"

The correct form of address for a member of the President's cabinet is "The Honorable the Secretary of State," or "The Honorable John Smith, Secretary of State"; and letters should begin: "Sir." Address the President of the United States as "His Excellency the President of the United States," letters beginning: "Mr. President," or "Sir."

"E. T. P." San Francisco, Cal.—"(1) Which of the following sentences is correct? 'I had better go to-day,' or 'I would better go to-day.' (2) Is it correct to say 'I had just lain my book aside'? Is *lain* ever transitive?"

(1) Both are correct. "I had better go" makes use of a long-established English idiom; *would better* is felt by some persons to be the more logical construction, but these critics of *had better* have, in the eyes of many of us, the look of purists.

(2) *Lain* is the past participle of the intransitive verb *lie*, and should never be used as a transitive verb. The verbs are: transitive, *lay*, *laid*, *laid*; intransitive, *lie*, *lay*, *lain*.

"I. M. J." Cincinnati, Ohio.—"In THE LITERARY DIGEST, for August 10, 1912, page 214, first column, last line, occurs this wording: 'But our Government are in some sort.' Is the plural form of the verb correctly used?"

The quotation is from an English paper, and refers to the English "government." The term is one applied specifically to the cabinet—the prime minister and his associates. The plural is used because, in this sense, *government* is a collective noun (like *cabinet*) and the group of men who compose it is thought of and spoken of as plural. "Our Government" in the quoted passage is equivalent to "our governing ministers." This is the established usage in Great Britain and the British colonies.

The Tower of Babel is Still Standing

DO you realize that 4000 years after this most wonderful of all towers was built by the ancients (according to the Book of Genesis about 2400 B. C.) its seven stages still rise high above the plains near the site of Babylon? Until a few years ago it had been known as the Mound of Birs Nimrud when Sir Henry Rawlinson discovered in one of the stages the inscribed cylinders which made the identification possible. Other expeditions uncovered many of the thousands of curiously interesting records and documents contained in the great work—

The Library of Original Sources

now for the first time available to the general public. **By taking over the entire unsold edition from the publishers we secured it at an absolutely unheard of bargain. So now we can offer the few remaining sets to Literary Digest readers**

**AT LESS THAN IT
COST TO MAKE THEM**

Send us the attached coupon at once, and we will tell you how to get the Library on easy monthly payments, and mail you FREE a book of rare documents—showing inscriptions of the Ancients. Remember there are only a limited number of sets, so act quickly. Mail the coupon NOW. You assume no obligation. No salesman will call. The book is FREE.

THIS MARVELOUS WORK is revolutionizing modern thought. It's turning upside down all notions and ideas. It gives the authoritative, rock-bottom sources of our knowledge on ALL SUBJECTS OF HUMAN INTEREST from the earliest civilization DOWN TO TODAY—the inside facts which the average person has never even heard of.

OVER 100 RESEARCH SPECIALISTS spent 10 years gathering the contents of this great work. Ancient and remote and forgotten civilizations in all parts of the globe were uncovered, and age-buried hieroglyphics on monuments, tablets, sun-baked bricks and palimpsests yielded their secrets; untiring workers ransacked the hidden literature of every age, ancient, mediæval and modern, to find the "original documents" that shaped the civilizations and influenced the thought and life of the world. Nothing like it has ever been attempted or thought of before. You'll be amazed at the wealth of information this unique library contains.

DO YOU KNOW that the old Egyptians, 5000 years B. C., had a Bible which they called the "Book of the Dead"?—Do you know that the Assyrian sacred literature gives the story of the Creation?—Do you know that books and newspapers were printed in Asia thousands of years before printing was invented by Gutenberg? Did YOU ever read Columbus' personal log of his great voyage—filled with strange happenings and ominous forebodings? Do you know that there occurred in Mediæval England a great Socialistic protest—the first of its kind ever known? Do you know by what unique process Harvey demonstrated that the blood does not stand still in the veins, as everyone then thought? Do you know who Machiavelli was, or what world-famous treatise he wrote?

YOU'LL FIND THEM ALL—and thousands of others equally as curious and important—in The Library of Original Sources. Every document is in the exact words of the original, translated; every contribution is from the actual eyewitness or person who took part; every idea is in the words of the thinker, investigator, discoverer or inventor.

JACK LONDON SAYS: "It is a whole library in itself. I certainly never could spare these books from my shelves."

10 sumptuous, massive volumes, bound in rich, deep red Morocco; full-page illustrations, pure silk headbands, printed in large, clear type on hand-made paper, gold tops—a triumph of the bookmaker's art.

MISCELLANEOUS

SYMBOLISM OF THE COVER DESIGN.—Our cover design represents Pheidippides, the Greek courier who ran from Athens to Sparta, about 150 miles, in two days, to ask Sparta's help against the Persians. He symbolizes the news-bringer. The painting is the work of Mr. Harold Nelson.

Stop Forgetting!

Now, What Was That Fellow's Name?
I Can't Remember Those New Terms.
I Know—But Can't Find Exact Word.
What an Earth Did He Say About It?

A Perfect Memory Is the Key to Success

The mind of the average person is filled with thousands of single unrelated ideas which waiver and fluctuate with every emotion, like the billows of the sea.

The man with a Wandering Mind can never hope to Make Good—he will always be a drop in the market—he has too many competitors. The great men of all ages were those who acquired the ability to concentrate and to memorize.

You Can Be Trained to Remember Accurately

In the business battle—meeting with each hour of every day—the ability or inability to think on your feet, to remember instantly and accurately, means gain or loss. To succeed you must be "forget-proof."

The Dickson Method of Memory Training Will

enable you to classify impressions, ideas, names, facts and arguments so as to have them ready at a moment's notice. It will train you to think on your feet, to converse in a natural, interesting way, to converse with confidence and bashfulness, to acquire easy, logical thinking. My course is not a theory, but is purely and absolutely scientific—the result of more than 20 years of close, intimate contact with students in schools and colleges and searching their developing minds for means of strengthening their memories.

I Want to Send You My Book "How to Remember," Absolutely FREE

Simply clip the coupon and mail it today. It will explain clearly the course that has raised thousands of men from failures to great successes. You can have this same training. My free book is the first step. Don't delay. Age, education, vocation or place of residence makes no difference. Send the coupon or postal today.

How to Get a Free Copy of This Valuable Book

The free edition handsomely illustrated, richly bound. Is exactly suited to meet the needs of the man or woman who desires to be a successful public speaker.

The price of this 1912 de luxe edition is \$2.00. I will, however, present a copy absolutely free to every student who enrolls for my course of memory training within ten days after reading this offer.

SEND THE COUPON OR POSTAL TODAY

A Real 1913 Car

By R. E. Olds, Designer

Here are some things which you should look for in a 1913 car. A car without them lacks things you should have.

New Features

The leading cars of this year have the left-side drive. They have electric dash lights—set-in lights—not the old projecting lamps.

They have oversize tires. Skimpy tires, which double one's tire bills, are quite out-of-date.

All cars, in such things, follow the leaders. So don't get features which the best makers have abandoned.

New Ideals

Then men today are buying cars for keeps. So the best makers now are building cars which will run for years like new. And cars which cut down upkeep.

Reo the Fifth, my latest car, shows what such cars require.

It is built of steel made to formula, and analyzed twice. The gears are tested in a 50-ton crushing machine. The springs are tested for 100,000 vibrations.

Every driving part, as a margin of safety, is giving 50 per cent overcapacity.

We use 15 roller bearings, though they cost five times as much as common ball bearings. We use 190 drop forgings to avoid the risk of flaws.

We use a \$75 magneto, a doubly-heated carburetor, a smokeless oiling system.

We build slowly and carefully—grind parts over and over—watch them through endless inspection.

Each engine is given five long tests, lasting 48 hours altogether.

We could save in our building about \$200 by using less care and less costly parts. But it would cost you in upkeep, in years to come, several times \$200.

So we give you the best we

know. Then we save you about 20 per cent on our cost by confining our output to this single model.

Thus we give you a car, built as we describe, at this matchless Reo price.

Rod Control

Reo the Fifth has our new control. All the gear shifting is done with one center rod, entirely out of the way. It is done by moving this rod only three inches in each of four directions.

There are no levers to clog the way of the driver. Both brakes are operated by foot pedals. So the driver enters from either side.

You will want this feature in your car when you see how much it means.

After 26 years spent in car building, Reo the Fifth marks the best I know. If you want the best, please see it.

Write for our catalog and we will direct you to the nearest Reo showroom. They are everywhere.

Thousands have been writing us for plans for a \$5,000 CYPRESS BUNGALOW—so here it is

CYPRESS BUNGALOW "C"

THIS IS AN EXCEPTIONALLY INTERESTING and ARTISTIC CYPRESS BUNGALOW SPECIALLY DESIGNED FOR US BY ONE OF NEW YORK'S ABLEST and BEST KNOWN ARCHITECTS

WE ADVISE IMMEDIATE APPLICATION for VOL. 8, CYPRESS POCKET LIBRARY (NEW) SENT FREE ON REQUEST TO ANY ADDRESS IN THE WORLD.

SPECIFICATIONS GO WITH WORKING PLANS and are SUFFICIENT for any competent carpenter TO BUILD FROM.

The less you are able to spend in building, the more important it is that you secure the longest possible life for your investment. The more you spend, the more important it is that your money represent a permanent investment, and not have to be spent over again in expediting repairs. CYPRESS is "the one best buy" in the entire wood market for those who care what they get for their building money. "CYPRESS lasts practically forever." CYPRESS RESISTS THE ROT-INFLUENCES which so soon destroy other woods. CYPRESS does not warp or shrink or swell like most woods—and takes paint or stain perfectly. Whether for MANSION, PASTURE-PENCE OR "LITTLE JOE OF BACK-STEPS"—remember—IF YOU BUILD with CYPRESS YOU BUILD but ONCE.

Ask our "ALL-ROUND HELPS DEPT." any question about Wood. Our reply will be frank. We recommend CYPRESS only where CYPRESS can prove itself—the one best wood for your use.

SOUTHERN CYPRESS MANUFACTURERS' ASSOCIATION
1223 HIBERNIA BANK BUILDING, NEW ORLEANS, LA.

We produce CYPRESS but do not retail it. INSIST ON IT NEAR HOME. Wide awake Local Dealers sell CYPRESS; if yours does not, WRITE US, and we will tell you where you CAN get it.

5 Big Book Bargains from our Removal Sale

Scientific Sidelights

Containing nearly 4,000 selections from the foremost scientific authors of our time. Illustrating many thousands of topics in religion, morality, politics, history, education, social progress, literature and domestic life, etc. Compiled by J. C. Ferriand, L. H. O. H. W. P. D. ex-Chief of Bureau of Chemistry, U. S. Dept. of Agriculture, Washington, D. C. One of the most valuable additions to our library. One large volume—1600 pages. Regular price \$7.00. Special Removal Sale Price—\$2.90

Historical Lights

Six thousand historical quotations—valuable for public speakers, preachers, lawyers, and writers in the press. "We have subjected 'Historical Lights' to several years' test, and found it valuable in every instance."—R. S. MacArthur, D. D., ex-President, Chicago, Ill. One volume—1600 pages. Regular price \$5.00. Special Removal Sale Price—\$2.90

The Standard Family Physician

A most valuable home reference work—valued by high medical authorities. "No home should be considered complete without it," said Dr. Thomas Hodgson, ex-President New York Board of Health. Bound in two volumes, three-quarter leather. Regular price \$4.00. Special Removal Sale Price—NOW only—\$3.95

Race Life of the Aryan Peoples

Two large, attractive volumes, telling the history story of the history of the Aryan Race. Beginning with the Aryan period, for taken up to order for people, customs, race, habits, Southern and Western Europe, and from time to time, which has resulted in what we know of modern civilization. A volume of interest to all readers of history and average readers. The story grips you hard—while told in a narrative like a novel. Regular price \$4.00. Special Removal Sale Price—\$2.90

Hawaii: Our New Possessions

An extremely interesting description of the people, customs, and habits of the Hawaiian Islands. A wonderfully fascinating book. "The volume about the island is a masterpiece of Hawaii plan any better published. Superb illustrations show the way without the aid of the accompanying text."—The Independent, Chicago, Ill. Illustrated. Large volume—1600 pages. Regular price \$4.00. Special Removal Sale Price—\$2.90

Only a few copies left of this book in stock—and at these prices only a few more will be available. Write at once.

FUNK & WAGNALLS COMPANY, 44-60 East 23d Street, New York

We want the name of every young man who is ambitious to

BE A LAWYER

and we want to hear from every BUSINESS MAN who wishes that he knew BUSINESS LAW.

Write today and let us tell you how we have made lawyers of hundreds of young men just like you, and equipped business men with a legal training that has been of immense benefit to them. This School, founded 23 years ago, has graduates who have passed bar examinations in every state in the U. S. Courses endorsed by Bench, Bar and Business Men.

STUDY LAW AT HOME

Learn about (1) our Complete College Law Course, which fits for practice, and (2) our Complete, Practical, Business Law Course for Business Men. Find out about the law cost, and see how easily you can obtain a thorough knowledge of the Law while continuing your present work. Easy Terms! Send today for handsome catalog and list of successful graduates all over the U. S. who grasp their opportunity by once answering an ad. like this.

THE SPRAGUE CORRESPONDENCE SCHOOL OF LAW
297 American Building, Detroit, Mich.

Prepare for College at Home

You can prepare for College or complete your high school work at home by our simplified correspondence courses. Our courses meet all entrance requirements; they are written by members of the faculties of Columbia, Cornell, Pennsylvania, Mass. Inst. of Technology, Harvard, Chicago, Michigan and other leading universities. The American School is one of the largest educational institutions in the world and employs an expert selection of teachers. Write for special College Preparation Booklet.
AMERICAN SCHOOL OF CORRESPONDENCE
8761 Drexel Avenue, Chicago, U. S. A.

THE SOUL.

Its Organ and Development. By Carl J. W. Conley, M.D. Just published. Scientific and educational. Astonishing new discovery—first use of the brain is used for the mind. "We are really in the dark as to the reason why we have two hemispheres."—Dr. Michael Foster, Physiologist. No longer a mystery. This unusual hemisphere can be developed, now being considered for the intellectual or soul faculties, and then transformed into supernormal. Price: Cloth, \$2.00; postpaid, \$2.50. Free trial form.

Pinnacle Publishing Co., 222 W. 34th St., Los Angeles, Cal.

Talk Or Write To Anybody

anywhere in the world—no matter what their national language is. LEARN ESPERANTO—the great International language. Our Text-Book will teach it to you in six weeks; the time required for any other language. 308 pages, cloth; \$1.00 Postpaid.

THE AMERICAN ESPERANTIST CO., Inc.
Dept. 5, West Newton, Mass. (Boston Postal District)

SOCIALISM

The question of the hour. Read both sides. A book in which the most widely circulated political paper in the world, after the Sunday edition, 25¢ six months. Address BOX 7, GIRARD, KANSAS.

A GOOD INCOME and INDEPENDENCE in Poultry Raising

pleasant, profitable outdoor work awaits you. Learn to make, at home, from your own poultry. Experts teach you to start and manage a money-making poultry business. **WE TEACH YOU SET YOU UP IN BUSINESS** at once. For \$10.00 home outfit, equipment and select flock price. Twelve lessons—only \$25.00 poultry plants. Details on special illustrated Booklet, FREE. Offer limited—write today. **PARK HEDGE SCHOOL OF POULTRY CULTURE**, 3000 N. 1st St., Chicago

Two Great Books on Character Building

The Education of The Will

By JULES PAYOT, Ph.D.

Educate Your Will. Dr. Payot shows how one may begin to educate the will, and how the habit, once formed, will grow stronger each day. He is no theorist; he is intensely practical.

"His treatise is the most thoughtful, the most systematic, and, if we may so express it, the most business-like we know of."—*New York Evening Sun*.

"It must be declared in uncompromising terms that this is a valuable, perhaps a great book. . . . In this haphazard, nervous age such a book as this is a tonic. It preaches the gospel America needs."—*The Brooklyn Times*.

Cloth. 450 pp. \$1.50 net; by mail \$1.60

The Education of Self

By Dr. PAUL DUBOIS, author of many STANDARD works on mental science

"This book shows the priceless value, mental, moral and physical, of the habit and power of self-control. It tells the ordinary man or woman just how to go to work and how to continue, in order to secure the benefits of such a valuable habit of life. The discussion is always philosophical and charmingly direct and personal."—*New York Times*.

"Such a work by so eminent an authority is certainly needed in this age when nervous debility and consequent lack of self-control are so prevalent. Succinctly stated the cure for the individual deficient in self-control from any cause is to be found in the carefully formed determination to govern ourselves—to be masters of our own thoughts and actions. Dr. Dubois offers valuable suggestions to this end."—*Overland Monthly*.

Cloth. 350 pp. \$1.50 net; by mail \$1.60

FUNK & WAGNALLS COMPANY, New York, N.Y.

New Books of Varied Appeal

A GUIDE to the MONTESSORI METHOD

By ELLEN YALE STEVENS

An interpretation of Montessori's Method for American parents and teachers, this book is not meant to take the place of Montessori's own—nothing can do that; but it does explain the method step by step.

It gives directions as to the use of the material, an exposition of the psychological basis, suggestions regarding American conditions, and a view of Montessori's deeper message. Miss Stevens is a graduate of Columbia and Chicago, has observed Montessori's schools in Rome, and has had long teaching experience. Illustrated, \$1.00 net; postpaid \$1.10.

To be published in June:

PEDAGOGICAL ANTHROPOLOGY

By MARIA MONTESSORI, M.D.

The foundation of Montessori's ideas. Meant primarily for teachers, but the well-informed general reader can appreciate it. Quarto, with illustrations, diagrams, etc., \$3.50 net; postpaid \$3.75

TALES of the MERMAID TAVERN

By ALFRED NOYES

Interesting stories, some humorous, some tragic, told strongly and delightfully in solid, manly verse by a master. "The Mermaid Tavern" was the gathering place of Shakespeare, Ben Jonson, Marlowe, Raleigh, and other famous Elizabethans.

"Noyes takes his place undeniably and triumphantly among the masters of English literature."—*N. Y. Times*.

Illustrated from old prints. \$1.35 net; postpaid \$1.45.

MARRIAGE and the SEX PROBLEM

By F. W. FOERSTER

Professor Foerster of the University of Zürich, writing for the general reader, opposes the "advanced" theories of Ellen Key and others and supports the Christian doctrines of the marriage relation and sex morality.

Foerster contends that the correct method of sex education is to keep attention from sexual matters instead of directing it towards them; and, that the problem of morality is one of power more than of knowledge. \$1.35 net; postpaid \$1.47.

SMITH and the CHURCH

By REV. HARRY H. BEATTYS

Why don't men go to church? This is a common-sense view of both sides of the question, which takes up the problem of Sunday recreation and comes to definite conclusions about the obligations of both "Smith" and the church. It was written to answer an essay by Meredith Nicholson in *The Atlantic Monthly*, entitled "Should Smith Go to Church." 60 cents net; postpaid 68 cents.

Notable New Novels

Owen Johnson—"The Sixty-first Second"—\$1.35 net; postpaid \$1.47.
Edna Ferber—"Roast Beef Medium"—\$1.30 net; postpaid \$1.32.
Olive Higgins Prouty—"Bobbie, General Manager"—\$1.35 net; postpaid \$1.37.
Author of "To M. L. G."—"The Life Mask"—\$1.30 net; postpaid \$1.42.

You Need Never Say "I FORGOT!"

Learn Prof. LOISETTE'S MEMORY SYSTEM

This is not some new-fangled, untried system, nor another one of the countless systems of simple mnemonics, but is founded on the *law of the mind* and has been tested now for nearly one-third of a century.

Among those who have tested it and indorse it are some of the most prominent, level-headed men of affairs here and abroad.

WILLIAM WALDORF ASTOR says: "Prof. Loissette has greatly strengthened my natural memory and I would say to my friends learn Loissette's System and no other."

THE LATE CHIEF JUSTICE WAITE of the United States Supreme Court, in commendation of Loissette's method, said: "Learn this system and you will have the power to command all book learning as well as the minutest details of any complicated system."

HARRY KELLAR, the noted magician—a man who in his profession has great need of a ready and accurate memory, says: "Loissette's teaching applies to all subjects. I particularly recommend it to all speakers, public readers, actors and writers, that they may therefrom always enjoy the luxury of never forgetting; a comfortable feeling that they can depend upon their memories."

TO REMEMBER A BOOK AT ONE READING So that at its close you are master of the entire story, the plot or the characters in it; so that you can repeat from memory the contents of each chapter, or cite the principles, facts or illustrations used in the book. LEARN LOISETTE'S SYSTEM.

TO RECALL A GOOD LECTURE Sermon or address, without any notes whatever, will be as easy as it is now to forget almost all you heard. LEARN LOISETTE'S SYSTEM.

TO LEARN A LANGUAGE is largely your ability to recall the words, the pronunciation or the idioms used. All this becomes easy when the mind is once trained to remember according to LOISETTE'S SYSTEM.

A \$25.00 BOOK FOR \$2.50 Hundreds of eminent men and women, including Presidents of Colleges, Chief-Justices of the U. S. Supreme Court and titled nobility, paid \$25.00 gladly to the author, Prof. Loissette, for the instruction given in this book, and signed a contract not to impart it. We are now in a position to offer the identical book without conditions.

An Average of TEN MINUTES Three Times A DAY will prove in six weeks a marvelous benefit to your memory. Each day you can put into practice the principles here laid down in accord with a true system of mnemonics, LOISETTE'S.

SEND FOR THE BOOK TO-DAY

The title of this book is: "Assimilative Memory; or, How to Remember and Never Forget." 12mo, cloth. Price, \$2.50 net; by mail, \$2.56.

FUNK & WAGNALLS COMPANY - NEW YORK

Three ways to buy clothes

YOU buy your clothes in one of three ways. Which do you think is the best way?

1. You may go to a custom-tailor and have them "made-to-order." You have delays; "try-ons"; you don't know what you're going to get; and if he's a cheap tailor—\$25, \$30, \$40—you don't get very much.

2. You may pick out a piece of cloth from a book of samples; send your specifications away somewhere; and wait. If the suit "makes up" as you expected, if it is trimmed as you hoped, if it fits as you want it to, you're lucky.

3. You may go to a dealer in our clothes; see them ready, not merely a piece of cloth; see how they look on you, not in an illustration or on a dummy figure; see the linings and trimmings, not merely words about them; see how the suit fits, before you buy, not after; see if it's becoming to you, not just guess at it; and take only a few minutes of your time.

This third way is right; you pay less than in 1; and get more value than in 2. You'll find our clothes at \$18 and \$20 and up to \$40 or \$50. Better look first at our \$25 suits.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 44-60 E. 23d St., New York

VOL. XLVI., No. 20

NEW YORK, MAY 17, 1913

WHOLE NUMBER 1204

TOPICS OF THE DAY

CALIFORNIA'S SOLUTION OF HER JAPANESE PROBLEM

THE JOURNEY of the Secretary of State to Sacramento to make clear to the California legislators the Administration's views with regard to the pending alien-land bills was Mr. Bryan's "first real baptism in serious diplomacy," says a Southern editor. He proved himself "a good diplomatist," too, remarks the *St. Louis Globe Democrat* (Rep.), and papers of all parties seem ready to praise the manner in which he performed a rarely difficult task. But was his mission a success or a failure? Here answers differ so radically that it may be well to take refuge in the *New York World's* conclusion that "if Secretary Bryan's errand in California was to prevent alien-land legislation, it was a failure; if it was to persuade the Californians to enact a law in harmony with our treaty with Japan, it was a great success."

The Webb Bill, which was the final result of the California Legislature's labors, after Mr. Bryan's suggestions had been politely considered, and, for the most part, as politely rejected, is not looked upon by the press of the nation as an ideal solution of the problem. Yet *The World* would congratulate all parties concerned on a temporary adjustment by which the Californian government apparently gains its point,

while Japan's treaty rights are fully recognized and no offensive terms are used. President Wilson, observes the *Chicago Inter Ocean*, "appears to have 'saved the face' of the Japanese on

the point on which they asked it to be saved, and the Californians are going to get what they want. Therefore let both be as happy as they can." To a number of papers, however, the honors of the engagement seem to be with California. Among these we find the *Houston Post*, *Detroit News* and *Free Press*, *Pittsburg Chronicle-Telegraph*, and *New York Telegraph and Tribune*. As they are summed up in the Sacramento dispatches, the principal provisions of the Webb Bill are based on the fact that the Japanese are held to be ineligible to citizenship. To quote the summary:

"(1.) Aliens eligible to citizenship may acquire and hold land to same extent as citizens.

"(2.) All other aliens are limited to the specific rights conferred upon them by the existing treaties between the United States and the nations of which such aliens are citizens or

subjects. In the case of the Japanese, the bill will bar ownership of farming or agricultural lands, while permitting them to own residences and factories, manufactories, and shops.

"(3.) Leases of agricultural land by such aliens are permitted for a period of not exceeding three years.

FACING THE LEGISLATURE AT SACRAMENTO.

From the reader's left to right stand Secretary Bryan, Governor Johnson, Lieutenant-Governor Wallace and Speaker Young.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 44-60 East Twenty-third Street, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

"(4.) Aliens ineligible to citizenship cannot inherit land. Upon the death of an alien landholder his property shall be sold by the Probate Court and the proceeds distributed to his heirs.

"(5.) The State specifically reserves its sovereign right to enact any and all laws in future with respect to the acquisition of real property by aliens.

"(6.) Present holdings of ineligible aliens are not affected, except that they cannot be bequeathed or sold to other aliens classified among those not eligible to citizenship."

It seems to *The Tribune* that this "astute and able piece of work" places the State of California "in an impregnable position so far as criticism at home or abroad is concerned." In the first place it "expressly and amply recognizes and respects all treaty rights in land."

"But in the case of aliens ineligible to citizenship (the discrimination is actually made, tho the phrase is not used) such rights are carefully restricted to those awarded by treaty. Rights in land are allowed 'in the manner and to the extent and for the purpose prescribed by any treaty now existing between the Government of the United States and the nation or country of which such alien is a citizen or subject, and not otherwise.'

"Just how much California has accomplished by this ingenious law it will remain for the courts to decide. As has often been pointed out in these columns, the treaty of 1911 with Japan by no means gives Japanese subjects full rights to own and lease land in this country. The treaty is entitled a treaty of 'commerce and navigation.' And the grant of land rights is carefully restricted. The controlling permissive phrases are, first, 'to own or lease and occupy houses, manufactories, warehouses, and shops,' and, second, 'to lease land for residential and commercial purposes.' It may well be contended that no rights with respect to agricultural land are awarded by this language.

"The great weakness of Mr. Bryan's position was that he asked a State to award greater land rights to aliens than were secured to them by treaty. On this point Governor Johnson had all the best of the argument. And by craftily granting the one thing that Mr. Bryan waived and recognizing fully our treaty obligations, the Californians placed themselves in a wholly sound and defensible position.

"We can not see how Japan has any legitimate quarrel with this new law. If she wishes larger rights for her citizens she can seek a new treaty."

But some indication that the new California legislation is not altogether satisfactory to Japan, appears in the fact that Ambassador Chinda had an official protest from his Government ready for Secretary Bryan upon his return to Washington.

The severest criticism of the Webb Bill, which Governor Johnson intends to sign after waiting to give President Wilson an opportunity to offer any suggestions, we find in a California daily, the *San Francisco Chronicle*. This paper declares the bill "foolish from the standpoint of its promoters for several reasons." Chief among these are the various avenues for litigation which are opened up. For instance:

"It assures the immediate institution of a lawsuit to determine what rights the Japanese have under the present treaty. In the present hostile attitude of the country, which must of necessity influence even the highest courts, it is very imprudent for this State to invite such a suit.

"It probably assures another suit to determine whether the Japanese are not now eligible to citizenship—a matter exclusively within Federal jurisdiction—which it is also imprudent for us to suggest at this time."

Many who agree with the *Washington Star* that Mr. Bryan's mission "failed on the main issue," think that it was not entirely fruitless, "in view of the fact that his efforts to modify the California legislation must have a mollifying effect upon Japanese public opinion and convince the Japanese Government and people that the trouble is local and not national." So it seems to the *Springfield Republican*, and editorials in the *Baltimore Sun*, *St. Louis Globe Democrat* and *Republic*, *St. Paul Pioneer Press*, and *Philadelphia Record* express the same sentiment. It is even hinted that this was the primary object of the mission and that President Wilson and Secretary Bryan are

quietly smiling at the cries of "Failure" from some hostile journals.

But if this is the case, writes Mr. John Temple Graves from Washington to the Hearst papers, the President's attitude simply strengthens the contention of Japan—

"Diplomats of our own and other countries agree that the extraordinary activity and energy displayed by President Wilson in seeking to repress or modify the action of California, is a broad confession that he recognizes the foundation, if not the justification, of the Japanese complaint."

In his final speech to the California legislature, Mr. Bryan skilfully avoided any suggestion of antagonism and even refrained from passing judgment on the Webb Bill, then assured of passage. He insisted, as he had throughout the conferences, that he was but the spokesman of President Wilson, whose purpose, he explained, has been "to confer with the legislature as to the national and international phases of the question under consideration," to confer, "as a not unsympathetic friend who desires to aid to the extent of his ability in a matter where he has not only a constitutional duty to perform, but where he may be assumed to be able to judge of the effect of legislation upon our relations with other countries." The President, continued Mr. Bryan, has pointed out things in the Webb Bill which seem to him unwise:

"The first words to which he calls attention are 'eligible to citizenship,' which are as clearly discriminating as the words 'ineligible to citizenship,' against which he so earnestly advises. In the second paragraph the property rights of those therein described are defined as they are defined in the treaty. He fears that this will raise a question of construction and involve the subject in a lawsuit that may be both irritating and protracted."

After again appealing for delay, the Secretary of State concluded with this interesting hint:

"You are fortunate in this State in having the initiative and referendum. The initiative spurs you on to do that which you believe your people want done, while the referendum empowers those for whom you speak to put their veto upon your acts if you fail to reflect their wishes. It may be assumed, therefore, that if you feel it your duty to enact any legislation on this subject at this time your people will either manifest their approval by acquiescence or their disapproval by submitting your action to the judgment of the voters by means of the referendum."

This suggestion seems "excellent and to the point" to the *Washington Times*. It would "take the better part of two years to get a referendum determination of California's own attitude toward this law."

"By that time, no matter how the vote might result, diplomacy would have opportunity to better the situation so far as possible, feeling would doubtless in considerable measure subside, and the people of Japan would come to understand the full measure of good faith with which this Government was handling its difficult part of the affair.

"After that, legal proceedings may stave off the inevitable for another long period. In the meantime, such a constitutional amendment as would obviate recurrence of such an incident, and dispose of the present one might very properly be introduced and passed."

If the Japanese wish to appeal to our courts, say the *New York Globe* and *Boston Transcript* on the Atlantic, and the *San Diego Union* and *Los Angeles Express* on the Pacific coast, let them attack "the Act of Congress denying them the right of naturalization." The *Globe* thinks it "rather ridiculous for the nation to discriminate against particular peoples in its naturalization laws, and then assert that a State may not follow this discrimination in its land laws." And the *Philadelphia Public Ledger* declares that California "has succeeded in making a test of our naturalization laws obligatory." According to our law, we are reminded,

Copyrighted by the International News Service

TEN THOUSAND REASONS FOR WOMAN-SUFFRAGE.

The parade up Fifth Avenue, in New York City, on May 3.

only "free white persons, natives of Africa and persons of African descent," are eligible to citizenship. Hence the question rises, are Asiatics white? Court decisions, it appears, have not always agreed on this point. Only lately, remarks *The Public Ledger*,

"Akhy Kumar Mozumdar, Yogi philosopher and Hindu, has been admitted to American citizenship by United States Judge Franklin H. Rudkin, whose antediluvian and genealogical investigations have led him to the conclusion that Hindus may be Caucasians, and that Mozumdar actually is one; nor is there an indication that the Judge will be impeached for his action. . . . The Mozumdar decision indicates that the threat of the Japanese to assay in our courts the elements of their own racial composition is not so meaningless as was supposed."

However the present episode may terminate, observes the *Springfield Republican*, "incidents like this are sure to strengthen the feeling that the national government should be absolutely supreme, even as against the reserved rights of the States, in all questions of international concern." And *The Republican* quotes Prof. W. W. Willoughby, an authority on constitutional law, as stating his conviction that

"the obiter doctrine that the reserved rights of the States may never be infringed upon by the treaty-making power will sooner or later be frankly repudiated by the Supreme Court. In its place will be definitely stated the doctrine that in all that properly relates to international rights and obligations, whether these rights and obligations rest upon the general principles of international law or have been conventionally created by specific treaties, the United States possesses all the powers of a constitutionally centralized sovereign state; and, therefore, when the necessity from the international standpoint arises the treaty-making power may be exercised, even tho thereby the rights ordinarily reserved to the States are invaded."

Nearly all our papers agree with the *San Francisco Chronicle* that "talk of war is nonsense." Japan, asserts the *Sacramento Bee*, "could no more go to war to-day than Jim Jeffries could reenter the prize ring and whip the youngest and strongest of the coming champions." Similar statements appear frequently, but it is also noted that Japan has recently placed an order for three 30,000-ton dreadnoughts, and the Hearst papers have discovered that "Japan will have in 1914 a fleet of battleships and armored cruisers of the all-big-gun type which will be greater than our own."

THE MARCH OF SUFFRAGE

CHAGRIN over their defeat in Michigan, at the second attempt to secure the ballot, is said to be partly compensated for by the success of the suffragists' pageant in New York on May 2 and the next day's parade in which about ten thousand women and men from various States marched. Between failure of suffrage in Michigan by a few hundred votes in November last and failure by several tens of thousands in April, the *Baltimore News* remarks that, "there is too much difference to be lightly ignored." The cause of the Michigan disaster is found by many papers in the recent action of the English militants. The *Detroit Times* says:

"It is the conduct of the militants in England that gave the brewers, the saloons, the political boss, and the allies and hirelings of the political boss a talking point which made the odds against the suffragists too great."

The setback in Michigan is welcomed by the antisuffragists, who, according to their own statement reported in the *New York Evening Post*, saw in the parade "only a remarkable falling off in popular interest in the cause." But *The Post* believes everybody else received a very different impression from "the beautiful spectacle." It continues:

"Each successive parade shows clearly how great the progress in poise and earnestness of those who take part in it. There was a quiet air of confident determination throughout which no one could fail to notice. The respectful attention of the crowd, so different from the hooting and deriding of two years ago, told its own story."

At the pageant in the Metropolitan Opera-house on the night preceding the parade Colonel Roosevelt made a straight-out woman-suffrage speech. Suffrage conditions, according to this conspicuous convert to the cause have changed enormously in sixty-five years:

"A meeting like this would have been impossible sixty-five years ago. The idea of the mastership of man over woman has changed to the idea of equal partnership and right between man and wife, and the loftiest type of family life that I know is in the homes where that equality is accepted as a matter of course. . . . In no State where suffrage has been tried has it done damage and in every State it has bettered social and industrial conditions. All the arguments against it are duplicated in the arguments against manhood suffrage a century ago."

MR. WILSON'S STORMY HOME-COMING

ANY SUGGESTION that the President of the United States lowers his dignity by coming back "to beat the gang" in New Jersey is treated as "sheer humbug" by most of the press of that State. *The Jersey Journal* (Ind. Rep.) says that the President returns to urge the fulfilment of the pledges that "he himself, in common with other representatives of his party made to the people, and that he is under obligations of honor to do all in his power to have these pledges redeemed." These pledges promise a reform of the State jury system and a commission to revise the State constitution, and they are bitterly opposed by the President's foes within his own party. For example, the *Newark Evening Star* (Dem.), owned by James Smith, Jr., of the Jersey political firm of Smith and Nugent, says that, in so far as Mr. Wilson's "demands upon the New Jersey Assembly to pass a judge-made jury bill are concerned, it will be found in the sequel that the weight of the Presidential office is not of any more effect in New Jersey than it has proved to be in California." But the latest news dispatches indicate that President Wilson is defeating the machine on both the question of the jury and the constitutional convention, which moves the *Indianapolis News* (Ind.) to say that "a man who is making such a fight is more than a national leader—he is a local leader in every community that is curst with a corrupt machine." *The News* continues:

"There is no State in the Union without a corrupt machine. The question always is whether the people shall govern themselves. The bosses and machines say that they shall not. President Wilson says that they shall. He stands for the people, and honest local self-government. The great problem of the day is to make local self-government honest, efficient, and vigorous. The problem of New Jersey is also the problem of Indiana and of Indianapolis."

"More power to President Wilson!" the *St. Louis Republic* (Dem.) cries, glorying in his courage and his earnestness for making the same fight that has already been fought for the people of Missouri against "boss-chosen juries," while the *New York World* (Dem.) maintains that President Wilson's denunciation of the New Jersey bosses fits even more aptly the Democrat Murphy and the Republican Barnes, whose "domination of the New York Legislature is more complete and shameless than

boss domination of the New Jersey Legislature." Altho admitting in all probability the failure of President Wilson's efforts with a legislature "absolutely in the control of his own party," the *New York Evening Mail* (Prog.) argues that Mr. Wilson could not have shirked the promises he made as Governor to the people of New Jersey. He may gain prestige or suffer embarrassment, but he will achieve renown in a losing fight rather than in any compromise his opportunist advisers urge. "The great experiment," is the *New York Evening Post's* (Ind.) term for President Wilson's reentry into New Jersey to assert "his party leadership." "He puts his political fortunes at hazard," observes *The Post*, and it continues:

"The risks are great. The test will be severe. President Wilson will be called a dictator. His interference will be resented. But this will not matter, if only he show wisdom in choosing his issues, and if his old courage and skill in championing righteous causes before the people do not fail him."

The *New York Globe* (Rep.) finds the advent of the President stimulating, the message he is delivering timely and sensible. His first speech, according to *The Globe*, "marks in one important respect the high-water mark of American politics. No other party leader, however candid he might be before election, has been as candid as this after election." The President's first word, the same newspaper shows, is to all political parties; his second to his own party, as when he says:

"I want everybody to realize that I was not taken in by the results of the last National election. The country did not go Democratic in November. It was impossible for it to go Republican because it couldn't tell which kind of Republican to go. The only united helpful instrument with which it could accomplish its purposes was the Democratic party, and what it did was to say this:

"There are certain things that we want to see done, not certain persons whom we want to see elevated; there are certain things we want to see administered. This great United States can no longer be controlled by special interests. Now we are going to try the Democratic party as our instrument to discover these things. If the try is not successful we will never make it again. We want an instrument in our hands by which we can be masters of our own affairs. It looks likely that this is a suitable and representative instrument; therefore we will try it." Not adopt it; try it."

If the men now in power will not serve the people, the President continued,

OLD HOME WEEK.
—Macaulay in the *New York World*.

"THAT'S WHERE YOU BELONG, MR. PRESIDENT."

JAMES E. HUSSEY.

HIGH POLICE OFFICIALS CONVICTED IN NEW YORK'S POLICE-GRAFT HUNT.

These four men, each sentenced to a year in jail, held the highest rank in the uniformed force.

"they will be swept away like chaff before the wind. Other men more honest, more active, more wholesome, with the freshness of a new age upon them, with eyes that see the country as it is—men who are cool and thoughtful and determined—will go to the front and lead the people to the day of victory. Then America will be crowned with a new wreath of self-revelation and of self-discovery, and these creatures will have disappeared like the dust in the wheels of the chariot of God."

The President's confession that the country did not go Democratic last December and his warning that power is opportunity to do as the party should, not license to do as it likes, in the judgment of the *Brooklyn Eagle* (Ind. Dem.), is "a truth or truism that will ultimately penetrate the dull consciousness of Democratic machinists in New Jersey, and will be grasped in other States which can not hope to have the prestige of the Presidency enlisted in behalf of decent politics." The *New York Journal of Commerce* understands definitely that there is a note of warning in the President's utterances "evidently intended to sound beyond the borders of New Jersey"; and the *New York Commercial* finds in the warning to his party throughout the nation that the President tries also to inject an inspiration.

That in returning to New Jersey Mr. Wilson makes good his promise not to "desert" his friends is conceded by the *New York Sun* (Ind.). But it regrets the annoyances suffered by the President at a conference, or caucus of Democratic politicians in Jersey City, where "he was handled without gloves" by a Hudson County member. In *The Sun's* opinion: "The people are pained by the spectacle, and it is doubtless the general feeling that the President should never risk a repetition of the experience. Mr. Wilson needs all his vitality for the responsible duties that he must discharge in Washington."

NEW YORK'S QUAKING "SYSTEM"

IN THE BELIEF of District-Attorney Whitman, the New York police "System" is tottering, and may fall at any moment. "When it does, it will not be a question of one little lieutenant or four big inspectors; there are bigger men who will fall with it," declared Mr. Whitman after the trial which resulted in the conviction of the four ex-inspectors, Sweeney, Hussey, Murtha, and Thompson. Full credit for this latest achievement of the District-Attorney is given enthusiastically by the New York papers, which commend his adroitness as much as his persistence in trailing the police scandal gradually closer to the man higher up. Severe criticism, on the other hand, is meted out by several editors to Mayor Gaynor and Commissioner Waldo for their conduct in the police exposure that began with the conviction of Lieutenant Becker in connection with the murder of the gambler Rosenthal almost a year ago. The conviction of the ex-inspectors, in the words of the *New York World*, "marks the beginning of the end of the System," and adds that District-Attorney Whitman is the first effective police reformer New

"HELD BY THE ENEMY."

—Harding in the *Brooklyn Eagle*.

York has produced in a generation. He has had to combat not only the System, moreover, but has had to deal with "an unfriendly Commissioner and a hostile and malicious Mayor."

In the judgment of the *New York Globe*, Commissioner Waldo, who said, "if the ex-inspectors are guilty we are perfectly delighted to have them punished," and who has dismissed them from the department, "is still apparently unaware that anything has happened." *The Evening Post* assures Mr. Whitman of the support and cheer of the public in his next step "against the police scoundrels," and hints that "if Mayor

Gaynor's soul were not above popular applause," he could get his share of it "by coming out with a vigorous announcement" of his purpose to cooperate heartily with the District Attorney. However, *The Post* is forced to admit that in the matter of police corruption, "the City Hall seems to be sicklied o'er with the pale cast of thought," and it thus analyzes the exact significance of the trial of the four ex-inspectors:

"They were not indicted for grafting. They were not on trial for bribery, the indictments against them on that charge have been found and are pending. What they were prosecuted and convicted for was a conspiracy to obstruct justice. That is only a misdemeanor, under the law, punishable with imprisonment for no more than a year. Why, then, did the District Attorney lay so much stress upon this trial? . . . The correct answer can be made only in full view of the strategy which Mr. Whitman has been steadily pursuing. This trial is only an incident in his general campaign—an immensely important and instructive incident, it is true, but rightly to be considered only in relation to what has gone before it and what is expected to come after it. The District Attorney's great objective is the inner circle of police officials who have waxed fat on the wages of sin. To break into that, to expose it to the public, to draw the net of justice about the men who sell licenses to vice and crime—this has been his chief aim in the police prosecutions."

How District-Attorney Whitman is going to reach the men at the top of the System is outlined in a review of Mr. Whitman's tactics by the *New York Press*, which says that he wanted to prove to the policemen he convicted of minor offenses that their associates could not save them in "even so relatively slight an emergency as one calling for a sentence of only a year," and adds:

"It has been perfectly evident from the beginning that the District Attorney has been after police officials higher than patrolmen, higher than lieutenants, higher than captains. If he has proved to the police criminals whom he has convicted and to police criminals who have been associated with those now convicted, that in spite of the System he can do something worse for them, why, then, somebody is going to squeal. Wherever there are crooks and whenever it can be made sure to them that there is something bigger and stronger than the force they have always feared as the strongest and biggest thing—in this case the System—why, then, there is always in that bunch some crook that will squeal. Members of the underworld not in uniform were needed to convict criminal policemen of minor rank. To convict criminal policemen of more important rank, policemen are needed. And they will squeal."

"Every conviction," the *New York Tribune* observes, "helps to destroy the myth of the System's power to protect and punish." This sentiment is echoed by the *New York Sun*, calling the System "a fraud and a myth—a handful of evil-doers preying on other evil-doers; it sold what it could not deliver, and attained vast proportions in the imaginations of its victims and the gullibility of the uninitiate. District-Attorney Whitman has shown it up." With all due gratitude for Mr. Whitman's present successful endeavors, the *New York Evening Sun* calls to mind—

"the still larger question, the broader problem, with which many public prosecutors before Mr. Whitman have wrestled, but none have given more promise of solving. Great as is the credit that justly belongs to Mr. Whitman for past services, how infinitely larger will be his claim to public gratitude if he can uncover the connection between police corruption and political power."

On this point the *New York Call* (Soc.) says there is no prospect that Mr. Whitman's efforts to reach the men higher up or to root out police graft will be effectual. *The Call* continues:

"What will happen, then? Nothing much except what has happened before. Mr. Whitman will be made Mayor or Governor or something, just as Hughes was for exposing the insurance graft, and the police 'System' will carefully collect its shattered remains and proceed to do business as before."

MR. MELLEN'S BOOKKEEPING

IN NEW ENGLAND the newspaper editors who were so incensed at the disclosure of the New Haven's traffic deal with the Grand Trunk a few months ago now find themselves less angered than amazed at certain facts which have been appearing in the course of the Interstate Commerce Commission's Boston inquiry into the financial affairs of the New England lines. "Fearful and wonderful" they say is the bookkeeping system revealed by Mr. David E. Brown, the Commission's examining accountant. This condition is explained by President Mellen and his friends as a necessity in view of the "complicated processes of railroad integration and combination" which have been going on of late years and which they believe the future will justify. The unification of the New England railroads they consider a real blessing to that section, and the methods employed, it has been pointed out, are those of the successful Morgan school of finance, in which Mr. Mellen was trained.

But the *Springfield Republican* is not satisfied with such protestations of good intent. It declares that the "evidence of secret juggling through inside stock operations, to give the company's annual reports a fictitious appearance of financial strength, presents a very serious issue of corporation ethics and good faith with the public." The existence of "facts by no means creditable to the management" is apparent to *The Wall Street Journal*. And the equally careful *New York Journal of Commerce* is convinced that there has been "much waste of capital and overissue of stock in acquiring subsidiaries at an extravagant cost and in efforts to suppress competition and establish monopoly in New England transportation." The president of the company, it adds, "appears to have been the leading spirit in the whole business." The belief is now strengthened, says the *Washington Times*, "that an intimate relationship existed between the dazzling series of financial and intercorporate manipulations and the inefficient character of service." And the *Providence Journal* wonders if the recent shrinkage in the market value of New Haven stock is not due to "lack of confidence in the New Haven's monopoly program" and a resultant "system of financing that is mystifying, to say the least."

The examination of the Government's accountant by Mr. Brandeis at the hearing held by Commissioner Prouty is spoken of as "tearing away the veil which had hitherto concealed the operations of the New Haven Railroad." But some of the acts and conditions thus brought to light, it should be said, were later fully explained by Mr. Mellen. Figures were submitted showing an increase in capitalization far greater proportionally than the increase in revenue, and an increase of 42 per cent. in expenses in the last ten years. A large number of purchases of stock and property of competing steam and trolley roads and steamship lines were cited in which the price paid was declared to far exceed the value. The New York, Westchester, and Boston Railroad, running from New York to White Plains, cost the New Haven \$33,000,000, or about \$1,500,000 per mile. Two steamers costing \$932,000 were "broken up" to prevent their falling into the hands of competitors, and as old junk brought \$44,000. The arrangement by which the New Haven hands over its parlor and sleeping-car service to the Pullman Company is said to mean an annual loss of \$400,000 by the road. It further appears, as the *New York World* sums up the testimony, that the New Haven's "profit-and-loss surplus reported last fiscal year was in reality a deficit of \$11,000,000," and that "by failing to maintain an equipment depreciation-account common to other roads, the book surplus was wrongfully padded to the extent of \$2,300,000." One stock transaction was mentioned in which Mr. Mellen apparently made a personal profit of \$102,000.

The last charge Mr. Mellen denies on the stand, explaining that this money was paid to him, to quote the *Boston Transcript's*

HERE TO CELEBRATE A CENTURY OF PEACE.

Nineteen delegates from England, Canada, Australia, and the city of Ghent are in this country to cooperate with an American committee in arranging for a proper celebration of the centenary of the Treaty of Ghent and one hundred years of peace among English-speaking nations. The joint committees are here seen standing on the steps of New York's City Hall, after an official reception by the Mayor and a committee of citizens. Mayor Gaynor is in the center. At his right is Lord Weardale, chairman of the English delegation.

summary of his testimony, "to reimburse him for payments that he had made to the Republican National Committee (\$50,000) in 1904, \$6,500 given to Vice-President Buckland for contributions in Rhode Island, and for other expenses." As for the Pullman contract, says Mr. Mellen, "it is possible in dollars and cents to figure a loss to the road by virtue of the Pullman contract, but the economic gain, including the gain to the traveling public, in the opinion of the directors, more than compensates for a nominal loss in revenue." The New Haven's trolley lines, asserts Mr. Mellen, will pay "4 per cent. upon the total investment in the year ending June 30, 1913." President Mellen admits that he did not like the investment in the Westchester road, that the heavy investment in steamship properties was a mistake, and that he himself had favored accepting C. W. Morse's offer for them five years ago. In general, he is of the opinion that time will justify his investments, and that eventually his motives will be appreciated by a public now under the spell of his financial foes and a prejudiced press.

These statements made a good impression in Boston, according to the *Boston Advertiser*, which thinks Mr. Mellen's evident faith in his road is justified. But *The Transcript* says:

"A careful reading of Mr. Mellen's testimony fails to disclose any adequate reason for the confusing system of bookkeeping employed by his company; fails to satisfy with respect to the methods of letting certain contracts; and leaves an open question the wisdom of his policy of purchasing so many subsidiary companies at prices that appear to many as extravagant. For some of his purchases Mr. Mellen disclaims responsibility, and about others he appears to share the public's doubt."

Mr. Mellen, "for the first time in his career," as far as the *Providence Journal* can ascertain, "has publicly confessed that large sums of money have been diverted from the treasury of the New Haven road for political purposes." The great railroad system of New England, continues *The Journal*, can never be

what it should be while it "has at its head a man crazed with the notion that he owns New England, vicious in his attempts to undermine competition, and incapable of properly conducting the affairs of a great traffic organization. . . . The first measure of rehabilitation needed by the New Haven is the elimination of Mr. Mellen."

But the *Hartford Courant* insists that "nothing has come out of this humiliating drag-net business" which "reacts upon the integrity of Mr. Mellen or anybody else in the company." This daily avers that "the entire proceedings bear the earmarks of hostility and of personal animus," and thinks that Mr. Mellen is being forced out and New Haven stock is being forced down because "a New England group of financiers instead of the New York financiers propose hereafter to furnish what money the road needs."

That the lower value of New Haven securities is not due only to the financial dealings of its head is shown by this item we find in the *New Haven Journal-Courier*:

"The New Haven road adds to its already heavy burdens by the increase in the wages of its firemen amounting to \$150,000 per annum; by an increase of pay in its telegraph department of \$90,000 a year, and now, just adjusted, also is an increase of \$200,000 a year for three thousand employees in five of its subsidiary roads. All this in one week. A 6 per cent. dividend rate on the New Haven's stock seems fully foreshadowed."

The Interstate Commerce Commission's recommendations with regard to the New England railroad situation will be forthcoming after they have considered the briefs, to be handed in by lawyers acting for and against the New Haven management. Meantime, we are reminded, Mr. Mellen is under indictment for violation of the Sherman Law, and that fact may have impelled him to withhold some information, lest he disclose the line of defense to be taken at the trial.

MR. McADOO'S \$1,000,000 ORDER

THE FISCAL SYSTEM of the United States, governing deposits of Federal funds, is "revolutionized," the *Washington Post* (Ind.) declares, by the Secretary of the Treasury's new order that on and after June 1 all government depositaries, whether active or inactive, will be required to pay interest at 2 per cent. per annum upon deposits of the Government. The innovation is expected to bring into the Treasury annually \$1,000,000 clear income. Coincidentally, Secretary McAdoo authorizes the transfer of \$10,000,000 of Treasury funds to national bank depositaries in various parts of the country. The second "revolutionary" feature of the McAdoo order is that in future the Treasury Department will require United States bonds as security only for 70 per cent. of the Federal deposits carried by a national bank. Approved State, city, and county bonds will be accepted as security for the remaining 30 per cent. of the deposit, which will be credited at 75 per cent. of their market value. Never before, "except in periods of financial stress," *The Post* continues, has the Treasury "accepted security other than government bonds."

That the new Treasury policy is not due to a prospective tight money situation is the statement of Secretary McAdoo quoted by the *New York Commercial*. "It is a clear business proposition in bringing additional interest to the Government," while *The Wall Street Journal* accredits Secretary McAdoo with the belief of some years standing, "that nothing can justify the withholding from public use of the enormous amounts of money which have been held by the Treasury Department." Adding to the volume of deposits now held in the national banks, in the opinion of the *New York Journal of Commerce*, "makes a welcome increase in the cash means of certain places."

The *New York Times* (Ind. Dem.) likewise understands that the increase of national bank deposits will ease a stringency, "if

there be one," and it believes that the Secretary "acted with discretion" in his new order, "even tho his reasons are not stated." The *Indianapolis News* (Ind.) agrees that the amount of money in circulation will be considerably increased, and riddles the protests made by some bankers against paying interest on active funds, with which the banks perform for the Government many services without charge, such as the cashing of pension checks:

"The only possible question is whether they pay enough in service, under the present arrangement. That question is answered in the negative. Of course no bank needs to accept government money if it feels that this new charge is unfair. The whole thing is voluntary. We believe that the Secretary of the Treasury is right. It is not so much a matter of the rate of interest as of enforcing a sound principle—namely, that the Government should be directly paid for use, by the banks, of its money."

The *Chicago Inter Ocean* (Rep.) notes that it remains to be seen whether the banks can afford to pay as much as 2 per cent. per annum on monthly balances of deposits for which they have to give special security. It adds:

"However, Mr. McAdoo seems to believe that there will be no trouble on that point."

"In default of the currency and banking-reform legislation which we seem unlikely to get from this session of Congress, Secretary McAdoo is to be commended for doing what he can to help bridge over the well-known and annually recurring currency and credit difficulties of the crop-moving season."

No need for extra money is visible to the *San Francisco Chronicle* (Ind.) at this time "unless the new tariff puts too many people out of business." As to the soundness of Secretary McAdoo's business ideas, it says of his order "that it is good business for the Government, altho it can hardly be called conservative banking to pay interest on daily balances of checking accounts unless such balances are large and very constant."

TOPICS IN BRIEF

WHAT shall we do with our ex-proceedents?—*Columbia State*.

California favors the see-America-first movement, but not for the Japanese.—*Columbia State*.

Of the two it might be cheaper to go to war with California than with Japan.—*Hartford Times*.

THE great task of nation-building in which the Republican party has been engaged during its whole long and fine career is being undone. Citizens in South Dakota, in Kansas, and in Arizona are proposing of their own accord to elect postmasters and Federal judges.—*From Dr. Butler's address as printed in the Boston Transcript*.

FOREIGN COMMENT

THE "REAL CAUSE" OF THE BALKAN WAR

NOT A SINGLE PAPER of importance in Christendom has taken the part of the "under dog," the Turk, in the Balkan War. Not that they have all favored the Allies, for Austria, Germany, and Italy regard the rise of the Balkan League as a danger; but to favor the Turk was too much like favoring the massacres that have been drenching the soil of Macedonia for many years. The Moslem has acquired the reputation of a mere butcher, and everybody seems agreed that he should be driven out of Europe. His "atrocities" provoked the war, so out with him! But a very different picture is drawn for us by Mr. E. N. Bennet, in the *Edinburgh Review* (London)—probably too late to do the Turk any good. Mr. Bennet is one of those Oxford honor men who have devoted themselves to journalism. He has traveled over the ground in the Balkans and made the acquaintance of most persons of authority in the war. He declares positively that the Bulgarians, in their greedy ambition for more territory, provoked the struggle by the most cruel and nefarious means. They employed hundreds of Komitadjis—*agents provocateurs*—to set Moslem and Christian by the ears and rouse the spirit of bloody retaliation. The "hypocrisy" of Czar Ferdinand was the first incentive to the war. This writer says:

"When King Ferdinand in his famous Declaration of the 17th of October described the coming campaign as 'a war of the Cross against the Crescent' it was realized that the gates were being opened to the worst features of religious fanaticism and pitiless savagery. Such anticipations have been amply fulfilled. It may be said without fear of contradiction that modern history furnishes no parallel to the atrocities inflicted by the allied invaders upon the helpless Moslem inhabitants of Macedonia. A strange silence has been observed with regard to these happenings by the English press. In the absence of sanguinary battles, the public has lost all interest in the campaign, and our politicians are Gallios who care for none of these things so long as the victims are only Moslem Arabs in the Tripoli oasis or Moslem Turks in the towns and villages of Macedonia. It is impossible to do justice to the evidence within the limits of this paper, but after a careful sifting of the records and the elimination of everything except the testimony of reliable eye-witnesses, so terrible an indictment remains against the invaders that Dr. Daneff was well advised in requesting the non-publication of certain evidence on the ground that it would prejudice the cause of the Allies in the eyes of the British public."

How the Bulgarian agents incensed the Turks is described in a passage which this writer quotes from Mr. Andrew Melrose's "The Balkan War Drama." In this extract the work of the Komitadjis is thus described:

"The policy carried on by this body was one of the most

diabolical that had yet been invented throughout the blood-stained history of the Balkan problem. A group of enthusiasts had noticed how easily sympathy was aroused once 'massacres' were mentioned, and they at once set to work to encourage massacre. . . . The most effective way of doing this was to put bombs in the midst of a Mohammedan crowd in some remote village—on a market day for preference. The bomb would explode and kill three or four persons; it was whispered that this was the work of Bulgarians, and the incensed crowd would see red and massacre every Bulgarian on whom it could lay hands. It was then easy enough to say that the bomb was the work of the Young Turks, while there could be no dispute as to who had committed the subsequent massacres."

THE AUDIENCE OBJECTS.
BALKAN ALLIES—"If this is what you call a concert, cut it out!"
—*Stupiderstimm* (Munich).

Mr. Bennet quotes from "a representative of one of the Great Powers at Constantinople" the following summary of slaughter among non-combatants:

"The Bulgarian and Servian massacres in the Balkans still continue—the number of Turks massacred amounts to some 240,000 persons. I do not exaggerate in so computing it. If only Europe would but once interfere—that Europe which has gladly intervened when a Bulgarian shepherd or a Servian sheep-stealer has been killed by a Turk!"

But the Bulgarian and Servian agents, while they brought about the massacre of Bulgarians by Turks, also provoked the massacre of Turks by Bulgarians. "So sincere an admirer of the Bulgarians as the famous war correspondent, Lieutenant Wagner, admits this without hesitation." The most infamous

of these dark and tragic incidents took place at Kotchana, and Mr. Green tells us:

"It is notorious that the Kotchana massacre which stirred the Bulgarians to frenzy was brought about by the same infamous use of Bulgarian bombs. The Komitadji bands stopt at nothing in their determination to keep the Macedonian agitation open. At Salonika bombs were even exploded on the French ship *Guadeloupe* and in the Ottoman Bank; this was followed by the cutting of the gas and water mains. 'Despairing cries,' writes an eye-witness, 'of "Aman! Aman!" ("Mercy! Mercy!") were heard in the streets.' Then began outbreaks of fire, and soon the sky was all a 'glowing red.' The dynamite used by the bands came largely from Russia, packed in sardine-boxes, and the Servian, Bulgarian, and Greek monasteries, subsidized by their respective Governments, provided the Komitadjis with a safe retreat from the pursuit of the Ottoman authorities."

"Amid all the evidence, varied, cumulative, and irresistible, for the evil and persistent work of those *agents provocateurs*, the Komitadji bands, the Turks have been continually denounced for their failure to establish settled government in Macedonia. The bands were not only subsidized from Sofia, Athens, and Belgrade, but actually organized by well-known officers and professors like Panitza, Nikolaieff, and Matoff. For the cruel

history of Macedonia, for the blood and tears of innocent peasants, Turkish and Christian, heavy may be the past responsibility of inefficient rulers, but heavier still that of the European Powers who failed from self-seeking greed to use their strength to good purpose, and heaviest that of the authors of the infamous policy which was framed in order to destroy the possibility of reform.

"For years," writes Lieutenant Wagner—who, whatever his eccentricities as a war correspondent, possesses an intimate knowledge of and admiration for the Bulgarian people—"the Komitadjis have, with rifle, knife, revolver, and bomb, waged a terrible guerrilla war in Macedonia against everything that is not Bulgarian. Mercy there is none, not even to old men and women and children."

If the Turks have lost so much and their disasters have culminated in the disasters of Adrianople and Scutari, they still maintain an attitude of heroic optimism, declares Mr. Bennet, adding:

"The average Turk confronts the situation with the characteristic fortitude and dignity of his race. His forefathers came

THE GUN FOUNDRIES ARE BUST! —U.R. (Berlin).

from Asia, and thither he returns. For years past many of the better-class Ottomans, mindful of their coming doom in Europe, have sent their dead across the Sea of Marmora for sepulture among the cypresses of [Asiatic] Scutari and Haidar Pasha. Macedonia and Albania and nearly all Rumelia have gone forever, but no cry of *renouveau* will ever turn the hearts of the coming generation toward the surrendered provinces. The blood and treasure of Anatolia have been poured into Macedonia to little purpose and small profit, and few Turks waste useless regrets upon the loss of Albania, Tripoli, or Crete. The eyes of the Turkish people turn bravely from the survey of their unspeakable calamities to the hope of some better future in Anatolia. Asia Minor is full of latent wealth; Mehmet Ali once remarked that he would exchange the whole of Egypt for the rich plateau of Adana. Minerals and oil await development, and the railway system is in its infancy."

The only question Turkey is at present asking is, Will the Powers aid us in recuperating our losses and leave us in peace until we have made a home in the space still left us? On their answer depend the safety and life of Western Europe. As Mr. Bennet puts it:

"The all-important question which the Turks now ask themselves is, Will Europe grant us breathing space to show what we

can do in the territory which still remains to us? Ominous signs are not wanting in the Russian and French press that fresh pretexts for interference in the affairs of Turkey are being sought from alleged 'unrest' in Syria and Armenia. . . . If the Osmanlis are brought to realize that they are marked out for destruction, whatever they do and wherever they dwell, and yield themselves up to despair—*una salus victis nullam sperare salutem*—England and France may find themselves one day in the midst of a veritable conflagration among their African and Asiatic subjects."

SEEDS OF MORE BALKAN TROUBLES

THE END of one war may contain the seeds of more quarrels, and as Turkey sees the dawn of peace the *Ikdam* (Constantinople) wonders what conflicts the new day will bring. "Is our cup of wormwood quite full?" it asks pathetically. "Ah! So let us hope!" it exclaims, but goes on to show that the coming peace for Turkey will not mean peace for the Allies. "As for them," it remarks, "stained with the blood of thousands of innocents wickedly butchered, undoubtedly dissensions and quarrels will soon break out, which may plunge Europe into war." To particularize:

"With the removal of Turkish rule from Macedonia, because of that removal, in fact, it becomes the arena of strife. How is Macedonia to be divided? Who is to have Salonika—the Greeks or the Bulgarians? Why, the Greeks, they say. They took and occupied the city with their army and with the help of their navy.

"The Bulgarians reply that a glance at the map will show that the city and port of Salonika are a necessity for the commercial interests of Bulgaria more than for those of Greece. This seems reasonable, unless Salonika can be made a free city under European control, especially as Bulgaria has been obliged to give up Silistria to Rumania. Can the city be divided between the two claimants? If not, the Allies of to-day may be the foes of to-morrow.

"A similar bone of contention is found at Monastir, which is claimed by Bulgarians, altho now in the hands of the Servians, who confessedly helped the Bulgarians to take Adrianople.

"That permanent peace is in sight it would be idle to claim. True, the great Powers intervene as peacemakers, but each party in interest has his own thought and wish in his eye; every one pulls the *yorgan* (bedquilt) over to his own side. The members of the Triple Alliance prefer to give Salonika to Bulgaria. This would be more favorable to Austria, but Russia and France prefer to leave that city to Greece. Well, we readily leave this problem to be solved by the conference of ambassadors in London.

"Then we come to the question of the Aegean Islands and Albania. The quarrel over Scutari and North Albania is still hot, of South Albania Russia and France wish a good slice given to Greece. Italy and the other members of the Triple Alliance wish all to be included in the new Albania.

"As to the islands, how difficult it will be to limit the ambition of Greece, leaning, as she does, upon the support of Russia and France.

"The resolution of all these difficult problems waits upon the action of the conference of ambassadors in London, where the stand taken by England will be decisive. Her interests in the Mediterranean will place her on the side of the Triple Alliance, and forbid the giving over of those islands *en bloc* to Greece.

"In the whole business, the vital thing for us is, not what disposition others will make of the possessions of which we have been dispossessed, but can we administer fitly what we remain possessed of? Shall we have a statesmanship, a government, which can bind up our wounds and meet the exigencies of our changed national life? A great calamity has befallen us, but Germany's Foreign Minister has said in a speech in the Reichstag, 'The Ottoman state has emerged injured from the war, but has preserved her honor and good name. If she now exerts herself to develop her valuable resources in Asia, she will soon repair her losses. For facilitating her discharge of that duty we will not refuse her any aid in our power to give.' In this England is in accord with Germany. It remains for us to cast aside all personal ambition, and work with all our might, individually and collectively, government and people, to restore, reform, establish our nation in prosperity."—Translation made for THE LITERARY DIGEST.

MEXICO'S DEMAND FOR RECOGNITION

WHEN BENEDICT ARNOLD appeared in London after the execution of André he was received with effusive favor by the royal family and the Ministers of State. But society universally gave him the cold shoulder, and he eventually disappeared from the public gaze. Sentiment was against him, and sentiment is stronger than diplomatic decrees. There is something analogous to this in the attitude of our press toward Huerta. They seem to feel that Uncle Sam should hesitate to grasp his hand. But the Mexican papers maintain that Huerta has been constitutionally appointed by Congress and the *coup d'état* which cleared the way for his elevation is a domestic affair with which no foreign Government has anything to do. Thus the *Universal* (City of Mexico) remarks with refreshing coolness of the "removal" of President Madero:

"Nations possess a sovereign freedom to change their rulers, without any other Government having the right to interfere, and Mexico exercised an absolute right in removing Señor Don Francisco I. Madero and choosing in his stead General Victoriano Huerta as *ad-interim* president."

Great Britain has recognized the Government of Huerta, well understanding the position we take, says the *Independiente* (City of Mexico), for how General Huerta climbed to that good or bad eminence is no business of any one but the Mexicans who accept him. To quote the words of this journal:

"The refusal or simple failure to recognize explicitly the new Government which guides the destinies of Mexico has no satisfactory explanation in the light of the precepts and practises of international law. The Government is no power *de facto*, no power that has thrust itself in, in defiance of the nation's laws. Seeing that legal formulas have been followed in the transmission of the powers of government, even viewing matters with the strictness of a meticulous constitutionalist, and setting aside considerations of public welfare; seeing that power passed from Lascarrain to Huerta, without the omission of a single requisite, and with the full sanction of Congress, the present Government can not be regarded as unconstitutional by friendly Powers."

"As to the events which preceded and gave rise to this change, foreign chancelleries are not entitled to base thereon an adverse decision. The question is one of internal Mexican politics; it is our business exclusively; it is a thing that can not affect the cordiality of the friendly bonds uniting this country with other Powers nor be a cause of estrangement or coolness of relations,

"We feel authorized to say that the absence of an explicit decision on the part of the United States, as to the recognition of our Government and the acceptance of Ambassador Rabasa, would not be of great importance from the point of view of our relations with that country. Nay more, we think that the present state of things is not adverse to us and that we have no reason to regard it as a sign of coolness, still less of hostility on

"FATHER TO THE THOUGHT."

EUROPA (complacently)—"Well, so the war is practically over?"
TURKEY (still more complacently, having read reports of dissensions among the Allies)—"My felicitations, madam. Everything seems to point to the outbreak of a sanguinary peace."

—Punch (London).

the part of the White House toward us. It is sufficient that the American Ambassador remains at his post in this capital and that he has attended the official ceremonies, . . . for it to be considered that, *de facto*, there has been the recognition, which so absorbs public opinion, and that that recognition will be reinforced, if we may use the expression, by a more or less explicit declaration, when the occasion arises.

"To act otherwise would be to fall a victim to the suspiciousness of international law."

The *Imparcial* (City of Mexico) enlarges on this point and asks if there is no significance in the continued presence at Mexico City of Ambassador Wilson, who, "on February 21, just after the tragic happenings of that month," presented America's "sincere congratulations" to the man who, as the Ambassador stated, "had assumed the high post of *ad-interim* President of the Republic." This paper states the case with an implication that President Wilson is shilly-shallying, for we read:

"The public, with growing surprise, asks itself: Why does not the American Government recognize the Government of Mexico? What reasons can the White House allege for a postponement?"

"In reality, the suspension of international relations—for this is what non-recognition amounts to—is only conceivable, except in extraordinary cases growing out of conflicts between nations, when there has been an interruption of the constitutional order as, for example, when a republic succeeded the monarchy in Portugal. But the suspension of recognition is not in order when the change in government personnel takes place in accordance with the country's institutions.

"We think, then, that recognition asserts itself as a necessity, the more so in that, otherwise, the presence of an ambassador near an unrecognized Government is inexplicable. The public,

ALBANIA'S FRIENDS.

"What a sweet little lamb!"

—Uk (Berlin).

for each nation solves its internal questions according to the exigencies of its politics and the express and preexisting text of its laws."

But the United States has really recognized us, exclaims the *Universal*, quoted above. It is merely that President Wilson is coy; he is like the maiden who will not say no, but really by a glance has answered her suitor's overtures with an unuttered assent:

with its natural good sense, has rightly interpreted the situation, saying: If the United States Government does not recognize the Mexican Government, what does its representative represent? Whence comes that embassy, and who is that ambassador who allows himself to be so styled, not only in private, but officially?

"But there is something more, as we said above. The American Ambassador has done acts which there is reason to regard as equivalent to a full recognition, the more recently Mr. Henry Lane Wilson has sought to get out of the matter."

CHINA AND THE PAWNBROKERS

A TRIP to the pawnshop always has an air of melancholy about it at best, whether the borrower is a destitute widow or the oldest nation on the globe, comprizing a quarter of the human race. The applicant is glad to have the cash, of course, but the regret at seeing the family garments go over the counter is apt to turn into a deep resentment at the man who exchanges his good money for the second-hand apparel. So China, as reported in the papers, presents this world-old air of asking money and yet hating those who offer it because they demand as security the national resources. A note of joy is heard in the Chinese press as America withdraws from the sextuple loan, very much as if the children raised a feeble cheer when a pawnbroker slammed the door in their mother's face when she was trying to hock the sewing-machine. The other Powers seem to have no hesitation about taking anything China has to offer, so that in the end the resources of the Flowery Kingdom may be pledged just the same, and some think it would have been better if Uncle Sam had stayed in the deal, to keep an eye on the other brokers, but the general feeling appears to be that he has done the manly thing, let others do what they will. A hopeful view of the situation appears in *The Chinese Republican* (Shanghai):

"President Wilson's action can not fail to help the Republic out of its fiscal difficulties. It has got along very well hitherto without the sextuple loan and can continue to do so indefinitely if necessary. The complete disappearance from the scene of the sextuple crowd is what is earnestly desired. It has wrought sad havoc with the country, handicapping the strenuous efforts of the reformers in every direction, while hampering the expansion of trade and preventing efforts to develop the mineral as well as many other latent resources of well-nigh incalculable importance to China and to the world. President Wilson's action has therefore come, not as another millstone round our necks, but as the balm of Gilead to hungry souls. It is to be welcomed as the harbinger of freedom from molestation, freedom from spoliation, freedom from an intolerable foreign yoke, and freedom from interference in the stupendous task of working out our own salvation in our own way."

The National Review (Shanghai) wishes that it was in the power of England to follow the example of Washington and thus escape casting a blot upon her own escutcheon, and we read:

"The policy which has implicated Great Britain in this entanglement is greatly deplored by the vast majority of English-speaking people. It is a policy nominally connected with China alone, but is really more broad-based. It is, indeed, a policy of world-wide attack on principles which in the past have done

so much to place Great Britain on the pedestal she has so long occupied. Unfortunately it is also a policy which has already succeeded in causing not only a lamentable fall from the high estate which once she could boast, but has also brought about a further double evil, a grave loss of political prestige, and a sad narrowing of possible material profits. Our columns have more than once shown how British interests have gone by the board in this way. We have further provided information more than ordinarily reliable and supported it by argument and contention based on justice and fair play. Much that we have advanced has received the flattering confirmation of accomplished fact."

But *The Overland Mail* (Shanghai) is certain that the word of the United States can not stop the current of financial events in China. There appears to be a veiled sneer in the reference to President Wilson, as if the writer rubbed his hands and remarked with a smile, "Well, you see, business is business." The sentiment underlying what one of these papers calls "Mr. Wilson's masterly statesmanship" seems not to be appreciated in the following words from *The Mail*, which scouts the idea of England's following the example of the United States:

"The somewhat altruistic step recently taken by the United States' new Administration regarding loans to China is apparently not going to find imitators among other nations, and it is therefore clear that unless China herself puts impediments in the way the huge international loan will continue to be at her disposal. Sir Edward Grey, in his latest statement on the question, makes it abundantly clear that Great Britain's policy has in nowise been altered to meet changed conditions, and the policy laid down from the beginning of the negotiations has to be rigidly adhered to."

Talking of the sextuple group from which President Wilson withdrew, *The Celestial Empire* (Shanghai), while approving of Oliver's escape from the den of Fagin, remarks:

"The moral backbone of the group has had a nasty jar. There is, moreover, a rankling wound left in the minds of some who keenly feel the hint that their aims and objects are such that honest nations are better free from them. How much this suggestion has hurt is evident from the wealth of adverse comment which the week has produced on American action, partly from American upholders of the group, partly from British sympathizers, and partly from the Japanese press. All these shake doubting heads much after the style of the silent character in 'The Critic.' It is, however, fortunate that they do not remain silent, otherwise the mirth of nations might have been considerably lessened during the past few days. Meanwhile Peking reports 15 acceptable loan offers on hand in reply to the confident statement that it must be with the sextuple group or not at all that China can possibly get the money she needs. The Standard Oil Company alone is offering \$25,000,000 gold, 'with petroleum deposits in China as security.' The financial question, therefore, would settle itself in a week if the super-added politics were disentangled from it. What remains to be seen is whether the liberal Powers will take heart of grace from American action and determine that this shall be done."

But *The Republican Advocate* (Shanghai) regrets our withdrawal. The presence of America on the board of directors would have acted as a safeguard for China's rights and interests amid the necessary scramble of the other contributors. To quote this, one of the most advanced and patriotic newspapers of the new régime:

"While those sympathetic with President Wilson's policy see

THE SCARECROW.

—*National Review* (Shanghai).

in this measure the liberation of China from the financial and political clutches of the Powers, there are those who regard the withdrawal of the United States as a distinct danger to China by virtue of the removal of the restraining influence which America might still exercise on the ambitions of unscrupulous Powers.

"It is a well-known fact that since the sextuple group came into existence the nature of the loan has been more or less of a political character. The fact is that in the process of the negotiations this political tendency has become more and more noticeable; it was especially emphasized in the recent disgraceful scramble for supremacy and political influence, and in the no less condemnable blunder of putting 'directors' for 'advisors,' a glaring mistake which could not but provoke suspicion on the part of the Chinese people."

SPANISH FEARS OF ARMAGEDDON

THE TARANTULA of the European war-dance has at length bitten Spain. We learn from Spanish papers that the struggle between the United States and the land of Cervantes awoke the latter from her lethargy, and great improvements have followed in her agricultural, manufacturing, and military activities. But they feel that one such blessing is enough; another would be one too many. France is strengthening her army, and Germany is preparing by an extravagant war budget for the possible conflict that may ensue, if Greek meet Greek, or, rather, if Slav meet Teuton in a death struggle. What part shall Spain take in the tug of war; can she be safe as a mere "innocent bystander"? Does not the Peninsula run the risk of becoming the theater of conflict, as in the days of Wellington, asks Spain through her newspapers. We can not compete with France or Germany, these papers say, by the strength of our army, the number of our population, or the wealth of our treasury; how, then, shall we hold our own?

The Spanish publicists feel that Spain shares, in some respects, the predicament of Turkey. The Powers have all turned their backs on Turkey. Spain fears the same fate, and as the Moslem would turn for help to Russia, so one of the lead-

other the strong helpers on which Spain is to rely. It is impossible that in the Armageddon which the wisest of European statesmen with equal confidence predict Spain can remain neutral. All unite in the opinion that she was so quickly and easily stripped of her colonies by the United States because of her proud isolation. She was quite out of the running in the international dispute with France and Germany after the Agadir incident. Soreness on this point prompts this paper to declare:

"If the agreement with France concerning Spanish rights in Morocco last long and perhaps prove disadvantageous or disastrous to Spain, in spite of the by no means disinterested support of Great Britain, our weakness through our isolation is solely to blame."

Asking where Spain shall seek a buttress the *Correspondencia de España* (Madrid) remarks that neither the Triple Alliance nor the Triple Entente would be most helpful to Spain as a coadjutor in time of need. A new combination must be formed, as proposed in the following words:

"If Germany can yield us no advantage either by land, sea, or air in time of war; if Germany can give us nothing in time of peace; if Germany is powerless to attack us either by land, sea, or air unless Germany has first crushed and annihilated her own enemies; if an alliance with her on our part would involve us in a peninsular war with England and France; if the advantages of an alliance with Germany were contingent on her triumph over her enemies, it necessarily follows that such an alliance would be fatal to Spain."

The *Correspondencia* states that certain political writers have advocated this alliance, but while some such combination must be entered into, it thinks Germany and Austria too remote to be of help. This is piquantly stated as follows:

"We can not even think of an alliance with Germany, Austria-Hungary, and Italy. Destiny has geographically separated us from these countries, and it is not possible for us to resist destiny. To make Germany our ally and to become embroiled with France and England would be acting like a man who discarded his sweetheart in Madrid and was making love to a girl in China whom he could never visit and who could never visit him. An alliance with Germany would be nothing more than another adventure of Don Quixote, trying to find a second Dulcinea, but doomed to meet in his search a second batch of windmills, cudgel-wielding muleteers, a fresh set of scars—very glorious, no doubt, but also extremely ridiculous."

Spain should turn, then, to England and France, declares Deputy Alvarez in a speech in the Cortes:

"For my part, I would advocate an alliance of Spain with France and England. Of course it would be far better for us if we could remain neutral, but we have really no choice in the matter as to whether we should join or keep aloof from European politics. The belligerents might occupy the Balearic and the Canary Islands, with the object of forming suitable bases for their naval operations. Our alliance with France and England would also have an indirect influence on our domestic politics. In this connection the proposed visit of King Alfonso to Paris has much significance in drawing closer the ties that bind Spain and France."—Translation made for THE LITERARY DIGEST.

ing papers of Madrid, the *Epoca*, declares that Spain must look out for a strong and reliable alliance as a ruined spendthrift looks out for a rich wife. The *Epoca* mentions one after an-

SCIENCE AND INVENTION

AMERICA'S WASTE OF RADIUM

POSSIBLY there may be as much as an ounce and a quarter of radium, all told, in the world. This is the estimate of the United States Bureau of Mines, as stated in a press bulletin. To persons who are accustomed to measure mineral products by the ton, this does not sound like a large quantity; but its value is little less than three million dollars, so that it is by no means despicable. A large part of the ore from which this comes is believed to be from the United States, but all of it is worked up in Europe. In fact, until recently it was not certain that the carnotite ores exported from Colorado were used for this purpose, but an investigation made in Denver by Messrs. Moore and Kishil, of the Bureau of Mines, seems to have established this fact, which is not altogether creditable to American industry and ingenuity. Says the bulletin:

"Radium institutes have been established in Austria, France, Germany, and England, a European science and industry have been developed from American radium ores, and even the uranium present with the radium has been manufactured into marketable condition only in foreign countries and returned in finished condition to our own. American hospitals and physicians have been forced to procure from abroad such radium as they could afford for experimental purposes, and investigations in our governmental and university laboratories of the wonderful properties of radium and their possible application to the eradication of disease and the development of industry have been hampered by the almost prohibitive prices at which the finished material is held.

"While the Austrian Government, realizing the untold possibilities of the radium ores of St. Joachimsthal, has purchased the mines, put their output under direct governmental supervision, and has entered into an agreement whereby this ore is worked up in cooperation with the Vienna Academy of Sciences for experimental purposes in a carefully administered radium institute, America has allowed her large and much greater resources to be exploited on a basis which wastes perhaps irretrievably a large portion of the material mined, and has exported carefully selected ores at a price by no means commensurate with its radium value if worked up at home.

"Even before carnotite was exported, pitchblende of the highest grade was sent out of the country at the time when the world's radium output was supposed to be coming from Austrian ores. At least twenty to twenty-five tons of high-grade pitchblende has been sent out of the country. Within the last two years, however, foreigners have realized the value of our carnotite resources and most of the radium that has been exported has gone abroad in this ore. . . .

"Carnotite is a yellow mineral consisting mainly of potassium uranyl vanadate, but containing also small amounts of barium and calcium compounds. . . . While carnotite is known to occur in smaller quantities in other States, the more important deposits are scattered over a considerable area in Colorado and Utah."

In the mining of these carnotite ores, the writer tells us, probably five tons of material capable of concentration are thrown upon the dump for every ton that finds its way to market. To develop methods for concentration of these ores and save the valuable material now wasted is one of the problems before the Bureau of Mines—with fair prospect of a successful conclusion. To quote further:

"It is difficult to estimate the total amount of radium that has been produced up to the present time, but it is quite certain that if the ores which have been mined in this country and abroad and sold for radium production have been actually worked up into this material there is now in existence something like 40 grams (1¼ ounces) of radium. The price of radium salts varies somewhat. In large quantities it has been \$80,000 per gram for both radium chloride and radium bromide, altho the latter contains

less metallic radium in proportion to its weight than the former. It should be remembered, therefore, that it is more advantageous to purchase radium chloride than radium bromide. In small quantities the average price has been \$80,000 per gram, which represents about \$2,250,000 an ounce.

"The figures given show very plainly that the United States has taken the palm from Austria as the radium-producing country of the world. Very few people have been cognizant of the fact that the United States has such deposits within her borders. Up to the present time very little interest has been taken in the matter and only one firm has engaged in the extraction and refining of radium in this country—a condition which is deplorable. This firm has not yet entered the radium market.

"Practically every ton of ore mined in 1912 went abroad, and as the American deposits are far from being inexhaustible we are rapidly depleting our own reserve and are shipping from the country material of great value and of unknown possibilities which can not be replaced.

"The applications of radium are still too little understood to admit of definite statement. Its discovery and marvelous properties have already changed our ideas regarding the constitution of matter, and scientific investigation will undoubtedly lead to valuable results which we can not now even foresee. Altogether too many incorrect statements and vague speculations have been placed before the public as to its use in medicine. A recent report of the London Radium Institute and the many articles emanating from minor laboratories experimenting in the application of radium to therapeutics all tend to show, however, that it has a real value, the certain application of which must await further experimentation. In the meantime no credence should be given to the many stories that are sure to be printed unless they are backed up by the highest medical authority which will always give publicity with caution.

"The best medical authorities appear to agree that, up to the present time, radium has not been proved to be specific for any disease, altho it has been shown to be helpful in many cases, and the outlook for its future application to certain diseases not easily treated otherwise are decidedly encouraging.

"Apparently no uranium is worked up in the United States, but according to statistics gathered by the division of mineral resources of the United States Geological Survey, about \$14,000 worth of its oxides and salts were imported into the United States in 1911. It is one of the few materials shipped abroad as ore and returned in manufactured form."

"CURES," FOREIGN AND NATIVE—When you are cured in English you are well; when you are cured in German or Italian, you may still be ill; you may even die. An Italian physician, we are told in *The Journal of the American Medical Association* (Chicago, April 26), was recently made to say, when his article was translated into English, "I cured ten typhoid patients last month and six of them died." What he really said was that he had treated ten patients. The word "cure" in German or Italian means simply "treatment"; this is the original sense, from which we have wandered somewhat in our English use. This fact often causes confusion and misapprehension. Says the paper named above:

"Many newspapers are hasty or careless in announcing the discovery in Germany of some method of treatment more or less new, and not infrequently misinformation is given the public through failure to keep in mind the actual meaning of one little word. The German word *Kur* does not mean 'cure,' altho it is not an uncommon thing to find it so translated into English. 'To cure' in English means 'to restore to health; to effect a cure'; but in other languages it means merely to apply 'a method of remedial treatment of disease; medical or hygienic care; method of medical treatment.' The German word for 'restoration to health' is *Heilung*, not *Kur*. The Latin word *cura* means merely 'care,' a shade of meaning which is preserved in the derived term 'curator.'"

FUNGI AS FOOD

AS FOOD-SUBSTANCES the various species of mushrooms stand between plants and animals—possibly a little nearer the latter than the former. In chemical composition they strikingly resemble animal products. Cellulose, the characteristic element of vegetable tissue, is entirely absent, and in its place is chitin, a substance also found in the shells of crabs and the wing-cases of beetles. There is also no vegetable chlorophyll, or green pigment, and no starch, but an abundance of glycogen, which is found elsewhere only in animal organs. The food value of the fungi is the subject of an article contributed to *Die Naturwissenschaften* (Berlin), by Dr. C. Reuter, who epitomizes therein the latest opinions of investigators. Apparently the value of mushrooms as food has not been done full justice in recent years. Dr. Reuter thinks that we shall have to return again to the rating of the older physiologists, who thought highly of them. He says:

"The nutritive value of fungi has been much debated. The high content of nitrogen caused the older food-chemists to value them highly, and they were recommended as a substitute for meat.

"But when digestion and assimilation tests began to be made, this opinion was reversed. When it was discovered that a certain percentage of the nitrogen passed through the body without being digested, it was concluded that a portion of the albumen of the fungus was completely non-digestible. But this assumption came in part from the fact that the presence of the chitin was then unknown, so that it was disregarded. The chitin is, in fact, entirely non-digestible, and it contains 6 per cent. of nitrogen. It was assumed that this non-digested nitrogen was a constituent part of the nitrogen of the proteins contained."

Careful experiments made by Dr. Reuter have now proved that these proteins, that is, the albumens of the fungi, are perfectly digestible. He also declares that the high percentage of carbohydrates adds appreciably to their nutritive value. Another element not to be overlooked is the presence of minute quantities of other substances which act as stimulants to the appetite. Because of these, mushroom extract is useful in hospitals and sick-rooms for preparing dishes to tempt invalids. He adds:

"It should be observed that when mushrooms are boiled and the water is thrown away their nutritive value is much lessened.

"In general it may be said that when properly prepared the fungi have a very high nutritive value as compared with other vegetables."

Another point of value is the author's reminder that since the fungi have a very brief life-period and contain those highly active agents of chemical action, the enzymes and ferments, they are peculiarly liable to rapid alteration and deterioration. Hence it cannot be too strongly insisted upon that they should be eaten only when young and when entirely fresh.

Of course these remarks apply only to non-poisonous fungi. The inability of the layman to distinguish these from the poisonous varieties is really responsible for our neglect of these valuable food-products. Most of us do not care to perform the classic and infallible test—to tell a mushroom from a "toadstool"—the first step in which is consumption of the doubtful article, while the last is too often a trip to the cemetery.—*Translation made for THE LITERARY DIGEST.*

PEARLS AS SARCOPHAGI

THE NORMAL PEARL is nothing but the tomb of a worm, built by the enveloping oyster to get rid of its tormentor. The parasite irritates its host, which thereupon secretes a deposit of lime that entombs it. The fact that this deposit is brilliantly beautiful has nothing to do with its utility in the scheme of nature, but a great deal to do with its value in the eyes of man. Hence the oyster, in ridding itself

of its irritating guest, only succeeds in making itself the object of search and destruction by a more cunning and more powerful foe. Occasionally other irritants than the parasitic ones will produce results, tho they are not of the same grade; grains of sand and even small objects introduced especially for the purpose may come out as pearls of a sort; but they are not as pearly as the real worm-coffins. We quote an article contributed to *Ueber Land und Meer* (Stuttgart, March 13) by Dr. Wilhelm Berndt, as follows:

"What is a pearl? In itself a prosaic thing enough. A lump of carbonate of lime mixt with organic matter, which only through the intimate structure of its outer layers is able to show the wonderful play of color that depends on the so-called interference of light-waves, similar to the color phenomena shown by the inner surfaces of certain shells ('mother-of-pearl'). From both points of view pearls and mother-of-pearl are identical. Chemically, they are the same; both proceed from the 'mantle' of the bivalve; only the form is different. . . . Where the mantle deposits a layer of white mother-of-pearl, there occur the common, so-called 'white' pearls; where, in some mussels, it deposits in certain regions reddish shell-substance, there we find the wonderful 'rose-pearls.' Brownish-black pearls occur near those parts of the mantle that are connected with the darker upper part of the shell. In

numerous cases free round pearls are not produced. Instead of an isolated ball or lump of lime, there is a knotty protuberance on the inner wall of the mussel-shell; the pearl seems united or merged in the shell, and we have what jewelers call 'half-pearls' or 'buckle-pearls.' . . .

"The origins of pearls are of various kinds. It was once commonly assumed that small foreign bodies, grains of sand, coral, or sponge spicules, falling into the mussel between the mantle and the shell, were covered with concentric layers of deposited lime, forming finally a spherical pearl. Such foreign-body pearls unquestionably do occur in nature. . . . The Chinese, who are fine observers of natural phenomena, place small images of Buddha in the living mussel, between the mantle and the shell, and thus cover these objects with a layer of pearly substance. These, however, as is also often the case with natural pearls formed around a foreign body, resemble the so-called 'half-pearls' connected with the shell. The origin of the normal pearl is different and more complex, as is shown by the older investigations of Moebius, Filippi, and others, as well as by the more recent studies of Dubois, Biedermann, and many other scientists. In sea-mussels, as we now know in almost all cases, the formation of pearls is dependent on the presence of recognized parasites, belong to the classes of trematode or of cestode worms. . . . 'The most beautiful pearl,' says Dubois with Gallie elegance, 'is thus only the brilliant sarcophagus of a worm.' Many fair ones would be surprised if they knew that they were wearing thousands of dollars' worth of worm-coffins around their necks."

The cestode worms, we are further told, seem to be responsible for the finest grade of pearls, the trematode worms for others. Pearls are found also in some fresh-water mussels, and it is not so certain that parasites are responsible here.

HOW PEARLS GROW.

mp, outer skin of oyster; k, foreign body; mp, mantle-skin of the pearl; p, layer of mother-of-pearl; p, mother-of-pearl coating of the pearl; s, shell.

Possibly these are formed around tiny fragments of the shell. The writer goes on to say:

"Pearls are similar in many respects to organisms: they can 'sicken' and 'die.' Sick pearls lose their luster, become spotted and dull. In the Orient the treatment of such pearls is a mystical process belonging to wise men who hand down the knowledge of it from father to son. Authentic literature on this subject is lacking. Probably the pearls have suffered from careless handling, possibly also from indisposition of the wearers, involving some acid reaction. It is commonly said that pearls must not be too long left unworn, because the natural oil of the skin aids in preserving them."—*Translation made for THE LITERARY DIGEST.*

A FISHING SPIDER

THE following account of a South African spider that deliberately catches fish for food is contributed to *Nature* (London, April 10) by E. C. Chubb, of the Durban Museum, Natal. His account is in the words of the discoverer of this odd creature, Rev. N. Abraham, who apparently did not communicate his observations to any important scientific body, but merely embodied them in a lecture before a local society of which an account was published in the papers. This was in November, 1911. The spider has now been identified. Mr. Chubb tells us, as a species known to naturalists as *Thalassius spenceri*, and specimens of it are to be seen in the museum at Durban. Later observers report that this same spider eats, also, small frogs and toads. Says Mr. Abraham:

"In the year 1905 I was living in Greytown, Natal. One day I was catching small fish and aquatic insects for an aquarium. I was using a small net in a shallow stream. I happened to see on the edge of the water a fine spider, which I captured. On reaching home I placed my specimen in a large aquarium, where I had a number of small fish. The spider measured about three inches when its legs were extended; the body is small, but the legs are long. After being on the rockwork of the aquarium for some time, it took up a very interesting position. It rested two legs on a stone, the other six rested on the water, well spread out, the ends of the six legs commanding a definite and well-defined area of water.

"Being busy, I merely took a note of its attitude, and left it to its devices. After a few minutes my servant boy came into my study to say that the spider I had put into the aquarium was eating one of my pet fish. I at once went to see what had happened, and soon saw the spider on top of the rockwork, holding in its grip a beautiful little fish about four times the weight of its captor.

"For a moment I was startled into a strange surprise. How could this spider, which has no power to swim, catch a lively, quick-swimming fish? I looked at it in wonder, as it seemed to clutch the fish as a cat clutches a mouse. It soon began to devour its catch, and after some time had passed nothing was left of the fish but its backbone. The spider had eaten it as surely as an otter eats its trout.

"I was now anxious to find out how the spider caught the fish. That night, about 11 o'clock, when I had finished my day's work, I sat down by the aquarium to watch the spider, with the hope that I might see how the fisherman caught his fish. The spider had taken up a position on a piece of stone, where the water was not deep, and had thrown out its long legs over the water, upon which their extremities rested, making little depressions on the surface, but not breaking the 'water skin.' The tarsi of two posterior legs firmly held on to a piece of rock just above water-level, the whole of the body was well over the water, the head being in about the center of the cordon of legs, and very near to the surface of the water.

"After watching for some little time, I saw a small fish swim toward the stone and pass under the outstretched legs of the spider. The spider made a swift and sudden plunge. Its long legs, head, and body went entirely under the water, the legs were thrown round the fish with wonderful rapidity, and in a moment the powerful fangs were piercing the body of the fish. The spider at once brought its catch to the rocks, and began without delay to eat it. Slowly, but surely, the fish began to disappear, and after the lapse of some time the repast was over."

TO STRAIGHTEN OUT CROOKED PLANT NAMES

THE TASK of inducing the Filipinos, when they learn our tongue, to discard what he believes to be incorrect names of plants and fruits, is to be essayed by O. W. Barrett, chief of the Division of Horticulture in the Philippine Islands. The islands, he assures us, are on the eve of becoming an English-speaking country, and it is "now or never" if we are to make the language of our wards an improvement on our own. An editorial critic in *The Scientific American* (New York, April 26) thinks that Mr. Barrett's plan may possibly involve too much interference with "English as she is spoke" in these United States. Take our word "corn," for instance, which is not the "corn" of the British Isles:

"In British countries there are several kinds of 'corn,' including wheat, rye, barley, oats, maize, rice, and even leguminous plants, as peas and beans. Locally the word is often understood to mean the leading cereal crop of the district; hence, while 'corn' means wheat in most of England, it means oats in Scotland and Ireland. Our English ancestors found maize under cultivation by the Indians all over this country as their principal food crop, and gave it the not inappropriate name of 'Indian corn.' The name 'mahiz' (whence 'maize') was current in Haiti, where the plant was first seen by Columbus.

"The fact that the Spanish name for this plant, 'maiz,' is already familiar to the Filipinos, would no doubt facilitate the adoption of the name 'maize' in preference to 'corn' among the islanders who learn English. Such is Mr. Barrett's hope; and he says, in writing on this subject in the Philippine *Agricultural Review*, 'Let us adhere firmly to the old (pre-Columbian Arawak "mahiz") correct name by which this plant is known practically everywhere outside of the United States.' However, there are certain difficulties in the way of carrying out this reform in a land where the natives are learning English from Americans, identical with those which would be encountered if the same thing were attempted in this country. Mr. Barrett does not appear to realize that the word 'corn,' as used by Americans, has so ramified in phrases and compounds of every-day use that to abandon it would entail an appalling number of other changes in our speech. Thus, to be consistent, we should have to substitute 'maizemeal' for 'cornmeal,' 'maizebread' for 'cornbread,' 'maizestarch' for 'cornstarch,' and so on. No longer would Young America delight in the pink and the white varieties of 'popcorn,' but in 'popmaize'! And how on earth should we ever persuade the newspaper paragrapher to banish 'Farmer Corntassel' for so unconvincing a personage as 'Farmer Maizetassel? Let Mr. Barrett light his pipe ('maizecob,' if he will have it so), and reflect upon the uttermost consequences of his rash suggestion.

"The rest of his propaganda is less revolutionary. For example, in urging the spelling 'coconut' in lieu of the old-fashioned (but not oldest-fashioned) 'cocoanut,' he is merely seconding the recommendations of most American lexicographers. 'Cocoa' for 'coco,' in this sense, arose from a stupid blunder in Doctor Johnson's dictionary, and has never had the sanction of careful writers.

"A certain fruit which Mr. Barrett thinks should not be called 'alligator pear' has become tolerably familiar in recent years to Americans who can afford exotic delicacies. Of course, it is not remotely related to the true pear, and some varieties are not even pear-shaped. In advocating the more euphonious name 'avocado,' Mr. Barrett says: 'Objection to this word is gradually dying down, but, for some unknown reason, there still lingers in the minds of thousands of people an apparent preference for the hideous name "alligator pear"; this is probably due, however, to the plebeian shrinking from any foreign-sounding word, especially if it has more than three syllables.'

"Another tropical product which has attained prominence in this country in comparatively recent times, and which has reached a greater perfection in Florida and California than anywhere else in the world, is probably best known to most of us as 'grapefruit.' This name is said to be due to its grape-like flavor (which few people can detect), or to the clustering habit of the growing fruit. It is sometimes called 'shaddock,' a name that properly belongs to a more primitive and much coarser variety of the same species. Mr. Barrett would have us abandon 'grapefruit' in favor of 'pomelo.'"

TO AVOID STREET ACCIDENTS

TRAFFIC-CONTROL has now been in operation long enough in our larger cities to make it certain that the safety and comfort of both pedestrians and riders may be promoted by the observance of a few simple rules. There are still many, however, who regard such rules merely as so much annoying "red tape," who do not understand the principles on which they are based, and who are unwilling to play their little part in making general street traffic safe and speedy. These should peruse the following rules, laid down by Dr. Frederick Remsen Hutton in *The Scientific American Supplement* (New York, April 12). What Dr. Hutton says is part of the campaign now being conducted in New York by the American Museum of Safety and is in accordance with the ideas of those in charge of that institution. Says Dr. Hutton:

"There are some absurd proposals that all individual vehicular traffic shall be stopt at intervals; this would defeat its own purpose, and be hardly enforceable, except in spots, and the whole subject is too broad to be discuss in its entirety in a short article. But there are certain standards which seem so possible for the user of the wheeled vehicle that it may be worth while to discuss them.

"(1) *The Controlled Traffic.*—If all vehicles head one way, and only turn around at the corners or street intersections, then all on foot need only look for danger from one direction. On the right of the center, you look over the left shoulder; on the left of the center, you look for danger from the right hand. No child should ever play in the intersections of streets, and no pedestrian or vehicle should ever 'cut the corners.'

"(2) *The Classified Traffic.*—Since it is the Rule of the Road that the faster vehicle passes the slower on the right of the former and by turning to the left hand of the slower, the faster vehicles will always be in the center of the highway, or farther away from the sidewalks of the street. This is the first classification, and rightly makes the center of the street the more dangerous part. But a second classification is that of the ordinary and the preferred class of vehicle as respects the right of way. The hospital ambulance and the fire-service vehicles, on their errands of life-saving or rescue of lives or property, are entitled to speed, and the center of the street. Pedestrians should get on the sidewalks, and vehicles of the lower classes should go to the right of the highway and stop there. No child should be or remain on the roadway when a fire or hospital vehicle is exercising its paramount right of way.

"(3) *The Standard Type of Warning Signal.*—No vehicle should have or sound the warning signal of a superior class. The powerful gong rapidly sounded is the accepted signal for the ambulance in this part of the world, and the high-pitched steam whistle or siren or the swinging bell is the fire signal. For others to use the emergency standards is to lower the warning value of the real ones, and should be forbidden by ordinance. No man should cry 'Wolf!' like the shepherd in the fable, to get a right of way to which he is not entitled, else he breeds carelessness in the face of real need.

"(4) *A Standard Quality of Warning Signal.*—A warning signal must not only impress sound waves on the drum of the ear, but it must reach the mind behind the ear, and cause

volitional action. The action should be partly automatic, in the sense that action should follow the sense-impression quickly enough to escape accident, if it comes near."

It will be of the greatest value, Dr. Hutton advises us, if the mind can be trained to recognize the signal of the fast-moving vehicle, and at the same time to judge the distance of the sound. Most drivers are watching the roadway about one block away. They probably sound signals at about this same distance. Hence the signal should carry its alarm over that distance to even a deaf or a slow-moving person and against the wind and other noises of the street. The warning should be of a quality not attaching to any other street noise; and it should be audible from such a distance that the person warned should not have to jump. To quote further:

"(5) *The Warning Signal Should Not be Sounded Unnecessarily.*—To do so is not only to make the street more noisy than necessary, but also it breeds the habit of disregarding the signal when it is full of real meaning.

"(6) A true musical note (one with a definite number of air-waves per second) is not as serviceable for arousing attention and for warning as a pure noise, unless it is much louder in intensity than such noise. The so-called siren is a pure tone at all points of its range, but to make it carry sudden warning, it has to be so loud that it is rightly to be forbidden where noise is an objection. The short explosive note of the diaphragm types of signal, where a steel diaphragm is set vibrating by an electric motor on the principle of Savart, makes the first sound waves as effective as those which leave the signal later, and this is its best claim to be a safety device, in the sense that the American Museum of Safety uses that term."

ON SOME GOVERNMENT TELEPHONE LINES THE GIANT CACTI ARE USED FOR POLES.

CACTUS TELEPHONE POLES

—In some parts of the Southwest, giant cacti are being used with success as telephone-poles. This is the case in Arizona, where, we are told by *The Popular Electricity Magazine* (Chicago, May), the United States Government through its Forestry Bureau is assisting the State to develop and use all its natural resources. We read:

"One of these is the giant cactus, a sturdy, non-edible fruit-bearing plant which sometimes attains a height of forty feet. The sahuara,

or cactus, is strong and tough, and when it became necessary to build a telephone line from the office of the Supervisor of Forests to the Soldier's Camp Ranger Station, a distance of some thirty miles, economy dictated that some use should be made of the many sahuaras growing along the proposed route.

"From Tucson to the magnetic observatory, about eleven miles, the wires were strung on the poles of the Arizona Telephone and Telegraph Company; to Lowell Ranger Station, redwood poles alternated with cacti, in the proportion of one cactus to two poles; to the Great Western power damsite, second-hand boiler tubes alternated with sahuaras in the same proportion, and from there to Soldier's Camp the wires were strung on trees.

"The result has been less satisfactory than was anticipated, owing to the fact that the sahuaras are especially susceptible to be struck by lightning, and it has been found necessary to replace a number of the cacti with wooden poles on this account."

LETTERS AND ART

THE CIRCULAR COURT-HOUSE

THE great circular court-house designed by Mr. Guy Lowell to form the nucleus of New York's new civic center is "without precedent in the public or monumental buildings of this country," and has, therefore, "an extraordinary architectural significance," says *The Architectural Record* (New York). Such an innovation inevitably challenges discussion, and, while Mr. Lowell carried away the award from twenty-two competitors by the verdict of a unanimous jury, it is only natural that the verdict of those unofficial critics who register their opinions in the press should be marked by a lesser degree of unanimity. Thus we find some commentators unreservedly praising this unique and daring conception of a great public building, while others find fault with the design from both artistic and utilitarian points of view. But before considering further these differences of opinion it is interesting to note the following facts

gathered from Mr. Lowell—who is a second cousin of James Russell Lowell—by a representative of the *New York Times*:

"Rome is admittedly the inspiration of Mr. Lowell's design. When he was there a year or so ago he came across a model showing the ancient buildings of the Eternal City in its prime. He found that a goodly proportion of them were curvilinear, the of these but one remained, the Colosseum. Then when he came to study the creation of a building, not only as an ornament to the city, but also to provide quarters for the busiest law courts in the world, the value of the circular idea struck him. . . .

"Economy, said Mr. Lowell, is one of his chief objects, economy of cost of construction, space, and time for those who will frequent the new court-house. A circular wall will include a larger amount of space than one built as a rectangle, so there will be less actual marble and stone used in the new building than if it had been designed on more ordinary lines. The multitudinous court-rooms and offices can be fitted more compactly into a circle than into a square, and above all, lawyers and litigants will be able to reach the trial rooms more quickly as at present laid out than according to any other arrangement.

"North, south, east, and west the portals of the court-house will be open to seekers after justice. They will pass directly through a broad lobby to the central hall. This in itself will be a building which can command attention. It will resemble the Pantheon, but will be larger than that famous structure. Its diameter of 112 feet will be ten feet greater than that of the ancient building. From all round it will rise elevators, which will take those with business in the courts directly to the floors they seek. . . .

"Five floors are to be devoted to the actual trial of cases, on one of them the City Court having its quarters and on the others the general and special terms of the Supreme Court. To these upper floors an abundance of light and air will be admitted, as above the ground floor the building will not be solid. From the

summit of the central hall to the upper air will be a vacant space which will insure an abundance of ventilation and illumination, and there will be another opening between the ring of elevators and the main building.

"This light well will extend around the central hall and the elevators, which, so to speak, will form the core of the court-house, and access to the court-rooms will be obtained from the elevators by bridges thrown across it. The reason for this opening is that thereby Mr. Lowell hopes to solve the difficult problem of proper ventilation and light to the trial rooms without impairing their acoustic properties. . . .

"On the seventh and eighth floors will be the judges' chambers, their library, consulting room, lunch room, and so on. Each of them will have ample quarters for himself and his secretary, and they will be able to work there in comfort, close to their court-rooms and yet removed from any fear of disturbance. To their use will be assigned a terrace which will run round the entire building, 200 feet above the ground. From it a fine view will be obtained of the city at their feet.

"In working out the detail of the building there will be plenty of opportunity for the architectural use of statuary. On either side of the broad steps, which will lead to each of the four great porticoes with their Corinthian pillars, will be groups of marble figures. Over each of the porticoes will be statues, probably of the great law-givers of the world, from Moses and Solon to Marshall and Kent. Above will be the imposing arcade of Doric pillars, and still further aloft will be other marble groups. Then almost at the summit there will be a sculptured frieze. . . .

"The court-house will occupy 120,000 square feet of ground. This should leave a fair amount of the ground condemned for the court-house site for park purposes and the construction of terraces and approaches. If President McAneny's plan for the taking of additional property to the southeast and southwest is carried out, there will be no buildings between the court-house and the Hall of Records and the Municipal Building. Mr. Lowell, bearing in mind that it is hoped to make the court-house only one of a group of public buildings in a civic center, has suggested that the rectangular classical design should be adopted for its future neighbors."

Mr. Lowell estimates that the court-house could be erected within two years of the completion of the foundations. The cost of the building, we read in *The Architectural Record*, is likely to be \$10,000,000, and Mr. Lowell's commission will be 6 per cent. of this, or \$600,000. In addition to this the site will cost at least \$6,000,000.

The court-house will form, as it were, the hub of New York's new civic center, certain features of which are thus described in the *New York Sun*:

"In the first place, its magnitude will not be discernible at a glance except to an observer high up in one of the down-town skyscrapers; furthermore, it will combine architecture pecu-

MODEL OF NEW YORK'S PROPOSED COURT-HOUSE.

This will be not only the largest court-house in the world, but also the first great public building in America to be built in circular form. It will cover 120,000 square feet of ground, and the cost of construction is estimated at \$10,000,000.

liarily American with the classic styles in a fashion absolutely novel. The New York civic center is going to draw lovers of the artistic from all over the world just to see and study.

"Tho the formal array of buildings will stand round about the new court-house, there will be much more to the civic center than lies there. The present Post-office and Federal Building is likely soon to be swept away, restoring City Hall Park to its former beauty, for the old Tweed court-house will vanish too within a few years. Therefore the civic center will begin at the junction of Broadway and Park Row and it will not stop short of the causeway to the Manhattan Bridge at Canal Street and the Bowery. It may not stop there."

To present this audacious design, says the *New York Outlook*, Mr. Lowell has needed equal courage and taste. So, too, thinks *The Tribune*, which finds the perturbation of spirit caused in some quarters by the idea of a circular court-house "both saddening and funny," and attributes it to "a kind of provincial timidity." In praise of Mr. Lowell's design *The Tribune* goes on to say:

"He has planned a work of living architecture, a rare and beautiful example of what a true artist may do when he adopts a classical language and makes it his own, using it easily and naturally to express fresh, vital ideas. . . . He has followed the inspiration which gave us the majesty of the elliptical Colosseum and the circular Pantheon at Rome, the grace of the Temple of Vesta at Tivoli, and the Choragic Monument of Lysicrates at Athens, and the kindred individuality and charm of the octagonal Tower of the Winds, also at the Greek capital. The singular beauty and interest brought into the architectural panorama of the past by these and other renowned buildings may be traced to nothing more nor less than a reaction in men's minds against the tyranny of the immemorial straight line. Countless architects in our own age have felt the same pressure and have sighed to make the same protest. But it needs a resolute will, a strong originality, to make the decisive step. Mr. Lowell could not have committed himself to his circular plan without qualities which we are sure will enable him to justify in stone and marble the courage which he has shown on paper."

But it is against this very matter of adopting "a classical language" that a correspondent of the *New York Sun* protests,

According to this writer, "the world has produced three great types of architecture, the Greek, the Gothic, and the American, each perfectly adapted to its use and its environment," and of these "the American is the greatest achievement, because it is obliged to fit into a life more complex and to meet demands incomparably more strenuous." Therefore the court-house, he argues, should have been built in the American or "skyscraper" style. He says:

"You have just completed the Woolworth Building; can you not see that the mind of man never conceived, the hand of man never wrought so superb a structure? It is not perfect; it still has a lot of the rags and tatters of antiquity hanging about it; it is but a step toward the greater yet to come, but as compared with the laborious proportions of the Colosseum it is a triumph that should fill our hearts with pride. . . ."

"You are to have a court-house built of steel, built according to the latest word in engineering science, then artificially made to look like a Roman antiquity. How tired you will get of it! How sick you will be of it when you see all the men and women who come to your city from the four quarters of the globe gazing awestruck at your own mighty American architecture, and passing by contemptuously your mistaken exaggeration of something that was fine 2,000 years ago. . . ."

"The round form may be a happy thought—and it may not be—it may afford large opportunities for interior subdivision; that is a practical, an engineering proposition. And certainly the very suggestion of a round or octagonal building should fire the imagination of an American architect, since it offers fresh, unexploited opportunities for steel and the clothing of steel in garments that cling like a woman's gown; garments that make the beholder feel the form, the structure, the palpitating body beneath."

Another correspondent of the same paper, a lawyer this time, says that the approved plan "shows a building utterly unsuitable for its purpose." He writes in part:

GUY LOWELL.

Whose design carried away from twenty-two competitors the award for New York's new court-house.

By courtesy of the New York Sunday "World."

HOW THE COURT-HOUSE WILL LOOK AMONG ITS NEIGHBORS.

This idealized representation of New York's proposed civic center was drawn by Mr. Louis Biedermann, Jr. Before the picture can be reproduced in fact many old streets and buildings will have to be obliterated.

"It is a freak idea and it naturally leads to freak results. One of these results is the central rotunda to which judges, lawyers, and jurors alike must betake themselves in order to get anywhere. What can follow but congestion and confusion? . . .

"Another feature of the building which seems to me opposed to reason and common sense is that its system of internal communication depends upon innumerable bridges, big bridges for lawyers and jurors and little bridges for judges; bridges everywhere spanning the interior area which is expected to afford light and air to the court-rooms and to the interior offices. And what does this area amount to? It is less than thirty feet wide and over one hundred feet high, cut up into segments by the aforesaid bridges, which radiate from the rotunda like the spokes of a wheel. The light and air which penetrate these chimneys will have to show a good deal of enterprise to illuminate and ventilate the innumerable dark corners with which such a building inevitably abounds.

"Without going into further details it seems to me perfectly evident that the interior of the building has been planned to fit the exterior and that all considerations of utility and practical convenience have been subordinated to a desire to produce an unusual and striking design."

THE VANISHING LOVE LYRIC

THE LOVE LYRIC in English literature is either dying or decadent, declares a woman writer, who signs herself M. M. B., in the *London Daily News*. And the responsibility for this fact, she intimates, rests at the door of modern woman herself, who, having descended from her pedestal into the hurly-burly of life, has sacrificed her glamour, her mystery, her power to evoke the poet's adoration and to lift him to the heights of song. In support of her allegation that the love lyric is vanishing, this writer cites a book of "Georgian Poetry," recently published by the Poetry Bookshop. In this collection of typical examples of the work of the younger generation of British poets during the past two years, "there is not one love lyric." "Divers subjects—dust, rags, fish, and tea—have given inspiration," we are told, but "woman alone has failed to fan the poetic fires." This *Daily News* writer continues her contention as follows:

"Turning to various latter-day books of verse, the same fact faces us. Love, with which the sixteenth-century poets were so greatly preoccupied, is the theme which appears to touch the modern minstrel's mind least. It is true that Mr. Lascelles Abercrombie, in his remarkable book, 'Emblems of Love,' does concern himself with this emotion. But it is a metaphysical and quite impersonal analysis. It is noteworthy, too that he finds his inspiration not in modern women, but in tameless and strong-willed heroines of the past like Vashti and Judith.

"Broadly speaking, nature and realism are what stir the modern poet most frequently. These are the principal preoccupations of the flock of young poets who perpetually browse in the pleasant pastures of the *English Review*."

Then, in regard to the responsibility for this state of affairs, she goes on to say:

"One wonders if the modern woman is responsible for the decline and decadence of the romantic love lyric. No doubt her accessibility, the fact that she is no longer carefully guarded and chaperoned, has much to do with the decrease of her inspiring power. Inaccessibility and remoteness have always tended to idealization; nearness and familiarity to the contrary. The woman of to-day works side by side with man in offices, she golfs with him, she sits on committees with him. She scuffles with him in suffragette scrimmages. Has no one ever written a sonnet to 'Belinda Breaking Windows' or to 'Priscilla in Prison'? Moreover, the modern woman is very businesslike and matter of fact. There would be no need for a poet to sing 'Come into the garden, Maud' in a dozen impassioned stanzas. The Maud of to-day is probably a very punctual person who keeps a diary of engagements. She would no doubt be there before him.

"After all, a Dante needs a Beatrice and a Petrarch a Laura. Both these ladies were remote and proud and extremely inaccessible—quite different from the heroines of modern novels."

CHICAGO'S OPERATIC INDEPENDENCE

NOT THE LEAST interesting of the many interesting signs of the times in opera—the growing indications that this hitherto subsidized art can pay its own way in the United States, the various managerial rivalries, the increasing interest in opera in English, and the welcome movement for popular low-priced opera in New York next season—is the withdrawal of Andreas Dippel and the New York directors from the Chicago-Philadelphia Grand Opera Company, and the purchase by Chicagoans of the stock held in New York. In many quarters these changes in management, directorate, and stock-ownership are interpreted as a declaration of musical independence on the part of the city by the lake—another step in the progressive fulfilment of that historic promise that "when Chicago gets around to it she will make culture hum." We read in the *Chicago Inter Ocean* that "the organization will become strictly a Chicago enterprise, thus permitting the continuance of opera seasons on a broader scale, with better artists and a higher standard than ever before." And in the *Evening Post* of the same city we are assured that "the future of grand opera is thoroughly established in Chicago, and the coming season of the Chicago Grand Opera Company promises to be more brilliant than ever before." Mr. Dippel is succeeded by Mr. Cleofonte Campanini, who adds his new duties as general manager to his old ones as musical director. "Mephisto," who contributes a weekly page of musical gossip to *Musical America* (New York), gives the following account of the incident and the forces behind it:

"Ever since the Chicago Opera was started there has been friction between Mr. Campanini and Mr. Dippel. In the various controversies between them, Signor Campanini—a most able conductor, by the bye—has based his plans for managing the opera on the elimination of the New York members of the directorate, and particularly of those who were connected with the Metropolitan Opera Company.

"Virtually the position was this: Mr. Dippel stood for the organization, and was loyal to the members of the New York Metropolitan Company, whose support he had had when he was in New York, connected with the Metropolitan Opera House and associated with Mr. Gatti-Casazza; while Signor Campanini stood for a new deal, in which the Chicago Opera was to be run by Chicago men exclusively, without either support or interference on the part of New York. In this, of course, he appealed to local pride, as well to local sentiment. Thus he secured the assistance of Mrs. McCormick and her friends, and so was able to create a situation which resulted in Mr. Dippel's resignation and Mr. Campanini's appointment as manager of the Chicago Opera Company.

"I am all the more satisfied that this view of the case is correct, because we now know that Captain Lydig, Mr. Clarence Mackay, and other members of the Metropolitan Company have resigned as directors in the Chicago Company, and we also know, from a dispatch in the *New York Herald*, whose operatic news has generally been almost of an official character, that there is possibility, in the future, of an 'operatic war' between the Chicago and New York directorates."

A correspondent of the *New York Musical Courier* reports from Chicago that "the Dippel-Campanini feud, which started in 1911 and which culminated in the resignation of Mr. Dippel, was one of the most intense in the history of musical enterprises." Yet both Mr. Dippel and Mr. Campanini, according to the dispatches, somewhat discount these rumors of discord by their assurances of mutual friendship.

It is said that under Mr. Dippel's management the first year of opera in Chicago resulted in a deficit of \$246,000, the second year showed a practically even balance between expenses and receipts—about \$1,000,000 on each side of the ledger—and this season left a profit of nearly \$50,000. Mr. Dippel, according to the correspondent, receives \$25,000 from the Chicago Opera Company as the price of his agreement not to reenter the grand-opera field for three years. CHIEF FIGURES IN CHICAGO'S OPERATIC CRISIS.

in the course of an editorial on "Chicago's Own Opera," has this to say of the interesting situation that has developed:

"Chicago has done the deed and broken boldly the yoke of 'dependence upon New York'—hateful words to true Chicagoan spirits.

"There were 'New York directors' in the old Chicago-Philadelphia Company; they had the temerity to exercise their voice in its affairs. The ambition, the wealth, and the Chicagoan spirit have now extinguished them. Its own operatic Mæneas has bought their stock, fortified the new company with his resources, asserted the independence and stimulated the ambition of all concerned. What Mr. Statesbury is to opera in Philadelphia and Mr. Jordan to opera in Boston, Mr. Harold McCormick will now be to opera in Chicago. It is an exacting task, generously undertaken, sometimes ill requited.

"Yet Chicago—lusty, innovating, self-confident Chicago—will not rest content with all these changes. Mr. Campanini will be the director of the company that is to give a hungry city more opera and better opera. Mr. Campanini has also been and will continue to be its chief conductor. This dual function is familiar enough in Europe. For ten years Mahler was the director and the chief conductor of the Court Opera in Vienna, and he made it the foremost lyric theater in the world. For almost as long Mottl discharged both functions at Munich, as Bruno Walther discharges them now. In America, for a few years, Mr. Dambrosch conducted with a touring company in opera and was also one of its managers. Hitherto, however, this side of the Atlantic, no fixt and established opera has made the chief conductor the director also, until Chicago gave Mr. Campanini the double post.

"The advantage, from one point of view, is obvious. There can be no disagreements between the 'artistic end' and the 'business end' of an opera company when the final authority over both is lodged in a single man—no appeals from one to the other, no meshes of intrigue, no double face toward the public. The disadvantage is as clear. The director-conductor may be a glutton for work and have staying power proportionate to his appetite; and he may delegate his functions and pick his lieutenants with the wisest wisdom. Yet the burden is tremendous for one man who would uphold his artistic standards, pervade every application of them, and yet sign a creditable balance-sheet at the end of each operatic year. Mahler left the opera in Vienna spent in body, mind, and spirit; Mottl died untimely in the harness of the twofold work at Munich. Mr. Campanini, strong and able as he is, must be seeing ghosts as well as glories."

Mr. Campanini, the Brooklyn *Eagle* reminds us, is the conductor who "made the reputation of Oscar Hammerstein and his Manhattan Opera-house in New York."

A PULPIT PLEA TO ARTISTS

AT A SPECIAL SERVICE for artists held recently in the Cathedral of St. John the Divine, New York, American artists were urged to draw their chief inspiration from American life. In the congregation, say the press reports, were nearly a thousand artists, representing many leading art clubs and art schools, and it was suggested that this service should be made an annual event. In his address the Rev. Howard C. Robbins argued that the artist does not speak for himself alone, but for his people, and carries in consequence a national responsibility. On this point the *New York Times* quotes the speaker as saying in part:

"He speaks for his people. He gives expression to the inarticulate thousands who have no other voice than his to utter forth their mind. As in art man becomes man, so in art nations become nations, and add, according to the grace that is given them, to the strength, symmetry, and standards of the world. Therefore the artist may not build on the foundations of a foreign culture. He may learn from these; he may be warned by these; he might be mightily inspired and helped by these; but he appropriates them at his peril.

"Opprest and overshadowed by the glory that was Greece, Rome took over bodily Hellenic culture, and what was the result? Imitation, pale, devitalized, and languid; an art so parasitic that it left a mighty people without an utterance worthy of its soul.

"My friends, if you will permit a layman to address you upon a topic of which he is not technically informed, out of much ignorance, I fear, of the peculiar problems which beset you, yet with a deep and somewhat troubled interest in the spiritual issues here involved, let me ask if there is not, in the stillborn art of Rome, a warning which America must not be suffered to neglect? Rightly or wrongly, the idea is prevalent that American artists are unduly dependent upon foreign models, that American critics and purchasers of works of art are too much influenced by the stamp of foreign approval. . . .

"Let the artist be free to roam at will, to ransack Europe in his quest for inspiration, but let him add to freedom the profoundest loyalties of life, loyalties of home and fireside, loyalties of state and nation.

"Is there a district even in Italy more dotted with memorable battlefields than our Virginia, with its sad and heroic memories of war? Let the life of the nation afford our artists their material. Let the spirit of the nation inform their works of art. What matter if there result from the encounter the crudities of form and expression? They shall be American crudities. We shall love them and learn to better them as time goes on."

RELIGION AND SOCIAL SERVICE

MR. BRYAN'S GRAPE-JUICE BANQUET

SECRETARY OF STATE BRYAN acts within his rights and sets a good example to the whole country, in the unanimous opinion of the religious press, by declining to serve alcoholic beverages at his table. The *Nashville Christian Advocate* (Methodist) says it knows of no better story with a moral than this one of the man who from boyhood grew up with "a strong conviction that the drinking of spirituous liquors, including wine, is morally wrong." He abides by his conviction through his career, in victory and in defeat. Now in one of the highest posts of the American Government, he finds it necessary to give a banquet to the retiring British Ambassador, the Hon. James Bryce, and to other members of the diplomatic corps. Could he go contrary to the long-established custom of providing wine at his table, *The Advocate* asks, and submit himself to the ridicule and harsh criticisms of newspapers in three continents? This is just what he did, and for standing firm on their principles *The Advocate* votes all honor to Mr. and Mrs. Bryan, affirming that "their example will be worth much to the American people."

The comment, wide-spread and immediate, that followed the Bryce dinner, remarks the *Boston Zion's Herald* (Methodist), drew from Mr. Bryan a public statement in explanation of his position. As this was the first dinner they had given to the diplomatic corps, and as the guests were all from foreign countries, he stated frankly before sitting down that he and Mrs. Bryan, like their parents before them, were total abstainers, and never had liquor on their table. Mr. Bryan had explained this to the President, when the State portfolio was offered to him, and Mr. Wilson had left the drink matter to Mr. Bryan's discretion.

Mr. Bryan's statement of his reasons for serving grape juice instead of wine at a state dinner, says *The Presbyterian Banner* (Pittsburg), "met with the approval and applause" of his guests, for he acted "in a straightforward, manly way," with the courage of his convictions. *The Banner* adds:

"It is only some newspaper men and congressmen who are jeering at Mr. Bryan and affirming as tho they were the final authorities on points of etiquette that he had no right to impose his custom on his guests. But every host has just this right, and guests submit to this condition in accepting his invitation. That wine must be served at state dinners at Washington or something awful will happen is simply a traditional bugbear and humbug, and Mr. Bryan has pricked this bubble."

On the question of the etiquette of the absence of wine at Mr. Bryan's dinner, the *New York Christian Advocate* (Methodist) suggests that those who tremble for the dignity of our nation, especially when the Secretary of State has distinguished Europeans at his board, may calm themselves "if they reflect on the importance of having men in charge of international affairs

whose brains are not muddled by alcohol." *The Advocate* says, in conclusion: "The fewer drinking men there are at the head of governmental affairs in Washington, the greater will be the sense of security experienced by all thoughtful citizens."

Mr. Bryan's decision, says the *Chicago Continent* (Presbyterian), has attracted more attention than "some of the momentous work he is doing in the State Department. The newspaper correspondents seem to have been surprized at Mr. Bryan's course, but there would have been greater cause for

surprize if Mr. Bryan had done violence to his well-known temperance principles."

Reminding us that it is also the practise of President Wilson and Vice-President Marshall not to serve spirituous liquors to guests, *The United Presbyterian* (Pittsburg) lauds Secretary Bryan, and says of the Administration that it quickens the pulse to read of its "open loyalty to religious convictions and practises." *The Catholic Temperance Advocate* (Chicago), the official organ of the Catholic Total Abstinence Union of America, says that "the effect of Mr. Bryan's advocacy of temperance, while in a position of honor and power, can not fail to be very great." We read:

"He will deal with the representatives of all the nations of the earth. The moral influence of America for good or for ill has

been greater than many of us have realized. We believe the attitude of Mr. Bryan on the temperance question will help to make America stand more than ever for private decency as well as for public honor."

Similar approbation of Mr. Bryan's stand is to be noted in papers of the lay press, which are at pains to defend him against the strictures of their foreign contemporaries. *The New York Globe* says:

"Mr. Bryan's dry dinners will not cause unadulterated derision in this country. Mr. Bryan is an unworldly man, no doubt, but even he must have known what would be said of his innovation. He knew, and he did not care. Believing that the world would be a better place without alcohol, he thought ridicule not too high a price for the privilege of testifying to his faith. This is an attractive courage, of a kind few of us would be capable of if we occupied Mr. Bryan's official position. The knowledge of Mr. Bryan that the incident gives is in harmony with what we all knew about him. And so one arrives at the paradox that Mr. Bryan is less laughed at than he would have been if he had not known he would be laughed at."

Continuing, *The Globe* admits that it feels moved to criticize one point—namely, that he regrets the importance attached to his statement on the non-use of wine at the Bryce dinner. *The Globe* holds that the great publicity given to Mr. Bryan's dinner departure is the best missionary work he can perform in the cause of temperance; and it hints that "silence would imply a hope in Mr. Bryan's breast that foreign ambassadors,

A SUNDAY CROWD ON ONE OF THE CONEY ISLAND BEACHES.

for instance, would learn something from the dryness of his dinners."

Speaking of "those dry diplomats," the *Pittsburg Dispatch* wonders, in view of London press comment, whether they "are such habitual 'soaks' that to ask them to attend a dinner at which no intoxicants are served is cruel and tyrannous?" *The Dispatch* answers its own question:

"Hardly, yet that seems to be the effect of the comment upon Mr. Bryan's adherence to a lifelong custom of barring liquor from his table.

"There is nothing, however, in Mr. Bryan's dry banquet to prevent a thirsty diplomat from having his dinner with all the wet courses before he goes. Thus fortified, he ought to be able to survive the function. But failing that, no guest need lack intoxication if he lends an ear to the exhilarating eloquence of the host."

"Whatever Europe may think of grape juice at a State dinner," the *Baltimore Sun* points out, "the Bryans will suffer nothing in American esteem for carrying out their principles on this subject in their own house." Nor will ridicule and satire disturb Mr. Bryan, asserts the *St. Louis Globe-Democrat*:

"A man who has braved the resentment of a thousand Democratic diners, at Democratic banquets, in keeping his glass turned down while all the rest were quaffing the nectars of the gods, will find it easy to endure the polite shoulder shrugs and raising of eyebrows which is as far as the refined gentlemen of

the diplomatic corps ever allow themselves to go in disapproval. He who has run the Democratic party gauntlet with an inverted, dry and empty glass in his hand need not dread the deprecating smiles of men trained in diplomacy and its concealment of feeling."

NEW YORK'S DEMORALIZING SUNDAY

THE PROBLEM of making the summer Sunday a less demoralizing and depressing day for New York's five and a half million citizens is discussed with force and feeling by a writer in the *New York Call*, a leading Socialist daily. As it is, says this writer, instead of a day of physical and spiritual recreation and refreshment, New York's millions have a day devoted to the feverish pursuit of a relaxation which they do not find—a day of heat and suffocation in the city or of crowding and discomfort in the so-called "pleasure resorts" of the people. Our parks "are utterly inadequate"; our rivers "so polluted that it is almost impossible for the average person to get any good of them"; our subway, surface, and elevated cars "jammed to the doors"; our churches largely closed for the summer; our so-called "sacred concerts" in the vaudeville houses, the only form of dramatic entertainment permitted, are a sham and a disgrace; and on all sides New York's Sunday crowds "are subjected to every insult and to every inconvenience" and receive "the worst possible service for the greatest

Courtesy of the New York "Sun."

A SUNDAY SCENE IN A CONGESTED EAST SIDE DISTRICT.

possible amount of money." The writer estimates that "perhaps a million and a half people get into the parks or to the beaches or into the country on Sunday." Of what the day means to this more adventurous or more prosperous minority we read:

"The mad rush and crush for a Sunday outing show how eager the public are to have a day of relaxation. The robbed and swindled home-coming crowd show how thoroughly impossible it is to have a day of relaxation unless you have plenty of money. . . . About the most dreary sight you meet is that of weary, worried, sweating women, coming home on the night subway trains, holding their fretful, wilted babies, and trying to hush them from the effects of a day of pleasure. All are worn and irritable, their nerves are jangling and their money has been ruthlessly taken away from them by those whose mission it is in life to cater to the wants of the Sunday crowds. . . .

"The great, sheeplike crowd is rushed here and there, crowded and pushed about, swindled, short-changed, and poisoned by filthy drinks and decayed alleged edibles, and then driven home in herds—after a day of pleasure and relaxation."

The situation is slightly relieved by the band concerts in the parks, but the parks themselves are too few, too small, and too inaccessible. Moreover:

"What should be the greatest recreation places in the city—along the rivers—are given over to corporations. On the East River there is a dinky little park named after Carl Schurz. But in the neighborhood there are at least a hundred thousand people. Directly west is Central Park and over on the Hudson is Riverside Park. But you are kept away from the river bank. That belongs to the New York Central. The most of the East River is given over to factories, artistic dumps, breweries, and so on. The Hudson has factories and piers. The Harlem has railroad tracks and garbage scows, and on its sewage-thickened waters ride many gallant freight lighters.

"The recreation piers that have been open merely mock the hunger and the desire of the people to get near the water."

Turning to the case of the remaining four millions who "stay in the city and listlessly prowl about the streets, or continue to breathe the stench of the tenements," he writes:

"Some of them may go to church in the morning. But the number of summer church-goers is so small that many of the churches close or else run only one service and that to a dwindled congregation. The others merely sit in their noxious tenements and dawdle over the Sunday papers. Some of them rush the car or the equally pernicious ice-cream soda growler. The children cluster around the fly-infested places where ice-cream sandwiches are sold, or they droop and mope on the stoops or fire escapes. . . .

"If you desire to go to the theater, there is nothing for it but to go to a sacred concert. This consists of sacred smut, sacred dancing, inspiring impersonations, elevating disrobing acts in honor of the hot weather and things of a similar sort that you can see any week-day, only then they are not part of a sacred-concert. But you cannot witness a decent play."

These anomalous conditions, he says, result from a curious and illogical blending of puritanism and license, and they are difficult to reform because of the vested interests involved. Thus we read:

"We are a strict people in observing the Lord's Day. So whatever is good we close up; whatever is bad stays open. The saloons are closed, except through the back way. That maintains outward order and decency and promotes drunkenness. The regular theaters are closed. That teaches the actors that they are still regarded by many as outcasts. But the worst of the variety-shows are in full blast. That helps in the culture of indecency.

"We refuse to provide adequate facilities for recreation. That forces the people to travel far and makes them a prey to sharks. But it promotes business. It fats the purse of the politicians and others. It is good for the stockholders in traction companies and on railroads, and it is fine for the owners of steamboats. Everybody who goes near a beach is taxed for the privilege. That is fine for those who have stolen the beaches.

"Young and old are herded and driven. The utmost laxity prevails. Many of the places at the beaches are disreputable beyond description. That is excellent for the white-slave traffic."

Concerning the city's responsibility in the matter the writer goes on to say:

"The day of rest of a city with five and a half million people is a matter of civic concern. Two-thirds of those people cannot afford to go either to the beaches or to the country. . . .

"A great part of the problem would be solved if, say, half of the river front was reclaimed. A string of parks, piers, and bath-houses under proper supervision would accommodate hundreds of thousands. Food and drink for these people could advantageously be served even at a loss. But it would be pure and wholesome, which isn't the case with what is served now.

"It would cost millions of dollars. What of it? . . . Proper recreation grounds would mean increased health, and increased health means increased sanity in what is termed morals."

SPIRITUAL SELF-EXPLOITATION

THAT MUCH PRAYING and the constant expenditure of spiritual sympathy produce a lot of hypocrites is the startling indictment brought in *The Atlantic Monthly* (April) against the ministry; and another Boston publication, *Zion's Herald*, acknowledges itself frankly scandalized. *The Atlantic* actually compares the clergy to "clowns and jesters," but remarks that the clergy are "more to be pitied than the clowns," for the minister has to furnish sympathy and spiritual food whether his own feelings are engaged or not. They are called upon, it alleges, "to exploit their own spiritual nature in the earning of their daily bread." This is what appears in the "Contributor's Club," practically the editorial section of *The Atlantic*:

"At certain hours of the week the minister must summon from its hiding-place the spirit of prayer; he must literally exploit it for the edification of three hundred or five hundred or a thousand listeners. At certain other hours he must call forth his most solemn convictions about life and death, and exploit them in the same way. And at uncertain times, at any and every time, week in and week out, he must have his personality ready to deliver when called for.

"Is this fair? Can we wonder that the weakness of the ministry is along the line of hypocrisy, of the over-facile in expression, of the cheaply ready in sympathy?—that ministers sometimes develop a professional manner as marked as the professionally sympathetic manner of the undertaker? Is it surprising that in self-defense they should build up for themselves an armor, not of obvious reserve, but of glib expressiveness, which meets the same end? If they were always really turning themselves inside out, as they are nominally supposed to do, there would be nothing left of them, they would be worn to a frazzle in three months. Some there are who really do this, and these are usually indeed worn to a frazzle. Or, to use the conventional term, they 'break down.' Most of them do not do it, and they survive, but ideals suffer."

All this to *Zion's Herald* is "simply another way of saying that unless a minister be a nervous wreck he has sacrificed his high ideals; he is a mere mumblor of words, one who pretends to give himself, but does not." To which comes the retort:

"We do not believe anything of the kind. Failures there are among the ministry, naturally; men who come short of being what they should be. But the great majority of them are genuine men. And when they stand by the open grave and utter words of sympathy, or in the pulpit or in the home, they speak out of the heart. . . .

"The article in *The Atlantic* tries to say something in favor of the ministry, and to find a way of helping it, but it does it badly. It practically indicts the whole class for hypocrisy, while it makes a show of expressing sympathy for a difficult work. Nothing could be worse than for the people to lose faith in their ministers, to imagine that they are simply hired men, engaged to 'make emotionally satisfying' addresses by the graves of dear ones, or to pray at a moment's notice without feeling in a mood for it. Our ministers are nothing of the kind. Fed constantly on the deeper things of the Spirit, they are in a position to respond by the help of God to the great demands upon them."

REVIEWS OF NEW BOOKS

ENGLISH SOCIAL LIFE IN LATE GEORGIAN AND EARLY VICTORIAN TIMES*

Lady E. Spencer-Stanhope's "Letter-Bag" Reviewed for THE LITERARY DIGEST by

JOHN KENDRICK BANGS

UPON the invitation of Mr. A. M. W. Stirling, the author and compiler of the very attractive "Letter-Bag of Lady Elizabeth Spencer-Stanhope," readers of that work enjoy in effect a series of epistolary week-ends at the town and country houses of an English family of high social standing, and therefore well worth visiting; meeting any number of interesting, and in some cases really distinguished, people as the hours pass. Next to being admitted into the charmed circle of the *beau monde* itself, such an entrée as Mr. Stirling so amiably here provides for our delectation in this series of gossip letters, written by the men and women of his family in the past, presenting so intimately, so freshly, and so naively certain known and unknown personalities of a bygone century, is probably the most acceptable substitute one could wish for.

Perhaps for some of us who are shy, and not always sure of the proper disposition of our hands and feet, and to whom the formalities of a conventional society such as existed in Great Britain under Georgian and early Victorian conditions would appear formidable, this proxy method of being in, and yet not of, that circle is preferable; a circle pleasanter to read about than to be of; more comfortable to gaze upon through other eyes than our own; less trying to enjoy in the imagination than in the reality. For our preliminary comfort Mr. Stirling very tactfully adopts a method which it would be well for other compilers of intimate family correspondences to follow. Standing as it were upon the threshold at the moment of our approach, he explains to us, after the manner of an efficient *entrepreneur* of the Who's Who order, just whom we are to meet while enjoying this rather intimate hospitality. He assumes, and properly, that there may be some of us who, while we are willing to accept the Spencer-Stanhope family as all that is desirable in the way of acquaintance, would, nevertheless, like to be enlightened as to their identity; and, reversing the usual habit of the lordly butler at the door who announces us, he stands there himself and announces the hostess and her family to the arriving guests. This kindly courtesy on Mr. Stirling's part makes us feel very much at home not only at Cotton Hall in Yorkshire, where the Spencer-Stanhopes mostly did congregate, but also in the rarefied social atmosphere of Grosvenor Square, where hitherto not many of us have been permitted to disport ourselves in the flesh, and helps us to overcome whatever punctilious scruples we may have possessed in the matter of glancing over the Stanhope mail.

The visits are divided into two volumes,

the first of which is wholly Georgian, and the second almost wholly, if not quite exclusively, Victorian; and our hostesses are respectively Mrs. Walter Spencer-Stanhope and the Lady Elizabeth, to the latter of whom the compiler is indebted for the alluring title of his production. Both are charming, and it should be recorded by all veracious chroniclers of the right sort that their hearts go out at once to these gracious ladies, and especially so to the elder of the two, the wonderful mother of the Spencer-Stanhopes, for not only is she a most prolific writer of delightful letters, but in the brief space of twenty years she found time as well to become the mother of fifteen children, all but three of whom lived not alone to maturity, but in most cases completed the patriarchal and matriarchal span of three score years and ten.

Running as the letters do from 1805 down to 1873, they cover a period in English social and political life which to the student at least is of large interest, and should prove especially valuable, we think, to American readers, who will find in the vivid picture they portray of social manners and customs not too remotely connected with their own something more than worthy of their contemplation. Morally, perhaps the period of the Regency in Great Britain was not particularly edifying—it could hardly be so with such a human animal as the then Prince of Wales to set the standards of private deportment; but it was, nevertheless, in certain of its larger social aspects, a period of good manners, when it really meant something for a woman to be and to behave like a lady and for a man to be and to behave like a gentleman. We often run across the phrase, "a gentleman of the old school,"—indeed in these days of turmoil, of rush and hurry, of emergence of the submerged, and submergence of the emerged, with their turkey-trotting, their bunny-hugging, and their subway manners generally, we encounter the phrase more often than we do the gentleman himself. Our more popular fictionists, in their eagerness to depict To-day, have largely forgotten Yesterday, and since the quiet, unostentatious individual who goes quietly about the business of minding his own lacks dramatic interest, and appears less exciting than the bounders and the cads of the so-called smart set, it is of the latter mostly that they write, and the readers of the hour are in danger of forgetting that polite society ever existed.

Wherefore it is altogether a good thing for somebody to present to our contemplation such a picture as these letters reveal of a society in which men were courteous and stately, and none the less manly for the fact; and women were formal, and full of high feminine dignity, and none the less womanly withal; a Society in which ladies and gentlemen of the old school dominated the scene because of, and only because of, their personal graces, their spiritual and

intellectual charms, their courtesy and good manners, giving the world in which they moved an atmosphere of high distinction which can only prevail where good-breeding is to be found. One learns easily in reading letters such as these that after all it is better to be noble than merely royal, for the attitude of the ladies and gentlemen of real English society toward the Court in the time of the Regency is here revealed to be one of condescending tolerance of certain necessary evils rather than of defensive approval of the shortcomings of the Regent and his set. The profligate vulgarity of that First Gentleman of Europe, as George the Fourth was wont to style himself, is in nowise glossed over in any of these correspondences, and he is presented to us for what he unquestionably was, a bounder *par excellence*, utterly wanting in anything of the nature of decent regard for his personal responsibilities as a sovereign, a son, a husband, a father, or a man. That England should for a moment have tolerated the social and political dominance of such a human failure and moral affront becomes increasingly a matter of wonder the more one realizes, as one can not fail to realize in reading such letters as these, that a full appreciation of his mean, ignoble nature was not wanting among his contemporaries.

More important, however, than these little glimpses of the manners and customs of polite society, and the foibles of royalty; more edifying than the somewhat stupid *on dits* of the London smart set, duller even than our own, apparently, are the really satisfactory views *intimes* that come along now and then of men who really amounted to something in the great story of human progress. The age had its imbecible Georges, its silly fops, and its foolish beaux, men like Nash, Brummel, and Skeffington, but it produced with equal lavishness its truly great spirits. The compiler in one of his prefaces very aptly remarks of the period that it was a generation of colossal exaggeration both in talent and in idiocy, in virtue and in vice. "Men sinned like giants and like giants atoned. Common sense, mediocrity—save upon the throne—were rare. Even the fools in their folly were great." In these letters we get glimpses of both the giants and the foolish. Among the former we find Richard Brinsley Sheridan, who for his generosity of spirit and equanimity in the face of misfortune at the burning of his Drury Lane Theater, becomes even more lovable to us than he was before through the charming little flash upon his personality that these volumes give us; nor have we found in any similar collection of letters that we can at this moment recall a finer portrayal of the sufferings of a great spirit than is here given us in the letters from, and affectionate estimates of the virtues of, Lord Collingwood, the great sailor and admiral who was at Nelson's side at the battle of Trafalgar, sharing

*Stirling, A. M. W. *The Letter-Bag of Lady Elizabeth Spencer-Stanhope*. Compiled from the Cannon-Hale papers, 1806-1873. With numerous illustrations. Two volumes. 8vo. New York: John Lane Company. \$10.

with that heroic figure all the dangers and responsibilities of his perilous command, but awarded few of the honors, and these only grudgingly bestowed by the calculating lovers of place in the high seats at home. The tragedy and pathos of Collingwood's unselfish career are here depicted in such a way as really to create a positive "heart-thrill," and the caption of one of the pages, "How Collingwood Came Home," is worthy of the genius of Kipling, as is also the substance of that sad story as a theme for his vivid pen.

Then, too, through rather British eyes, of course, we get vivid glimpses of the personality of Bonaparte, not at all flattering, but convincing. Thanks to the good fortune of Mrs. Spencer-Stanhope's son John in escaping the dull round of social life in London to land in a French community as a prisoner of war, that admirable young man was permitted more than one peep at the then scourge of Europe while the latter was engaged in the pleasing diversion of collecting thrones, masterpieces of art, territorial possessions, and other objects dear to the soul of the political connoisseur; and his well-written account of his experiences at Verdun, and later at Paris, reduced for us to narrative form by the sympathetic compiler, forms one of the most absorbingly interesting chapters of the first volume. Naturally also we get closer to the real Wellington than most formal histories permit.

In the second volume we come upon an enchanting little love-story pleasantly told in the letters of Lady Elizabeth Spencer-Stanhope herself, daughter of the famous Coke of Norfolk, to her fiancé, the fortunate John Spencer-Stanhope, who as the recipient of the letters of mother, fiancée, and wife, stands in the relation of hero to Mr. Stirling's skilfully presented story. Here, too, we find pleasant gossip concerning figures eminent in both society and history. We get glimpses of Disraeli, Gladstone, the ever-witty Monckton Milnes, later Lord Houghton, Napoleon III., and many other British and Continental notabilities who flourished during the Victorian era, ranging from O'Connell, the great Hibernian, to Samuel Warren, author of "Ten Thousand a Year," from Atkinson and Watts to the Tiebborne Claimant. There are allusions also to such folk as George Hudson, the so-called Railway King, who cut so broad a swathe in English society of the time, and whose wife seems to have rivaled our own Mrs. Partington of pleasant memory—as when a host having explained to her that a certain bust in his drawing-room was that of Marcus Aurelius, the lady replied "that she saw the likeness at once, but for the moment could not recall if it was the late or the present Marquis."

There is a noticeable paucity of literary allusion in these letters, and one looks in vain for references to Tennyson, Browning, Byron, Wordsworth, or Thackeray among the celebrities known to the Spencer-Stanhopes, altho there is one good letter in the second volume containing an amusing reference to Dickens and Carlyle, with which we close.

"I was told the other day," writes Anna Maria Pickering to Lady Elizabeth, "that when Dickens had an interview with the Queen, she kept him standing all the time, and altho kind in her manner, treated him *de haut en bas*, not even offering to shake hands with him when he took his departure. With Carlyle the case was somewhat

different. The old Scotsman calmly took the initiative. Having greeted the Queen with due respect on her entry, he observed, confidentially, 'And noo, your Majesty, I would remind you that I am a verra old man, and so I will tak' a cheer!' and down he sat without any permission on her part. He then, with equal freedom, proceeded to criticize her ministry and give her much unsolicited advice, which nevertheless showed a foresight she might with advantage have made use of. The Queen, however, was much affronted at his freedom of speech, and after the interview declared that she would see no more literary men!"

Mr. Stirling's publishers have produced the work in sumptuous form, well worthy of its charming contents. Not the least interesting part of the compilation are the illustrations, portraits mainly, among which is included a startling reproduction of an engraving by S. W. Reynolds depicting, with a painful realism, King George III. in the days of his madness. It is so convincingly done as almost to be shocking, altho the general tone and temper of the work are otherwise altogether agreeable.

CATHERINE'S SON PAUL

Waliszewski, K. Paul I. of Russia, Son of Catherine the Great. 8vo, pp. 496. Philadelphia: J. B. Lippincott Co. \$4 net.

There has always been something Oriental in the history of the Russian dynasty of the Romanoffs, as evidenced in the despotic character of their rule and frequent violent end of their representatives. The subject of the present memoir is a case in point. He was brought up by a strong, unscrupulous, and licentious mother, Catherine, who for statesmanship and talent well merited the title of "Great." But Catherine was a bad mother. She trained her son in the principle which eventually proved his downfall. Speaking of the instructors of the young prince as supplied by Catherine, Mr. Waliszewski writes:

"The intellectual and moral nourishment with which they supplied him was always too substantial for his powers of absorption. It was always his fate to put into his head more than it could contain. While still a child sentiments were infused into him which were beyond the capacity of a mind in which the emotions always held the upper hand."

The result was a sort of delirious paranoia. Paul was never allowed to forget that he was the future Czar. At the same time he was fascinated by the romantic tradition of the Knights of Malta, of which he became Grand Master. He was a whimsical tyrant. One day he would treat his attendants as slaves, at another time array them as Crusaders and make them engage in mimic tournaments. A darker element was imparted to his mind by the suspicion that Peter III. was not his father, and the fate of that ruler haunted him with dark forebodings. When his mother died it was actually discovered from her papers that his renunciation of the throne and incarceration in the Castle Loude had been plotted by her.

But Paul had ideas of his own and set out on a career of reform. His aim was to cleanse his court and his army from all persons of suspicious character. In this work he gave full reign to his natural ferocity. "The times in which we live," wrote Prince Kotchoubey in 1799, "can not be described. We tremble. . . . True

or false an accusation is always listened to. The fortresses are full of victims. Black melancholy has settled on everybody. . . . We are being tortured indescribably."

Under Paul the system of police espionage in Russia was developed to an oppressing degree, and all around him lived in a reign of terror. If at home he was hated and feared; abroad his attempt at aggressive influence was disastrous, and his union with the allies against the French Republic in 1798-9 proved fruitless, for the victories of Suvaroff in Italy were rendered barren of result by the astute diplomacy of Napoleon who sowed dissension among the coalition. What rankled deepest in Paul's morbid mind was England's refusal to cede the Island of Malta, to which he laid claim in 1798 as Grand Master of the Knights of Saint John of Jerusalem, whose home was there. The league he formed against England resulted only in that country's capture of the Mediterranean stronghold. But Paul's troubles were now reaching a crisis at home. Count Pahlen and others who were closest round the person of the Czar formed a conspiracy for his assassination. Pahlen had taken some hand in the assassination of Peter III., and to show the depth and complexity of Russian intrigue, as well as the feeble inconsequence of Paul's intellect, we need only read Mr. Waliszewski's account of the last interview between this conspirator and his master:

"Paul shut the door of his cabinet as soon as Pahlen entered, stared at him silently for two long minutes, and then said:

"'You were here in 1762?'

"'Yes, sir, but what does your Majesty mean?'

"'You had a share in the conspiracy which deprived my father of the throne?'

"'Sir, I was a witness, but not an actor in the *coup d'état*. I was too young, a mere subaltern in a cavalry regiment. But, sir, why do you ask me this question?'

"'Because . . . because they want to do again what was done then!'

"Pahlen was for a moment overwhelmed, but soon recovered his coolness, and said, with complete calm:

"'Yes, sir, I know that. I know the conspirators—and I am one of them.'

"'What!'

"'It is quite true.'

"And the cunning Courlander explained that he was pretending to participate in the plot in order to be in a better position to watch its progress and to hold all the threads in his own hand. He then tried to reassure the Czar.

"'Do not seek to compare your position with that of your unfortunate father. He was a foreigner and you are a Russian. He hated, despised, and alienated from him the natives of this country; you love them and are loved by them. He irritated and exasperated the Guard, which is devoted to you. He persecuted the clergy; you honor them. There was then no police in St. Petersburg; now it is so perfect that no one can say a word or stir a step without my knowing it.'

"'All this is quite true, but we must not go to sleep.'

"'Doubtless, sir, but in order to avert all risk I should require powers so wide that I fear to ask you for them. Here is a list of the conspirators—'

"'Arrest them, clap them in irons, and put them in a fortress, or send them to hard labor in Siberia!'

"'It would have been done already, sir, but . . . I fear to wound you as a husband and a father. . . . Read the names;

HEAVY CAR TYPE FISK TIRES

HEAVY CAR TYPE FISK TIRES Are the Product of ONE Company Whose Sole Effort, Since the Advent of the Automobile, Has Been to Produce the BEST Pneumatic Tire

From the beginning the Fisk Rubber Company has had but one policy—that is, to produce the BEST pneumatic tire. No pressure has been strong enough to change this policy, and every suggestion pointing to a reduction in quality has been instantly dismissed.

The Fisk factory, always in the process of enlargement to meet the demand for Fisk Products, is devoted solely to the manufacture of tires, with no side lines to divert attention from the one objective goal—to produce *Greatest Tire Service*.

Reports from Fisk users everywhere show that this concentrated effort has been crowned with success.

FISK HEAVY CAR TYPE Construction is the result of this continued effort to attain tire perfection. It offers users uniform quality and *Greatest Service* in all Fisk Tires. A special rubber cushion minimizes the disastrous effect of road shocks, an extra breaker strip and heavier tread lessen the possibility of puncture and specially reinforced side walls are provided to prevent rim cutting.

Fisk Pneumatic Tires are guaranteed when filled with air at the recommended pressure and attached to a rim bearing either one or both of the accompanying inspection stamps. When filled with any substitute for air, or attached to any other rim than those specified this guarantee is withdrawn.

REVIEWS OF NEW BOOKS

(Continued from page 1132)

those of the Empress and two of your sons are the first!"

A few days afterward Paul I. was put to death by the conspirators who had entered his chamber for that fell purpose, March 23, 1801.

The best authorities appear to have been consulted by the author of this fascinating monograph. The only regret we feel in reading it is that the author has not stuck to the epic method of relating an incident clearly and with assurance, but sometimes conscientiously qualifies his narrative with the introduction of various versions, from which as a judicial writer he should have picked the most authentic. When he does use his own judgment the result is brilliant, as in the following discussion of the character of Paul as an administrator:

"It is certain that Paul's tragic end was not wholly or even chiefly due to his errors and his excesses. On the contrary, he owed his ruin to his most meritorious endeavors which united against him a coalition of the basest interests and passions. He repressed the abuses of the administration of the Imperial Palaces and thus exasperated the whole band of gilded and greedy idlers whom Catherine had tolerated because their presence gave a colorable excuse to her own debauchery. It was from among them that the instruments of her son's assassination were recruited."

On the question of the Czar's madness or sanity this writer, while denying that he was insane, pertinently remarks:

"One might be tempted to class him in the category of abnormal persons which has been established and popularized by Lombroso—men who are neither mad nor weak-minded; who occasionally are even of more than average intelligence, but whose faculties are subject to innumerable functional disorders. In such a case a man's faculties, however powerful, remain useless, because he has not the faculty of diverting or coordinating them. His thoughts and his actions are in perpetual antithesis. He becomes the sport of passion and impulse, and, tho his thoughts may be wise and his intentions excellent, he has all the appearance of unreason and immorality. Is not this the very portrait of Paul?"

"THE FINEST ENGLISH GENTLEMAN"

The Windham Papers. With an Introduction by Lord Rosebery. 2 vols., 8vo, pp. 800. Boston: Small, Maynard & Co. \$10.

In an age of great Englishmen William Windham (1750-1810) was recognized as at least the compeer of the most gifted; Lord Rosebery describes him as "the finest English gentleman of his or perhaps of all time." He came of an old Norfolk family settled at Felbrigg, near Cromer. From 1762 till 1766 he was a contemporary of Fox at Eton and the pupil of Robert Chambers at Oxford. There was nothing in his early life as a man of fashion and a scholar to indicate his coming prominence in public life. As a friend of Burke, he became really the political disciple of the orator. He was an intimate of Dr. Johnson, at whose deathbed he was present.

One of the most interesting features of his political life was the assiduity with which he supported the cause of the American

(Continued on page 1136)

The Happy Health Habit

THE happy health habit is not easy to acquire in Summer when the appetite is fickle, when the digestive powers are not in fullest vigor and when the warm weather necessitates a change in diet. The surest way to get Summer comfort and palate joy is to drop heavy meats and starchy vegetables and eat well-cooked cereals, fresh fruits and fresh vegetables. The most deliciously wholesome combination for the Summer days is

Shredded Wheat Biscuit With Strawberries

—a dish that is appetizing, satisfying and easily digested. One or two Shredded Wheat Biscuits with strawberries or other fresh fruits and cream is not only a rare palate pleasure, but will supply all the nutriment needed for a half day's work.

Heat the Biscuit in the oven to restore crispness; then cover with strawberries or other berries and serve with milk or cream, adding sugar to suit the taste—more nutritious and more wholesome than ordinary "short-cake."

The Only Breakfast Cereal Made in Biscuit Form

"That Is Nicer Than Darning Hose Isn't It?"

"Yes Dad, Holeproof Socks and Stockings Are Comforts"

Soft as down—easy to walk in. No darned places to hurt the feet. And style that no foreign brand surpasses. These are the features of genuine Holeproof—the finest stockings, the neatest Sox.

Nothing for travel, or every-day wear, gives such comfort and convenience.

Saves In Cost, Too

Are you wearing hose that are darned every week when Holeproof can be had at no extra expense? Six pairs of these wonderful hose will wear at least six

If you sacrifice nothing in cost, style, comfort—if you gain this convenience—don't you think that you want Holeproof?

1,000,000 People Do

1,000,000 people are wearing Holeproof, and they think there is nothing like it. You'll think the same just as soon as you try it. And that trial will get the whole family to wear it. Holeproof is made for men, women, children and infants.

Common yarn is short-fibred, heavy and harsh. There is a vast difference. Try Holeproof and see.

We spend \$60,000 a year merely for inspection, to see that each pair is perfectly made. Don't you want quality that is watched like this.

See the Spring Assortment

At all Holeproof Dealers now. All the new colors. All the grades. Add the New Mercerized Holeproof Sox at \$1.50 for six pairs, the 15c grade with the silky lustre and 22 per cent added strength.

Holeproof in cotton, for men, comes from \$1.50 to \$3.00 a box of six pairs. For women and children, \$2 to \$3 a box of six pairs. For infants, \$1 a box of four pairs. All the above boxes guaranteed six months.

Silk Holeproof for men, \$1 for three pairs. For women, \$1 for three pairs. These pairs of silk guaranteed three months.

The genuine Holeproof are sold in your town. Ask for dealers' names. We ship direct where we have no dealer, charges prepaid, on receipt of price. Write for free book about it.

Holeproof Hosiery

FOR MEN, WOMEN AND CHILDREN

Why Holeproof Outlasts Others

We pay an average of 74¢ a pound for the cotton yarn in Holeproof. Common yarn sells for 52¢. We pay the top market price for cuts. There is no better yarn to be had. It is three ply—three separate, soft strands, pliable, but strong, because long-fibred.

REVIEWS OF NEW BOOKS

(Continued from page 1134)

colonies. His first entrance into public life was signalized by a speech in which he opposed the raising of money by public subscription for the purpose of supplying the means of prosecuting the war against the revolting Americans. After the date of this speech, 1778, he rose rapidly in parliamentary life, and became Secretary of War with a seat in the cabinet. In this office he had opportunities for exhibiting his rooted distrust of Napoleon, and accordingly opposed the Peace of 1802. The Peninsular War met with his warm approval. When Sir John Moore set out on his unhappy campaign in the north of Spain, he blamed the ministry for not supplying this fated general with a stronger force. Some months after the battle of Coruña, on the 17th of May, 1810, he passed away in his house in Pall Mall.

Windham, was a man of many gifts and accomplishments, a fine classical scholar, a model country gentleman, who prized his home at Felbrigg above the society of the town. Being a devout Catholic and a generous landlord, he preferred to spend his income of £6,000 a year among his tenants and in his library. He was tall and athletic, and his graceful social qualities made him a general favorite both in London and among his country neighbors.

Lord Rosebery earns our gratitude for providing us with this collection of papers. Ours is said to be the age of memoirs. These memoirs of one of the foremost men in Pitt's first cabinet, "the ministry of all the talents," is eminently interesting. What are among the most valuable of the "Windham Papers" are hitherto unpublished letters from George III., Pitt, Fox, Canning, Johnson, Castlereagh, Nelson, Burney, and Cobbett, with the last of whom Windham was associated in founding *The Political Register*. Lord Rosebery sums up Windham's reputation among his contemporaries and friends in the phrase "high-souled Windham." We can not speak too highly of his introduction. It is free from exaggeration and sets forth with masterly taste a character and reputation which still survive after the lapse of a hundred years of change and development in English society and politics.

HENRY MAITLAND'S PRIVATE LIFE

Roberts, Morley. *The Private Life of Henry Maitland*. New York: George H. Doran Co.

In the March *Harper's* Mr. Howells recommends that "direct history of life" should come to supplant fiction. It would, he believes, "do the office of that secondary effect of reality which now delights and edifies the reader." His recommendation was apparently anticipated by Mr. Morley Roberts, who has given us the real life of George Gissing under the thin guise of fiction. So thin is the disguise that no one has been taken in, and Mr. Roberts has brought a swarm of murmuring objectors about his ears. The new mood evidently doesn't work well when you take a distinguished individual who has led a life open to more than one interpretation. Just this was probably not what Mr. Howells meant in proposing a substitute for the flood of invented histories that come from the press. We would not place

him as an approver of this particular book until he himself said so, yet one may fancy that the book would interest him as it has us. Granting the fact that no one connected with Gissing remains to be greatly pained by the revelations, one would call this an exceedingly valuable contribution to biographical literature. There were mysteries apparent to every devoted reader of this peculiarly fascinating writer that clamored to be cleared up. The hints one got that they were even worse than the facts revealed by Mr. Roberts's book were more or less insistent. The bare outline of Gissing's unhappy love affairs has in it nothing to outweigh the splendid picture of devotion, courage, and unremitting toil, the pathetic revelations of a really frustrate life such as now comes to provide the key to the puzzling mystery. As a study of a human soul apart from the fact that the identity is easily decipherable one would have to look far to find a more enthralling narrative.

THE HERO OF LEPANTO

Coloma, Padre Luis, S. J. The Story of Don John of Austria. Translated by Lady Moreton. Pp. 428. Illustrated. New York and London: John Lane Company. \$4.50.

It is not often that an historical biography has the thrilling, romantic interest of a dramatic novel, but that is true of the present life of Don John of Austria, who was one of the great figures in "one of the greatest periods of Spanish history." The book itself is attractive; in diction and motivation it stands far above the usual book of its kind. Even tho a translation, it seems to have lost little of its Spanish flavor or romantic atmosphere.

From the opening pages, when the reader is absorbed in the mystery that surrounds the parentage of the little Jeromin, there is no cessation of interest. Old Spain forms the background for a glowing and faithful depiction of the character of Don John, a royal and loyal gentleman, an honest warrior, and a deeply religious man.

When Jeromin was taken from the rustic surroundings of his boyhood home, he was entrusted by Luis Quijada, favorite lord of Charles V., to his wife, Doña Magdalena de Ulloa. To this beautiful woman of high ideals were due most of Don John's lovable traits of character. She was to him a guardian angel, mother, aunt, and friend all in one. Never did he lose his affectionate adoration for her. He died with her name on his lips. On the death of the Emperor Charles V., his son, Philip II., made public recognition of Don John as his half-brother, established him with a fitting household, with Luis Quijada and Doña Magdalena, and gave him the title of Don John of Austria.

Until Don John was absent from Madrid busy with Moorish conquest, the two brothers stood in close friendly relation, but during this absence, a wily secretary, Antonio Perez, poisoned the mind of Philip against the brother whom he had loved and trusted. It is pathetic that intrigue, misrepresentation, and falsehood should have turned Philip against such a brother, one so upright and loyal, but court jealousy and a consciousness of being detected in scandalous behavior prompted Perez to all kinds of lying subterfuge. The result was suspicion, delays, and injustice on Philip's side, and heartaches,

Are you loss-proof?

This handy machine guards you from all losses—small or large

\$175

Stop the leaks!—The Barrett easy-to-carry, easy-to-operate adder and computer is an infallible, automatic check on time-loss and money-loss. No matter how small the loss or how big, the Barrett will find it and stop it. Many a business has been ruined by the small, intangible losses here and there which often seem unpreventable. But if the figures in your office go through the Barrett, it is mechanically certain to detect and prevent loss.

Profits slip away!—In a thousand different little ways your profits slip away between your fingers—unless you keep a firm hand on every department and every employé. Without the easy-to-carry Barrett this is practically impossible.

This machine is a watch-dog!—The Barrett goes into every department, to every desk, to every employé right at his work, prevents all loss in time used to travel to the big, unwieldy adders. It is absolutely accurate and so simple and easy to operate that any one who can write can learn to use it correctly in *One Hour*. Thus it becomes a faithful, trusted watch-dog over your entire business. No one can cheat or fool the Barrett.

Why it stops losses!—The Barrett Adding and Computing Machine with the special simplifying attachment shown above weighs slightly more than 17 pounds, has a capacity of 99,999,999.99, is handle driven and portable, and splendidly simple, durable, and accurate. It costs \$150—\$25 extra for the special computing attachment, which vastly simplifies multiplication. No other machine at any price, combines all of these valuable features in one machine!

Let Us Lend You A New Kind of Shower

Fits any Bath Tub. Needs no Curtain. Don't
Have to Wet your Hair. Almost as
Enjoyable as Ocean Bathing

10 Days' Free Trial

No Money in advance. Only \$6
If You Keep It

Just to show you how it beats a tub bath—
and how it will help you stand the hot weather—
we want to **lend** you a Kenney Four-Stream
Needle Shower—

Want you to attach it to your bath tub—that will take
you only a minute—and enjoy it ten days free.

You won't have to send us a single cent in advance.
And you won't have to pay us a penny if you are willing
to return the shower after a trial.

And it will cost you only \$6 if you keep it—only half
as much as the cheapest old-style shower you can get.

Makes Your Bath Twice As Refreshing

There is almost as much difference between a **needle** shower and an
old-style or **overhead** shower as between a bath in a nice porcelain
tub and a sponge bath out of a tin pail.

And here is a **new** kind of needle shower which throws **four** needle-
spray streams instead of only one. That makes it luxuriously stim-
ulating and refreshing.

Has all the good points of the extravagantly expensive showers
without a single one of their faults.

Why The Price Is So Low

Works on a new principle. A patented feature keeps it from
splashing out of the tub. No clammy curtain to spoil your enjoy-
ment. That is a revolutionary improvement.

Doing away with the expensive curtain and with overhead piping
and complicated parts is what makes the price so low.

No Shock To The Head

When you stand erect in using a Kenney Shower, not a drop of
water touches your head. All shoots direct against the body, from
the shoulders down. Don't have to drench your hair. But if you
want to douse your head, simply bend over a trifle.

Kenney Needle Body Shower

All Metal. Easy To Put Up

A very handsome fixture. Heavy
nickel finish over brass. Nothing to
wear out or get out of order. Easily
put up. Never in the way.

A Mere Request Brings It

Just order on your letterhead or en-
close business card or reference and
you'll get the shower complete and pre-
paid for ten days' free enjoyment.

If you want to keep it, simply send \$6
in full payment; if not, simply return it.

Better make the trial now. A single
month's use—especially during the heat
of summer—will alone be worth more
than the shower will cost you.

A Two Million Dollar Book About Tires FREE TO YOU

Twenty thousand motorists have read and proved
the suggestions in this book, which we call "From
Hide to Highway." It has shown each of them how
to save from \$50 to \$200, by adding 5,000 miles to
the life of their tires. To figure conservatively we
will call the average saving \$100—this means a total
saving of \$2,000,000 for 20,000 motorists alone.

Before the season is well underway, another
20,000 will have read and acted on this book and
this gigantic tire saving will be repeated by means of
Durable Threads.

No matter whether your present tires are new or old,
this book will put dollars in your pocket. If new, it
shows how to make them last three seasons instead
of one—10,000 miles instead of 3,000 to 5,000—if
old, rim cut or rut worn, it shows how to make
them last a whole extra season.

"From Hide to Highway" does not deal in gener-
alities, it is concrete—definite—and contains a copy
of the most remarkable money-back guarantee
ever issued—a guarantee of 5,000 miles without
puncture.

But why go into detail here when your copy of
"From Hide to Highway" is all wrapped up ready
to mail without the slightest obligation attached?
Don't even bother to write a letter—merely say
"Send the book" on a postcard and mail today,—your
copy will reach you without cost by return post.
Surely, a book which has led to a saving of
\$2,000,000 to 20,000 other motorists, is at least
worth sending for. Write for it **NOW**. Address
nearest office.

THE COLORADO TIRE AND LEATHER COMPANY

1245 Acoma Street, Denver, Colo.
437 Golden Gate Avenue, San Francisco, Calif.

disappointment, and sacrifice on the part
of the youthful, honest, and ambitious
Don John.

Padre Coloma makes this life story one
of deep interest, and with it gives us the
interwoven destinies of other great his-
torical personages of the times. Physically
Don John was exceptionally handsome;
mentally he was well balanced and alert;
spiritually he was a devout churchman of
lofty ideals. He early developed the spirit
of the Crusader. He longed for conquest
that should add to his brother's glory.
He was content to shine in reflected light,
never making a move without consulting
the King.

The rebellion of the Moriscos of Gra-
nada in 1568 was the chance Don John
had waited for. His campaign against
them was the beginning of years of success-
ful fighting culminating in his wonderful
victory over the Turks at Lepanto. From
that time, however, Philip's unjust sus-
picions of his motives held him back from
further conquests. Don John's character
is disclosed in the fact that those who were
sent to watch and restrain his "undue
ambition" always ended by becoming his
devoted friends and allies. Pius V. and
Gregory XIII. had schemes whereby Don
John was to bring England back into the
fold of the Catholic Church, but Philip
thwarted them all by appointing him
Governor of Flanders and then failing to
support him in every way. With few
exceptions Don John was everything, ad-
mirable in a man. The reader is distressed
at the neglect and injustice that saddened
his last years—years of impatient waiting,
honest ambition, and glorious opportuni-
ties that were not supported by the
brother whom he loved with steadfast
devotion.

Of all those royal persons from Charles
V. to Alphonso XII., whose bones lie
incased in splendid sarcophagi beneath
the grim old Escorial's pavement, none
awakens in the tourist half the interest
that is aroused by the structure which
holds Don John's remains. Thousands
have had their tears start as they stood
alongside that white marble tomb, on
which rests the warrior's recumbent fig-
ure, its marble hands grasping the sword
carried by Don John at Lepanto.

OTHER BOOKS WORTH WHILE

Torrey, Bradford. *Field Days in California.*
Illustrated. Cloth. Pp. 235. Boston: Houghton
Mifflin Co. \$1.25 net.

To the several books of nature study
which Mr. Torrey has written the publish-
ers add now a new volume—regrettably
a memorial one, since the author did not
live to see its completion. The pleasant
essays which it contains will charm the
bird-lover. One may dip into its pages any-
where and find oneself in leisurely, amiable
conversation with a man of gentle spirit,
wide intelligence, and keen powers of
observation, who is constantly finding
fresh springs in life. It is good to linger in
the sunshine with him and listen to the
song of the bird and the ripple of the water-
falls.

Rose, J. Holland. *The Personality of Napole-
on.* 8vo. Pp. 383. New York: G. P. Putnam's
Sons. \$2.50 net.

It might well be imagined that the sub-
ject of Napoleon was exhausted, and if the
multiplicity of literature that has been

piled up on his name be taken as a test, this would be true. Professor Holland recognizes this truth, but he also comes into the field as a genuine *rédacteur*. He takes this mass of stuff and distils it, so that its essence is a sparkling product of pure and exhilarating fact. It must certainly be allowed that we have here a new description of Napoleon the truth of which is self-evident. In the first place, the work is eminently refreshing. We are brought down to the stern and wild scenery of Corsica, the feverish excitement of the Jacobin spirit, the almost insane war passion of the genius who had been fed on Arrian and Livy, and the records of Carolingian conquest. Napoleon's career as a soldier is better known than his success as a legislator and a thinker, and those who wish to contemplate this great historic figure apart from his white horse and gray surtout would do well to study this delightful volume in which the learning of a scientific historian is combined with the skill of an accomplished essayist.

Parker, Gilbert, Complete Writings of. Imperial edition. Vol. IX and X. New York: Charles Scribner's Sons. \$2 per vol.

Few new novels will be welcomed with more enthusiasm than these republished stories of Gilbert Parker. And those interested in this beautiful new edition of his works will add volumes IX and X to the collection with pride and satisfaction. Vol. IX contains "The Seats of the Mighty," an historical novel of the conquest of Canada, written most appropriately at a hotel in Mablethorpe called "The Book in Hand," in 1894-5. The first germ of the story came from "The Memoirs of Major Robert Stobo," a tiny volume found by Mr. Parker in Quebec, but the plot, characters, and general ideas are all imaginative. "The book," says its author, "has a position, perhaps, not wholly deserved, but it has crystallized some elements in the life of the continent of America, the history of France and England, and of the British Empire which may serve here and there to inspire the love of things done for the sake of a nation rather than the welfare of an individual." Vol. X, "The Battle of the Strong," is a "protest and a deliverance," a breaking away from Canada as a background, a determination, on the part of the author, to fulfil himself and to take no instruction except those of his own conscience, impulse, and conviction. "The Battle of the Strong" is a story of Jersey, and is not without faithful historical elements, but the book is essentially a romance, in which character was not meant to be submerged by incident. It was this story that brought Mr. Parker out of the tyranny of the field in which he had first sought a hearing.

A Dictionary of Automobile Terms. By Albert L. Clough. New York: The Horseless Age Company.

Mr. Clough presents his book as a serious endeavor to give in alphabetical order the terminology daily applied to motor-cars. It is, he believes, the first work of the kind to be compiled. Every year thousands of people who become interested in motor-cars are introduced to a nomenclature that is peculiar to the automobile industry, but quite foreign to them. Heretofore they have been unable to secure an intelligent guide. Mr. Clough's work will be found an open sesame to this technical

The Power of Silent Service

If the crowd on the stock exchange kept quiet and let one man talk, that man could be heard in every corner of the room. But the shouting members produce a composite of sound, so that no one trader is understood except by a small group around a particular trading post.

If everyone were able to shout twice as loud, the result would be only a greater noise, and less intelligible.

For communication to be universal there must be silent transmission. In a noisy stock exchange where the voice, unaided, cannot be understood across the room, there are hundreds of telephones which carry speech half way across the continent.

The telephone converts the spoken words into silent electrical impulses.

In a single Bell telephone cable, a hundred conversations can be carried side by side without interference, and then distributed to as many different cities and towns throughout the land. Each conversation is led through a system of wire pathways to its proper destination, and whispers its message into a waiting ear.

Silent transmission and the inter-connecting lines of the Bell System are indispensable for universal telephone service.

Without such service, our cities would be slow of speech and the States would be less closely knit together.

**AMERICAN TELEPHONE AND TELEGRAPH COMPANY

KNO-BURN METAL LATH was used in this house at Los Angeles, Calif.

METAL LATH Construction

deserves careful consideration from the prospective home builder, because it offers him a rare combination of permanency, economy and life-long satisfaction. Our FREE booklet 705, "Metal Lath for Home Construction," is full of profitable pointers for home builders. Send for it now and find out why KNO-BURN Metal Lath for inside walls and ceilings, and KNO-FUR Metal Lath for exterior work are superior to old style methods of construction.

KNO-BURN METAL LATH

is a flat sheet of metal fabric with a web-like mesh that completely imbeds itself in the plaster. This form of construction produces a reinforced concrete-like wall. The plaster simply can't come off.

FIREPROOF — KNO-BURN METAL LATH covered with Portland Cement plaster is an effective barrier to fire because all wood studding and joists are completely protected.

DURABILITY — KNO-BURN METAL LATH, on account of its rigidity, assures a smooth wall that will never warp, buckle or crack. It is coated with a carbon paint that withstands rust—it never disintegrates.

KNO-FUR METAL LATH

for outside use is a metal fabric similar to KNO-BURN with parallel ribs that increase its strength and provide a substitute for furring. It has the same web-like plaster-gripping mesh that makes KNO-BURN so effective.

ECONOMY — In addition, the use of KNO-FUR Metal Lath eliminates sheathing, building paper and weather boards—a single economy that saves its entire cost.

LASTING — KNO-FUR is made from metal specially prepared to resist acid and rust. It is rigid and imperishable.

Our regular monthly bulletin "Expanded Metal Construction," will be sent to Architects and Contractors, upon request.

North Western Expanded Metal Co.
970 Old Colony Building CHICAGO

vocabulary. The task he set himself, involving as it did much mechanical and electrical description, was by no means an easy one. He has accomplished it with remarkable skill. He is especially to be commended for having avoided technical phraseology. The use of plain terms throughout the book will commend it to all who wish to inform themselves on the terminology of automobile engineering. The thoroughness which characterizes the work is shown under such words as *carburetor*, where twenty-five relative terms are treated; *motor*, of which forty different types are described; and *tire*, where forty-five allied terms are considered. This book should become indispensable alike to the prospective purchaser and to the owner of a car.

Woolcombe, H. S. *Beneath the Southern Cross.* 8vo, pp. 165. New York: Longmans, Green & Co. \$1.35 net.

This is the pleasantly written book of travels in which the chaplain to the Archbishop of York details his impressions of the inhabitants and scenery he became acquainted with during a tour through Australasia and South Africa. The author of course was particularly interested in the life of the Church of England missionaries and English settlers, but he makes some important additions to knowledge of the aborigines. The narrative is graphic and quite personal. It reads like a series of familiar letters. The photographic illustrations are good and numerous.

Birge, Julius C. *The Awakening of the Desert.* Illustrated. Cloth, pp. 429. Boston: Richard G. Badger.

This is the story of a long expedition made in prairie days more than forty years ago across the plains from Wisconsin to Salt Lake City through the region of the great American Desert. This adventure was undertaken in 1866, remembered as one of the "bloody years" in Indian affairs, and many anecdotes of frontier life are told. Especially remarkable is the sane, detailed, reflective picture of life as it was lived on one of the countless "trails" that marked the expansion of America westward and that are as characteristic of that day as were the expeditions of Cook, Drake, and De Gama in theirs. Life in the West had rugged aspects in those days which melodrama has stamped on popular ideas of the West. But Mr. Birge writes as one who has seen at first hand and lived much before the record was cast into final shape, and the proper dignity of the narrative gives weight to his words. Thus the book indirectly casts light on the period covered in Miss Coman's "Economic Beginnings of the Far West." But one would very much wish to be sure of how far the record is to be taken verbatim and how much is artistic atmosphere. We should like to have a preface telling us who Mr. Birge is and how the details of the vivid narrative of so long ago were preserved. Till this is known its usefulness to students of the period will be uncertain. As a picture it is vivid and very enjoyable.

Brawley, Benjamin Griffith. *A Short History of the American Negro.* 8vo, pp. 247. New York: The Macmillan Company. \$1.25.

The history of the expatriated Africans and their descendants in this country is one of profound interest, and this little volume summarizes that history in a clear

The Magic Wand

of easier, better and quicker dusting, cleaning and polishing. Easier because it puts an end to stooping and bending, better because it cleans and dusts thoroughly and quicker because it dusts, cleans and polishes all at one time.

O-Cedar Mop Polish Mop

reduces the work of cleaning, dusting and polishing to almost nothing. Being treated with O-Cedar Polish, it gives a high, durable, hard polish. Easily cleaned by washing. Heavily padded to prevent marring the furniture.

At Your Dealers —On Trial—

Simply deposit \$1.50 with your dealer and try the O-Cedar Polish Mop for 2 days. If it is not satisfactory in every respect, your money refunded without question. Sent prepaid, upon receipt of price when not at dealers.

and sympathetic narrative. It is not very generally known that altho England was a leading agent in the slave-trade in the early years of the eighteenth century, it was perhaps the decision of Lord Mansfield, Chief Justice of England, made in 1772, that as soon as a slave set his foot on the soil of England he became free, that started the work of Thomas Clarkson and William Wilberforce. But all the great leaders of American statesmanship were for the abolition of slavery—Patrick Henry, Washington, Jefferson, and the rest. It was left to Lincoln to realize their ideas.

Mr. Brawley pays especial attention to the negro question since the Proclamation of Emancipation. He treats the question from a political, social, religious, and educational standpoint. We expect to find this work adopted as a text-book in our public schools, for the young would derive from it many lessons of value and much historical information.

Goodrich, Joseph King. The Coming Mexico. 12mo, pp. 280. Chicago: A. C. McClurg & Co. \$1.50.

The title of this work is sadly misleading. Mr. Goodrich tells us nothing about Mexico's future which must be based upon some political foundation, and from politics he keeps strictly aloof. But we learn here, what we may learn from a hundred volumes, about "Ancient Mexico," "Physical Mexico," "Prehistoric Mexico," and "The Coming of the Spaniards." There we are told of "Mexico for the Archeologist, the Antiquarian, the Collector of Curios," "The Wealth of Mexico," "Industrial and Municipal Development." There is nothing whatever of the coming Mexico, and we are tempted to echo the words of *Lear*, "Nothing can come of nothing—speak again." As a compendious account of the resources of this land of Aztecs and the Toltecs, its capture by the bold conquistador Cortez, its rebellion against Spain, and its present relations with the United States, the volume may be found useful and convenient.

Home University Library. Edited by Herbert Fisher, Gilbert Murray, and others. 7 volumes. 16mo. New York: Henry Holt & Co. Cloth, 50 cents net each.

These volumes, the newest addition to the Home University Library, raise the number of volumes thus far issued to sixty-four. The subjects here treated include Napoleon, German literature, Newspapers, and Dr. Samuel Johnson. The writers have been selected with judgment. Varied as the topics are, and differing materially as does the character of the writing, one can not fail to note an excellent level as generally maintained.

Payson, George Shipman. The Vital and Victorious Faith of Christ. 12mo, pp. 247. New York: Funk & Wagnall Co. \$1.

A thoroughly orthodox and evangelical statement of the claims and teachings of Christianity as the early Reformers knew it and taught it. To-day, the day of doubt, question, and unrest, these ten sermons will be found to breathe a spirit of piety and devotion very different from the barren intellectualism which is now so much in vogue. "The Faith of Christ," "Love in Sacrifice," "The Lamb of God," "Temptation," "Meekness and Manliness," "Pain

Design is the real basis of the extraordinary Jackson Comfort

Deep cushions, good springs, and a roomy body will give a degree of comfort; but not the comfort that has set the Jackson apart from competition.

Because Jackson comfort has a basis in things far more necessary than these details.

Its foundation is the engineering ability that has grown out of eleven solid years of experience in building comfortable cars—improving each model over its predecessor.

To this engineering ability and ingenuity are due the balance, the distribution of weight, the relation of all structural elements that are vital to the easiest-riding car.

To be sure, the Jackson has ten-inch seat cushions, shoulder-high seat backs and exceptional room in front and rear.

It has, too, full elliptic springs front and rear; because no better type has ever been devised.

Its wheelbase is long, therefore easy riding. Moreover, the wheelbase length in each model is scientifically correct with relation to wheel sizes weight and balance.

Many cars have the soft upholstery and other visible evidences of comfort.

Few—very few—have these combined with the really vital comfort elements—the engineer's care and skill applied as painstakingly to produce ease of riding as to the mechanical design and construction.

In this regard the Jackson has long been unique; even today it stands almost alone.

So, we say, do not deceive yourself into the belief that one car is as comfortable as another providing it is as roomy and as well upholstered.

A ride in the Jackson, and a ride in several others, will convince you that we are right.

We shall be glad to put you in touch with the Jackson dealer if you write.

and Peace"—such are the most salient subjects of a series which will bring refreshment and comfort to many minds.

Wilson, Woodrow. *Mere Literature*. 8vo, pp. 94. Boston: Houghton Mifflin Co. \$5.

There should be no doubt of a ready demand for this limited edition of minor writings by President Wilson that date from 1891, 1893, and 1896, and which were reprinted in book form with other essays in 1896. Of that volume the present one contains three papers only. These are entitled, respectively: "Mere Literature," "The Author Himself," and "On an Author's Choice of Company." They form an addition to the Riverside Press editions of notable writings. Only 550 copies have been printed. The paper is of fine quality and the type large.

Guizot, François P. G. *The History of France from the Earliest Times to the Outbreak of the Revolution*. Abridged from Robert Black's Translation of Guizot's *Larger History*, with Chronological Index, Historical and Genealogical Tables, Portraits, etc., by Gustave Masson. 8vo, pp. 613. New York: Funk & Wagnalls Company. \$1.75.

Guizot's history of France has so long been held in general esteem as one of the best of all French histories that a condensation of it into one volume was cordially welcomed when first made many years ago. Mr. Masson, when he undertook this condensation, dated his preface from Harrow-on-the-Hill, the English school in which Byron and Sir Robert Peel were schoolmates. It has long been recognized as the best one-volume history of France extant. For such a work the need is constant. This new printing of it scarcely needs an introduction to the public. Only its existence needs to be made known.

Richards, G. E. *The Louvre*. 18mo, pp. 107. Boston: Small, Maynard & Co.

Fitch, J. E. Crawford. *The National Gallery*. 18mo, pp. 144. Boston: Small, Maynard & Co.

These volumes are two in a series called the "National Treasures Series." They deal in compact form, first, with the history of the buildings referred to, and then in brief chapters with the artistic treasures they contain, these being arranged, as to the National Gallery volume, with reference to the schools of painting represented in it, and as to the Louvre, with reference to the paintings, sculptures, potteries, furniture, etc. Each volume is illustrated and should prove helpful to travelers.

Kimball, Kate F. *An English Cathedral Journey*. Illustrated with photographs. 12mo, pp. 394. New York: Thomas Y. Crowell Co. \$1.50.

Miss Kimball, the executive secretary of the Chautauqua organization, originally prepared nearly all this matter as a course of reading in *The Chautauquan*. Eight cathedrals have chapters with illustrations devoted to them. An additional chapter deals with Westminster Abbey, and an introductory one discusses "some characteristics of cathedral architecture in England." The text is prepared along good lines. The illustrations are unusually excellent; they are also numerous. Valuable and well-considered notes are appended to each chapter, and there is a bibliography, with a glossary of architectural terms. Altogether the book is far quite in a class by itself as to cathedrals, and should be well received.

—away with suspenders and belts

Adopt the only practical and hygienic way of holding your trousers up. Suspenders are uncomfortable—unsightly—they drag—they make men stoop—they make their round shoulders—they wear off buttons. Belts are stiff—binding—unhealthful.

WEAR Stanford "HIP-FIT"

The "Hip-Fit" trousers supporter entirely eliminates suspenders and belts—gives perfect comfort—perfect posture—perfect bodily freedom at all times, under all circumstances. Can't slip. Can't bind. Can't work out of adjustment. Takes all weight and pressure off the shoulders. Has elastic over hips and back—yields to every movement—pressure gentle and evenly distributed; acts as an abdominal support. Sanitary—cool—serviceable.

Thousands in use, all giving perfect satisfaction—no boy or man will wear suspenders or belts after wearing a "Hip-Fit." If your tailor or dealer cannot supply you, send waist measure taken snugly above hips under trousers, accompanied by money order for \$1, and we will promptly fill your order.

Satisfaction Guaranteed or Money Refunded
For men with large protruding abdomens requiring more than ordinary support, we make a conclusive trousers and abdominal supporter. Price \$1.50.

LAWRENCE, D. H.—"The Trespasser." \$1.25 net.

HARRIS, FRANK—"Unpath'd Waters." \$1.25 net.

"The Genealogical and Encyclopedic History of the Wheeler Family" is the title of a work to be put to press in June by the American College of Genealogy, New York. It will contain 35,000 names and cover a period of nearly 300 years of American history. It will comprize records of all branches of the family in America and historical material pertaining to the family in the old world. Benjamin Ide Wheeler, president of California University, writes the Foreword; Prof. James Rignall Wheeler, of Columbia University, is literary editor, and Edward J. Wheeler, editor of *Current Opinion*, is biographical editor.

This New Burroughs Saves 5 Hours a Day

This wonderful new Burroughs is doing for a Cleveland concern, in less than 3 hours a day, work which took 8 hours a day by hand. It saves over 50% for a Chicago concern on statement work alone.

Besides saving time and money, it totally eliminates all mental drudgery and effort required in getting both totals and balances, because it is absolutely automatic—and absolutely accurate—and quick and neat at both.

Just think of this—it adds credits, deposits or other items; subtracts debits, checks or similar items; prints dates, numbers, letters, etc.; gives old and new balance (makes carbon copies), all automatically. You just put down the figures one after the other—the machine does the calculating, thinking and printing.

And then in addition to this extraordinary work—it will do multiplication and division—in fact, all the work of a standard Burroughs Adding and Bookkeeping Machine.

Don't you think you need this Burroughs "brain" in your office? Others tell us it pays for itself in less than a year. At least find out the truth of this as applied to your own business, by permitting us to demonstrate its immense field of usefulness without cost or obligation to you.

BURROUGHS ADDING MACHINE COMPANY
49 Burroughs Block, Detroit, Michigan

ALL doubt regarding correctness of style vanishes when you wear Ide Silver Collars. They are truly smart.

Ide Silver Collars

1/4 sizes — 2 for 25c — In Canada, 3 for 50c

retain every bit of their original "snap and set" of lines — because the LINOCORD UNBREAKABLE BUTTONHOLES, found only in Ide Collars, don't stretch and don't tear out. This insures continued style, comfort and service.

The Sussex is the newest cut-a-way fold effect. It has the approval of the High Court of Collar Fashion—the famous old clubs of London. It is daring only because as yet unimitated. Full wide front sweep effect.

U-KAN PLATE

(EXTRA STRENGTH)

Keeps the 1812 nickel trimmings on your AUTOMOBILE bright and shiny—plates last year's brass fixtures, giving them new with metal effect. Quantity, \$2.00; Trial size, 10c. At Auto Supply Dealers, or by Parcel Post. A. B. Jantzen Co., 609 Chestnut St., Philadelphia.

In Thrilling Moments Like This

Your camera—your lenses—must not fail you. If you wish to unfailingly record incidents in real life not as the eye sees them—but as they actually happen—use

GOERZ LENSES CAMERAS

A Goerz Lens takes pictures that are worth money, because they show in clearest, sharpest detail, incidents which the eye itself is not quick enough to grasp. A Goerz Lens may be fitted to the camera you now have.

Our Book on "Lenses and Cameras" will be sent for the asking.

C. P. Goerz American Optical Co., 3211 East 34th St., New York

New Ignition Device

Develops more engine power because the explosions are more rapid and more complete; maintains the extra power because there are no points to displace or burn away; reduces fuel consumption because it explodes a leaner mixture and any mixture more effectually. Spark plug renewals and troubles eliminated.

More engine power and less cost for owners of motor cars, trucks, motorcycles, motor boats or stationary gas, gasoline and kerosene engines if the firing is done by

McCormick Power Plugs

(Take the place of spark plugs)

Try for 20 days. Money refunded if not as represented. Price \$2.00 each net, post-paid. (Mention size and model of machine.) Further particulars on application.

McCormick Manufacturing Company
36 East First Street Dayton, Ohio

In the cool and careless woods the eyes of the
Eunuchs burned not,
But the wild hawk went before me, being free to
return or roam,
The hills had broad unconscious backs; and the
tree-tops turned not,
And the huts were heedless of me; and I knew I
was at home.

And I saw my lady afar and her holy freedom upon
her,
A head without veil, averted, and not to be turned
with charms,
And I heard above bannerets blown the intolerant
trumpets of honor,
That usher with iron laughter the coming of
Christian arms.

My shield hangs stainless still; but I shall not go
where they praise it,
A sword is still at my side, but I shall not ride with
the King,
Only to walk and to walk and to stun my soul and
amaze it,
A day with the stone and the sparrow and every
marvelous thing.

I have trod the curves of the Crescent, in the maze
of them that adore it,
Curved around doorless chambers and unbidden
abodes,
But I walk in the maze no more; on the sign of the
cross I swore it,
The wild white cross of freedom, the sign of the
white cross-roads.

And the land shall leave me or take, and the
Woman take me or leave me,
There shall be no more Night, or nightmares seen
in a glass;
But Life shall hold me alone, and Death shall
never deceive me
As long as I walk in England in the lanes that let
me pass.

The English language is not suited to
those verse forms which depend on the
length of syllables rather than upon accent;
still there are some successful attempts to
write English verse after the manner of
Greeks and Romans. A notable example
of this in recent years is found in the
Sapphics of Bliss Carman. The following
poem is written in what might be termed
modified Sapphics. The melodious lines do
not suffer because of their lack of rime. It
appears in the *May Smart Set*.

A Spring Afternoon

BY LOUIS UNTERMEYER

The world's running over with laughter,
With whispers, strange fervors and April—
There's a smell in the air as if meadows
Were under our feet.

Spring smiles at the commonest waysides,
But she pours out her heart to the city;
As one woman might to another,
Who meet after years

. . . Primroses, pinks, and gardenias
Shame the gray town and its squalor—
Windows are flaming with jonquils,
Fires of gold!

Out of a florist's some pansies
Peer at the crowd, like the faces
Of solemnly mischievous children
Going to bed

. . . And, like a challenge of trumpets,
The Spring and its impulse goes through me—
Breezes and flowers and people
Sing in my blood

Breezes and flowers and people—
And under it all, oh, beloved,
Out of the song and the sunshine,
Rises your face!

PERSONAL GLIMPSES

DIAGNOSING MEXICO'S CASE

AFTER all that has been printed in the newspapers about the Mexican situation during the past two years and a half, what actually ails the so-called republic continues to be a mystery to a great many people on this side of the Rio Grande. Everybody knows a good deal about the revolution and some of the men who have figured conspicuously in it, but fragmentary information naturally gives vague or mixed impressions. John Kenneth Turner, who, before the revolution, wrote a sensational series of articles under the general title, "Barbarous Mexico," which ran for a time in a popular monthly magazine, and who followed the Madero campaign closely and was jailed for several days by Huerta after Madero was slain, attempts to analyze the situation in an article for *The Metropolitan Magazine*. Being somewhat of a radical himself, Mr. Turner writes from the revolutionist viewpoint, but his handling of the subject is by no means hectic. He says that notwithstanding some strong American suspicions to the contrary, Mexicans are human beings like the rest of us, and their wants, their ambitions, and their motives for endeavor are the same as ours. And he assures us that, unlettered as many of them are, the men who have been fighting with guns, "and will continue to fight," know as definitely what they want as any equal number of Americans marching peaceably to the ballot-box on election day know what they want. Mr. Turner thinks the key to the trouble can be given in one word—feudalism. Diaz, who kept the old régime alive by swift and frequent killings, was not overthrown by battles, we are told, but by the almost unanimous opposition of all classes. Nor was the revolution that drove Diaz into exile fought to put Madero in the Presidential chair; it was a spontaneous uprising of the people to put an end to conditions which had become intolerable. Mr. Turner gives his explanation of why Madero failed:

The revolution of 1910 failed to realize the ideals. Its leaders failed to carry out their promises. The government was changed. President Diaz gave place to President Madero. But the system remained the same. Madero was a "good man," but the Mexicans were not looking for a good man merely. They wanted things, and certain things. When Madero arrived in triumph in the capital, he was met with a storm of approbation such as had never greeted any previous hero of Mexico. The reason was that in the minds of the people he embodied the ideals of the revolution. For several months there was almost peace in Mexico. Then the fighting began again. If the revolution that drove Diaz into exile was justified, then the subsequent revolution against Madero was

Bone—Muscle—Health result from feeding AUSTIN'S

Austin's DOG BREAD

Kitchen scraps or raw meat will never give your dog the strength and endurance that hunting or shooting requires. The one way to keep him in shape the year round is to give him Austin's Dog Bread.

And be sure that you get Austin's. It is not enough to simply ask your dealer for "Dog Bread." Specify "Austin's."

Austin's is so good for your dog because it is made especially for him. It will give him a glossy coat, firm flesh and clear eyes because it contains just the things his stomach needs. Its good, clean flour and cereals and fresh, sweet meat are *bought expressly* for it. It contains no waste, by products or chemicals. It never scours. It is always relished. It is the *oldest* dog bread made in America and the *best* dog food in the world.

Send for FREE Sample

Simply send us your name and address and the name of your dealer, on a postal, and state whether you want to try Austin's Dog Bread or Austin's Puppy Bread for pups under six months. Your dealer has it or can get it for you.

justified; for it was fought with precisely the same program, it was proclaimed not as a new revolution but as a continuation of the old, and it was begun only after it became certain that Madero would not carry out the program. I am referring now to the revolution of Zapata, Orozco, Salazar, and their friends, not to the reactionary affair which their revolution unfortunately made possible, the affair of Diaz and Huerta.

Does this mean, then, that Madero was a failure, that his government was a failure?

If Madero had given place to better men, instead of to worse; if his death had brought Mexico nearer to a solution of her problems, instead of taking her farther away, I could condemn him with a better heart. Certainly he never committed any crime that would justify his being shot like a dog in the night. Twelve days before the treason that liberated Felix Diaz from prison, Madero talked to me enthusiastically for an hour explaining his policies. He convinced me that he was a man of some sincerity, tho he could not convince me that he was a success. On February 8, I was not thinking highly of Madero. Since his assassination it is difficult for me to think of him except as an angel of light.

But the melancholy end of a man, or even his personal qualities, must not be permitted to warp the judgment as to his work. His work must be judged by—his work. Madero did some good things. On the whole, he and his government were a failure. Madero would perhaps have done very well as President of the United States in a quiet era. But he was not big enough and brave enough to face squarely the stormy needs of Mexico. His enemies said that he betrayed the revolution, and they made out a strong case. But that he betrayed the revolution out of wanton dishonesty I do not believe. He yielded somewhat to personal ambition, no doubt. Beyond that he was simply not equal to the influences that were put about him. Probably no man of Madero's class could have risen to the occasion. The President of Mexico in that hour should have been not only strong and brave, as one man in millions, but a poor man, one without financial or family or social ties to make him afraid of going too far with the people. The only crisis in our own history that can be compared even remotely with the Mexican crisis is the one that was met by Abraham Lincoln. When I cogitate upon the sort of president that was needed—and is still needed—to lead Mexico out of the wilderness, my mind runs back to Lincoln, who, in defiance of vested rights, of written law, and of civil procedure, by one stroke of the pen set free four million slaves in order to strike at the sectional strife that was threatening to make two countries out of one.

But let us get down to definite detail to this thing that is the matter with Mexico.

Land holdings are concentrated to a greater degree in Mexico to-day than they were in France in 1789. Seven thousand families hold practically all the arable land. If the distribution were proportionately the same as it is in the United States, one million Mexican families would be in possession of titles to landed property. In the state of Morelos, the center of the Zapatist revolt, twelve *hacendados* (proprietors) own nine-tenths of the farming

Who Ever Knew Any Corn to Stay?

Who ever saw a corn so old, so tough as to resist a Blue-jay plaster?

There are corns which resist the first plaster—that's true. But the most stubborn corn must come out with the second.

Think how easy it is. The little plaster is applied in

a jiffy. The pain stops instantly. For two days the corn is forgotten. Then you take off the plaster and the corn comes out.

It comes out entirely and forever, without soreness or any discomfort.

Did you ever know anyone to use a Blue-jay without just that result?

If not, why don't you try it? Why not end your own corns in this modern scientific way?

Now used on a million corns monthly.

A in the picture is the soft B & B wax. It loosens the corn.
B shows the pain and keeps the wax from spreading.
C wraps around the foot. It is narrowed to be comfortable.
D is rubber adhesive to fasten the plaster on.

Blue-jay Corn Plasters

Sold by Druggists—15c and 25c per package
Sample Mailed Free. Also Blue-jay Union Plasters.

property. In Chihuahua, the center of the agrarian revolution in the north, the Terrazas family holds nearly twenty million acres, which comprise nearly all the tillable soil of that state. The greater portion of the state of Yucatan is held by thirty men, kings of sisal hemp. The territory of Quintana Roo, which is double the size of Massachusetts, is divided among eight companies. When I visited Madero on January 27, he unrolled a map of Lower California showing the land gifts of General Diaz. That territory, equal in area to Alabama, had been sold in five vast tracts for about three-fifths of a cent an acre.

In this country the farmer is, as a rule, a humble person, and the typical farm is a hundred and sixty acres; in Mexico the farmer is like a feudal baron and his acres frequently run into millions. We read on:

In a news dispatch regarding the operations of the rebels, which recently appeared in the Mexican papers, it was casually mentioned that on one farm in the state of Puebla, the Ateneingo, the rebels had burned two million pesos' worth of sugar cane. If the crop standing in the fields was worth two million pesos, how much might the farm itself be worth?

Instead of showing a tendency to break up, this system has been steadily growing stronger. Always, since the rule of Spain was fastened upon Mexico, land has been held in huge tracts, and there have been feudal lords and serfs. But in Spanish times and later, after the independence, a considerable proportion of the common people had farms of their own, which insured them a fair measure of freedom. Under Diaz nearly all of these small holdings were swept away. The big farm reached out and swallowed the small farm beside it. The big farm grew larger and larger. The big farm did not need the new ground for purposes of production. Indeed, production was only a remote consideration. Invariably only a small fraction of the million-acre farms is cultivated. The big farm grabbed the little farm for two reasons: first and most important, to prevent the people from working for themselves—that is, to leave them no other means of livelihood except to become peons on the big farm; second, for speculative purposes.

The result of this land concentration was to give to Mexico a system analogous in all of the essentials to the feudalism of Europe in the sixteenth century. The authorities, state and local, civil and military, were the same unquestioning servants of the *hacendado* as they had been of the feudal lord. The power of the *hacendado* was even greater, if possible, the exploitation more severe. The *hacendado* possess not only the right of the first night, the power to pay or withhold pay at will, the power to dictate the daily living of the peon to the final detail, but also, practically speaking, the power of life and death itself. In the capital was a written constitution which proclaimed that all men were free, but to a man who owned a million acres and ten thousand peons this constitution meant nothing—and it meant nothing to the peons.

The peons of Mexico are weak and ignorant, yes. It is not because they were made so by an all-wise creator, but because they are serfs. Serfs have always been weak and ignorant, and always will be so.

Walk-Over
The Shoe
Without
a doubt!

WALK-OVERS are shoes of certainty—shoes with the doubt left out!

Their approved styles and splendid fitting and wearing qualities make Walk-Over the popular shoe for men the world over.

Walk-Over stores offer an unsurpassed service. Better styles, better attention—more skill in finding and fitting the exact shoe that is meant for you.

Wear Walk-Overs—and you get the benefit of forty years' striving to accomplish an ideal—to give you the perfect shoe!

Walk-Overs are sold everywhere!
From \$3.50 to \$7.00; standard prices \$4.50 and \$5.00.

Through the Wilds Down the Allagash

(208 Miles by Canoe)

It is one of the wonder vacations of the world.
You go by train to Moosehead Lake away down
in the **Wilds of Maine**

There you get your camp supplies, and guides, white or Indian. The next morning you're off for 200 miles through forest scenery of unimaginable beauty—still water, quick water, rapids, waterfalls. You cross nine exquisite, lonely lakes—Chesuncook, Umbagogus, Mud, Chamberlain, Eagle, Churchill, Umsaskis, Long, Round—and so into the Allagash River, into the St. John, to Fort Kent on the Canadian border. (Get out your map.)

You camp in delightful places, sleep on hemlock boughs, eat campfire cooking, breathe pine-spruce-laden air, fish, explore, study the deer and moose.

You come out brown and happy and made over in body and nerves.

Two weeks are ample for the trip and the cost is small.

the medal. The men who had fought for Madero had been promised lands. Tens of thousands had been promised their own particular lands, and by Madero himself. Thousands had actually taken possession of their lands and were preparing to cultivate them. Thousands of slaves, liberated during the fighting, were in possession of guns. When these people were told that the promises of the revolution meant nothing, that those on the lands must get off the lands, that the former peons must become peons again, that the slaves must return to their slavery, what could you expect them to do?

What would you have done?

Well, if you had done it, you would have been called a bandit. . . .

I am confident that neither Huerta nor Felix Diaz can bring peace to Mexico, because these men are further away from the people, in their sympathies and their affiliations, than was Madero himself. Their promises may help the fighting in some localities for a time, but in the end they will give no relief and the revolution will go on.

THE STORMY PETREL OF THE REICHSTAG

DR. KARL LIEBKNECHT'S sensational charges that large German manufacturers of war materials had bribed officials at home and paid French newspapers to foment international ill feeling in order to increase their sales made him a world figure, at least for a brief period, but it was not the first time he had attracted attention to himself. In 1904 he got a great deal of notoriety as counsel for the defense in the famous "conspiracy" trial of German Socialists charged at Königsberg

with assisting Russian revolutionists living abroad in transporting over the border a lot of literature that was illicit in the Czar's Empire. He was a young lawyer at that time, but despite his limited experience in handling large cases Liebknecht turned the trial into a huge political indictment of the Prusso-German régime. It was regarded as a splendid piece of political agitation, if we are to believe an anonymous writer in the London *Daily News*, who seems to be none too friendly to the German Government. Our informant says:

It was, perhaps, this trial which induced Herr Liebknecht to become, so to speak, the champion enemy of the Prussian régime, and of all that it connotes—Junkersdom, militarism, Hohenzollern autocracy, and so forth. An excellent speaker, tho not an orator, with a temperament full of enthusiasm and fire, highly educated and well read, tho far from being a theorist and "philosopher," as so many highly educated Germans are, Herr Liebknecht threw himself now into an agitation against the military caste, and soon became the foremost leader in the campaign for the conquest of universal suffrage to the Prussian Landtag—that bulwark of Prussian domination in Germany.

His antimilitarist agitation had for its special object to educate the youth of the working class in the spirit of peace and internationalism; but he also went so far as to suggest propaganda in the barracks and among the army generally, after the manner of the French antimilitarists, for which, however, he never gained the sympathy of his fellow-Socialists. With regard to the Prussian franchise, he was one of the first (sharing in this respect the honor with Herr Bernstein, his antipode in the party) to urge the ultimate application of the general strike as a means of compelling the Prussian Government to abandon "the most wretched of all electoral laws," as it was called once by Bismarck (who, of course, could not have foreseen the Russian electoral law), and to extend the Reichstag franchise to Prussia.

The two lines of agitation ultimately converged for him in a curious manner, one leading to his being convicted of "seditious" propaganda and sentenced to eighteen months' confinement in a fortress, and the other resulting in his being returned at the elections of 1908 to the Prussian Landtag as one of a small group of Socialists who entered those sacred precincts for the first time in Prussian history.

This, again, made him a celebrity for the time being in his fatherland, but a still greater sensation was to come in January, 1912, when he was elected to the Reichstag for the Prussian Royal borough, the Potsdam constituency, where the Court and military naturally constitute the greatest social forces. This was a resounding "box on the ear" for the ruling clique on the part of the electors, who evidently delighted in seeing the most implacable enemy of the Prussian monarchist and military régime, and one who had but recently "done" imprisonment for high treason, to act as spokesman for the foremost constituency in Prussia. Since that time Herr Liebknecht has more than ever loomed in the eyes of the public as an emblem or symbol of the revolt of the de-

KREG PECANS

Selected Paper-Shell Pecans

Get the ordinary, little brown nuts you buy at the store, but large, thin-shelled, easily-cracked nuts, filled with delicious golden goodness.

Don't buy nuts during the hot summer months. Kreg Pecans are good in soups, salads, cakes, sandwiches, fruit, ice cream, garnishes, and almost every kind of food. They will provide most nourishment and an altogether more palatable and healthful.

You Can Buy Only By Mail

The pecans in Kreg's selected paper-shell are not sold in the stores. We are offering them with our pecans in bulk, and this is probably the best to get them. You have only had to buy them in the stores, and you have only had to buy them in the stores, and you have only had to buy them in the stores.

We are not alone in our selection of the best pecans in the world. We are offering them with our pecans in bulk, and this is probably the best to get them. You have only had to buy them in the stores, and you have only had to buy them in the stores.

No shipment of less than 5 lbs. will be made. Order today. Send 25c for sample package. KREG PECAN CO., Williamsport, Pa.

THIS roof takes precedence over other materials for beauty, durability, fire protection and low cost. Rough-surfaced shingles of crushed slate or granite embedded in pure asphalt. Natural colors of garnet, red or gray-green, which never fade and never need painting.

Reynolds Asphalt Shingles

They have withstood the ravages of driving rain, pelting hail, hottest sun and heaviest snow. They lie perfectly flat—cannot warp, crack, split, curl, drop or blow off. They are as cheap as good wood shingles, yet are far more lasting, far handsomer, and cannot be set on fire by flying sparks. They save part of your insurance cost. Adaptable to every style of pitched roof, and make possible many unusual architectural effects.

Guaranteed for 10 years

We are the ORIGINAL MAKERS of Flexible Asphalt Slate Shingles and tested our product for ten years before putting it on the general market. Right here, in Grand Rapids, where climatic changes are extreme, our shingles, after ten years' exposure to every kind of weather, look as good as the day they were nailed on. It surely will be unwise to waste your money in buying quick-fading wood shingles, which catch fire from the first spark, and equally unwise to pay exorbitant prices for heavy slate or similar materials.

Uniform in size—8 in. x 12 in.—and are laid 4 in. to the weather. Your building-supply or lumber dealer can secure these shingles for you.

Let us send you a booklet showing photographs of modern houses roofed with Reynolds Asphalt Shingles—signed opinions of the owners are included. Also opinions of leading architects and builders. Write for a copy TODAY.

moeracy against the reactionary powers in the state.

And now, by his revelations in the Reichstag, Herr Liebknecht has dealt the same powers another and not less sensational blow. The Prussian reaction likes to play the part allotted to it by Frederick the Great of a *rocher de bronze*, on which no attacks, however spirited, can produce the slightest impression. It simply waves with its hand and disdainfully says: "It does not matter." But students of German life know that it does matter. The "rock" continues to stand, but its foundations are becoming undermined, and one day it may topple over, the whole weight of it, at one blow. And Herr Liebknecht knows it, and does his work with a gusto, just as his father, the great Wilhelm Liebknecht, did it in his days, after his manner.

There is, indeed, a great similarity, in spite of external differences, between these two men, father and son. Old Wilhelm was the type of a cultured German, full of ideas, full of kindness, deliberate, quiet, large-minded, and large-hearted. Young Karl is impetuous, passionate, a man of action, who will often act before he even has time to think. Yet never has a son been a truer image of his father in so far as political ideals and the means of attaining them are concerned. Karl is as devoted a Socialist as his father ever was, and just like the latter, he stands on the extreme "left" of his party, hating all compromise and firmly believing in the inevitability of a revolution. Unlike his father, he does not excel in the councils of peace, being temperamentally unsuited for chamber work; but like his father, he is always to be met with in the front ranks of an attacking column. Take his father, too, he is a passionate internationalist, and just a couple of weeks ago he visited Paris, London, and Brussels, holding forth on the necessity of combating the machinations of the militarists in every country, and of preserving the world's peace.

Big Appetites Thank These Baskets

A small piece of ice in a Hawkeye Refrigerator Basket keeps lunch and bottles cold all day. An outdoor lunch from a "Hawkeye" doubles the pleasure of your motor boat or auto trip. Ride you of unsatisfying food or drink! Our Free Booklet tells all you want to know about outdoor lunches.

Prevented—Stopped

MOTHERSILL'S, after thorough tests, is now officially adopted by practically all the Great Lakes and New York Steamship Companies running south, and many Transatlantic lines.

Four years ago Mr. Mothersill gave a personal demonstration of his remedy on the English Channel, Irish Sea, and the Baltic, and received unqualified endorsement from leading papers and such people as Bishop Taylor Smith, Lord Northcliffe, and hosts of doctors, bankers and professional men. Letters from personages of international renown—people we all know—together with much valuable information are contained in an attractive booklet, which will be sent free upon receipt of your name and address.

Mothersill's is guaranteed not to contain cocaine, morphine, opium, chloral, or any coal-tar products. 50 cent box is sufficient for twenty-four hours. \$1.00 box for a Transatlantic voyage. Your druggist keeps Mothersill's or will obtain it for you from his wholesaler. If you have any trouble getting the genuine, send direct to the Mothersill Remedy Co., 407 Scherer Bldg., Detroit, Mich. Also at 19 St. Bride St., London; Montreal, New York, Paris, Milan, Hamburg.

THE SPICE OF LIFE

How It Was.—"Is your wife going away this summer?"

"No—I'm sending her."—*Town Topics.*

Since Eve's Time.—A woman can say "dear" to another woman and make it sound like "I'm a liar."—*Cincinnati Enquirer.*

The Brute.—CO-ED—"What tense do I use when I say, 'I am beautiful'?"

BOLD SOPH—"Remote past."—*Vermont Crabbe.*

Marked.—MOTHER—"Don't cry, dear. Which one of the twins hit you?"

DEAR—"The one with the black eye."—*Wisconsin Sphinx.*

In John D.'s Class.—"Is he rich enough to keep an automobile and a yacht?"

"Yes, he is even richer than that. He keeps a lawyer."—*Chicago Record-Herald.*

Minnows Only.—"Have you had many proposals?"

"Oh, yes, but not one from a man worth suing for breach of promise."—*Detroit Free Press.*

Where We Win.—"In China the oath of brotherhood is taken by breaking a cup."

"If that worked in this country, our cook would be sealed to us for life."—*Kansas City Journal.*

Gymnastic Stunt.—BARBOUR—"You seem warm; have you been exercising?"

WATERMAN—"Yes, indeed; I went to the mutes' dance and swung dumb bells around all evening."—*Michigan Gargoyle.*

This is Mean.—"It is only a question of time when the suffragists will sweep the country."

"Nonsense! Not half of them know how to handle a broom."—*Town Topics.*

Embarrassed.—"Didn't you feel pretty cheap sitting there with a young and innocent girl at such a shocking play?"

"I did. She had to explain a good many of the innuendoes before I was able to get them."—*Chicago Record-Herald.*

Mutual Profit.—PARENT—"Now, what are you going to charge me to cure this boy of the measles?"

PHYSICIAN—"Nothing at all, my dear sir, as it is an original case; and you get your ten per cent. commission for every child that catches them from him."—*Puck.*

Narrow Escape.—HE—"Will you be my partner?"

SHE—"Oh, George, this is so sudden! Give me a little time."

HE (continuing)—"for the next dance?"

SHE (continuing)—"to catch my breath. I haven't recovered from the last Boston yet."—*California Pelican.*

Strike Broken.—MASTER OF THE HOUSE—"See here, Mary Ann, where's my dinner?"

SLAVEY—"Theer ain't agoin' to be no dinner, if you please, sir."

"What's that! No dinner?"

"No, sir. The missus came 'ome from jail this afternoon, an' ate up heverythink in th' 'ouse!"—*Cleveland Plain-Dealer.*

Non-negotiable. — CRAWFORD — "Are those dollar watches any good?"

CRABSHAW—"They're all right, except when you're broke."—*Judge*.

Great Climax.—"How was the play you saw last night?"

"Pretty melodramatic. In the second act when the skulking villain descends upon Hickory Farm and forecloses the mortgage on old Uncle Zeke's automobile there was hardly a dry eye in the house."—*St. Louis Republic*.

Some Hint.—"Papa wanted to know whether you were a good business man," she confided.

"Have you any idea why he asked?" inquired the young man, who had been calling for a long time.

"I guess it was because you never talk business."—*Judge*.

Secret Dangers.

A juvenile Jap
Was buying a map
For use in a school, he confest.
A man in the shop
Sent out for a cop
And ordered the fellow's arrest,
He cried, "It's a plot
To pick out a spot
For landing an army out West!"
But somebody showed that the dangerous
scroll
Was merely a map of the Pearyized Pole!

A yellowish cone
From sources unknown
To Governor Johnson had come.
'Twas heavy and hard,
And every guard
Was sure they'd discovered a bomb
To blow 'em sky high,
Sent secretly by
Some devilish son of Yum-Yum!
But then the cook saw it and said, "If
you please,
Who sent us this beautiful pineapple
cheese?"

A statesman grew pale
To find in the mail
A hieroglyphical note,
He whispered, "The band
That's called the Brown Hand
These threatening characters wrote!
I'm certain they say
They'll kill me to-day
By slitting my eloquent throat!"
But he was restored to his usual ease
When told 'twas a check from a laundry
Chinese!

A Japanese got
A hundred-foot lot
Quite close to the City of Wash,
A building he made
And persons afraid
Said "Goodness!" and "Gracious!"
and "Gosh!"
This devilish one's
Constructing big guns
To blow our fair city to squash!"
But lo! 'twas a shop where he got the
mazuma
By selling much genuine, rare, old
Satsuma!
—*John O'Keefe in the New York World*.

Have you ever met John Hance?

He's a Grand Canyon guide and a teller of stories that might be true, if—

John Hance prides himself on being the most accomplished fiction-ist in Arizona. He has wintered and summered at the Grand Canyon for thirty years. Hamlin Garland, in a delightful study of this pioneer guide, affirms that Hance is a most dramatic raconteur.

It's worth stopping off at Williams, Arizona, on the transcontinental trip, and taking the sixty-five miles' run up to the canyon of canyons, just to meet Hance face to face.

His tales lose their flavor when reduced to print. They require his soft, drawling, high-pitched voice, and awkward gestures. Also they require the canyon environment.

One anecdote concerns the time he escaped a pack of wild wolves by riding full tilt off the rim and jumping unafraid into the abyss. When within a few yards of the bottom, Hance saved his own life by gently leaping from the saddle. The horse met an untimely death on the rocks below. Do you ask for proof? He will show you the stones and the bones!

Story-telling is as old as the race. The Grand Canyon is older. But what's an eon more or less amongst friends?

The point is, that no matter what the yesterday of this sublime scenic spectacle was, to-day it is the Wonder of the World. To-day happens to be the day you are on earth, too. So why not pack your grip and go there by the first Santa Fe train?

The journey is so easy and the cost so trifling, if taken as a side tour on the way to or from California.

Many travelers say that El Tovar Hotel, managed by Fred Harvey, is sufficient reason for the canyon outing. El Tovar is a home-like inn. Here, in the wilderness, you can get a tub bath, eat grape-fruit for breakfast, and scan a dinner menu that would make Broadway envious. Next door, for contrast, are Navaho hogans and Hopi adobes, housing primitive Indians. Next door, too, is that great gash in the earth, a mile deep, miles wide, and painted like a hundred sunsets.

Three days spent at the Grand Canyon equal three weeks spent anywhere else. That's a modest comparison.

One day can be given to the trail. It zigzags for eight miles down, down, down to the Colorado River. It zigzags the same distance back. You leave in the morning; you get back in the late afternoon. You wear a suit of khaki or blue jeans, or any old thing. You ride a placid mule—though volcanic if disturbed when off duty. The mule seems ninety per cent of the trip, and the canyon the remaining ten. Afterward, in memory, the values are reversed.

Maybe you have not been in the saddle for twenty years. The saddle for you to-day, plus the mule, plus the mile-deep hole. You early learn the mule's name and repeat it often when rounding the steep places. You are one of a little party, in charge of an experienced guide. The guide is used to it; you are not. There's a thrill for you at every turn; the guide is placid. But he knows the way, bosses the mules, and restores confidence.

You reach the river at noon, lunch, throw stones in the rapids, and start back uphill. How far and tall the cliffs are! How distant the hotel on the rim is! You get to the top eventually, tired but happy—happy in having had a unique experience.

Next day ride on the rim boulevard and see the sunset from Hopi Point. The day after, go to Grand View and see an entirely different section of the canyon. Both jaunts in easy coaches.

Stay a few days more and try one of the many camping trips, if time can be spared.

If all this appeals to you, write to Mr. W. J. Black, Passenger Traffic Manager of the Santa Fe, 1064 Railway Exchange, Chicago. Ask him for copy of an illustrated booklet, "The Titan of Chasms." The cover is a four-color reproduction of an oil painting of the canyon by W. R. Leigh. Inside are articles by Powell, Lummis and Higgins, with full information about what to see, what to do, etc.

CURRENT EVENTS

Foreign

- May 1.—A representative of the Carranza revolutionists warns Americans to leave Mexico City while there is still rail connection.
- May 2.—Suffragettes burn railroad sheds at Bradford, England, valued at half a million dollars.
- May 3.—Tancrede Auguste, President of Haiti, dies.
- May 4.—Senator Michel Orreste is elected President by the Haitian Parliament.
- A daughter is born to Queen Sophia of Greece.
- May 5.—King Nicholas of Montenegro decides to leave Scutari's future to the Powers.
- May 7.—The British Government announces that no more opium will be sent from India to China this year.

Domestic

WASHINGTON

- May 1.—President Wilson nominates E. K. Campbell, of Birmingham, Ala., to be Chief Justice of the United States Court of Claims.
- Theodore L. Weed, director of the postal savings system, resigns.
- May 2.—The United States Government recognizes the new Chinese Republic.
- May 5.—The Court of Appeals of the District of Columbia affirms the lower court's contempt judgments against Samuel Gompers, John Mitchell, and Frank Morrison, American Federation of Labor Leaders, growing out of the Bucks Stove and Range case, but holds that the sentences originally imposed were too severe. Gompers' sentence is reduced from one year in prison to thirty days, Mitchell's from nine months' imprisonment to a \$500 fine, and Morrison's from six months to \$500.
- May 6.—Sir Arthur Spring-Rice, the new British Ambassador, makes his first call at the White House.
- May 7.—The President nominates John Purroy Mitchel, anti-Tammany Democrat, to be Collector of Customs for the Port of New York.
- The Post-office Department, pursuant to an executive order from President Wilson, amends the order of President Taft putting all fourth-class postmasters under civil service rules. The new rule requires all postmasters appointed prior to the issuing of the Taft order to take civil service examinations.
- The Sundry Civil Bill, with a "rider" exempting labor-unions and farmers' organizations from prosecution under the Sherman Anti-trust Law, is passed by the Senate.

GENERAL

- May 1.—The managers of Eastern railroads decide to appeal to the Interstate Commerce Commission for permission to increase their freight rates 5 per cent.
- The National Peace Congress convenes at St. Louis.
- May 2.—President Wilson speaks at points in New Jersey in behalf of jury-reform legislation.
- May 3.—The California House of Representatives passes the Bloodgood Antislavery Land Bill, which is identical with the Webb Bill, already adopted by the Senate, and Secretary of State Bryan leaves Sacramento for Washington, D. C.
- May 6.—Police Inspectors Dennis Sweeney, John J. Murtha, James F. Thompson, and James E. Hussey, of New York City, are found guilty of conspiring to prevent a witness from testifying in the police-graft investigation.
- Twenty-two are hurt in strike riots in Syracuse and the city is placed under martial law.
- Governor Cox, of Ohio, signs a bill making it a felony to carry deadly weapons concealed.
- May 7.—The Federal cases against Eugene V. Debs, J. I. Sheppard, and Fred D. Warren, of *The Appeal to Reason*, a Socialist weekly newspaper, charging them with attempting to obstruct justice, is dismissed at Fort Scott, Kan.

The Effete West.—A man from California reports this:

FIRST LITTLE BOY.—"What let's do?"

SECOND LITTLE BOY.—"Let's go East and be gunmen."—*Louisville Courier-Journal*.

National Veneer Products Company
805 Beiger Street, Mishawaka, Indiana

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnall's Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"A. E. T., Highstown, N. J.—'Kindly explain why it is considered incorrect to say, 'I was sitting in back of her,' since the expression, 'sitting in front of her' is permissible."

The expression "in front of" is correct, because educated people use it; "in back of" is not correct because educated people do not use it. In English, it is usage by the educated classes which makes any phrase or construction "good English."

"H. C., Stryker, Ohio.—'Please state if the following sentence is correct grammatically: 'I am the oldest of my brothers.' If not, how could it be improved?'"

The sentence is not correct in logic (which is a part of grammar). The "oldest of my brothers" is one of my brothers; but I am not "one of my brothers," and hence can be neither the oldest nor youngest of them. One should say, "I am older than any of my brothers."

"E. W. L., Denver, Colo.—'Are the expressions, 'I feel ill,' and 'I feel finely,' correct when used to express the condition of one's feelings or physical condition? In the word 'denote,' proper when used in the place of 'express' in the above sentence?'"

Neither "I feel ill" nor "I feel finely" is correct. The verb *feel* in the sense here used must be followed by an adjective describing the condition of the speaker (as his feeling reports it). You probably mean *denote*, not *denote*; *denote* could not be used in place of *express*. One denotes by signs, expresses in words.

"W. B. D., Roanoke, Va.—'(1) How is *catercornered*, meaning diagonally opposite, spelled? Is it a good word? (2) Is the mean sea level of the Pacific Ocean at Panama higher than that of the Atlantic? If so, how much? (3) How is precedence passed in the sentence, 'This action takes precedence over that?'"

(1) The word is *catercornered*. It is provincial or dialectic—in that sense not "good" English. (2) We have at hand no more definite statement than that in the *Encyclopædia Britannica*, to the effect that "old speculations as to a great difference of level on the two sides of the Isthmus of Panama have been proved by modern leveling of high precision to be totally erroneous." The profile of the Panama Canal prepared by authority of the Isthmian Canal Commission draws a single line through to represent the mean level of both oceans. (3) *Precedence*, in the sentence you quote, is a noun in the objective case, being direct object of the verb *takes*.

"W. S. T., Montgomery, Ala.—'Are the following sentences grammatically correct? 'It is raining to day.' 'It will probably rain to morrow.' If so, to what does 'it' refer?'"

The sentences are correct—except that it is usual to write *to-day*, *to-morrow*, instead of *today*, *tomorrow*. It is what the grammar calls an impersonal subject—a subject referring to no specific person or thing. The construction is found in all languages: *it rains, snows, thunders, etc., it is hot, it is cold, it is stormy, etc.*, furnish examples of impersonal verbs or impersonal use of verbs.

"C. M. S., Modesto, Cal.—'Will you kindly explain the proper use of the word *tentative*? Is it properly used in the following sentence? 'Tentative plans were submitted to the Council.' A recent magazine article, published a week ago, but which I have not seen, was approached on the subject, and made a tentative denial.' The reader would be interestedly accepted."

The word *tentative*, as an adjective, means "used experimentally, being tried out, being tested." "Tentative plans" are plans submitted for consideration, to be tested by argument or by actual trial. "Venire-men accepted tentatively" are accepted "on trial"; further consideration may lead to the decision that they are not acceptable. It is hard to see how a *denial* can be *tentative*; to say that any one made a "tentative denial" is to impugn the integrity of that person. In this case the word *tentative* is improperly used.

Garford

The economical result of producing six cylinder cars in great quantities

TO the average mind it probably seems incredible that we can build a thoroughly high grade six cylinder car for so much less than other manufacturers. But have you thought of it from a manufacturing standpoint? This Six is being built in lots of ten thousand—which is the largest six cylinder production ever attempted. The average six cylinder production is less than one thousand cars. The Garford output being ten times larger—our production costs are ten times less. Manufacturing automobiles, on such a large scale, permits practical manufacturing economies, such as the unlimited use of automatic machinery, special tool and drop forge equipment, and this is what materially reduces the price.

Any manufacturing cost will decrease in exact proportion to the increase of mechanical facilities. This is a natural and invariable manufacturing law. This is why we are in the position to give you as much for \$2750 as most manufacturers must get \$5000 for.

In point of mechanical efficiency and actual comfort the new Garford Six is as luxurious and as finished as the most expensive car in the world.

Look up the Garford dealer in your town and see this car at once. Compare it with cars that cost twice as much.

Handsome catalogue on request. Please address Dept. 4.

The Garford Company, Elyria, Ohio.

\$ 2750

Completely Equipped

Single electric head light

The Garford Six is the only automobile made with the head light where it should be—in the center of the radiator. This new Garford method of lighting throws a flood of light directly on the road where it belongs. It is just as unnecessary to have two head lights on an automobile as it would be to have two on a locomotive.

Dash and dome lights

Sunk flush with the dash are two powerful bull's-eye electric lights. On the rear of the front seat is a brilliant electric dome light which illuminates the interior of the tonneau. Two concealed electric lights illuminate the entire dash. All lights are controlled from the dash by convenient push buttons.

60 H. P. Six-cylinder motor

The motor is cast en bloc. It is of the long stroke type, having a bore of 3 1/4 in. and a stroke of 6 in. It is conservatively rated at 60 horsepower; is very flexible, has an abundant amount of reserve power. Sensitive to the slightest touch of the throttle. Remarkably economical, practically free from vibration, and very efficient.

Wheel Base, 128 inches
Warner Auto-Meter—driven from the transmission
Tires, 36 x 4 1/2
Demountable rims
Bosch Magneto

All steel Pullman body

The Garford body is a solid welded steel unit. No rivets, no bolts, no joints, no wood. It cannot rattle, warp, squeak, creak or crack. It is constructed on the all-steel Pullman principle. It is light, flexible, absolutely noiseless, and cannot under any circumstances be affected by temperature changes.

Simple, positive electric starter

The Garford electric starting system is very simple, always sure and perfectly safe. It is not big and bulky, but light and compact. A generator takes the place of the fly wheel. Just touch the pedal and it responds instantly, turning the engine over until it starts. It is 100% efficient. A child can operate it.

Luxurious upholstery

The new Garford "Six" is upholstered with those luxurious Budd de luxe cushions, which are made of the best hand buffed leathers and the very finest genuine hair. They are soft, thick, rich, comfortable, beautiful, and durable. Garford upholstery will last for years without the least sign of wear or abuse.

SYMBOLISM OF THE COVER DESIGN.—Our cover design represents Phaidippides, the Greek courier who ran from Athens to Sparta, about 150 miles, in two days, to ask Sparta's help against the Persians. He symbolizes the news-bringer. The painting is the work of Mr. Harold Nelson.

The Greatest Business Convention in History Beckons You To Baltimore

Every man who uses publicity in any form—every man with advertising or merchandising problems to solve—should be in Baltimore from the 8th to the 13th of June. The occasion is the ninth

Annual Convention of the

Associated Advertising Clubs

of America. Ten thousand delegates and guests are expected to be present. They will come from all parts of the United States and Canada, and even from abroad. The general sessions, held in the Fifth Regiment Armory, will be addressed by the most progressive and successful American advertising and business men. Departmental and other special meetings will discuss in open forum the problems of various branches of the great business of advertising and selling merchandise of every description.

At this convention you will have an opportunity to hear of the great progress which is being made in efficiency in advertising—how advertising is being made more productive and profitable. You will hear from the lips of the leaders in the movement just what has been done and is to be done to check and

punish those who are guilty of fraudulent or misleading advertising. The great educational movement, inaugurated by the Association and now being carried out by scores of clubs, will also be fully described by those in charge of the work. Lay sermons by prominent advertising men will be delivered from the pulpits of Baltimore on Sunday, June 8th.

Don't fail to visit this great convention—send your advertising or sales manager if you cannot come personally. All will be welcome, whether members of advertising clubs or not. All will have an opportunity to hear the addresses and to participate in the splendid program of evening entertainments which Baltimore has provided.

Write now to the address below for the full program, hotel accommodations, etc.

Life, Death and Immortality
By William Hanna Thomson, M.D., LL.D.
Author of "Brain and Personality"

The Independent, New York:
"Life, Death and Immortality is a book which supplies much food for thought. Dr. Thomson's conclusions will be found a support to Christian faith in immortality."

Examiner, Chicago:
"It is especially interesting to find the author, a scientist and physician, points in his conclusions valuable to the doctrine of the immortality of the soul. Science will appreciate the vigor in handling a subject of personal interest."

Herald, Boston:
"His argument for immortality rests upon the personal personality. He maintains that the spiritual life has never yet been discovered and that, from a scientific point of view, everything points to immortality."

Philadelphia Telegraph:
"The statement of his case for immortality on scientific grounds is clearly stated, ingeniously argued and supported with every manifestation of scholarly possibility and sound probability."

Herald-Republican, Salt Lake City:
"Those thinkers who enjoy this book and find in it ideas that make them think will soon..."

IF YOU ACT NOW
See Coupon Below**

HOMILETIC COMMENTARY

This Universally Commended Colossal Collection reflects a stupendous amount of research by scholars of all creeds and denominations. Its treatment of texts is ample, authoritative, evangelical. It is the most widely used Homiletic Commentary extant. It contains much that can not elsewhere be found. **Some of its Many Advantages Are:**

IT BRINGS TO THE PREACHER'S ATTENTION thousands of texts heretofore almost wholly overlooked by the pulpit. Spurgeon in his *Commenting and Commentaries* says: "We have next to nothing on Kings." In the Homiletic Commentary we have on Kings alone 743 treatments of texts. The same is true of other books, as Jeremiah. A flood of new light in the way of exposition, critical notes, illustrations, etc., is poured in upon those neglected texts, and additional light is thrown upon old texts.

IT IS THE ONLY COMMENTARY in any language that supplies a sermonic treatment of homiletic suggestion on every paragraph and verse of both the Old and New Testaments, that can be used to advantage as the text to a sermon.

IT CONCENTRATES THE LIGHT of all ages and of all countries on the text.

IT IS WHOLLY FREE FROM DENOMINATIONAL BIAS, strictly evangelical. Says Dr. Alexander Scott: "It exalts the Savior; it is an invaluable boon to hard-worked clergymen. Its fullness is astonishing."

IT SUGGESTS THOUSANDS of meaty themes for sermons; also a world of illustrations.

THE INDEXES are very full and valuable. "Useful on almost any subject along homiletical lines," as an eminent critic says.

IT THROWS GREAT LIGHT upon the present controversies over the Old Testament. In this respect, especially, nothing could be more timely or helpful than this wonderful commentary.

THE COMMENTARY IS WHOLLY IN ENGLISH, avoiding Hebrew and Greek except in the critical notes.

Covers Both the Old and the New Testaments

WHAT THESE MEN HAVE GAINED— YOU CAN GAIN

"Your course in public speaking has done for me that which I am convinced beyond a doubt, nothing else of an educational nature could have done. It has changed me from a backward, timid, self-conscious man, to a confident, self-reliant, assertive one. I began your course for the specific purpose of being able to speak to the agents under my management. I have accomplished more than I ever dreamed, and my meetings are NOW productive of the results desired. I want to add here that you could not buy these lessons back at hardly any price if no more were available."—*Jno. B. Carter, District Manager Peninsular Casualty Company, Jacksonville, Fla.*

No Man Could Help Being Benefited

"No man, if he did nothing but simply read the good advice you give, could help being benefited. Your teachings are inspiring and elevating. They inspire confidence, thus removing all fear, the two important factors in the failure of many would-be public speakers."—*C. E. Embree, General Manager, Farmer's Union of Maine, Bangor, Me., February 3, 1913.*

This Man Has Reached An Independent and Influential Position Through Its Help

"Since taking up your lessons I have been able to increase my earning capacity as a salesman, and have been enabled to work myself into a more independent and influential position."—*W. S. Webber, 106 Brunsvick Rd., Melbourne, Australia, March 25, 1913.*

Makes a Successful Speech After the First Few Lessons

"Some time ago when I was yet at the outset of your course, I made a successful address at the people's church, the unique theatre here, I was able to speak with confidence and poise that I had never possessed before."—*James T. Marayama, Minneapolis, Minn., March 21, 1913.*

"It Develops Not Only the Speaker But the MAN"

"The course under Prof. Kleiser in Public Speaking has proven so valuable to me that I recommend it everywhere. The particular charm and value of the course, is that it develops not only the speaker but the MAN."—*Allen G. Loehr, Prof. French and German, University School for Boys, Stone Mountain, Ga., January 9, 1913.*

Always Used to Become Hopelessly Disconcerted—Now It Is Otherwise

"The course is everything its author says for it—so practical, lucid, and easy of comprehension. Before I studied this series of lessons I was unable to face an audience, and when I began to talk I became hopelessly disconcerted and confused: now it is otherwise, and the larger the audience, the more readily I talk."—*John B. Carroll, Quincy, Ill., April 5, 1913.*

Grenville Kleiser (former Yale Instructor) through his course of instruction by mail has taught more than 10,000 men and women in all occupations to become confident, forceful speakers on all occasions.

This summer he wants you to

UNITED STATES TIRES ARE GOOD TIRES

They cut down tire bills

Just what kind of a tire do you want?

Pick out the features you want to find in the tires you buy. You want generous mileage, full rated size, flexibility, protection against rim cutting, ease of manipulation and security of fastening.

Measure up this ideal tire against every other tire on the market and then compare with a United States Tire.

You will find United States Tires combine all these identical features of your ideal tire in a way that no other tire on the market approaches.

We believe that every tire maker in the country has been making the very best tires that his facilities would permit.

Some of these tires have been greatly strengthened at one or two points—some at others.

But it is a matter of general comment among dealers, car owners and car manufacturers, that never has any tire combined *all* these special points of superiority as do

United States Tires

In the matter of mileage—the most accurate tests have proven that United States Tires today yield on an average from 25 to 50 per cent. more mileage than was ever given by any make of tire previous to the organization of the United States Tire Company.

No tire has ever been made with a larger average size or a larger average air capacity than the United States Dunlop.

No tire has ever been made as flexible or as resilient as the United States Dunlop.

If this is the kind of a tire that you want to use, United States Tires ought to be the exclusive equipment on your car this season.

They are made in Plain, Chain and Nobby treads and in three styles of fastening, including the famous Dunlop (straight side).

This is the first and only tire that has ever been absolutely guaranteed against rim cutting.

It is by long odds the easiest tire in the world to put on or take off—yet it can't possibly come off the rim until you are ready to take it off.

In fact if you were to have a tire built to your order it would be difficult for you to specify a single desirable feature that you can't get today in a United States Tire.

Cost no more than you are asked to pay for other kinds

Tires by Satisfaction

United States Pneumatic Tires are guaranteed when filled with air at the recommended pressure and equipped with a rim bearing rubber core in both of the accompanying inspection stamps. When filled with any substance for air or attached to any other rim than those specified, our guarantee is withdrawn.

United States Tire Company

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Coddigy, Treas.; W. J. Funk, Sec'y), 44-60 E. 23d St., New York

VOL. XLVI., No. 21

NEW YORK, MAY 24, 1913

WHOLE NUMBER 1205

TOPICS OF THE DAY

THE DEMOCRATIC TARIFF THREAT

THE PROTECTIONIST HINTS that a tariff meant to fill an empty market-basket may really mean the emptying of a full dinner-pail have been quite openly and definitely answered by the Democrats. The plan, as first announced by Chairman Underwood and later set forth in some detail by Secretary Redfield, is that the Bureau of Foreign and Domestic Commerce is to be called in to find out the facts of the case whenever producers make the change of tariff rates an excuse for reducing wages. Then, says Senator John Sharp Williams, if any manufacturers agree together to close their shops or reduce their wages, let them beware of prosecution under the Sherman Law. This "Haman gallows of very practical type," as the *St. Louis Post-Dispatch* (Dem.) calls it, delights the more radical Democratic press, and appears to independent middle-of-the-road observers, like the *New York Evening Post* and the *Springfield Republican*, as an application of the doctrine of "pitiless publicity," to which honest manufacturers can not reasonably object. Republican editors, however, find in this warning a Democratic confession that their tariff will hurt business. And such inquisition into the affairs of private concerns is denounced in round terms by papers of varying allegiance, notably the *St. Louis Globe-Democrat* (Rep.), *Philadelphia Press* (Rep.), *Baltimore American* (Rep.), *New York Press* (Prog.), *Times* (Ind. Dem.), and *Sun* (Ind.), and *Detroit Free Press* (Ind.).

The suggestion which thus renews the interest in the tariff battle was made by the Chairman of the Ways and Means Committee on May 8, when his bill passed the House after a month's consideration by a vote of 281 to 139. As reported in *The Congressional Record*, Mr. Underwood said, in reply to a Republican argument for a tariff board:

"More than that, Mr. Speaker, we have established a Bureau of Foreign and Domestic Commerce that goes far beyond anything that these gentlemen desire to obtain in their tariff board, and it is well for the country to know it. It not only has the power to investigate the question of cost either here or abroad, the amount of imports and exports and American consumption, but when a great manufacturing institution is ready to threaten its laborers with a reduction of wages because they say there has been adverse action and legislation in Congress, or to reflect on the action of the Government of the United States, that bureau has the power to walk into their offices and ascertain whether there is real reason for their cutting the rates of wages

of their labor or whether it is merely a selfish attempt to put money in their own pockets.

"The statement has been made that this Tariff Bill will act on labor and affect the wages of laboring men. I give you notice now that when the men from whom you bring that message endeavor to grind labor in the interest of Republican politics there is a bureau of this Government that is going to ascertain the reason why."

What is there to complain of in this? asks the *New York World* (Dem.):

"Manufacturers who protest against any changes in the tariff should be the first to welcome the opportunity to prove to the proper Government officials that their grievances are justified. If they are not justified, certainly the public has a right to know it when a campaign for lower wages is set on foot by special interests that have resisted an equitable system of taxation.

"Manufacturing industries and interests that for many years have frequented Congressional committee rooms and maintained lobbies in Washington to secure the legislation they wanted can have no honest objection to showing how and when they are hurt by tariff revision. If they attempt to deceive the country by dishonest clamor against acts of Congress and to rob their workmen by reducing wages on false pretenses, they deserve to be exposed."

Nor has criticism moved Mr. Underwood. "When a manufacturer says he is cutting wages because of tariff reductions," he explains, "we want to know if he is telling the truth."

"If he is not, and he is simply punishing labor, then the facts should be made public. If he is telling the truth, we want to know it. If we have made a mistake in any particular instance, we are not afraid to acknowledge it and correct it."

This is definite enough, but the *Brooklyn Eagle* (Dem.) notes that there is nothing equivocal about the manufacturers' "answer to the threat, so-called." Mr. Wilbur F. Wakeman, general secretary of the American Protective Tariff League, makes this typical statement:

"No factories will be closed unless manufacturers can not make money, and as far as an investigation is concerned, I know that every manufacturer in the United States would welcome the most searching inquiry. . . .

"We are connected with every producing industry in the United States, and I do not know of one single producer or manufacturer who wants to curtail employment or shut down his factory. To-day I met some of the largest manufacturers in the textile trade and they told me that they are operating on a 4

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. RECEIPT of payment is shown in about two weeks by date on address label; subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 44-60 East Twenty-third Street, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

per cent. basis. Certainly you would not expect a producer to do business for a smaller profit. It is simply a question with producers and manufacturers whether they can make money or not. They are not running their business for philanthropic purposes, whether it be by the instructions of Mr. Underwood or Mr. Wilson."

The Underwood threat seems to the *St. Louis Globe-Democrat* (Rep.) to be "a confession that the free-traders realize im-

Copyrighted by F. W. Knecht.

"THERE'LL BE NOTHING LEFT OF YOU IF MY TARIFF BILL IS A SUCCESS."

—Knecht in the *New York Evening Sun*.

pending losses to business under the operation of their law." Glancing at the political aspects of the proposition, the *Detroit Free Press* (Ind.) remarks:

"The absurdity of the idea that the manufacturers of the country would deliberately plan to injure and ruin business, that they would cut wages and bring on a labor war, simply to injure the Democratic party in the next Congressional campaign does not appear to have impinged the exalted and lack-humor consciousness of these new lawmakers of ours, but it is very apparent to any one not blinded by fanatical partizanship or engaged in the blind worship of a theory."

Evidence that the Democratic leaders are acting under no sudden impulse, but rather in accordance with carefully laid plans, is seen by the press in the understanding that the House will appropriate any sums necessary to meet the expense of investigations, in the action already taken to inquire into conditions in the pottery industry, and in what Secretary Redfield told the National Association of Employing Lithographers in Washington last week. The Secretary of Commerce, it happened, had seen a circular sent out by the lithographers saying that the new tariff might mean longer hours, less pay, and fewer jobs in their business. Inspired, perhaps, by this, he gave a definite idea of what manufacturers might expect if they started wage-cutting. As quoted in the dispatches, he said in part:

"As the reduction of wages has direct social effects, and as the public has the right to efficiency in its factory servants, the Department has undertaken to find out whether the facts do or do not justify the threatened reductions. . . ."

"Operating with bad equipment, with unscientific treatment of material, with antiquated methods, in poor locations, with insufficient capital, and generally ineffective management, will not be esteemed a satisfactory reason for reducing wages."

After explaining how complete are the facilities of his Department for carrying on such investigations, the Secretary went on to tell his hearers "candidly, as a brother business man, some

of the things to which we should look if we had to ask you for information." First:

"We should probably not accept as conclusive a statement of the amount of wages paid as compared with the total cost of the goods or the total selling price. . . . We should have to examine into all classes of labor and into the various operations to see whether and how far any of them were capable of improvement or whether and how far any of them were in any one particular plant on a better basis than in another."

Then, too, it might be necessary

"to discuss with people the furnishing of materials and apparatus, as to whether they found objection to the use of the best equipment, and the most economical materials; and certainly the sciences of chemistry and the mechanics as well as that of accountancy would all come into play."

Secretary Redfield's plan commends itself to the *Newark News* as "of much value." "If carried out it will go very far toward clarifying the wage situation in the hitherto protected industries, and may easily rid the air of much of the vaporous nonsense that has kept the whole question of the tariff befogged."

But according to a number of statements from prominent manufacturers collected by the *New York Sun*, Mr. Redfield's ideas find little favor with those most immediately concerned. We quote, for instance, what Mr. James T. Hoile, of the Manufacturers' Association, has to say:

"The people of the United States have not yet concluded to submit to the rulings of czars and martinets."

"When the employer is deprived of the right to say what he will agree to pay for the production of any article, and when the employee is deprived of the privilege of demanding what he pleases for his labor, then the employer will have no contracts to offer his employee and the employee will not be required to put a price on his labor. In other words, mills, factories, and plants will have to shut down."

"If one-half that has come to me from manufacturers concerning the outlook under the new tariff law be true, I don't think it will be necessary for the Government to hire expert accountants and economists to figure out what our profits should be. There won't be any profits to figure on."

IT LOOKS A LITTLE ROUGH FOR HIM.

—Cesare in the *New York Sun*.

On its editorial page, *The Sun* declares that the plan of Messrs. Underwood and Redfield "opens a vista of appalling consequences in the way of interference, inquisition, surveillance, official blacklisting, coercion, constant harassment, probable litigation in the courts, and ruinous discouragement to the complex mechanism of business as now constituted."

THE INCOME TAX UNDER FIRE

THE Democratic income-tax plan, now before the Senate as part of the Tariff Bill, has for weeks been attacked by a large portion of the press as a remarkable example of how the right thing can be done in the wrong way. The taxation of incomes is an eminently fair method of collecting revenue, many editors believe, tho the *New York Sun* and several of its contemporaries object to its use save as an emergency measure. The chief points of criticism in the present plan are the "undemocratic" \$4,000 exemption, the provisions that seem to let off lightly the incomes received from corporation bonds, the taxation of the incomes of insurance companies, the administrative features, especially the "collection at source of income," and the "obscure and contradictory" language of the bill. For it seems to the *New York Journal of Commerce* that the various provisions "are involved in prolix and ambiguous sentences from which it is difficult to decipher the exact intent in many places, and the more clearly the sense is made out, the more the defects are disclosed." Some phraseological changes were made in the income-tax section of the Underwood Bill before its passage in the House, and certain criticisms were answered by two committee amendments exempting from taxation the incomes of mutual-benefit cemetery companies and the incomes received by the insured from payments upon life-insurance policies. The host of changes suggested while the bill was before the House lead many editors to hope for a general overhauling by the Senate. Yet the income-tax plan has been looked upon by its creator and called good. Mr. Cordell Hull, of the House Ways and Means Committee, who framed the income-tax section of the Underwood Bill, and defended it on the floor of the House, is confident of its "workability." He says:

"The pending measure has been submitted to some of the best expert accountants in the country and to Treasury officials—both of whom are well versed in the operation of the present Corporation Tax Law and former income-tax laws—and each has pronounced the measure entirely practical and workable. I have no doubt as to its successful administration."

Perhaps the most serious objection to the Hull measure from those who insist upon their belief in income taxation lies in the high exemption limit. This, as our readers are doubtless aware, is \$4,000. In England, notes the *San Francisco Chronicle*, it is only \$750; in Prussia, \$225; Austria, \$113; Italy, \$77.20; and in the Netherlands, \$260. But, tho it is admitted that incomes range higher here than abroad, we find that the comparatively high limit does exclude most of us. According to figures submitted with the report of the Ways and Means Committee, the number of people who would pay taxes is something like this:

Four thousand dollars to \$5,000, 126,000 persons; \$5,000 to

\$10,000, 178,000; \$10,000 to \$15,000, 53,000; \$15,000 to \$20,000, 24,500; \$20,000 to \$25,000, 10,500; \$25,000 to \$50,000, 21,000; \$50,000 to \$100,000, 8,500; \$100,000 to \$250,000, 2,500; \$250,000 to \$500,000, 550; \$500,000 to \$1,000,000, 520; over \$1,000,000, 100.

That is, as the *New York Sun* observes:

"The number of persons to be affected by the income tax as its provisions now stand is estimated officially at about 425,000.

"The amount of revenue to be produced by the income tax as its provisions now stand is estimated officially at about \$70,000,000.

"The income-taxed part of the population, therefore, is about one person out of every 225 persons."

This is not a very "democratic" measure for Democrats to enact, say opposition papers. It "smacks of class legislation." And even the friendly *New York Evening Post* sees dangers in it, remarking:

"The principle ought to be that those should be exempt who must exercise great frugality in providing themselves with the necessities of a simple life, and that all others should pay something even tho it might be very little."

The Republican suggestion that the \$4,000 limit was a "practical consideration" was frankly and rather naively admitted by Congressman Palmer on the floor of the House. He said:

"If we taxed all incomes of more than \$1,000 we would be turned out of power at the very first election after the tax collectors called at the houses of the voters. Now it is generally admitted that this is a just system of taxation and one needed in this country to place upon the rich their proper proportion of the burden of government. Therefore the party first writing such a law on the statute-books should see to it that there is nothing in the tax that will destroy its popularity and turn a majority of the people of the country against it. . . . The \$4,000 exemption was fixt on the assumption that it takes that amount of money to maintain an American family according to the American standard and send the children through college. There are, of course, different standards of living, but our purpose was to pick out a high standard."

Since the income-tax plan drawn up by Mr. Hull specifically exempts from taxation "fraternal, beneficiary, and other associations operating for mutual protection and benefit, and paying no part of their net income to any stockholder or individual," the mutual life-insurance companies do not think it fair that they should pay a tax on their net incomes. The president of one of the great insurance companies has sent to each of its 750,000 policy-holders a letter urging him to write a protest to his Congressman and Senators. The letter concludes by saying that if Congress hears this protest distinctly "there is every reason to hope that the bill will be amended so as to protect you from a tax you ought not to pay for reasons stated in the bill itself, viz.—your income is not \$4,000—or if it is you are otherwise taxed; in your capacity as an insurant you do not operate for profit." These arguments seem quite convincing to a large portion of the press, irrespective of party affiliations, and we find vigorous demands for exemption of the mutual companies

HE FRAMED THE INCOME TAX

Cordell Hull, the Tennessee Congressman who drew up the income-tax section of the Underwood Tariff Bill, and defended it in caucus and on the floor of the House. It was finally adopted by the House practically without change.

in the editorial columns of the *Atlanta Constitution* (Dem.), *Philadelphia Record* (Ind. Dem.), *New Orleans Times-Democrat* (Dem.), *New York Journal of Commerce* (Fin.), *Press* (Prog.), *Evening Mail* (Prog.), and *Telegraph* (Dem.). And the *Brooklyn Eagle* (Dem.) points out that

"'net income' for a year means to a life-insurance mutual company only so much additional marginal protection for the policy-holders. In the common sense of the term such a company has no 'net income.' What is taken away by taxation lessens protection, not profits to be divided and spent."

On this point Representative Hull, in reply to the many communications he has received, has seen fit to issue a public

TOUCHING HIS POCKET NERVE.

—Macaulay in the *New York World*.

statement which the *Springfield Republican* feels will "receive general approval by the country." He says in part:

"Some of the large companies which have amassed in the neighborhood of half a billion dollars in assets and which derive large profits annually from savings in expenses, from savings in mortality, and from exceptional earnings in addition to the amounts received from premium payments, are seeking to have these net profits in bulk exempted from the proposed nominal tax of 1 per cent. per annum. . . . No one can question the justice of a nominal tax upon these classes of accumulated profits, which are in excess of current needs. Of course the companies can blend the earnings I have described with premium overcharges, and then insist that no tax should be laid. . . . My judgment is that the accumulations of these companies, which arise from savings in expenses, savings in mortality, savings from lapses and surrenders, and profits from excess interest earnings, when considered in the aggregate, are clearly of such a character as to merit the payment of the proposed tax."

Another source of inequality in collection of this income tax is seen by several newspaper critics in the complication of the tax upon the net earnings of corporations with the personal income tax. The former takes the place of the latter, and it is the opinion of Republican Senators, as gathered by the *New York Tribune*, that

"As Mr. Rockefeller and most of the men whose incomes run into the millions derive their incomes entirely from the corporations in which they are interested, their tax will practically be 1 per cent., whether their incomes run into seven figures or not. Some of the large fortunes are derived from real estate, held individually. In this event, they will be subject to the graduated tax, but, it is pointed out, it would be a very easy matter to incorporate such holdings, in which event the 1 per cent. rate would prevail, and would render the income immune from the graduated tax."

"The Senators hold, therefore, that, as framed by the Democrats, the bill will impose relatively a much lighter burden on the men of great wealth than on the men of moderate resources."

Then there is another point cited by the *New York Journal of Commerce* for the attention of the Senatorial debaters:

"Where bondholders have their interest rate guaranteed, without deduction on account of any tax, they would not be reached at all by the tax upon income from this source; but the corporation guaranteeing the interest would not be permitted to deduct it from its own payment, and it would come out of what would otherwise go for dividends upon shares, throwing an additional burden upon stockholders."

Or, to put it concretely, Mr. Andrew Carnegie's fortune consists largely of first-mortgage bonds of the United States Steel Corporation, which, according to the *New York Evening Post*, were issued with a guaranty against all taxation of any sort. That means, as several editors see it, that the 115,000 stockholders of the Steel Corporation, some comparatively poor men owning only a few shares, will pay "a taxed tax" on the money they owe Mr. Carnegie, while the millionaire "has paid no tax on his net income."

Mr. Hull answers this objection by remarking that

"If the corporation enters into a private agreement with the individual holder to pay his tax gratis, this is of no concern to the Government. They can settle that among themselves."

GOV. SULZER'S FIGHT ON TAMMANY

THE EYES of the country are turned toward New York to watch Governor Sulzer's campaign for direct primaries—not for interest in an issue merely local, but because of the greater question, whether the Democratic party is coming to the point of finding Charles F. Murphy's usefulness as a boss at an end. When the legislature at Albany on May 1 defeated Governor Sulzer's bill for a State-wide direct-primary system, the Governor at once served notice that he would summon it in extra session, which he has called for June 16. He promised in the meantime to slump the State in an effort to arouse public sentiment in favor of direct primaries, and in the view of the *Springfield Republican* (Ind.) his cause is boomed by the "extraordinary array of names" he has placed on his committees. "Prominent men of all parties appear in the lists," adds the *Republican*, including Messrs. Roosevelt, Odell, Hearst, Pulitzer, Perkins, Mitchel, and Connors, and it wonders if it can be that the Murphy-Barnes combination is facing an uprising destined to crush it. It points out, also, that Governor Sulzer's position is notably strengthened by President Wilson's appointment of John Purroy Mitchel as Collector of the Port of New York, with Senator O'Gorman's approval, and maintains that inasmuch as Mr. Murphy is the chief obstacle to a direct-primary law of the sort desired, it is felt that the appointment of an anti-Tammany Democrat to the collectorship "fixes the Federal Administration's position in the coming contest."

Whether Governor Sulzer will succeed where Governor Hughes failed is problematical to the *New Orleans Times-Democrat* (Ind. Dem.), which recalls that genuine direct-primary legislation, promised by all three of New York's parties, has been defeated by Republican and Democratic legislatures alike; and, mindful of Governor Sulzer's threats of reprisal, it adds: "Governor Hughes undertook to defeat for reelection recalcitrant legislators of his own party, but, in spite of his efforts, the opposition, by banding Democrats and Republicans together, always succeeded in mustering a majority." The contrary opinion is held by the *Indianapolis News* (Ind.), which says that in his direct-primary campaign the New York Governor "is smart enough to see the light and brave enough to follow it." He

moves against the Tammany machine, to which the national Administration is also known to be hostile, realizing that the people, whether of New York, New Jersey, or Indiana, "are no longer willing to have their affairs directed by the Murphys, the Jim Smiths, and the Crawford Fairbankses." *The News* does not doubt for a moment that the people will answer Governor Sulzer's call for a direct-primary law, and sees little future for Murphy, who "has lost control of the State, is without power in national politics, and is likely to be beaten in the approaching city election."

Nearer home, the *New York World* (Dem.) pictures Murphy as having the national Administration against him, its single senatorial representative indifferent to his commands, a Governor openly defiant and seemingly intent on constructing a rival machine, the assembly districts of the independent Bronx county organizing a revolt, and rumblings of discontent in at least nine of the Brooklyn districts. As an expression of the Governor's "open defiance" may be cited his speech before fifty-one of the sixty Democratic chairmen, in which he said:

"If we fail in this fight it will be due to the fact that I do not realize what the Constitution says concerning the agencies of the executive. All of that power, all that is honest, and all good agencies will be used by me from now henceforth to defeat and to crush the Democrats who would make the Democratic party of New York the laughing-stock of the people; who would make the Democratic party of New York a political hypocrite and a political failure. . . . If any Democrat is against me in my determination to keep Democratic faith, I must, of necessity, be against him. It is all very simple to me. If any Democrat in this State is against the Democratic State platform, that man is no Democrat; and as the Democratic Governor of the State I shall do everything in my power to drive that recreant Democrat out of the Democratic party."

On the stand of the legislature the *New York Press* (Prog.) observes that political rumor begins to whisper rather loudly that in the special session to act on direct primaries Governor Sulzer will have control of the Assembly, and it adds:

"It is even hinted that already he has had assurances from numerous senators previously voting against him that next time they would be with him."

But "bluster and browbeating" are attributed to the Governor by the *New York Journal of Commerce*, which says that "the trouble with William Sulzer is that he is not a big enough man for the job he has undertaken" as Governor and as leader of his victorious party in the State. Recalling his origin and training as an East Side henchman of Tammany in days when it was no better than it is now, *The Journal of Commerce* notes that while Mr. Sulzer was in the legislature "he was as subservient to the machine as those whom he now denounces for fidelity to the power that put them where they are" and which virtually put him in Congress and opened the way to his present position. Yet—

"He has been declaring his independence ever since he was elected Governor, but he has not consistently maintained it in his conduct. He is new to the rôle of champion of high principle and official integrity, and it does not fit gracefully. He seems to be playing a part to which he did not take naturally in his early days and to which he has not been trained and disciplined. He lacks restraint and self-control. He is voluble and self-asserting, but has not the aspect of command or the force of mastery. While he is putting his followers or those who should be his followers to a test of their fidelity, he is undergoing a test of his powers of leadership, and it does not appear to be turning out well. We fear he has assumed a part to which he does not measure up."

Furthermore, in the view of this paper, "there is nothing in this campaign that looks like a spontaneous 'uprising' of popular sentiment, but much that looks like a strenuous effort to work up the factitious appearance of a demand," while the *New York Sun* gives its attention to the forces that constitute Governor Sulzer's battle line in his fight with the legislature.

First, and most considerable, *The Sun* esteems the up-State contingent, which is the permanent anti-Tammany force in New York. "Slowly and with some lack of enthusiasm," this faction rallies to the Governor, not because they are keen for any primary measure, but because of instinct and tradition to follow any Democrat who is actually fighting Tammany's control in the State. The second regiment in the Albany muster are the followers of Governor Hughes in 1910, who have to a considerable extent joined the Progressive party, tho "the Progressive label is as yet but lightly fixt upon them." The third faction is represented by Shearn and Hopper, and includes "all that has survived of the several Hearst parties" since Mr. Hearst himself returned to the Democratic party. Its activities are in the main controlled by Mr. Hearst, but it

THE GRAVE-DIGGER.
—Macaulay in the *New York World*.

has no political home, "and its actual strength is problematical." *The Sun* concludes:

"What can result from such an alliance it is futile to attempt to predict. Obviously the most natural thing to expect would be the liberation of up-State Democracy, and perhaps the party in the State, from the Tammany control, and possibly the rise of some new leader who could command the sympathy and support of the Washington Administration and build on State and national patronage a rival and commanding organization."

Looking farther ahead than the immediate conflict, the *Washington Post* (Ind.) grants that the States gradually will "embrace the primary principle of making nominations and do away with the old convention system," but puts the question: "What is to become of the platforms, wherein parties have expressed their creeds, so that people may decide between principles as well as between men?" *The Post* adds:

"The United States has been called a government of laws, and not men, but the doing away with conventions will mean that we will become a nation of men rather than of principles. Even tho it may not be intended to carry the primary system to national affairs, platforms must disappear in the States. And when the platforms go, united action by a party in behalf of any given principles will disappear."

"If platforms are to remain, some one must draft them. It can't be done with any pretense of representing the prevailing sentiment, unless the people delegate representatives in a convention to do the work. Evidently there are practical obstacles to the pure democracy that some persons would have us establish. It is even possible that in seeking to give the people full sway the reformers are ending the opportunity for the expression of party opinion at the election."

DISPOSAL OF A TAFT BEQUEST

THE NEW RULING of the President that fourth-class postmasters who receive more than \$180 a year must prove their fitness in an examination brings to mind Mr. Taft's general "blanket" order of October 15, 1912, placing postmasters of this class under the protection of the Civil Service Law, so that upward of 37,000 Republicans were bequeathed

Copyrighted by G. V. Brock, Washington, D. C.

WHILE OFFICE-SEEKERS ARE STARVING.

Postmaster-General Burleson, on the reader's left, exchanging stories with Secretary McAdoo on the deck of the battleship Wyoming.

to, or "wished on," the incoming Democratic Administration. It is recalled that Mr. Taft, in making this legacy on going out of office, acted as Mr. Cleveland did when he made way for Mr. McKinley, who found the civil-service regulations so extensive that General Alger, his Secretary of War, could not even appoint his own confidential secretary. But the hungry office-seeker takes small count of the heritage of a new President and his cabinet, and we read the pathetic statement that "only those who understand the terrific pressure brought to bear on each new Postmaster-General," with regard to appointments, can realize the strain that Mr. Burleson has been under. Relief appears with the examination requirement, altho it is remarked in various quarters that the examination may work harder against the Democrats than for them, because the Republican postmasters now in office have the advantage of training and experience. As to Mr. Wilson, in the opinion of the *Brooklyn Eagle* (Ind. Dem.), the new order relieves him from the dilemma of either leaving Republicans to draw salaries for several years or of assuming "the unpopular attitude of the 'spoils system' as against civil-service reform," and it adds that he remains true to the merit system, while the *Houston Chronicle* (Ind.) points out that now a man gets his job for ability, irrespective of the fact that he is a Republican or a Democrat, observing:

"It works no hardship on the present Republican incumbents, for if they are as superlatively capable of holding their places as claimed, and as they ought to be after four years' experience, all they have to do is to prove it. On the other hand, it creates no artificial advantage in favor of Democratic office-seekers. If they are so superior as they claim, and can improve the service so much over their Republican predecessors, all they have to do is to demonstrate the fact by attaining the highest rank in the forthcoming competitive examinations."

The examinations may result in the failure of a good many postmasters, the *Philadelphia Record* (Ind. Dem.) expects, and it remarks that "they will be replaced by new men, some of whom will be Democrats. But we do not suppose that even a Republican would say that civil-service reform consisted solely in fastening Republican office-holders in place," while to attribute President Wilson's action to politics "requires a mean sort of partizanship" in the view of the *Washington Times* (Prog.), which says, as if addressing the office-seekers:

"As a patronage grab, the thing will prove a sad disappointment to anybody who thinks it will pan out that way. A large proportion of fourth-class post-offices are held by men who could hardly be replaced if they should resign. The cross-roads storekeeper accommodates his patrons and the community by 'keeping post-office'; nobody else could afford to do it or to provide the necessary quarters. Between the thousands of offices which are held in this way, and which nobody will want, and other thousands that are held by men whose experience will make them sure winners in a civil-service examination, the proportion of places that will be shaken down under the Wilson order will be disappointingly small."

After twelve years' famine of jobs, thinks the *Dallas News* (Ind.), "if the Democrats are to be persuaded to take the civil-service reform cure, the pill must be sugar-coated and rather heavily coated at that," for, in the opinion of *The News*, "this Burlesonian contrivance may not, strictly speaking, be orthodox civil-service reform, but it improves the quality of the Taft order." And yet, this paper assumes, "an Administration that has been remarkably candid in the explanation of its purposes will hardly care to deny that a desire to feed a horde of hungry Democrats is one of the motives prompting this modification of Mr. Taft's order." "It can admit the imputation," *The News* holds, and still "somewhat exculpate itself," but the *Pittsburg Dispatch* (Ind. Rep.), making no imputation, asserts that the order "may be bluntly described as a scheme for ousting Republican office-holders and making places for Democratic candidates," and inquires:

"What other class of Government employees placed under the civil-service rules was compelled to pass an examination to re-

PRESIDENT WILSON ORDERS 50,000 POSTMASTERS TO TAKE THE CIVIL-SERVICE EXAMINATION.

—Thomas in the *Detroit News*.

tain positions? There are adequate provisions for getting rid of incompetents under the civil service. If any of the fourth-class postmasters now in office are incompetent they can be identified and removed with much less trouble."

THE MEN WHO WILL ANSWER THE RAILROADS' PLEA FOR HIGHER RATES.

The Interstate Commerce Commission as reorganized after the appointment of Commissioner Franklin K. Lane as Secretary of the Interior. From the reader's left to right are seated Commissioners Baltazar H. Meyer, James S. Harlan, Judson C. Clements, Edgar E. Clark (Chairman), Charles A. Prouty, C. C. McChord, John H. Marble. They are now asked to permit the Eastern roads to increase their freight rates 5 per cent.

THE MERRY-GO-ROUND OF RATES AND WAGES

TWO YEARS AGO, after protracted hearings, the Interstate Commerce Commission denied the railroads' plea for permission to raise freight rates. Now the Eastern roads think the time has come to try again, and they hope that their request for a little increase of only 5 per cent. will, in view of changed conditions, seem only just and fair to the Commission. Railroad firemen and engineers, it is noted on every hand, have just won wage-increases amounting to about \$7,000,000 a year; conductors and trainmen are now demanding something like \$17,000,000 more pay annually. So, while the spokesmen for the carriers lay emphasis on the need of cash "to keep the railroads abreast with the growing demand of the business of the country," it seems to *The Wall Street Journal* that the real question is, "Will they be able to use it that way if they get more revenue, or will rates, wages, and supply prices merely resume their seats in the merry-go-round?" *The Wall Street Journal* and some other financial authorities do not quite approve of this merry-go-round process, and think the carriers ought not to make their request just now, if it means only a strengthening of their employees' demands, and wage concessions which would take up all the additional revenue brought in by higher rates. But as the lay press see it, the wage situation appears rather to give point to the plea of the railroads. The *New York Tribune* tells why the public should pay the higher rates:

"The public has decreed these higher wages. To save the public the cost and inconvenience of strikes, the railroads have consented to arbitration. Representatives of the public have adjusted the disputes, determining the wages that should be paid, and thus adding many millions to the railroads' expenses."

Then there are other facts which bring such papers as the *New York World* and *Evening Mail*, *Philadelphia Record* and *Public Ledger*, *Baltimore Sun*, and *St. Louis Republic* to the conclusion that there is a certain amount of "justice and common sense" in the application made by the roads, or, at least, that the Commission should "investigate this claim with painstaking care and from all angles." The railroads of the country, observes the apparently friendly *St. Louis Republic*, might have "taken care of themselves in spite of high prices, burdensome legislation, and lowered rates, but when the weather joined its forces against them they were compelled to cry for mercy":

"The winter of 1911-12 . . . was the most severe since 1882, and the most expensive for railway operation throughout the

northern part of the country. This winter was followed by a spring whose floods paralyzed railway transportation in the lower Mississippi Valley, destroyed crops which would have furnished a large tonnage, and made much track reconstruction necessary. And then, this spring the floods have desolated regions hitherto considered immune from danger, paralyzed transportation throughout the Mississippi Valley as a whole, and made extensive reconstruction imperative in many States. Meanwhile ties cost more than ever; steel rails have been breaking, and must be so manufactured as to cost more; State legislatures are requiring electric headlights, automatic signals, and larger crews; and every labor dispute results—as it should—in higher wages for railroad men. . . .

"These physical disasters put the agonizing twist on the railways' need. In view of them they ought to have the 5 per cent. advance in rates they request. *The Republic* believes that the good sense of the American people will approve the request."

Compared with this, the statements issuing from the companies seem rather modest. The roads concerned are the trunk lines operating between New York and Chicago. If their application is approved, the *New York Evening Post* points out, "it will mean a general increase in freight rates, for the New York-Chicago schedules are used as the foundation in all rate-making." The railway executives, says President Willard, of the Baltimore & Ohio, in a public statement, "hope to obtain the consent of the Commission for an advance of 5 per cent. on freight of all character, and it is believed that such an advance, if granted, will create little, if any, disturbance in commercial conditions." Mr. Willard continues:

"Since the previous hearing the railroads generally have expended large sums for equipment and additional facilities, and while there has been some response in the way of increased gross revenues, the surplus income, after paying charges and dividends, has been so narrowed as not to encourage the further expenditures required to keep the railroads abreast with the growing demand of the business of the country. . . .

"Unless the carriers are enabled to increase their revenue in some manner, and the plan above proposed seems likely to meet with less opposition than any other, their ability—already limited—to provide such additional equipment and facilities as will be necessary to take care of the growing demands of the country will be very seriously impaired."

The fact that since 1910 the Interstate Commerce Commission has approved 66 rate advances in special cases brought before it, as against 60 disapproved and 18 approved in part, seems to the *Springfield Republican* a sign that the Commission will treat fairly the present request of the carriers. The chief task before the railroad heads, thinks the *New York Sun's* Washington correspondent, "will be to persuade the Commission to grant the general increase without waiting for the

results of the Government's physical valuation of the roads, a task which will take from three to five years. Other editors and writers declare with significant emphasis that "if the railways come with clean hands" they are likely to succeed. Eastern shippers are said to be preparing to oppose this increase, tho not so vigorously as they did on the previous occasion. One of them refers to the investigation of the New Haven's finances, and remarks:

"Some of the roads are admittedly in need of increased revenues, but the commercial public insists emphatically on being shown that this condition has not been the result of questionable financing or desire on the part of the managers to increase the dividends on their stock without warrant."

At least one important daily, the *Brooklyn Eagle*, does not believe that an advance in railroad rates is the only way in which increased railway expenses can be met. It wonders if increased efficiency in operation and larger profits from bigger business at low rates would not help considerably.

Tho *The Commercial and Financial Chronicle* (New York), on the other hand, has not the least doubt that the roads are entitled to the rate advance they are requesting, it doubts the expediency of their move. It would be better "to take a resolute stand against further increases in wages." The demands of the conductors and trainmen for a 20 per cent. wage increase has been refused. The railroad managers, says *The Chronicle*, should "persist in the refusal, even if the actual result be a strike." According to this leading organ of railroad finance:

"The roads can not ask for an increase in rates and at the same time refuse this further demand for higher wages, no matter how unreasonable it may be. It must be either one or the other. The public will, we are sure, put up with the inconvenience of a strike, seeing how hard pressed the railroads are, if thereby an advance in rates can be avoided; but to ask it to submit to a strike and also to prepare for higher rates at a time when business will be sadly deranged by tariff changes will, we are afraid, be more than the public will be willing to submit to. In such event, too, popular sympathy would be with the striking employees. It would be argued that as the roads had petitioned for better rates, they could well afford to pay these workers higher wages. On the other hand, should the railroads

yield to the demand of the conductors and firemen they would gain nothing, even if the Interstate Commerce Commission should, after lengthy hearings and long delay, sanction the proposed increase in rates. The one would simply offset the other, leaving the roads no better off in the end. It is for this reason that we think the move ill-advised at the present time."

If the roads should get the 5 per cent. increase they want, it would add, according to a railroad official quoted in the *New York Journal of Commerce*, over \$35,000,000 a year to the revenues of the fifty roads involved. Tho about half of this would accrue to the three big systems, the Pennsylvania, New York Central, and Baltimore & Ohio, it is asserted that it is the little roads which most urgently need the additional revenues which would come from higher rates. The rate question, says *The Journal of Commerce* elsewhere, "does not concern merely present income and profit," but "has a direct relation to ability to raise capital and provide for future needs." For, "where the prospect of net earnings is uncertain, there is a risk in railroad investment which demands a high rate upon loans and makes the placing of new stock difficult." "Assuming that the railroads obtain the consent of the Commission and are able to apply the 5 per cent. to not less than 80 per cent. of their freight business," *The Wall Street Journal* figures, "the result will be additional borrowing power to the extent of \$800,000,000 to \$1,000,000,000 for the fifty-four Eastern roads, and to the extent of nearly \$2,000,000,000 for all the railroads." But if the railroads want to attract investors, advises the *Springfield Republican*, they should stop their cry of "wolf":

"This cry of ruin to railroad corporations unless rates were promptly raised all along the line, so industriously circulated in the past two years by the companies themselves, has done much to arouse distrust of railroad securities among investors. The railroad financiers doubtless have believed it necessary to depict the financial prospects of the carriers in dark colors in order to secure the support of public opinion for their rate program, but the cry has been like a two-edged sword. It is not improbable that as much apprehension over the future of railroad investments among people of property has been caused by the lugubrious outpourings of railroad presidents as by all the attacks from muckrakers and unfriendly law makers."

FOREIGN COMMENT

THE GERMAN CROWN PRINCE ON WAR

THE SON OF A LION must be expected to roar, says the quaint Persian proverb, and the Latin poet had the same idea when he remarked that "fierce eagles do not beget doves." Frederick William, the imperial heir of Germany, has exemplified this truth by his recent book, whose

title may be translated "Germany in Arms." According to the Prince, "Germany must always be in arms," an echo of his imperial father's injunction about keeping the powder dry and the sabers sharpened. Some may think the author of this work has out-Heroded Herod and out-William William in his advocacy of the sword as the best arbiter in international disputes. The Hague Tribunal is swept aside as a perch of idle chattering and dreamers, and the Bismarckian "blood and iron" is to rule the world. Strangely enough, at the same time his father, William II., once feared by the nations as "the war lord," has recently

laid aside his leonine character. He gives nothing but messages of peace to the nations, and, like *Song*, the joiner, "will aggravate his voice so that he will roar as gently as any sucking dove, an 'twere a nightingale." It is, in fact, only the ancient spirit of the sire that seems, in a more violent form, to have passed into the son. For "Germany in Arms" is a thoroughly warlike book.

It contains some twenty flaming pictures in color, in which scenes of battle and victory to German arms are dramatically portrayed. These pictures cover historic events in which the army and navy of Germany appear to be quite in the ascendent throughout history.

The title-page bears, as motto, the Kaiser's famous saying: "The world is not more certainly supported by the shoulders of Atlas than Germany is by her army and navy," while the thesis of his argument he thus expresses:

"Our country is obliged more than any other country to place all its confidence in its armaments. Set in the center of Europe, it is badly protected by its geographic frontiers and is regarded by many nations without affection. Upon the German Empire, therefore, is imposed more emphatically than upon any other people of the earth the sacred duty of watching carefully that its army and its navy be always prepared to meet any attack from the outside. It is only by reliance upon our brave sword that we shall be able to maintain that place in the sunlight which we ought to occupy, and which the world does not seem very willing to accord us."

In his chapter on the royal body-guards of the Empire we read:

"Any one who has taken part, at a review, in a cavalry charge feels that there is nothing in the world more beautiful, and yet the horseman under these circumstances feels that there is something lacking. He feels that he ought to have at the end of this

wild charge an enemy to contend with, and the struggle for which we are all being trained, the struggle for life.

"How many times during such a charge have I heard with my ears the appeal of a comrade galloping by my side: 'Donnerwetter! If only this time we were doing something real.' You see there the spirit of the cavalryman. All those who are genuine true soldiers feel in their hearts and say the truth of the axiom, 'Dulce est pro patria mori.'"

Naturally enough, the book has commanded a wide sale, and will, no doubt, as is intended, do much to stir up the country to favor the big war budget and the increase in the army. Nevertheless,

"Aunt Voss," the *Vossische Zeitung* (Berlin), the organ of the respectable middle class—albeit professedly a liberal organ, does not attach much significance to the publication, treating it as "an unimportant addition to the mass of illustrated literature treating of the German Army, which already floods the country." "The act of the Prince Imperial in lending

his hand and his name to such a work is an unfortunate blunder at this moment, when Europe is racked by such political anxiety," remarks the radical *Morgen Post* (Berlin). The Socialist *Vorwärts* (Berlin) speaks of this imperial effusion as merely embodying the crude theories of a young lieutenant in the Guards. To quote its words:

"We think it regrettable that at the moment when the Balkan crisis has reached its culminating point and when the conference of ambassadors at London is straining every effort to establish peace, the heir to the throne should come out with a book whose object is the glorification of war. That the Crown Prince, who is thirty years old and full of life, should thrust upon the officers who are his comrades his ideas on the philosophy of existence is nothing at all improper, but that he causes such a

book as this to be published at a time when the international situation has become threatening seems to us to constitute an attempt at making a public manifesto which the German people will not endure without strong protestations."

The *Berliner Tageblatt* occupies a peculiar position in German

journalism. It assumes to be rather a cosmopolitan than a merely national organ. A fierce opposition to the Government and its measures characterizes its utterances. At the same time it sympathizes with France, and shows an evident leaning toward the demands of Alsace-Lorraine. Yet its editor speaks with a good deal of reserve about the literary venture of Prince Frederick William, and tries by subtle innuendo to shift the responsibility upon Chancellor Bethmann-Hollweg, who is something of a fire-eater himself. The *Tageblatt* remarks:

"Nothing is doubtless more natural than that a young officer should thus speak with enthusiasm and eloquence and quote when he can do so a line of Horace. But this warlike excitement seems to us regrettable when such an officer is the Prince Imperial, and when such utterances, likely to be read by the whole world, are published at a moment when the European horizon is heavy with clouds. The Emperor would not be able to pronounce such words excepting as the mouthpiece of the Chancellor. Has the Prince Imperial the right to deliver them? Will the Chancellor support him in his actions?"

But what conservative paper in Berlin could help throwing bouquets and passing compliments to this "literary soldier boy," as the Socialists style his Imperial Highness. We are not, therefore, surprised to read in *The Post* (Berlin), the organ of the pan-Germans and the army, the following encomiastic words:

"The Crown Prince has spoken exactly as a future Emperor ought to do, and we hope that the moral and intellectual vigor of the heir to the throne will arrive at complete maturity, and that no foreign influence will be allowed to dwarf it before it reaches its full development. There is no other cause for anxiety so long as we see how deeply rooted are the noble convictions of the Crown Prince."

Still more emphatic is the express approval of the *Deutsche Tages Zeitung* (Berlin), organ of the Agrarian party:

"Bravo! Everybody who has in his veins a drop of German blood, or a spark of German military enthusiasm in his heart, will applaud the virile words of the heir to the throne."—*Translation made for THE LITERARY DIGEST.*

INDIA'S COTTON FIGHT WITH BRITAIN

NOT LESS than \$115,000,000 a year is paid by the natives of British India for foreign-made cotton fabrics. India has now determined that this enormous sum shall not go out of the country. She will build her own mills and spin her own cloth. This is bad news for Lancashire, which has hitherto imported raw cotton from India and sent it back to Calcutta and Bombay in printed or plain fabrics of the loom. But times have changed, says Saint Nihal Singh in the *London Magazine*, and "as year by year the smoke curling from the chimneys of Indian cotton-mills increases in volume, it writes the doom of Lancashire against the industrial firmament in characters so black and so bold that he who runs may read the decree of the Fates."

How the cotton-weaving activities of the great Asiatic peninsula have developed is thus summarized:

"An idea of the gigantic strides that the Indian cotton-mill industry has taken can be formed by studying the figures for the last generation. In 1880-81 there were 55 cotton-mills, containing 1,434,364 spindles and 12,739 looms, and giving employment to 46,530 men. Twenty years later the number of spindles and looms had more than trebled. During the next decade progress was made at a still more prodigious pace, and in 1909-10 the number of mills had grown to be 216, with 5,773,824 spindles, 74,585 looms, giving employment to 215,419 persons, and producing 593,206,855 pounds of yarn and 215,360,904 pounds of cloth. During 1911-12 the Indian mills consumed 6,000,000 hundredweight out of the 14,000,000 hundredweight of cotton India had produced during that year.

"The phenomenal growth of the industry has already enabled the Indian cotton magnates almost completely to rout Lancashire out of one large corner of the Indian market. No longer does

Manchester ship to Hindustan much of the coarse cloth which the natives annually consume by the million pounds. This demand is now largely met by the Indian power-mills and by the native hand-loom, which employ two and three-quarter millions of men, or really three times as many people, for the wives and children of the weavers work alongside of them."

The favoring of India-made cotton stuffs is a patriotic but not a seditious movement. The sentiment of the Hindu, while warmly urging him to back his fellow countryman in a trade war, is not prompted by animosity against the British raj, says Mr. Singh. To quote his words:

"Hindustan is in no mood to exult. Altho it knows that the goal is yet far distant, it is marching enthusiastically to that end, never lagging a step to gain a brief respite, so consumed is it with the passion to beat Lancashire."

"The all-conquering character of this enthusiasm is best illustrated by the fact that many Indians to-day are preferring to wear comparatively coarse cloth made in their own land, and are even willing to pay more for it than they would be charged for finer fabric made in Lancashire. This sentiment, known as 'Swadeshi'—literally 'Own Country,' meaning the patronage of home products—is actually building a substitute for a high-tariff wall to protect the native mill industry—a rampart invisible to the eye, but none the less effective. It bears not the least impress of sedition, but is purely patriotic, calculated to provide protection for an industry which India, on account of her political impotence, can not vouchsafe it."

WOMAN'S CENTURY IN TURKEY

WE OFTEN HEAR that the twentieth century is to be woman's century. Certainly women's colleges, women's clubs, and women's professional life have raised the gentler sex, as it used to be styled, into great eminence on the stage of life. The ground on which female emancipation has been built is education. The leaders of Turkish thought are beginning to realize this and to discover the power that educated women can possess in serving society and their country. Thus Ahmed Jevdet Bey, writing from Vienna to the *Ikdam* (Constantinople), makes an earnest plea for the education of his Turkish sisters, whose industry and quickness to learn he fully appreciates. They are not the dreaming, useless slaves they used to be, he says, or the "hired animalisms" of the harem and the bazaar; they are potentially noble, sensible, and intellectual creatures, that is, if they be properly educated and trained. He believes that they see Turkey's present position more clearly than the men do, and are quite capable of lending a hand to extricate their country from utter ruin. To quote:

"We have all heard that in Europe the same care is given to the education of girls as to that of boys. Here in Vienna, not only is woman the mother of humanity. She is often obliged to fulfil the duties of both father and mother. The men can not alone meet all their own needs; the woman has to work with the man to earn money to supply the family wants. We shall soon feel the same necessity. True, with us village women work in fields as well as men; better, sometimes, as they do in some parts of Europe. But in our cities women have no well-defined work to do, even when they face the need of some remunerative toil. We can claim that those of our women who have received some degree of education do cherish the desire of improvement. Where this desire exists among them, it is keener than that of the men. Mussulman girls and women have a strong desire for mental and moral advance. They recognize the need of the time for mental and moral uplift of their sex. They see this clearly in the lurid light of the calamities that have befallen their country, even where the men are unmoved. They have more feeling, they understand the truth of the situation better."

Turkish women have long been misunderstood in Europe by those who have read only of their dancing and their seraglio life. This writer here vindicates his countrywomen from the charges of inferiority in the following words:

"Certain young women from among us who have received a

good education have developed exceptional personalities. I have great hope of our women.

"A perfectly ignorant girl from Anatolia was received as servant into the house of a Turkish Bey who had a German wife. In one year this girl not only learned to do well even the most difficult work of the household, but learned German so as to be quite free in understanding and speaking the language. The

lady expressed to me her deep regret at the lack of schools for Turkish girls, such as are found everywhere in Europe. It is a pity our men have failed to see the great advantage of educational institutions for our girls. It is because they have been unable to fathom the needs of our social life. Not only for the training of our children, but for a proper appreciation of the requirements of our social and political life, it is a vital necessity

that our women be educated. I wish to invite the attention of our women to this, viz., don't let them wait for the men to do this or that for them; let them undertake some organization themselves, however small. Let those of some means join together to secure education for poor but worthy girls. We can't establish great educational institutions for girls as they do in Europe, but we can begin with little things."—*Translation made for THE LITERARY DIGEST.*

OUR RAILROAD INVASION OF SOUTH AMERICA

THE MAN who remarked that if he could make the songs of a people, he didn't care who made their laws, might revise his observation to-day to read: "Let me build the railroads, ships, and harbors of a country, and the government of the region is of no importance to me." The United States, at any rate, is accused of acting up to this theory in promoting the transportation facilities of the Ibero-American states of this continent, and Mr. James Farrell, President of the United States Steel Corporation, recently testified before the Government Commissioners that this corporation within the last eight years "furnished the steel for every steel structure that has been built in Buenos Aires," and this too "in competition with German, English, and French competitors." Fears are expressed by Prof. Vicente Gay in the *España Moderna* (Madrid) that these South American states, under the influence of a "Yankee Railway Trust," are vast slipping into the condition of mere commercial and industrial colonies of the Northern Republic.

The professor dwells with deep feeling on the point that the capitalists of the United States have succeeded where British capitalists failed in providing adequate railway communication for Brazil, Argentina, Chile, and Peru. The difficulties of a mountainous country and the hostility of the aborigines deterred the English. On this point we read:

"The activities of the United States in Latin America have resulted in something more than territorial annexation at the expense of the Spanish colonies and the countries comprized in the sovereignty of the Latin republics. The imperialism of North America is of a far more extensive character, and at the same time that it realizes these territorial annexations it gives a great impulse to North American economic expansion which, penetrating the countries of South and Central America, tends to absorb these regions and make them its own economic territories."

This penetration has been slow and difficult, owing to causes thus outlined:

"There are many reasons why the republics of South America failed at first to become subject to the penetration of the United States. The geographical character of the country, in the first place, rendered the greater part of it inaccessible. At first the pampas alone were found suitable for colonization and railroad building. The greatest Latin-American states, Brazil, Argentina, Chile, and Peru, with their vast table-lands and mountain chains, presented serious barriers against railroad building. On the other hand, political ferment, by interrupting the course of national development, rendered it impossible for the Ibero-American colonies, in which to some extent banditism was the prevailing power, to develop on any large scale their respective natural economic resources."

The English were the first to build railways in Brazil, Argentina, Chile, and Peru. Their object was to exploit the immense wealth of the country. But they found the region of the hinterland practically inaccessible. As we are told:

"The first railroad builders in the four greatest South American states were foreigners, and the lines were managed by the English. The countries comprized in these republics contained deposits and productions of the highest value, such as rubber and niter, which offered such inducements as aroused a keen spirit of exploration. But that part of the continent was but

slowly and with difficulty colonized, as is proved by the predominance of the Indians of Picolmayo, who were only partially subjugated when Chaco was annexed by Argentina. This is confirmed by the fact that in 1911 the explorers of the province of Matto Grosso, in Brazil, near Bolivia, were received with a shower of arrows from the indigenes."

The Americans of the North, however, overcame all these obstacles and actually became the railroad kings of the Latin republics. This is how it came to pass, according to Professor Gay:

"The United States exploiters showed themselves much more pertinacious in their activities, and in South America they formed the design of completing an international communication by rail between all the countries comprized in that vast American region. Nor did they neglect to employ moral influence, for the officer of the American Republic at Washington instituted an active pan-American propaganda whose success will sooner or later be felt. Every year the commercial millions of the United States start for South America. Industrial workers, Yankee engineers and speculators join such millions. Their capitalists plan the acquisition of Brazilian mountains of iron, the installation of immense ice plants in Uruguay, and the establishment of a navigation company which will maintain the traffic between ports in North and South America."

This writer then enumerates the American companies which are to operate in South America—viz: "The Society of the Port of Para" at the mouth of the Amazon; the "Brazil Railway Company," connecting Brazil and the states of Rio de Janeiro. The length of this road is to be 5,700 miles. The navigation of the Amazon is to be in the hands of the Americans who have obtained large territorial concessions for their "Amazon Land and Colonization Company." The "Bolivia Central Railway" and the "Argentina Railway" are also American corporations. The capital of the Brazil and Argentina Railways amounts to \$50,000,000. Such is, in outline, the American Railway Trust in the Latin republics, and this writer continues:

"It is clear that this trust dominates the international relations between the capital cities of South America and the Atlantic regions."

"So far the railroad trust does not appear to be bent on hostile invasion. The excuse given for its existence is the disconnectedness of the inland lines. The trust aims at unifying these and forcing even the state roads to come within its sphere of operation. After conquering the eastern part of South America the trust intends to penetrate the table-lands of the center, and those sloping to the Pacific. At present the object of its operations comprizes Chile, Bolivia, and Peru. It has already announced its intention of absorbing the lines of Peru."

The Professor concludes his essay in a somewhat foreboding tone as follows:

"The publicists and statesmen of South America have expressed serious suspicions as to the final result of the exploitations carried on by the North American trust. The *Dia*, of Valparaiso, has again and again declared that the railroads of South America should be constructed by the South Americans themselves without the intervention of land-grabbing and self-interested intermediaries. For this Yankee penetration into the south has taken a special form which is of critical importance to the national life of the country. There was held out the promise of a great advance in trade, a great advantage from the commerce between South America and the United States. There is, nevertheless, the danger that the Ibero-American states will gain but a trifling profit from the course things are taking. Indeed, great works of public convenience, particularly railroads, are the very life-spring of society; they become the most powerful promoters of great activities. They should be operated as national institutions, not by private companies, and owned, if possible, by the state. If the great network of intercommunication between the South American states be relinquished to the Yankees, they will be found eventually to control the economic life of the nations, and turn the countries thus controlled into mere colonies of the North American monopolists."—*Translation made for THE LITERARY DIGEST.*

SCIENCE AND INVENTION

DR. FRIEDMANN'S GAIN AND LOSS

WHAT SHALL IT PROFIT a man if he gain two million dollars and lose the respect and confidence of his scientific associates? Some one is evidently willing to gamble on the success of Dr. Friedmann's vaccine; but the exact type of success on which the money is staked seems to be in doubt. To judge from the medical journals, it is not of the scientific variety. "Too much publicity," seems to be the verdict of the profession on Dr. Friedmann's treatment. It may be a great discovery, they say; Dr. Friedmann may be able and honest—but the "continuous performance," as one medical paper calls it, of newspaper notoriety that we have been witnessing in the case is not reassuring. To crown all, Dr. John F. Anderson, director of one of the Government laboratories, and Dr. A. M. Stimson, a naval surgeon, detailed to watch the progress of Friedmann's patients, in a report made on May 9 to the National Association for the Study and Prevention of Tuberculosis, announce, as quoted in the daily press of that date, that "the facts do not justify that confidence in the remedy which has been inspired by wide-spread publicity." The Government investigation is yet unfinished, and this report must of course not be regarded as final.

Several recent medical journals give more or less extended histories of the Friedmann treatment as far as it has gone. *American Medicine* (New York) says that whatever its value may be, the doctor "has outraged every sense of professional propriety and abused in the most astounding manner the courtesies and considerations extended to him." *The Journal of the American Medical Association* calls the episode "a disgraceful piece of commercialism." *The Medical Record* uses milder language, but is of opinion that "the results [of the treatment] have not been at all satisfactory—except to Dr. Friedmann." *American Medicine* treats the history of the matter as follows, to quote a paragraph here and there:

"Dr. Friedmann may be honest. His intentions may be of the best. His professional ideals may be of the highest. He may care nothing for money. He may have a great and noble mission which he aims to fulfil for suffering humanity. He may be anxious to demonstrate the efficiency of his remedy. Finally, he may be all—as a man and as a physician—that his supporters claim that he is. But one thing is certain, if he had deliberately gone to work to repudiate the good reputation and character given him by his friends, and justify the suspicions of his bitterest enemies, he could not have chosen a more consistent course than the one he has followed during the past month. . . .

"It may be that Dr. Friedmann has a different way of manifesting his likes and dislikes than the ordinary physician. Thus his sudden loss of interest in the cases he was treating under Government scrutiny and equally sudden trip to Providence, R. I., may have indicated his lack of business acumen or his complete indifference to the call of opportunity. That Rhode Island was the only near-by State that would allow patients to force Dr. Friedmann to take their money was only a strange coincidence. It was certainly sad, moreover, after Dr. Friedmann had fought so hard against going to Providence, that he had to remain there for so many days at the mercy of patients who, in spite of his most strenuous efforts, would not let him treat them until he had accepted twenty or twenty-five dollars. . . . The anguish and suffering Dr. Friedmann was forced to undergo, with money constantly being offered to him, can easily be understood.

"Then, cruellest act of all, Dr. Friedmann has had \$125,000 cash and \$1,800,000 in stock forced upon him for the American rights to his remedy, and this in spite of his repeated intention of giving it to the profession! . . . Sad, sad is the picture of Dr. Friedmann trying to give his remedy away, and not only being

denied this happiness but being forced against his will to accept so much money for it. . . .

"The more we consider the 'grand finale' of the Friedmann drama—we refrain from referring to it as a comedy—the more we can appreciate Dr. Friedmann's talents. It was certainly a stroke of genius to consummate the sale of his remedy before its efficacy was established, but the real hand of the artist was shown in collecting \$125,000 cash on delivery. Our only hope is that those who bought what Dr. Friedmann had to sell will find that it can stand the acid test. But like the canny Scot, 'we hae our doots, we hae our doots.'"

The famous cash harvests of former "cures" now bid fair to be exceeded, is the editorial opinion of *The Journal of the American Medical Association* (Chicago, May 3). Says this journal:

"The American medical profession has listened to the claims of Friedmann with an open mind. It has waited patiently for him to prove his claims and to show his real intentions. To wait longer is now unnecessary. At present its most pressing duty is to lay the facts before the public through the agency by which Friedmann has so shrewdly secured the free advertising, from which he is preparing to reap his golden harvest. A united movement to warn the people on this important question will, we are sure, meet with a cordial response from the same agency—the American press. Even if it should ever merit scientific classification among the many more or less helpful methods of treatment, the sensational publicity that has been given this vaunted 'cure' adds one more disgraceful chapter to the history of the exploitation of the sick for profit.

"We can disregard the fact that the remedy is a secret one; we can ignore the unethical and dishonorable conduct of Friedmann as a physician; we can even forget the possible danger that lies in his treatment; we can let all this pass. But one fact stands out clearly and should be emphasized: Friedmann has presented no proof, no scientific evidence, clinical or otherwise, to justify the claim that he has developed a cure for consumption."

Says *The Medical Record* (New York, May 3) in its editorial column:

"When Dr. Friedmann first came to New York, we thought he had been ill advised, but we were looking at the matter from the side of ethics; we now see, looking at it from an entirely different side, that he has been very well advised.

"Whether the purchasers of this secret remedy have been equally well advised time will show. . . . The results of the New York experiments would hardly seem to warrant an outlay of \$125,000 for the Friedmann secret, but then the stuff has been widely advertised and moribund consumptives are hopeful and credulous. There has, as yet, been no official report on the experiments with the turtle bacillus culture in the hospitals in this city, but it is very generally known among medical men, if not among the laity, that the results have been not at all satisfactory—except to Dr. Friedmann. Reports from Berlin also are very far from giving support to the earlier statements that the patients treated there are doing well. On the contrary, many of the survivors are stated to be doing very ill. One of the reported cases, indeed, is of most serious import, and it at once brings up the question whether the turtle bacillus is as innocuous as Friedmann has claimed and as has been generally believed—apparently only on his say-so. This case, referred to by correspondents of the *Southern California Practitioner* and the *Lancet-Clinic*, was that of one of those who died after treatment with the Friedmann vaccine. The autopsy showed that he had miliary tuberculosis, and fresh tubercles were found in the gluteal muscles, where the injection of the assumed nonvirulent bacilli had been made, and also in the glands receiving the lymph from that region, but the corresponding parts on the opposite side, where no injection had been made, were free from tubercles. Only one of Friedmann's New York patients, so far as we know, has yet died."

Mr. Moritz Eisner, who gave Dr. Friedmann the \$125,000 check for his secret, considers these criticisms unjust, and says

that all great medical discoveries in the past have met the same kind of opposition. "Did you ever hear of Jenner?" he asked a New York *Tribune* reporter. "And don't you remember the great opposition that diphtheria antitoxin had at first?"

Dr. Friedmann himself says in a public statement that he could not distribute his vaccine broadcast because it can be administered only by physicians specially trained for it. Hence the plan for a chain of institutes "where the vaccine can be freshly prepared and administered and where all poor patients may be treated free of charge." Further, he declares:

"As to the charge of commercialism, I need only refer to what Dr. Ehrlich stated in a recently reported interview: 'I have never been able to figure out how suffering humanity benefits from the fact that the discoverer of any given remedy emerges from his work empty-handed.' Nor do I feel it necessary to apologize for having thus taken the same position as such men as Dr. Ehrlich, the noted discoverer of salvarsan, and Professor Behring, whose antitoxin for diphtheria has robbed that dread disease of its terrors.

"I only repeat that public opinion should be based on an actual demonstration of facts, and I ask for nothing more than forbearance until the present hysteria of criticism has passed and until the cases treated by me have been repeatedly and impartially examined.

"As to the preliminary United States Government report published in the papers, I can only say that the physicians who made it have my utmost respect, and I am certain that when the time for the complete test of my vaccine has passed, these gentlemen, as well as the medical fraternity in general, will share my convictions as to its merits."

IS THE X-RAY'S MYSTERY SOLVED?

WHAT IS the Röntgen ray, and just how is it related to the ordinary light-ray? Familiar as we are coming to be with this wonderful discovery, men of science have not been able to agree on the answers to these questions. Tho many of them have been sure that they knew, their fingers have pointed in different directions. To some, the x-ray has been a light-ray of very short wave length; to others it has been merely a series of shocks or pulses that could hardly rank as a wave at all. The objection to considering it a ray of light, in any proper sense of the word, is that light waves may always be made to interfere, or cancel each other, and hitherto no one has succeeded in causing x-rays to do this.

Now, however, two English professors report that they have obtained interference by using the cleavage planes of crystals as reflecting surfaces. If their interpretation of their results should meet with general acceptance, the mystery of the Röntgen ray may be considered as solved. We quote below from an editorial in *The Electrical World* (New York, April 19). Says this paper in substance:

"Experiments made within the last few months on the reflection of x-rays from cleavage planes of crystals, based on the theory that natural cleavage planes approximate to that molecular degree of smoothness necessary for the reflection of extremely short wave-lengths, have proved successful, and for the first time definite and well-marked reflection of the x-rays has been secured. In a paper recently read before the Physical Society in London, Professors Barkla and Martyn presented the results of a further extension of this line of work. It is hardly necessary to remind our readers that the actual character of the x-rays has been a puzzle from the very beginning of experiments with them. They have been in turn supposed to be electromagnetic disturbances of enormously small wave-length, physical emission of some extraordinary and peculiar kind, and irregular pulses in the same medium which transmits other electromagnetic radiations but broken and devoid of anything like systematic periodicity.

"The experiments seem to throw new light on the very puzzling phenomena and to afford a basis for a definite answer as to the identity of the x-rays and their relation to other forms of radiant energy. It was definitely established that the re-

lection obeyed the ordinary laws which hold for electromagnetic radiations of visible wave-length. Moreover, a definite system of interference-fringes was established in the reflected ray owing to interference of the pencils reflected from equally spaced cleavage planes. The system of interference-fringes observed is thoroughly comprehensible on the theory that the radiations producing them are simple electromagnetic waves of extraordinary short wave-length."

These x-ray waves are of almost incredible shortness, we are informed. The shortest ultra-violet wave-lengths obtained by Schumann and Lyman are at least a thousand times as long, and are completely absorbed by gases. It would thus seem that all known gases are opaque to short waves until a certain unknown inferior limit is reached, at which they again become transparent. This is something like the case of water, which obstructs an enormous range of the longer wave-lengths, while beautifully transparent through the entire visible spectrum and far into the ultra-violet. To quote further:

"There is no great improbability *a priori* in the existence of a region of exceedingly short wave-lengths to which substances opaque to radiations of length commensurate to their molecular dimensions may be wonderfully transparent. Extremely-short radiations should traverse molecular structures as light-waves traverse the 'gauze-ring' that surrounds Saturn. What lies in the region between the shortest radiations detected by Schumann and the x-rays which produce the interference fringes found by Barkla and Martyn remains yet to be discovered. This latest investigation opens a huge unknown region in which momentous discoveries are due. This much is certain, that we are on the road to a clearer understanding of the x-rays and to a glimpse at last of a new realm bearing perhaps the same relation to the electron that ordinary spectroscopy bears to the atom and the molecule."

ARMORED HOUSES FOR THE TROPICS

ONE of the chief enemies of the dweller in tropical countries is the mosquito, long and unfavorably known as an annoying pest, but only recently recognized in his true and more alarming character of an inoculator of disease. He who would live in the tropics must keep clear of the mosquito. An aid will be the tropical house of steel and cement recently devised by T. F. G. Mayer in England, and described by him in *The Annals of Tropical Medicine* (Liverpool). Our quotations are from an epitome in *The Journal of the American Medical Association* (Chicago, May 3). Besides being mosquito-proof, the Mayer house is incidentally a protection against tropical storms—no mean argument in its favor. Apparently there is no patent on the device, and any one is at liberty to build on the Mayer specifications. We read:

"The house described by Mayer is constructed almost entirely of steel; woodwork is reduced to a minimum, and, where its use is unavoidable, is especially treated to withstand the attacks of insects, especially white ants. The house is built on a plinth of concrete and has a floor and a low wall of similar material. Their surfaces are cement-rendered. The walls are continuous with a steel framing, filled in completely with mosquito-netting made of a specially woven composite material proved to be stronger and more durable than any other. This netting is sandwiched between perforated metal sheets, which prevent bulging and render entry impossible, except by the spring doors at each end of the lobby-entrances. The roof is covered with non-conducting fibro-cement slates and is ventilated by means of louvre windows at each end. It is completely shut off from the room below by an asbestos ceiling. There are no walls or partitions within the mosquito-proofing, so that whatever breeze there may be blows straight through the house from one side to the other. Should this wind be too cold or too strong, as, for instance, during storms, it can be cut off at will by shutters which are provided all round the house and which are capable of closing the whole of it. These are manipulated from within by turning a handle, and can be made either to come down from above, or to move upward from below. The division of the interior of the house is left to the occupant, the ideal being the minimum required for privacy, and it is suggested

WHERE EARTHQUAKES JOG THE GLACIERS: MT. ST. ELIAS, ON YAKUTAT BAY, ALASKA.
Some of the glaciers are so long that the shock of an earthquake of 1899 has not yet traversed their entire length.

that by the use of sun-blinds, screens, and curtains, the open character of the house may be preserved, but permanent brick or stone walls may be built if desired. It is possible to make the house of any number of stories, and to build it on piles if desired."

ARTIFICIAL MEAT

THE USE of the spent yeast of breweries as food has already been noted in these columns. One of the products so obtained is the invention of a Belgian chemist, who names it "Viandine," because he considers it a complete substitute for meat. We quote a description from an article on "The New Artificial Foods" in *Minerva* (Rome, April). After discussing soy milk, which we have described here at some length, the writer goes on to say:

"A Belgian chemist named Effront has found a means of substituting for beef, veal, or mutton a vegetable food which has synthetically the same nutritive properties. The inventor substitutes for meat certain residues of the manufacture of beer, washed, compressed, treated with sulfuric acid, combined with a certain amount of lime, and then filtered, evaporated, and pressed again. By means of certain supplemental processes which the inventor does not describe, there is finally obtained a substance similar in all respects to flesh, but much less expensive."

"This artificial meat, to which Effront has given the name of 'Viandine,' has the same physiological effects on the digestive organs as the real article. Belgian physicians who have tried it declare it in certain respects superior to beef. A workman, usually ill-fed, whom the quarter of a pound of meat that he consumed daily did not nourish properly, increased in weight and improved in health when given an equal quantity of viandine. Experiments made on rats have demonstrated that the new artificial food has three times the value of lean beef. . . .

"Again, a professor in Berlin University, Emil Fischer, already known for his important laboratory experiments, has obtained from coal-tar products a polypeptone much resembling animal albuminoids; but the final results, tho scientifically noteworthy, have not yet any other practical value than to demonstrate the possibility of solving one of the most important problems of life."—Translation made for THE LITERARY DIGEST.

HOW EARTHQUAKES JOG GLACIERS

OBSERVATIONS in Alaska show that after a big earthquake there all the glaciers start up and push forward at the foot, so that they extend further out toward or into the sea. This is easily explained, if we suppose that the quake shakes down loose snow from the steep slopes above the glacier's source, so that the *névé*, or snow-field where the glacier rises, is greatly swelled. The increase in bulk moves slowly down through the mass of the glacier, like a lump in a flow of some such viscous fluid as molasses, until it reaches the foot, which it pushes forward temporarily. The following account of the phenomenon is from *Cosmos* (Paris, April 3):

"In September, 1899, the region of Yakutat Bay, in Alaska, was shaken by a series of earthquakes that seriously modified the topography of the country. The changes of level that took place then and there exceed, perhaps, all that have been recorded in historic time; the elevation of the ground at certain points, as proved by the displacement of shore-lines, reached 45 feet. . . .

"Now we know that the Alaskan glaciers were for the most part in a period of recession, at least up to 1905; those of Yakutat Bay, in particular, examined during the summer of that year by Prof. R. S. Tarr and Mr. L. Martin, were all, without exception, in such a condition.

"But in 1906, strange to say, Professor Tarr, on returning to the country, found the situation of the glaciers totally changed; in the short interval of ten months, most of the glaciers of Yakutat Bay had advanced by scores of feet; their surface, formerly regular, was scurried with ridges and scored with cracks, and the thickness of the ice was everywhere increased.

"This sudden advance of the glacier in 1906 is attributable to the earthquake of 1899. This is how it was: The basin that feeds the Yakutat Bay glaciers is bounded by rocky slopes where the snow rests in very unstable equilibrium. The violent shocks of 1899 must have detached, all at once, masses of snow and thus suddenly increased the volume of the *névé* as that of a river is increased by a flood. But while the flood-wave descends a river at great speed and soon reaches the sea, the swelling of the glacier, because of the far greater viscosity of ice, takes

several years to traverse the distance from the source to the foot. The time depends on the length of the glacier and the average speed of flow of the ice.

"The preceding theory seems to correspond pretty well to the facts. Thus, in the bay of Yakutat, the shortest glaciers were the first to manifest the progression of which we have spoken; while the longest do not seem yet to have responded to the action of the earthquake of 1899. The progression in question is only temporary; after a spasmodic advance of several months, all the glaciers of this region return quickly to the normal state, as known under previous conditions."—*Translation made for THE LITERARY DIGEST.*

WHALEY AND HIS TEAM

AN EXHIBITION of "team-play by such a force of workers as had never before been assembled under one directing mind"—that is what Camillus Phillips, writing in *Sytem* (New York, May), calls the construction and organization of the Grand Central Terminal in New York City. The "one directing mind," he asserts to have been that of Adelbert R. Whaley, former brakeman and now vice-president of the New Haven road, and Mr. Phillips's article is primarily about Mr. Whaley. But except for that bit of team-work on the terminal, the article would not have been written; nor, incidentally, would Mr. Whaley's salary have been raised to \$25,000. The whole job, it will be remembered, was done without interrupting the huge traffic that flows daily in and out of the terminal. Says Mr. Phillips:

"Take a large, tender section of the Panama Canal in the making, and juggle about half the railway traffic of New York through it day and night, and you have a faint picture of how much organization, and what perfect organization, was needed to keep the excavation and the upbuilding in constant progress, and the lives whole in the bodies of train passengers and crews.

"Some faint idea, too, can be had of the steadily growing anxieties and doubts which beset the officials of the New York Central and the New York, New Haven and Hartford roads as this titanic toil defied supervision, overwhelmed conscientious responsibility, and muddled brilliant executive talent. It was too much for one man; it was obviously impossible of accomplishment by more than one. They began to suspect that, for the superhuman task, they needed a superman—some supernatural spirit driving the activities of a supernatural brain, fit to grasp the infinite complexities and possess of resiliency enough to grapple with hourly emergencies, every one different from its predecessor.

"Meanwhile, amid the turmoil and recurring confusions, there seemed to exist always one oasis, one calm, unruffled surface of railroading, which no new phase of the great terminal's evolution could disturb. That was the New York division of the New Haven road. As the difficulties grew, that placid perfection of smoothness of operation and lack of difficulties began

to assume a special significance in contrast with the tumult and the confusion all about. At first merely interesting, this contrast soon became momentous.

"'There must be a man there,' the officials of the two roads surmised.

"So they hunted the man, back as far as he could be traced. They hunted him back from his \$5,000 a year division superintendency to his \$1.62 a day braking job. And they found that invariably, wherever Adelbert R. Whaley assumed any responsibility, a supreme, unerring, yet unobtrusive efficiency followed.

"New York has the habit of seeing only results. For a quarter of a century, this unnoticed man Whaley had been getting results; and they were results of precisely the brand needed in the baffling, multifarious problems of the terminal and its 800 fire-lunged shuttlecocks. So they told the quiet Whaley that he'd better tackle the terminal job, and added that he'd be paid \$12,500 a year so long as he could hold it down and keep the train service from interfering with the men who were putting it up. The train service came first, of course; the schedules simply had to be maintained.

"'I think,' he remarked, 'that I'd better look it over for a while.'

"He looked it over for a month or so. Then, with every aspect of the situation clear and with his plans formulated, he went straight at the roots of the trouble.

"In how many ways he surmounted so many chronic predicaments, it would take too long to tell. But a major dilemma, that of doubtful authority over important questions, he solved by requiring the two roads to appoint a joint committee of management, to which he could refer all of the larger uncertainties.

"The one, overmastering problem—the adjustment of schedules and service to the progress of the terminal's construction—he met with a comprehensive system, backed by indefatigable training of the whole human hive along lines of instant efficiency.

"The congestion of business, under the myriad difficulties attending the construction

work, was appalling. On Labor Day, or when the Yale-Harvard football game was played, the number of trains in and out rose to 950. During one truly desperate period all trains ran over one track that led to the terminal entrance. And all the while the vast structure was growing to its appointed immensity, and the countless trains, bringing stone and supplies, kept dashing in on their guerrilla raids through the schedule and its chronic revisions. . . .

"It was done mainly by such drilling of the human factors—one thousand of them, from station master to crews and from the baggage men to the porters—as no force of employees ever had in railroad history. He organized classes among them, in which the whole curriculum applied to exactness and the saving of waste movement. He studied, weeded, polished, and adjusted their least habits and actions so far as they could possibly apply to the achievement in hand. . . . That perfected organization, when he was done with it after six years of training it to perform all its impossibilities, made the works of a watch look like a little junk-shop.

"His vice-presidency, with its \$25,000 a year, isn't any excessive reward for his achievement. But it is the best his road has to give him."

NOT THE MIDDLE OF A MINING TOWN.

But the terminals of two great railway systems, whose trains were kept running smoothly while the Grand Central Station was being built. This shows the job at its worst, and reveals at a glance the task of the traffic managers.

A MOUNTAIN OF ALUM

WHAT IS DECLARED to be "one of the most marvelous geological and natural curiosities in the whole world" is a mountain of alum two square miles in extent and nine hundred feet high, near the Gila River, in southwest New Mexico. These superlatives are from an article by Daniel M. Grosh, of Philadelphia, in *Merrick's Report* (New York, May). The industrial value of this enormous deposit, writes Mr. Grosh, can not even be approximately estimated to those industries depending upon this mineral, and assures an almost inexhaustible source for the purpose of reduction. While the deposit has been known for years, its location and lack of transportation facilities have delayed its development, but these have been overcome, and now permit the marketing of billions of tons of aluminous ores, known variously as alum rock, alunite, aluminite, alunogen, gilaite, etc. The United States Geological Survey has recently measured this mountain of wealth and assayed its contents. We read:

"The deposit is so pure that any grade of manufacturing alum can be produced cheaply as compared with that from other sources. For many uses it can be marketed in its natural state, and so immense and pure is the deposit that there is no doubt it will control the markets of the world. The constantly increasing demand for the metal aluminum also tends to make this deposit of increasing value. In connection with the manufacture of aluminum, nature has certainly been most prodigal in this region. Enormous beds of lignite are at hand to produce the power necessary for its reduction, at a cost one-fourth to one-half that of hydroelectric power. No such combination as this of unlimited rich and pure raw material, and the cheapest power, exists in the whole world.

"Most of the aluminum produced in the United States has been from bauxite, shipped from Arkansas to the reduction plants, mostly at Niagara, and it seems logical to suppose that the future supply will originate and be reduced at the Gila River. The constantly increasing demand for the metal, which has jumped from 83 pounds in 1883 to 18,000,000 pounds in 1907 in the United States alone, shows to what extent the metal alone may draw upon it. . . .

Photograph by courtesy of Daniel M. Grosh.

SUMMIT OF THE ALUM MOUNTAIN, CALLED "ALUNOGEN HEIGHTS."

Elevation 900 feet above the river.

"The deposit is of volcanic origin, and it would not be surprising if pure aluminum metal would be ultimately found, and this ancient crater be the source of the placer-gold found near by.

"The anhydrous oxide as produced by this deposit has been claimed by authorities to be the opening wedge for an increased production of metal at a minimum expense, and will be most beneficial to the consumer by the consequent cheapening of the products. Much of the aluminum ware as made to-day, by reason of impurities of calcium and iron, undergoes a spontaneous disintegration. Investigation shows that a cellular structure develops, and disintegration is due to the opening of the joints between the cells, due to small amounts of these impurities.

"The commercial promoting of this wonderful natural cornucopia of beneficent nature is a project of national concern. Its benefits to the industries of the country are patent to all. It can only be compared with the great oil and coal measures, and we may look to see great industries deriving commercial and industrial benefits which will be shared in by the entire nation. Any process that can produce sulphuric acid even a fraction of a cent cheaper is bound to be of immense value alone, it being the king of the acids and of chemical products; and the other by-products also carry their weight in their utilization."

MORE BRITISH DOCTORS—By a change in the by-laws of the Royal College of Physicians in London, made in December last, says *The British Medical Journal* (London), the number of persons entitled to use the title of "Doctor" in Great Britain has been largely increased, altho, curiously enough, the number of qualified physicians remains precisely the same. The fact is that until this change all British physicians were not entitled to be called "Doctor." Only those who had received the doctorial degree from a university were so entitled. The Royal College gives diplomas to its graduates, but has no power to confer degrees. To the ordinary citizen, however, a physician is a "Doctor," degree or no degree; and the British apostles of red tape have been obliged to bow to the popular will. The Royal College of Physicians of London, by the alteration in its by-laws, has recognized this fact.

A CLIFF OF ALUM

LETTERS AND ART

A "BEST SELLER'S" CHANCE FOR IMMORTALITY

A LEADING AMERICAN PUBLISHER recently declared that while "novels of merit and value, representing honest work and the real convictions of their authors," still occasionally make their appearance, "it is seldom indeed that one of these finds its way into the ranks of the 'six best sellers.'" This idea that popularity implies inferiority in a work of literature is familiar enough, and doubtless represents the prevailing point of view, especially among literary critics. As Mr. R. A. Scott-James, writing in *The North American Review*, explains, the great majority of our fiction-readers are "unable to give the concentrated attention, still less the selective appreciation, which literature of the higher order requires," since they "turn to books only when their minds are fatigued and in need of repose," and consequently "read not for a renewal of activity, but for distraction." Such readers "do not see objects until they are exaggerated out of resemblance to life; the adjustments of the artistic vision are too delicate to reach their perceptions." The result, says Mr. Scott-James, is that we judge literary output by its sales instead of its quality. These are probably some of the considerations which moved a well-known critic to remark: "I should consider myself disgraced if I had written a book which in these days had sold one hundred thousand copies."

This theory that a "best seller" has no chance of achieving a permanent place in literature is critically examined and challenged by Mr. Arthur W. Page in the June issue of *The World's Work*. Prefacing his argument with an interesting array of facts, he tells us that between January 1, 1910, and January 1, 1913, "there were published new books of fiction by thirteen authors that sold as many as 100,000 copies in the regular trade editions—that is, at a retail price of \$1 or more." These authors were:

Eleanor Hallowell Abbott (Mrs. Fordyce Coburn), author of "Molly Make Believe."
 Florence Barclay, author of "The Following of the Star."
 Kate Langley Bosher, author of "Mary Cary."
 Margaret Deland, author of "The Iron Woman."
 Gene Stratton-Porter, author of "The Harvester."
 Myrtle Reed (Mrs. James Sydney McCullough), author of "A Weaver of Dreams."
 Rex Beach, author of "The Silver Horde."
 Robert W. Chambers, author of "The Common Law."
 Winston Churchill, author of "A Modern Chronicle."
 Ralph Connor (Rev. Charles William Gordon), author of "Corporal Cameron."
 Jeffry Farnol, author of "The Broad Highway."
 Henry Sydnor Harrison, author of "Queed."
 Harold Bell Wright, author of "The Winning of Barbara Worth."

Mr. Page supplements this list with the following information:

"If this year (1913) were included, the names of John Fox and Sir Gilbert Parker would certainly be added to the list, and probably several other names as well. Mr. George Barr Me-

Cutecheon, if his last book did not quite reach the 100,000 mark, has written books in the past that did, and undoubtedly will in the future. Mr. Vaughan Kester's 'Prodigal Judge' and the books of Mr. Basil King (generally recognized as the anonymous author of 'The Inner Shrine,' 'The Street Called Straight,' and 'The Wild Olive') sold within a few thousands of the round figure taken arbitrarily for the standard of this article. Nor does this exhaust the list of writers whose books belong in this class. But at least it is a definite record of one particular period and has the one merit of being founded on concrete facts of the success of those who have best succeeded in pleasing the public's taste in the last three years. And it is about such a list of authors of 100,000-selling books as any average three years would produce.

"These thirteen authors, divided as equally as may be between men and women, are fair samples of the successful writers of fiction. They are not of a single type. They are as different and they come from as different environments as successful railroad men, or Presidents of the United States, or any other successful people. They live all over the United States, from Cornish, N. H., to Southern California, and two of them live outside our boundaries—the Rev. Charles W. Gordon (Ralph Connor) in Winnipeg, Manitoba, and Mrs. Barclay in England. Only one of the thirteen, Mrs. Gene Stratton-Porter, was born or lives in Indiana, usually hailed the mother of authors, as Virginia is of Presidents.

"Their formal education also varies. Some of them had very little of it. They are self-made authors, as so many of our business leaders are self-made men. Mrs. McCullough (Myrtle Reed) attended the West Division High School in Chicago. Mr. Robert W. Chambers was a student in the Julien Academy in Paris. Mr. Winston Churchill graduated from the United States Naval Academy at Annapolis. None of these schools is particularly adapted to the training of American novelists. Mr. Henry Sydnor Harrison and Dr. Gordon are the only two of the thirteen that attended any well-known institution of liberal arts. Dr. Gordon is a graduate of Toronto University and Mr. Harrison of Columbia."

Turning to the question of a "best seller's" chances of immortality, Mr. Page holds that a book that achieves contemporary fame has a better chance with posterity than a book which fails to impress the public on its first appearance. "Not all the statesmen who are hailed as great men in their time remain so in history," he admits, "but history seldom makes great a man without prominence among his contemporaries." And "literature treats men much as history treats men." Exploring the subject further, he says in part:

"Most of the literary critics scoff at these books, belittle their literary qualities, and predict for them a sure decline to oblivion. It is a safe enough prediction on any particular book, because books that last in English literature come so infrequently that they would make up only a negligible proportion of the lists of books that are popular with the public against critical advice, or of those which are ignored by the public in spite of critical admiration. But the inference in these prophecies that the best sellers above all others are doomed to oblivion is certainly erroneous. The ultimate test of literature is the continuous appreciation of the public; and the only practical way of testing people's appreciation of a book is to offer it for sale and see the

ARTHUR W. PAGE.

Son of our new Ambassador to Great Britain. He does not think a "best seller" is necessarily disqualified for a permanent place in literature.

way that they buy and read it. Without any intention of comparing Mrs. Deland or any other of these successful modern authors with Dickens and Scott, it is interesting to remember that their novels were the best-sellers of their day, and, moreover, that both of these men wrote with their eyes upon the money return of their writing. Coming down to more recent times, Gen. Lew Wallace's 'Ben Hur' was published in 1880. Whatever the critics may say of it, it is well on its way toward becoming at least a fixt part of American literature. Thirty-three years ago when it came out it was a great success. This year Harper & Brothers, its publishers, contracted to deliver a million copies of it to a mail-order house in Chicago. In 1895, the first year that *The Bookman* published its list of 'best-sellers,' George du Maurier's 'Trilby' led the list. In 1896 came Sienkiewicz's 'Quo Vadis' and Sir Gilbert Parker's 'The Seats of the Mighty.' These books are nearly twenty years old and still alive.

"Those who are seriously interested in what American novels will continue to be read by successive generations might well check up the opinions of the literary critics with the reports of librarians and with the publishers' sales of books of by-gone years, especially cheaper editions brought out by the original publishers or by reprint houses such as Grosset & Dunlap and A. L. Burt & Co. On these lists Scott, Cooper, Kipling, Sir Conan Doyle, Harold Bell Wright, Sir Gilbert Parker, Robert W. Chambers, Winston Churchill, and F. Hopkinson Smith, and a host of others, all appear. They have sold continuously since publication. Probably by no means all these latter-day best-sellers will live as long as the books of the other authors on the list have lived, but they in turn were weeded out from a larger number in their generation. But this much is certain: a book that the public takes unto itself upon publication will have an opportunity to go at least one more step toward permanency in the reprint lists of the future—an opportunity which few books that do not succeed at first ever gain."

"IN THE SENTRY-BOX."

Oberländer here betrays two unconscious actors in an intimate scene.

"THE BUSINESS MAN."

The pedlar, tread with another traveler by a ferocious bull, does not let his opportunity go to waste.

HE MAKES GERMANY LAUGH

EVERY FAMOUS ILLUSTRATOR makes his appeal to a vast public—a public far greater in numbers and more comprehensive in character than that of the most celebrated artist. But does he lose something of his own individuality in thus bending his genius to be the handmaid of another man's sentiment? Such is the interesting question put by Alfred Mayer in an article in *Ueber Land und Meer* (Stuttgart), on the popular humorous draftsman Oberländer. For some forty years Oberländer has held a position on one of the well-known German comic papers. His skill has served to visualize the humor of many a clever anecdote, as well as to redeem many another from sheer banality.

But Mayer claims that Oberländer's gifts lay hold upon the universal, despite their constant subordination to the local and specific, so that he can not be entirely forgotten, however the surge of novelty may submerge his work for a while, since in art not "new" and "old" are the vital terms, but "good" and "bad." Before the rise into public view of that daring and dominant school whose bold lines and strong colors are found in the illustrations and caricatures of *Simplicissimus*, Oberländer was accounted the best German draftsman next to Wilhelm Busch. But his ideas and material have come to be thought old-fashioned:

"He still belongs entirely to that sect which loved the Fatherland before the formation of the Empire, an almost extinct race of artists, like Raabe and Spitzweg, whose creations were limited by their personal viewpoint. Enmeshed in ancient times and old-fashioned customs, he has carried into his art nothing of that which gives its distinctive intellectual stamp to our own era. He has not changed with the changing times.

"Little he troubles himself about fashions and tendencies—particularly indifferent is he to those views of Cézanne and Hodler and the 'Expressionists' who so mightily affect us.

"There is character in this rejection of all that might disturb one's own narrow circle, this contentment with the world of one's own imagination. And yet one can but regret while turning the leaves of an Oberländer album that an artist of his marked individuality should be condemned for so long to that portrayal of the mere anecdote, which narrowly limits and confines the expression of his own fantasy.

"We perceive that the comic paper which has assured his economic independence has been the ruin of a portion of his talent. The quality of the drawings which are the fruit of his own untrammelled imagination is sharply distinguished from the

illustrations of simple anecdotes which have given him a wide popular vogue."

Oberländer's most distinctive quality Mr. Mayer finds in his use of motion as a *motif*, while he remarks also upon his "amazing universality—only comparable perhaps to that of Adolf

"PRIDE MUST SUFFER PRESSURE."
Another example of Oberländer's graphic humor.

Menzel." He says further: "Oberländer seeks to hold fast that which is *typical* of motion in the eternally changing, in contrast to Wilhelm Busch, who gives us instantaneous impressions, or 'snapshots,' in his far more intellectual drawings." The critic points his views by a detailed appreciation of certain drawings of Oberländer wherein even the layman may read the universal rather than the illustrative or anecdotal. One of the cleverest of these is a delicious study of a stout, thick-waisted peasant maid hauling hard on the stays which accentuate the slender elegance of her extremely "high, well-born" lady. The caption, *Hoffart muss Zwang leiden* is somewhat difficult to render into English. The literal translation, "Pride must suffer pressure," hardly expresses its significance so precisely as the symbolic "*Noblesse oblige*." Says Mr. Mayer:

"Here the slimness of the lady shown in profile seated at her toilet-table—there the formless massiveness of the maid achieved by foreshortening. The lady, all sensibility down to her delicate finger-tips, suffers the tortures of a too tightly trussed body with all the symptoms of a coming swoon under the grip of the firm fists of the maid, who, in her loose jacket, betrays a certain complacency in carrying out the sacrifice of this lamb brought to the slaughter. Oberländer here modifies the peculiarities of his style even to the unrecognizability of his handwriting. It is entirely 'unmannered.'"

Another delightful picture is that of the "Don Quixote of the Pen," which is so self-explanatory that it hardly needs the amusing title, *Don Schmicos de las Papiros* ("Don Smearus of the Papyrus"). Here the critic calls our attention to the admirable composition and "space-filling," the humorous Gothic unity of the style, the Spanish note so well struck and maintained, and the curious invention of a writing-machine with endless rolls of paper worked by foot-power. We reproduce also "In the Sentry-Box," which Mayer finds quite "spooky" and metaphysical. "In the midst of the nocturnal idyl of a scene in a little town there is projected on an illuminated wall a silhouette of super-human size and Daumier-like forcefulness. With pure humor

the draftsman betrays an intimate scene occurring within." A portrayal of character is found in the pedler who plies his trade with undimmed ardor even in the branches of a tree where he and a fellow refugee are temporarily safe from the horns of a raging bull—a picture which is instantly intelligible without the neat definition of its title, "The Business Man."—*Translation made for THE LITERARY DIGEST.*

IS THERE ANY TEST OF GOOD ENGLISH?

BECAUSE "our most eminent teachers of English give the sanction of usage to ungrammatical locutions" and "slipshod methods of expression abound in the speech of the majority, as well as in the writings of good authors," declares Leila Sprague Learned in the *May Atlantic Monthly*, "we need a Hume or a Dryden to erect danger-signals along the rocky road of speech, as warnings to those who think it safer to sin with the elect (authors of renown) than to be righteous with the purist." Yet in the same number of the same magazine we find Mr. Elwood Hendrick presenting the other side of the case.

Miss Learned maintains that we do not show a proper respect for "the priceless heritage" which is our native tongue, but have drifted into "a prevailing slovenly use of language which is really abuse." And for this state of affairs, she says, even our accepted guides and counselors in matters linguistic must share the direct responsibility. Thus she cites a Columbia professor's defense of the phrase "It is me" as "an idiomatic colloquial

"DON SMEARUS OF THE PAPYRUS."
In this drawing by Oberländer the critic calls attention to "the admirable composition" and "the humorous Gothic unity of the style."

expression used without hesitation by the mass of the people and shunned only by the fastidious," and answers it with the assertion that in such fundamental principles as the relations of verbs to their subjects and objects language is an exact science, like arithmetic. "Can any professor, or armies of wise and learned men, make 'It is me' correct, any more than they can justify $4 \times 8 = 36$?"

"Well may we ask," she exclaims, "Is there any criterion of

"THE FINEST TINTORETTO EVER BROUGHT TO THIS COUNTRY."

This Tintoretto, "The Miracle of the Loaves and Fishes," a new acquisition of the Metropolitan Museum of Art, is the first picture purchased by the Francis L. Leland fund of \$1,000,000 which was given to the museum last year. It is the third example of this sixteenth century painter's work to be acquired by the museum, the other two being "The Last Supper" and "The Doge in Prayer before the Redeemer." It came from a country house in England, and is considered by Mr. Edward Robinson, director of the Metropolitan, the finest Tintoretto in the United States.

good English?" And to justify her pessimism, she quotes from no less eminent a source than Professor Lounsbury's "The Standard of Usage" the following sentences, with parenthetical emendations of her own:

"The process is liable (*likely*) to take place in the future."
 "This was due (*owing*) to the ending."
 "How tame it would have been to have used (*to use*), etc."
 "Such a desirable (*so desirable a*) result."
 "The opposition to new forms is apt (*likely*) to assume, et cetera."
 "He accomplished feats full (*fully or quite*) as difficult."
 "'Donate' has been pretty regularly shunned—(why 'pretty'?)"
 "One example is so curious (*queer*)."
 "No one seemed to think of or care for the other adjectives—(*no one seemed to think of the other adjectives or care for them*)."

Mr. Hendrick is also for precision, but he holds that if new forms express an idea more effectively than old forms, tradition must make way for evolution. He states the case as follows:

"The point at issue, as I take it, has to do with the primary requirement of language: whether it shall carry the idea with the greatest precision, or whether the greatest effort should be directed toward making the vehicle which carries the idea a thing of faultless construction.

"If the rule of precision in construction stands in the way of efficient expression it should be made secondary to it. Beethoven broke the rules of composition and accomplished wonders. To-day he is a classic, but in his own day he was a dreadful radical. So, too, painting would be an inefficient art now had the best usage and the rules current at the time been followed by the masters of the brush.

"The English language leads a dissolute life, and welcomes any word that comes its way. There have always been harsinister on its arms, but this has never seemed to worry it. In the Far East there are hundreds of Asiatic words in current use in English and they are gradually creeping into the dictionaries. This catholicity—to use a more gentle expression—is its very strength. The danger may lie in a splitting-up of the language into different dialects, and it is the business of scholarship to use every effort to avoid this. But in doing so it must be prepared to make compromises, and to welcome expressions which our grandfathers would have rejected. Do what we please—teach, instruct, threaten, cajole, or plead: nine out of ten boys will answer, 'It's me!' to the question, 'Who's there?' There must be a reason for this. The French, who are supposed to pay some attention to their language, use the same form—and it has received scholastic approval. 'Me' seems, somehow, more intimate, and is stronger than 'I,' which may be the reason why the child will say, 'Me go to mother,' and not, 'Give it to I.'"

TO CENSOR POPULAR SONGS

BECAUSE American music has been "handicapped and thrown into disrepute through the unspeakably depraved modern popular song," Miss Maud Powell, the distinguished violinist, would have our song-makers disciplined by a board of censorship. Addressing the recent convention of the National Federation of Musical Clubs in Chicago, Miss Powell vigorously arraigned that type of American popular song which consists of brazenly suggestive words to a catchy rag-time accompaniment. Not only has it become epidemic in this country, she said, but it has successfully invaded Europe, so that "you hear in London, Paris, Berlin the popular song of America," and "the shame is that in some places they think it is the highest expression of musical art in this country." Continuing the indictment, she added:

"I am heartily in favor of a board of censorship for the popular song. We censor moving-pictures and, in extreme cases, censor the drama. We need toning for the popular song. Its words, if spoken, would call for arrest.

"Its effect on young folk is shocking. The vicious song is allowed in the home by parents, who, no doubt, have not troubled themselves to look at the words. As a result the suggestive meanings are allowed to play upon immature minds at the dangerous age. It is from the popular song that the popular suggestive dance sprang. Together and apart they are a menace to the social fabric."

No wonder there is a movement to have the Post-office Department exercise a more careful censorship over songs sent through the mails, in the same manner as it censors books, remarks the *Washington Times*, which goes on to say:

"If the ancient worthy who said, 'Let me write the songs of a nation and I care not who makes its laws' could visit the United States to-day he would hear some things that would cause him to rush to the shadowy ferryman and beg to be taken back at once.

"With a Sicilian on the curb grinding out 'When the Midnight Chuchu Leaves for Alabam,' a player-piano around the corner banging away at 'Be My Baby Bumble-bee,' and a graphophone up the street producing 'The Devil's Ball,' the poor old back number would feel a mad impulse to get at the fellow who writes the songs for this nation and strangle him on the spot."

The censorship idea, however, does not meet with unanimous approval. Thus the *Springfield Republican* declares that it would be "futile," and the *Columbus Dispatch* remarks that the only way to drive bad music out is to put good music in.

RELIGION AND SOCIAL SERVICE

EPISCOPALIANS IN TURMOIL

THE CONTROVERSY in the Protestant Episcopal Church over a change of name is interesting the religious press of all denominations, and what *The Continent* (Presbyterian), Chicago, describes as a "painfully disturbed and abnormally sensitive situation" has developed. As if in answer to the question asked in various quarters, "Will the Episcopal Church split?" *The Continent* avers that many Episcopalians, both lay and clerical, fear "an actual breach or schism" when the matter is discussed and voted on at the General Convention to be held in New York City next October. Those in favor of changing the name, *The Lutheran Observer* (Phila.) points out, are not agreed on a new style and title altho they have several under consideration; but they are of one mind in "their desire to get rid of the word 'Protestant.'" Here is the kernel of the whole dispute, in the opinion of the opposition, whether the innovators would have the Church renamed "The American Church," "The American Catholic Church," or "The Holy Catholic Church of America," and the argument is clearly stated in *The Churchman* (Prot. Epis.), New York, by Thomas Nelson Page in an article said by *The Lutheran Observer* to be "of utmost significance not only to himself and to the Protestant element in the Episcopal Church, but to Protestants generally." Mr. Page recalls that the question of changing the name of the Church has been recurrent for thirty odd years, and declaring that those who clamor for a change of name are "gnawing at the root of Protestantism," takes his stand in these terms:

"All this tinkering with the name of the Church is an assault on Protestantism. I simply want to say I am a Protestant, and I propose, please God, to remain Protestant. The people of this Church are Protestants, and we say to the clergy solemnly that tho they may vote a change of name, they can not take the people with them."

Of the various new names suggested Mr. Page remarks:

"They have a mouth-filling and even a heart-filling sound. But it may be contended without fear of serious opposition that when a Church assumes a name, that name should be designative and should be founded on fact. 'The American Church' would be a name dangerous to our dignity if not to our reputations. One would hardly think that with but 850,000 or 900,000 members on our rolls we could face the other American Churches with their many millions and claim this name to be distinctive. The Catholic Church in some form is the name these gentlemen are all after—and the American Catholic Church is the especial form that appears to be in their minds."

Mr. Page acknowledges the historical and romantic appeal of such terms as "The Historic Catholic Church," "The Apostolic Church of the Ages," and all that, but he insists that Episcopalians are dealing with "a very far-reaching and practical matter," and they must walk with open eyes or they shall fall:

"The attractive argument of church unity has been warmly

protest in this discussion. It is a dream—a beautiful dream—but a fallacious dream. There can be no unity with Rome without complete and utter submission to her. The whole history of her past establishes the fact, and no part more absolutely than her recent past. Twenty years ago men began to talk of the liberty of the Catholic Church in America. It appeared as if it were destined to make a great name. Great ecclesiastics, honored of all men, like Archbishop Ireland and Archbishop Keane, stepped forward and took the lead with tongue and pen. Cardinal Gibbons appeared acquiescent; the great educational institution at the gates of the capital fell into the movement.

What happened? Rome said 'No.' The movement stopt as tho petrified to stone."

For all the respect and reverence Episcopalians have for the vast and important function the Roman Catholic Church performs in modern life, Mr. Page maintains that "she and the Protestant bodies together accomplish far more good than we believe would be accomplished were every Protestant to-day to join the Roman Catholic communion." That the appellative "Catholic" "tempts the Protestant Episcopalians sorely" is noted by *The Northwestern Christian Advocate* (Methodist), Chicago, which admonishes them that "it will be a part of wisdom to eschew the term. There is no Catholic Church this side of heaven," it adds, "nor will there be until denominations appreciate more fully the meaning of charity," and in similar mood *The Living Church* (Prot. Epis.), Milwaukee, which is in favor of the change of name, asks of those against it a continuance of the Christian spirit with the practise of justice and courtesy. It makes mention of "a succession of sermons against the correction movement preached from various Eastern pulpits, particularly in New York," and says:

"No doubt the reverend preachers are entirely convinced that they are doing God service in denouncing a movement that has become so wide-spread in the Church that men are no longer convinced when it is met simply by ridicule, according to the earlier practise; but one wonders what would happen if these priests, who believe in the holy Catholic Church and are devoting their lives to her service, would tell their people plainly what *the men who favor the movement say that it means*."

Moreover, *The Living Church* takes cognizance of "a curious misconception of the name movement" shown by men who "deem it of interest to proclaim that various parish corporations will retain the name Protestant Episcopal" even if the general convention should select a new title for the national church. It explains:

"Of course nobody proposes to disturb the name as locally applied to parishes or even to dioceses. There is far from being uniformity in the designation of the Church in either parishes or dioceses at the present time, and nobody has arisen to suggest that the title of the national Church must necessarily be incorporated in the names of dioceses or parishes."

Thus far the Diocese of California has voted in favor of a change of name and the Diocese of Pennsylvania has voted

DR. WILLIAM T. MANNING,
Rector of Trinity, New York. He objects to the term "Protestant" because "it reflects the controversial spirit of a bygone age."

against it; while the interesting point is raised by Dr. William T. Manning, rector of Trinity Church, New York, that Protestant Episcopal is not really the name of the Church, but a legal title. Dr. Manning's argument for a change of name, as stated in his pulpit, is recorded in the *New York Tribune*:

"This cumbersome and ugly legal title ought to be changed, because it is a modern innovation, because it misrepresents the Church and misleads people as to her true character, because it puts the Church in the light of a modern denomination, instead of in its true light as a part of the ancient, historic Catholic Church, and because this narrow and limited title is out of harmony with the true name of the Church as given in the Creed, it is a hindrance to our work among the multitudes of many races who are now coming to our country, and is also a most serious barrier, as is well known, to progress in some of our mission fields.

"Why should any one to-day want to fight for the word 'Protestant'? It reflects the controversial spirit of a bygone age. We have progressed beyond it. It is natural for ultra-conservative people to want to hold on to that which is, because it is. But changes must come when they mean progress and improvement."

In the judgment of *The Lutheran* (Phila.) the only objection to what Dr. Manning calls the true name of the Protestant Episcopal Church is that it is not true. It would like to know in what sense the Episcopal Church is Catholic and Apostolic in which the Lutheran Church is not? *The Lutheran* declares:

"Those terms belong to that invisible Church of believers bound together by one Lord, one faith, and one baptism, and known as the communion of saints. Calling a church catholic or apostolic does not make it so. And why object to 'Protestant'? What is 'cumbersome' about it? What 'ugly'? Was it wrong to protest against the errors of Rome in the sixteenth century? Is it wrong to do so still? Has the Episcopal Church ceased to protest against those errors? If so, then she is neither truly catholic nor apostolic."

To drop the name Protestant would be weakness, is also the notion of *The Christian Herald* (Undenominational), New York, which thinks that it would be especially so regarded by the Roman Catholic Church in "times when Protestantism needs to keep all its banners flying, with the emblems of the faith so clear and unmistakable that none can misunderstand them."

On the ominous question whether the name controversy will result in a schism in the Protestant Episcopal Church a writer in *The Congregationalist* (Boston) says that while there will be "no secession of any considerable body of the Episcopal Church on account of the difficulty of carrying many laymen along," he believes the leaders of the Catholic party within the Church "will be obliged to seek Rome as the only institution affording them a congenial home." Similar predictions draw from *The New World* (Catholic), Chicago, the statement that they are based perhaps on the assumption "that the copying of the Catholic ritual makes Catholics of Protestants." "As well," it says, "might one say that the putting on of a new suit of clothes invests a person with a new intellectual character." And *The Catholic News* (New York), speaking of the fifteen clergymen who signed a petition of protest against the change of name to the presiding bishop of the Protestant Episcopal Church in the United States, observes that,

"these fifteen clergymen are frankly Protestant, it would

seem from their statement. They are certainly in a more logical position than the Episcopalians who regard themselves as Catholics."

The only effective defense of the substitution of the name "Catholic" for "Protestant," declares the *New York Independent*, "is to assert that the sympathy and fellowship of the Protestant Episcopal Church is with the Church of Rome, and not with the Protestants." And in this connection it reminds us of the fact that "a Protestant clergyman who joins the Episcopal Church has to be reordained, as if his previous ordination were invalid, while a priest of the Roman Church joining it does not have to be reordained; and similarly a Protestant layman joining it has to be confirmed, but not if he comes from the Church of Rome." The reason for this is that the Roman and the Episcopal Church "both claim to have maintained the episcopal succession from the time of the apostles."

THOMAS NELSON PAGE.

An influential Protestant Episcopal layman who protests vigorously against "all this tinkering with the name of the Church."

AMERICA A RELIGIOUS NATION

THE INFERENCE was drawn from Dr. Carroll's religious statistics for 1912 (recently reprinted in these columns) that the 55,300,000 people unaccounted for as members of religious bodies are necessarily "not vitally connected with the churches." Nor was the wish father to the thought, for the thought came from the editor of that zealous representative of New England Methodism, *Zion's Herald* (Boston). But Mr. Edwin M. Bliss, himself connected with the Census Bureau, believes these figures misleading and the pessimistic inferences depending thereon quite unwarranted. This, he insists, in *The Congregationalist* (Boston), is by no means an irreligious country.

It may be "technically correct to say that 60 per cent. of the population of this country are not enrolled as church members," but "it is absolutely incorrect to infer from that fact that a majority of the people are opposed to or even uninterested in religion." Of course, when Dr. Carroll's 36,675,537 church members are deducted from the total national population of 91,972,266, according to the last census, the remainder forms the great majority. But, Mr. Bliss reminds us:

"This includes four classes: (1) Children who are too young to have any 'vital' relation to the church. (2) The entire Jewish population. (3) Those practically identified with the church as attendants upon services and contributors to their maintenance altho not enrolled members of any religious organization, frequently referred to as adherents. (4) Those who are clearly and definitely outside of church life and influence."

It is then pointed out that the first three classes greatly predominate:

"1. *Children*. It is not altogether easy to decide what age limit to adopt for the term in this connection. . . . Probably fourteen years would, on the whole, represent a fair average. According to the Census of 1910, there were 29,499,136 under fifteen years of age (including 10,631,364 under five years of age), and thus, presumably, outside of church membership. From this sum should be deducted 2,500,000 Catholic children over nine years of age and included in the church membership, leaving 27,000,000 whom it would scarcely be legitimate to class as eligible to church membership.

"2. *Jewish population*. Dr. Carroll gives 143,000 heads of families, the same figures that have been given for some years.

The Jewish Year-Book (London), for 1910, gives the number of Jews in the United States as 1,900,000, surely not a large estimate. Deduct from this 32 per cent. for the children already accounted for and there remain approximately 1,200,000.

"3. *Persons not church members, yet thoroughly identified with church life.* There is, at present, no way of accurately estimating this class, yet every one knows that it is a large one. Take the number of young people over fourteen who are attendants upon Sunday-schools but not church members; of parents whose children attend Sunday-schools and who are practically identified with church life; and any careful observer will recognize that they constitute a most important factor in community life. Here one person's guess is, perhaps, as good as another's, but it does not seem that one for every three Protestant church members, or 8,000,000, is an unduly large estimate."

The statistician then adds the numbers of these three classes, subtracts the total from the 55,300,000, and finds that there are only 19,000,000 left "who ought to be vitally connected with the church," but are not; a very different proposition from the alleged 56,000,000. He concludes:

"In all probability if there could be an accurate enumeration of the persons over fourteen years of age, it would appear that only a portion, and that not a large portion, of the 19,000,000 would wish to be classed as out of sympathy with any religious organization. The simple fact is that this is not an irreligious country. There may be wide difference of opinion as to the essential elements of religious belief, worship, and life, but the proportion of those who fundamentally deny the validity and value of religion is very small."

WHAT DO BUSINESS MEN BELIEVE?

NO OTHER MINISTRY save that which "grapples with men's actual problems" can to-day expect to find a "generous hearing." With this conviction in mind a Toledo minister sent out a list of questions to 120 of the "most prominent business men" of his city and requested permission "to enter the citadel of mind and soul, and take therefrom the deepest and most honest thoughts concerning religious subjects." The inquirer, Rev. George R. Wallace, tells in *The Advance* (Chicago) the results of his investigation, and first of all mentions "the willingness of the men addrest to discuss their beliefs." The "promptness, frankness, and earnestness of the replies," he says, "were pleasantly surprising." But besides this, he declares that in marked evidence were "the pathetic yearning for a sufficient faith, the diversity of beliefs, the startling denials of doctrines commonly cherished by the Church, with the deep and serious thought evidently given the subject." The replies are compressed under several heads:

"Regarding the existence of God there seemed practical unanimity that God exists. Regarding his nature most believed not in his personality; God, to them, is a supernatural first cause, the uncaused cause of all existence; a force which manifests itself in everything and most highly in man. Some believed in God not simply as creator and preserver, but also as 'Our Father'; those holding this belief were comparatively few. The replies indicated that rational instruction regarding the nature of God and the relation of deity to humanity is greatly needed.

"The question 'For what do you believe man is in existence?' elicited a variety of opinions. Some declare they had never heard or read a satisfactory answer to the question; others thought for some divine purpose which, with our present mental equipment, none can explain. To live, beget, and die, the same as a horse or bird, express the limited conception of some, while others considered the purpose of human life to be the exemplification of the highest form of creative existence. Many looked upon such existence as an inevitable necessity, the product of natural law, and the consummation of the laws of evolution. The theory of the divinity of man seemed to grip many, one expressing this belief by saying, 'As the acorn has in it all the possibilities of the oak tree from which it came, so man has in him all the possibilities of God who begat him.' A thoughtful Michigan manufacturer, owner of a large institution, later worked toward a solution of the human problem by the defini-

tion: 'Man is a germ of divinity operating under laws of limitation.' Some thought man exists here in preparation for a future life, and one asked, 'Could it be that man was created by God, on account of a paternal affection preexisting in him?'

"The changed belief regarding moral obligation from the clear-cut and definite faith of our Puritan ancestors was startlingly and overwhelmingly in evidence. To the question, 'Is man morally responsible to God, and will God punish evasion of this responsibility?' some replied affirmatively, but many more with an emphatic negative. The excusative and conditional nature of man's responsibility was frequently asserted. Opinions were expressed that hereditary tendencies nullified such obligations. The nearest approach to orthodox teaching was that any penalty would result in proportion as man is physically, mentally, and spiritually responsible to laws that can not be violated or evaded without incurring inevitable and fixt penalties. Some threw the obligation and responsibility for human failure upon God, one intimating that God would not condemn human failure 'more than a builder would attempt to blame his building for falling down, because of inherent weakness caused probably by faulty design.'"

Immortality seemed a perplexing problem to many and one concerning which they were in grave doubt. As we read:

"The replies received contained varied and emphatic views, such as, 'There is no future life, when we die that is the end; our immortality comes in the lives of our descendants—in the solidarity and continuance of the race; the good exist after physical death, the evil perish; this life is only a stage in human development; the next is a progressive life; in the next world lives are graded.'

"Regarding providential interest in and interposition for humanity, the prevailing attitudes revealed in the replies indicated pathetic desire and profound doubt. Asked 'Is God interested in, and does he care about man's every-day life and experiences?' some wrote, 'I wish I knew; so many in the past trusted false gods that were nothing at all; how can we tell?' 'There is too much suffering to believe that; I do not believe so, but such a faith would make one very happy; then life's sorrows could be laid on the shoulder of God, or at least shared with him.' The problem whether God is a person or impersonal law robbed some of comforting faith in providential oversight. One said, 'I can not reconcile personal supervision of individual affairs to my conception of law; while another wrote, God is not a person, so can not be personally interested.'

The supreme surprise of the replies, says this minister, lay in the attitude of these prominent business men toward the Church:

"So much has appeared in the press and elsewhere regarding the alleged decadence of the Church that at least qualified endorsement of that institution was to be expected, in reply to the question, 'What good is the Church to the world?' Not one unkind criticism or weak endorsement of the Church was received. Appreciation of the Church was comprehensively and startlingly expressed. Witness the following: The Church stands first in the world's institutions for the good of mankind in every relationship of life; the Church is the foundation of civilization, and does great good; the world would be lost without churches; without the moral teachings of the Church the world's degeneration would inevitably follow; it is the keystone of social order, society would be chaos without it; it uplifts the world and does away with vice; it teaches that, regardless of future reward, morality pays, not in money or glory, but in all that makes a man satisfied with himself; it creates and keeps alive high ideals; the example of its members in living right is of great value; it emphasizes the spiritual against the material; it elevates, softens, soothes, and comforts humanity; it keeps us close to God.

"Two impressions are made upon the propounder of the questions. One is that men are interested, as much as ever, in the history of the world, in the great religious questions regarding life and destiny. The other is that never has there been greater need, nor greater opportunity, for ministers to present intelligently, rationally, and earnestly the fundamental truths of Christianity. Men are hungrily seeking for true guidance in things spiritual. This is the age for ministers with a divinely inspired message; the world turns disappointed from all others.

"No attempt is here made to discuss the subjects presented. This article is written in response to requests from several ministers, that the result of the investigation regarding the beliefs of business men be published in abbreviated form."

Old Hampshire Bond

IS your business worthy of the best letter paper? If it is, letter paper less than the best is unworthy of your business.

There are credit, distinction and good opinion reflected on the business that uses Old Hampshire Bond stationery—but aside from all that, there is the same satisfaction to the user that comes from a carpeted office, a mahogany desk or a good location. It is the satisfaction that things of quality always bring to men who realize why some things are “Made a Little Better than Seems Necessary.”

The Old Hampshire Bond Book of Specimens was assembled and bound up to interest business men. It contains suggestions and ideas for letterheads and other business forms—printed, lithographed or engraved either on white or on one of the fourteen colors of Old Hampshire Bond. One of these specimens is almost sure to approximate the exact feeling-tone you desire for your stationery. Write for this book on your letterhead.

The only paper makers in the world making bond paper exclusively

After the Auto Ride

The fine run remains in your memory—the dirt and dust in your hair and skin.

Let the cleaning-up process include a restful shampoo with Packer's Tar Soap.

After Golf and Tennis

Don't forget that your scalp needs exercise, too. Systematic shampooing with Packer's Tar Soap gives your scalp the proper exercise necessary to the continued health of the hair.

For Prickly Heat and Sunburn

and irritations of scalp and skin; soothe by using Packer's Tar Soap.

This mild soap brings speedy relief to itching, chafing and irritations so uncomfortably common in Summer time.

And now the Shampoo

A cooling and refreshing shampoo is particularly grateful in warm weather. After salt water bathing, authorities agree you should shampoo with Packer's Tar Soap.

Three generations of users have found rest and refreshment in

Packer's Tar Soap

(Pure as the Pines)

Its use in the bath is attended by healthful cleanliness and followed by sensations of vigor and physical comfort.

THE PACKER MFG. CO.
Suite 84A, 81 Fulton St., New York

CURRENT POETRY

POET after poet celebrates the lure of the country. Particularly in the spring of the year, magazines and newspapers abound in poems in which hard pavements are contrasted with flower-fringed lanes, crowded apartment-houses with spacious farms, wild nature with nature tamed and sophisticated. This is to be expected, for surely every normal dweller in the city tries to spend a part of each summer in the woods and meadows, and many of them look back with longing to a boyhood on the farm and forward with hope to an old age that shall be free from urban noise and hurry. But there is another side to the picture, a side that has received little attention from the poets. And that is the charm which the city has for the farmer, and more especially for the farmer's children. The steady exodus of the younger generation from the country is a serious problem, and while it has appeared in fiction it is little known in poetry. Yet it has its poetic possibilities, as Mr. Stephen Phillips shows in the poem which we quote below, which appears in a recent issue of *The Academy*. He has sympathy, it seems, for the mother who is to be deserted and also for the boy whom London is calling. He writes with striking simplicity, a simplicity that occasionally, as, for instance, in the fifth stanza, suggests the laconic grandeur of Walter Savage Landor.

The Lure of London

By STEPHEN PHILLIPS

"My son, what ails ye, that of late
Ye hang o'er long upon the gate?
Ye will not to your supper come.
Ye can not sit with me at home,
What lass is it with eye so bright,
That keeps you from your mother quite?"

"Mother, no lass with eye so bright
Makes me to linger half the night.
No maid it is makes me to brood,
And keeps me from your supper good;
But, mother, if the truth ye'd know,
I am right and from home to go."

"My son, if 'twere a lassie bright
That keeps ye from me half the night,
That, soon or late, I must abide,
Nor e'er her silly rose-cheek chide,
Yet I had pain to give ye birth,
And ye'll forget me under earth."

"Mother, I know not how to tell
What broods in me this restless hell;
But this I feel that go I must,
I tire of this familiar dust.
Even the nodding flowers I'd leave,
Tho, mother, you I would not grieve."

"There is a city far away,
In midnight I can feel her day;
Mother, she has no need of sleep,
She doth sow not, she doth not reap;
Hardly, I think, she draws the dew,
But she hath many, we have few."

"When silvery light comes on the ground,
And in the world I hear no sound,
Still I can hear her silent call,
To her must go, whatever befall;
No more I smell the rainy sod,
Almost I have forgot my God!"

From Bessie in the private
Galleries of C. W. Post.

Breaking the Bonds of Habit

Most of us cling to the things of life which please the senses, and continued indulgence leads to fixed habits—some good, others exacting a heavy penalty.

If any habit, such as coffee drinking, is found to interfere with one's welfare and comfort, it's time to break away.

Medical opinion and the research of pure food scientists agree that the coffee habit is extremely harmful to many persons.

It is hard to induce people to give up coffee, but if they are given the pure food-drink

POSTUM

they will find a distinct gain in health without loss of satisfaction or pleasure.

This nourishing table beverage, made from choice wheat and the juice of Southern sugar-cane, possesses a rich Java-like flavour, but is absolutely free from the coffee drug, *caffeine*, or any other substance which could prove injurious to the most sensitive organism.

The ever-increasing demand for Postum amply proves its worth as a safe table beverage for those who seek the freedom and power which come with mental and physical poise.

"There's a Reason"
for

POSTUM

Sold by grocers

"If ye must go, then go ye must,
My boy; but when I'm turned to dust,
Come back, the many a mile ye make,
And think on how this heart did break."
"Mother, you red flare in the sky!
There will I go, if there I die!"

Here are two poems about trees by poets whose ideas are vastly different. Miss Bunston, whose poem we take from the *London Saturday Review*, puts a noble philosophy in her lines, while Miss Howard (in *The Bellman*) is concerned only with a charming fancy. It must be confessed, however, that her birch tree is more vividly and attractively portrayed than Miss Bunston's olive.

At Bogliaco, Lago di Garda

BY ANNA BUNSTON

The olive for heaven's azure sake
Lifts up her boughs, yearns to be true;
But still she softens to the lake
And bends toward the deeper blue.

Stern is the chastening she receives,
Aged and maimed she well-nigh faints,
Yet bears forth fruit and dove-like leaves,
Most lovable of mountain saints.

Leans o'er the path the golden bay,
The chestnut wrestles with the earth,
Only the cypress looks one way,
Knows naught but heaven from her birth.

Yet what tree in this terraced place,
Chestnut or bay or cypress-spice,
Achieves the tortured olive's grace,
Comes quite so near the heart's desire?

The Fairy Tree

BY ETHEL BARSTOW HOWARD

The birch tree throws a scarf of green
Around her silver white,
Woven of little polished leaves
All delicate and bright.
It sways with every passing air
And shimmers in the light.

Oh, like a Dryad nymph she stands
The birch tree, silver white!
And all day long that flowing veil
Trembles for my delight.
She stirs it as she moves in it
As a young maiden might.

And is she then a tree at all,
My birch, all silver white?
Clothed in a robe of little leaves,
Alive with wind and light,
And standing by the fairy ring,
With queenly slender height?

In truth I think she is a fay
The birch tree, silver white.
Bound by a spell the long bright day
But free again at night,
And she knows all the woodland ways
Under the gray moonlight.

The *Westminster Gazette* prints this manly and sonorous poem. Its courageous philosophy is clearly and vigorously uttered.

A Birthday in Middle Life

BY A. J. PERMAN

Upon the road another stone,
Another hard-won boundary passed,
And youth's dim unimaginable goal has grown
Instant and vast.

The end was far, undreamed-of then,
In life's first clear felicity;

Owners of Pleasure Electrics— We Guarantee These Tires 10,000 Miles—Two Years

Nearly everybody now knows that Motz Cushion Tires are *easy-riding* and *trouble-proof*, but do you realize the great *economy* of these tires?

Do you realize that every set of Motz Cushion Tires is guaranteed for 10,000 miles—two years?

Do you realize that the upkeep cost on a set of Motz Cushion Tires is practically nothing?

Do you realize that *four*, not *five*, of these tires make a complete set?

What if the initial cost of Motz Cushion Tires is a trifle more than pneumatics, is not the additional cost paid back ten times over?

They Ride Easy

Motorists and motor car makers once thought that only pneumatic tires could be *easy riding* and resilient, but Motz Cushion Tires upset all calculations. Thousands now know *from experience, from using Motz Cushion Tires*, that they were wrong. They know that no pneumatic, except under excessive speed, is more resilient than the Motz.

Note the construction of this remarkable tire. Note the double, notched treads (A in picture), which prevent skidding and distribute the weight to the sides. The sides are undercut (see B), which allows free action of slantwise bridges (see C). These bridges are elastic. They give and yield like the air in a pneumatic tire. Note D in the picture, showing shock-absorbing qualities when tire runs over a stone.

Needless to say, Motz Cushion Tires end all punctures and blowouts.

MOTZ Cushion Tires

All Leading Electric Car Makers Adopt Them

The demand for Motz Cushion Tires in two years has multiplied ten-fold. On every boulevard, in every city, wherever electric cars are used, Motz Cushion Tires *predominate*. All leading pleasure electric manufacturers have adopted Motz Cushion Tires as a standard equipment.

New Tire Book 98 Ready

Motz Cushion Tires fit any standard clincher, universal quick-detachable or demountable rim.

Our latest Tire Book is now ready for mailing. Don't fail to get a copy. Send a postal today and get acquainted with the tire that gives utmost *riding comfort*, utmost *convenience*, utmost *mileage*, utmost *economy*. Give specifications—name of car, model, size of rims, etc.

Send me
\$1.00
for Two
Poplin
Club Ties

With the distinctive understanding that the Ties I furnish will not WRENKLE like ordinary silk ties. If they do, back goes your money at once.

My Club Ties are made of **SILK POPLIN**, two together wide at waist, 20 inches long (for medium wear). 24 or 28 long (for large wear), extra long, 30". Are **REVERSIBLE**, double wear.

I guarantee them to wear as long as any silk or satin tie made.

Made in the following shades: Purple, Old Rose, Helicon, Blue, White, Green, Gray, Green, Black, Navy, Navy Blue, Medium Blue and Dark Blue.

A regular dealer would pass no chance for \$1.00 for them or selling for the usual price.

When you buy from me you are getting a guaranteed article, which you can return, if not satisfactory, and have your money back.

My free Catalogue, containing diagrams how to direct the Bow, French knots and Annals will be sent FREE on application.

My trials are not sold for second-hand goods.

High Grade Goods at \$1.00 each and money returned if any dissatisfaction.

Edgewood, Any Look in Town.

C. G. CLEMINSHAW, 289 River Street, Troy, N. Y.

It was a fate that called sometime for other men,
But not for me.

I drank the gladness of the grass,
The rapture of the woods in May,
I was immortal as they are, serene, alas!
And young as they.

But now I know the years are told,
And those come not again that go,
And ever closer to me creeps the silent, cold
Insistent foe.

What in the hurrying hours remains?
What faded blossoms linger on
To mock, as they recall, the joys, the joyous pains
That now are gone?

Ah! in life's barren, desert lands
This still may lift the heart, and be
A crystal well amid the bare rocks and the sands'
Monotony.

This—that no agonizing dies,
No hoping and no strife is vain;
That in the garnered harvest of a Man they rise
And live again.

In the following little poem (from *The Craftsman*) Miss Widdemer gives exquisite voice to that longing for rural calm which we mentioned before. The thought that "a night wind strokes the slumberers" is delightful, and there is splendid concentration in the third stanza.

The Little Comforters

BY MARGARET WIDDEMER

I have my little thoughts for comforters;
They run by me all day
Holding up perfumed memory that stirs
My dull accustomed way:

They murmur of green lanes we used to go
(For here the spring forgets
To set the roadways thick with grass, and sow
The paths with violets)

Here the hot city crashes, and all words
Thunder or scream or cry,
Yet there were lake-sounds once (they tell), and
birds
Called from a twilight sky:

There still a night wind strokes the slumberers
And the cool grass lies deep . . .
I have my little thoughts for comforters,
Who whisper me to sleep.

To scribble one's name on a wall in a hotel does not seem to us a particularly attractive method of gaining fame. Therefore we believe that Miss Roberts' graceful poem, with its interesting adaptation of an old comparison, would be improved by the omission of the last two lines. We take it from *Lippincott's Magazine*.

The Inn

BY MARY ELEANOR ROBERTS

Life's an inn, nor may we stay
Where we lord it for a day,
Dreaming, as the time slips by,
Ours the rooms we occupy.
Nay; tho' we be well-bestowed,
Other guests are on the road.

Friend, our moment comes to go!
The Postilion waits below!
And these halls that we have known,
Fondly thought of as our own,
Keep of us no further trace
Than the mirror of our face.

Quickly, ere the summons falls,
Write thy name upon the walls,

PERSONAL GLIMPSES

"ON THE INSIDE A-LOOKIN' OUT"

SINCE it is by no means certain that Dennis Sweeney, James E. Hussey, James F. Thompson, and John J. Murtha, the former New York Police Inspectors sent to Blackwell's Island jail for conspiring to keep a graft witness out of a grand jury's reach, will ever write descriptions of how it feels to be shut up in a place to which they in bygone days helped to send thousands of lawbreakers, we will content ourselves with what the New York *World* has to say about it. The story is about the men's first day on the island. Here it is:

Sweeney, wrinkled and stoop-shouldered, with a long apron covering his stripes, leaned over a great mixing-pan of dough and worked like a regular baker.

After he had kneaded a large piece of the dough he picked it up on his arms and carried it to a table, where other jail-birds sliced it up and molded it for the ovens. Toward the end of the day he became very tired. His task carries with it more actual manual labor than the tasks his three coplotter have been set to.

Hussey, in the bed shop, had a special job yesterday of tightening up nuts that join the ends of the iron cots that will be issued to the Police, Fire, and other city departments when they are completed. The ex-Inspector, with a steel S wrench, worked and worked hard. He had to get the different parts of the bed, assemble them and then bolt them together. His job is much easier than Sweeney's.

Thompson, who, it was feared by the doctors at the penitentiary, would have to go to the hospital for treatment if his mental and physical condition did not improve, came from his cell in the new prison when a guard unlocked the steel door for him. He didn't complain, say the guards at the prison, and seemed to be in a more cheerful frame of mind.

In the shoe shop, where he worked his first day and where he will labor for ten months, he pegged heavy brogans all day long. Once a pair of shoes belonging to one of the patients in the City Hospital, which adjoins the penitentiary on the south of the island, was sent over to the shoe shop to be repaired. They were given to Thompson, who, it is declared, did a good job on them.

He peeled off the old worn leather and replaced it with new. Then he removed a nail that had been bothering the owner of the shoes. The owner is a gunman who was injured in a fight on the Bowery and hadn't the money to pay for medical attention.

Murtha's job consists of assorting broom straw to the proper lengths. After he finishes assorting a pile another convict comes along and takes it away to be bound up.

The four former Inspectors arose at 6 o'clock with the 1,400 other prisoners and marched to the wash rooms. They awaited their turns at the showers, and all of them had to follow an assortment of

Your Foot Troubles Gone

You Can Think Clearly and Do Things with the Snap and Ginger of a Winner.

YOU know you can't feel or act like a success with tired, aching feet—tired feet—tired all over—ever notice it? Perhaps you think aching, tired feet nothing serious. But that is a dangerous attitude of mind.

You may not realize it, but those slight aches at the heels and ankles, those painful, cramped toes, that body weariness, and brain fog lessen your chances for success and happiness. And the worst of it is, that just as sure as you neglect these symptoms, you will pay for it with the torture of broken arches, "flat-foot," or a serious derangement of the whole nervous system.

It's an easy thing to neglect tired, aching feet, but it is a much easier and more sensible thing to slip a pair of Scholl's "Foot-Eazers" into your shoes today and put an end to your foot troubles.

For Men and Women

The **SCHOLL** Foot-eazer
"EASES THE FEET"

The Simplest and Easiest Thing To Use For

Tired, Aching Feet — Corns and Calluses — Weak Insteps — Turning Ankles — Broken Arch
Flat Foot — Bunions — Cramped Toes — General Weariness — Bodily Fatigue

Prevents Flat Foot

The Scholl "Foot-Eazer" firmly supports and arches the instep—bridges the body's weight from heel to ball—takes off the surplus strain on the muscles and ligaments—replaces the natural spring and elasticity. The Scholl "Foot-Eazer"—a scientific invention of Dr. Scholl—Foot Specialist—is anatomically correct and based on practical orthopedic principles.

I Have Increased the Efficiency—
Hence the Earning Power of Thousands

I have brought peace of mind, comfort, good health, greater efficiency and success to thousands of men and women. I have prevented thousands, through the use of Scholl's "Foot-Eazers," from becoming victims of the broken arch or "flat foot" and I have injected new life into sufferers from all kinds of foot ailments. If you are on your feet a great deal—if your work suffers because your feet hurt—if your earning capacity is limited on account of weak ankles or broken arch—you need my assistance at once.

The Scholl "Foot-Eazer" requires no breaking in—always comfortable and instantly self-adjusting to all feet—fits your regular size shoe and can be changed from one pair to another—light in weight, never bulky and keeps the shoes in better shape.

Remember the Name "Scholl." Think of "show" and add "il"—say "Show Me a Scholl"—For Scholl's "Foot-Eazer" is the only appliance that gives just the right support and elasticity which nature intended the feet should have, when people walked on carpets of grass and soft earth, instead of hard floors and pavements.

10 Days' Trial Bond You owe it to yourself to make this simple test—now—today. Go to any shoe dealer or druggist and get a pair of Scholl's "Foot-Eazers." The dealer will give you a Signed Bond for a 10 days' free trial without risk. I make this liberal offer to prove to you that no matter what kind of foot troubles you have, Scholl's Foot-Eazer will give you instant and permanent relief. Price, \$2 per Pair.

Free—Ask your dealer for Dr. Scholl's Valuable Book, "Treatment and Care of Feet." If he hasn't copy, write us.

petty criminals—both negroes and white men.

Sweeney was about to duck under the shower when a lank, lean West Indian negro—a fire-escape sneak-thief—jumped in front of him. The West Indian had his bath first. Sweeney stood to one side and allowed him to finish.

For breakfast the four had the same kind of hash they have had every morning since they have been in the "pen."

"There's one thing about this place," said Warden Hayes to a reporter for *The World* yesterday, "if a man who comes here has indigestion or dyspepsia he'll get over it before he has been with us a month. At least two and maybe all of the former Inspectors, I understand, have dyspepsia. Believe me, this diet they are on will cure it."

"It's the same thing to eat day in and day out that does the trick. Why, when these four get out they'll feel better physically than they have for many a year. See if what I tell you isn't true; I know all about what a diet of meat, bread and potato a day will do."

"The four worked just as hard to-day as any of the other men in the place. All the guards and men superintending the work in the shop were told to treat these men just like the rest. I positively will not stand for their being let out of the slightest task. They'll do their work, do it well, and when their time is up they'll get out. That's all there is to it."

None of the other convicts said much to the ex-policemen at breakfast or at the noonday meal yesterday. At supper, which is at about 4 o'clock, however, some remarks that didn't exactly please the quartet were made to them.

All the ex-Inspectors have had insults and jeering remarks hurled at them since they were taken to the Island, but Thompson, who has been very despondent, soon gained the sympathy of many of the jailbirds, and has been postured a good deal less than Sweeney, Hussey, and Murtha. To conclude:

Sweeney gets mad every time one of the convicts says anything to him, and snaps back some reply, intended to cut the tormentor. All he gets for his trouble is a curse and another sneering chuckle.

None of them have had visitors yet, it was declared last evening, altho all four expected that some of their friends would come over to see them. Last night they sat in their cells until 10 o'clock reading and writing notes. The lights were turned off at 10, and the four, dead tired from their work, went soundly to sleep.

The first night they were behind the bars in the "pen" they got hardly a wink of sleep. They were unused to their new surroundings. After the first night they all managed to rest. Yesterday morning the guard that opened Murtha's cell door had to go inside and shake him before he awoke.

Hussey, one of the prison guards said yesterday, hasn't had much to say, but he has struck up an acquaintance with the man in the next cell to him. The guard said Hussey had asked his neighbor a lot of questions about the rules and regulations of the penitentiary, and

he was much interested in the way the convict spoke of the Warden.

Hussey was told that Warden Hayes was a "good fellow so long as you don't try to put anything over on him."

The former Inspectors were all annoyed when informed that they couldn't smoke cigars or cigarettes while on the Island. Regulations forbid anything but pipes. So they had pipes and tobacco sent over to them. The tobacco, before it got to them, was taken from its original package and placed in a paper bag.

THE PRESIDENT AT WORK

THE President's friends at Washington have been very apprehensive of late concerning his health. Unlike his two most recent predecessors, Mr. Wilson avoids athletics, believing that his regular temperate habits will safeguard him against a physical breakdown. Private Secretary Tumulty says the President is "the hardest worked man in America," which statement does not sound like an exaggeration in view of what we read in the *New York Evening World*. It is a dispatch from a staff correspondent:

Executive decisions that direct the affairs of the nation are made at night by the President.

The central control station of the great machinery of government is a secluded room on the second floor of the White House where Mr. Wilson works alone in silence while the world sleeps.

A black leather-covered note-book, which nobody but himself reads, is the Domesday book of America, for it contains the secrets of state and the thoughts of the President written by his own hand.

This book has loose leaves that can be detached and fresh ones put in. The sheets are the size of business letter paper. Most of the entries are made in shorthand "pot hooks," a system of writing which Mr. Wilson has practised for many years.

The private study contains a flat-top desk and a filing cabinet. The President is more devoted to his black leather note-book and his filing cabinet than to any other possession. No secretary or clerk may touch them. He works over the filing case with the precision and skill of a system expert. He has his own plan of indexing and can instantly turn to any paper which he has put away.

At nine o'clock in the morning the President leaves the main part of the White House, after having breakfasted with his family, and goes to the west wing of the building, a long extension, one story in height, devoted to executive offices. He carries with him the precious black note-book. Private Secretary Tumulty and a stenographer join him. The notes written the night before in the study are dictated and the plans thought out are outlined for the private secretary to put into operation.

After an hour of this work the rest of the President's day is taken up by appointments, previously arranged. Cabinet officers, Senators, Representatives, prominent men from many cities, delegations of organizations, and citizens of every class endeavor to get audiences with the Presi-

Elgin

the watch word

A GOOD watch comes into one's life but *once*. Most often it remains forever!—the one thing that marks the *ever-present*, a pledge of the past and a promise of the future.

LORD ELGIN, here illustrated, is the watch for lifetime service. It is the correct model for masterful men and promising youths. The thinnest watch made in America with an enamel dial.

Lord Elgin is worthy a timelongs trust, worthy of lifelong partnership.

Today the Lord Elgin is measuring time for men and women whose individual needs.

Lord Elgin is made in one of the oldest and largest of watch factories. It is sold and vouched for by forty thousand merchants of standing, including every representative jeweler in America.

The leading jewelers in every town and city are Elginers—masters of watchcraft. They are the men who really know watches.

Consult your local Elginer. He speaks with authority. He has an Elgin to exactly meet your

dent. It is not difficult, either, if they have some business or subject of general welfare to present.

Thus the day is completely absorbed. There is no opportunity to read, to study, to think, to plan. The important papers of the day are picked out by Mr. Wilson and taken to his private study for night consideration. After dinner he seeks the seclusion of this study, his black note-book, and his filing cabinet.

At first he set 10:30 p.m. as the hour to quit work and go to bed. But he has not been able to keep to schedule. For the past few weeks the President has not been able to get out of his study before 11:30 o'clock. The night work is beginning to tell on him.

In order to conserve his strength and avoid a breakdown, the President is endeavoring to take a Saturday holiday each week, but thus far he has had very poor luck in trying to carry out his plan. Tremendous pressure pervades the atmosphere of the White House, and usually some important affair of state drags him back to his work. To proceed:

It is difficult to tell from mere observation when the President is tired. His normal actions are so methodical and measured in pace that they betray no variation from day to day, regardless of strain. His face is so bony, with skin so tightly drawn over angles and high spots, that there is no deepening of lines or the tenseness of features observable in most men under pressure. Color of countenance he has not, so pallor of cheek is in him a normal condition.

Perhaps the only indications of the strain which the President is experiencing are to be found in his manner rather than in his appearance. He is even more measured and reserved in speech and action than he was when he entered the White House. He is attempting to conserve his mental forces with scientific care and precision.

Underneath the calm exterior there is an active nervous system, altho people say that Mr. Wilson has no nerves. It is beginning to show itself now and then. Standing behind a chair with his hands on the back of it a few days ago, his fingers unconsciously drummed a tattoo. When reading a message personally to Congress a few weeks ago there was a nervous note in his voice for a few moments.

The general manager of the United States Government has a big job merely directing the ordinary duties of administration. But when there are added the ceaseless pressure of politicians for office and the attempt to institute many reforms of great magnitude in system, a President has more than one man can physically accomplish.

Private Secretary Tumulty is watching his chief and trying to shield him from as many troubles as possible, for once let the President get a subject in hand he goes through it with a thoroughness that requires laborious effort.

Mr. Wilson will not admit he is working too hard, or that he is tired some nights. He has been a little more than two months in the White House, and during that time he has scored two long credit marks:

1. He has not uttered a complaint about anything or anybody.
2. He has not spoken a cross word.

A Million Mothers Do This Every Morning

With hungry husbands in a hurry to get away to work—some with trains to catch, Kellogg's Toasted Corn Flakes offers a quick way to serve a delightful breakfast.

Men like Kellogg's for the flavor these crisp toasted corn flakes contain. It's good food, with a freshness you can depend on, and it can be served in a variety of ways. The child that doesn't love corn flakes, is yet to be born.

Lobert, as he slapped Overall on the back. "I would have given my year's salary if I could have honestly helped that hit."

"Forget it, Hans," replied Overall. "You're playing for Cincinnati, not Chicago, and it is all a part of the game. We will win out anyway." And no one on the Chicago team was half as happy as Lobert was over the victory of the Cubs in the final game. Also that hit by Lobert was a grand tribute to the honesty of the game.

Baseball history is full of deeds like those of Moriarity, Killifer, Lelivelt, Egan, McAleer, and Lobert. Perhaps in the career of every player there have been at least a dozen times in important contests when he has done exactly the opposite of what he would have liked to do. And each one of these men has acted properly, because he has acted honestly.

Just as long as the game is played, however, there will be any number of pessimistic individuals who will be able to pick flaws in what happens in the baseball world. Murder will out, and if anything is ever done in baseball the player with a grievance will be only too glad to tell the world. No such taint has ever been put on the grand old game, and as long as it is conducted on the present high scale its popularity will increase. The fact that the fans of the United States paid a half million dollars to see the 1912 World's Series best tells the story of how they regard the pastime of all pastimes.

A NEWSPAPER SAMARITAN

JUDD MORTIMER LEWIS, poet and jokesmith of the *Houston Post*, is, according to numerous authorities, one of the Texas city's most useful and popular citizens, and much of his popularity is due largely to his love of children. "Uncle Judd," as some of his fellow paragraphers frequently call him, makes a specialty of finding good homes for motherless babies, using space in his column in *The Post* whenever he wants to reach would-be adopters of children. One of his characteristic appeals was printed a few days ago under the caption, "'Nother Baby Girl":

Eyes o' blue, and touseled hair! Just think of it! You know we found a home for that other baby girl almost before the ink on the announcement was dry. A splendid home. Then I had so many inquiries from people who wanted it that I grieved because I didn't have about a bushel of babies to give away. But now I have another. A peach. Eight days old this morning. Weighed eleven pounds at birth. If some of you good people who telephoned me about the other baby girl, and whose name and address I neglected to make a note of, will call me up at *The Post* Editorial Department, or at my home (Hadley 941), I'll tell you all about it. I will tell you where you can see it, or I will take you to see it. The first good people that come after it can have immediate possession. You will be expected to legally adopt it.

JACK LONDON, FARMER

IN the comparatively few years since he began to sell newspapers in the streets of Oakland, Jack London has had more than enough occupations to justify his acquaintances in calling him Jack-of-All-Trades. In the days before his writings began to bring royalties in large checks he was an oyster pirate, a tramp, a sailor, a prospector for gold in the Klondike region, a wielder of mangles, wringers, and flatirons in a laundry, and a soap-box orator for Socialism, and now we hear from him as an authority on farming. The other day he talked about his agricultural experiences to a Los Angeles reporter, and the San Francisco *Post*, which quotes a portion of the interview, but does not say what paper printed it originally, thinks his story is "a contribution to current agricultural literature worth while," and suggests that Mr. London should be pressed into service as a lecturer before the Granges. *The Post*, which comes about as near to being a disciple of Karl Marx and a supporter of Eugene V. Debs as John D. Rockefeller, ventures the opinion that the novelist "can tell more about farming in an hour that would be worth hearing than he could about Socialism in a month." Here is what Mr. London has to say:

When I bought 150 acres near Glen Ellen nine years ago I knew nothing of farming. I bought the place mostly for its beauty, as a place to live and write.

About forty acres of the ranch was cleared and I tried to raise hay for my horses, but soon I found I could scarcely get the seed back. The soil had been worn out; it had been farmed for years by old-fashioned methods of taking everything off and putting nothing back.

The region was a back-water district. The ranchers were poor and hopeless; no one could make any money ranching there, they all told me. They had worked the land out and their only hope was to move on somewhere else and start in to work new land out and destroy its value.

I began to study the problem, wondering why the fertility of this land had been destroyed in forty or fifty years while land in China has been tilled for thousands of years, and is still fertile.

My neighbors were typified by the man who said: "You can't teach me anything about farming; I've worked three farms out." Which is as wise as the remark of the woman who said she knew all about bringing up children, for she had had five to die.

I adopted the policy of taking nothing off the ranch. I raised stuff and fed it to the stock. I got the first manure-spreader ever seen up there, and so put the fertilizer back on the land before its strength was leached out. I began to get registered stock, and now I sell a blooded sow at nine months for \$40, and an old-fashioned rancher comes along and wonders why he has to feed a scrub cow for two years and sell her for less than \$40.

An old-fashioned farmer has thirty milk cows and works eighteen hours a day taking care of them and milking them and can

PENNSYLVANIA
Oilproof
VACUUM CUP TIRES

THE mirror-like, slippery pavement affords as sure a footing for the car shod with Vacuum Cup Tires as the fine, dry macadam road. Whether the surface is wet or greasy, these tires are *guaranteed* not to skid, or are returnable at full purchase price after reasonable trial. The thick-walled cups drive deep and give positive traction in mud. Your discontent with tire service also ends abruptly when you equip

They are the heaviest tires of the rated size manufactured. Their construction is the strongest, their composition the toughest—and absolutely *Oilproof*—immune from "oil disease."

With each Vacuum Cup Casing goes a definite printed guarantee of 4,000 miles. Their actual service mileage averages a far greater distance.

make no money. An up-to-date man comes along, buys the place, pays \$10 for a Babcock tester and buys milk scales. Right away he gets rid of ten of the cows as non-productive, and he makes more at two-thirds of the work. Later he weeds out five more and still gets larger returns for the feed he gives them, with half the work. The experts of the University of Nebraska estimate that there are 200,000 cows in Nebraska that are a dead loss to the State; that the wealth of the State would be increased if they were shot.

Here is the desperate situation in this country which makes correct farming certain of good returns. In ten years the mouths to feed in the United States have increased by 16,000,000. In that ten years the number of hogs, sheep, dairy cows, and beef cattle have actually decreased, on account of the breaking up of large ranches into small farms, and that breaking up has increased the demand for and the number of horses and mules. That is the fundamental cause of the increase in the cost of living. The situation is so desperate that in the Middle West the feeders, the men who raise corn and buy cattle to fatten, can no longer get the cattle; they cannot compete with the butchers, who need the young, partially fattened cattle so badly that they outbid the feeders.

The rancher who gets good stock and who conserves and builds up his soil is assured of success.

NOTABLE VEGETARIANS

THO it is altogether likely the meat packing-houses will be running six days a week and with full crews when all of us have long since finished our negotiations with St. Peter, vegetarianism is gaining many recruits, and what speaks well for it is the fact that many great brain-workers of national or international prominence not only get along well without meat, but make it a part of their business to urge others to adhere to a vegetable diet. The *New York Sun* says the popularity of vegetarianism is rapidly increasing the world over, particularly in England and in the United States, the England has been known for many centuries as a land of meat-eaters. Health, religion, desire of beauty, taste, and artistic feelings are among the various reasons. The *Sun* mentions some of the most notable vegetarians and tells their reasons:

Perhaps the most famous vegetarian in the world to-day is George Bernard Shaw. He has sounded his trumpet many times to draw attention to the subject. His reason for being a vegetarian is that meat is distasteful to him, that it is repulsive to him to think of eating the carcasses of slaughtered animals, that meat eating is unclean, unartistic, and revolting. He also feels repulsion against all alcoholic drinks and tobacco; why should he fill his system with such unnecessary rubbish, he asks, and dull and befog his brain with them, when he is so much better without them?

Mr. Shaw is tall, robust, and healthy.

The Standard Hammock

35 years of experience back of Rowe's Gloucester Hammocks. Made to stand up and look fresh under severest conditions of use; many are now giving first-class service after 10 years' constant use.

Made of the highest grade white or khaki duck (extra heavy) by sail-makers. Our khaki duck is genuine khaki which will not fade or rot the fabric or stain garments.

with a ruddy color, clear eyes, and an elastic gait. His diet consists of fruits, nuts, vegetables, and cereals. He often makes what he regards as a hearty meal on four bananas, and when he is traveling he does not have the trouble that most people do, for he can carry in his grip a supply of nuts, and with the fruit and vegetables and grains that he can buy he can manage beautifully. He said at a meeting of vegetarians:

"There are two sorts of mankind, those of higher and those of lower character. The lower craves meat. I do not like meat and never did."

And again he said:

"Daniel was a vegetarian, and after a time he became very handsome. That struck me at the time. I am not sure that it did not have something to do with my views."

Miss Marie Corelli is another English vegetarian of literary fame. She is a vegetarian because of her aversion to killing; the thought of taking life to satisfy the appetite is shocking to her. One has only to see Miss Corelli to realize that meat is not at all necessary to an appearance of roundness and perfect health, for Miss Corelli is as plump and rosy as a child.

The Countess of Warwick adopted vegetarianism about a year ago and people have surmised a good many motives for the action of the beautiful noblewoman. Some say she made the change for the sake of her beauty and figure, others because of religious scruples, and again others because she finds that her wits are clearer on a vegetarian diet. It is to be supposed that the first reason has had a good deal to do with it, and that Lady Warwick viewed with dismay the rapidly increasing flesh that was destroying all her beauty. Since she adopted vegetarianism she has lost many pounds and has regained her former slenderness and loveliness. She has made a careful study of a perfectly balanced diet, and is thus enabled to nourish her body without becoming over stout or over lean. She is fast making other converts to vegetarianism, for to be overweight is almost a disgrace at the Court of St. James's.

There are three famous French actresses who have, within the last ten years, become strict vegetarians, and one and the same motive prompted each—the preservation of beauty and slenderness. The actresses are Rejane, Sarah Bernhardt, and Cleo de Merode.

One can not imagine Sarah Bernhardt getting actually fat, and yet the famous actress was gaining weight and losing the lines of her figure, notably about the neck and waist. As in everything else in life, she made a careful study of the matter and conferred with authorities on the subject. The result was that she gave up all flesh food and became strictly a vegetarian. She has demonstrated that a vegetarian diet makes one younger and more elastic and gives a clear brain and steady nerve. She has lost her heaviness, and her figure has greatly improved so that she is enabled at nearly 70 and as a great-grandmother to act the rôle of Joan of Arc in tights and to reveal an agile, graceful figure.

Mme. Bernhardt does not even eat eggs, as they are a form of flesh food, and she takes no chances. She sticks to a simple the widely varied diet of

Dominion and Power

By CHARLES BRODIE PATTERSON

Author of "The Will to Be Well," "The Measure of a Man," etc.

THIS is a new edition of one of Charles Brodie Patterson's most popular books. It has been thoroughly revised and contains some five or six new chapters, dealing with Mental and Physical Health, Psychic Development, The Right Use of the Breath, Self-Control, etc. It is filled with uplifting and helpful suggestions, and must, of necessity, prove a benefit to thoughtful readers. "Dominion and Power" has had a large sale in this country, has already passed through several editions in England, and has recently been translated into Dutch, in which language three editions have been called for in a little over a year.

The author is buoyantly optimistic throughout, and helpful to courageous and wholesome living. It is a good book for those who feel the need of fuller instruction on the subject of the higher development of mankind.

12mo. Cloth. Price, \$1.20 net; postpaid, \$1.30

dried and fresh fruits, nuts, cereals, and vegetables. Her only beverage is cool spring water.

Rejane became a vegetarian to stay the appalling increase of her weight. She was becoming so stout as to be quite unfitted to take the parts in which she had been so successful the world over. It was a good deal of a wrench to her will power, this renouncing meat, for she is fond of good living, and especially of fine dinners of many courses, but her art is her life, and so she schooled herself to give up a meat diet and to adopt vegetarianism. Now she finds it easy to go without flesh food. She has found that she can keep herself youthful and slender in appearance and her figure is strikingly beautiful with no hint of the heaviness that once threatened it.

Cleo de Merode is perhaps the most famous dancer that the Paris Opera ever had. Her figure was superb in its perfect roundness and the long, beautiful throat and fine, small head of the dancer were copied many times by artists. Then of a sudden she began to show an increase of flesh. She did not dance as lightly nor look as young and fairylike. Her pictures no longer brought a ready sale on the boulevards; artists no longer beseeched her to pose for them. She was, in fact, losing her vogue. Then of a sudden she disappeared.

She dropt out of the public view as completely as if she had died and no one saw her for a year. Then she as suddenly returned, years younger in appearance, slender and graceful as a fawn and radiant with a new kind of freshness. She created a veritable sensation last October in Paris, and everybody of course wanted to know her secret. It was simply that she had adopted vegetarianism and had dieted for a year without a mouthful of flesh food of any kind. Her appearance told the rest of the story. She looks exactly as she did twelve years ago, when she first became famous as a beauty and a dancer.

Auguste Rodin, the sculptor, became a vegetarian when he found that he could do much better work on a fleshless diet. His imagination worked more clearly and the general tone of his productions was higher. Much the same motive prompted Madame Maeterlinck (Georgette Leblanc) to renounce the flesh diet. We read on:

Religious feelings solely have prompted three other famous women of Europe to give up the flesh of animals as food. They are Princess George of Greece, who was Marie Bonaparte of Paris; the Grand Duchess Serge of Russia, and Mme. Dieulafoy, the famous archeologist, who has dressed like a man for many years and is a familiar figure in Paris with her husband, who is also an archeologist of note. It is said that the two patronize the same tailor and have their clothes made exactly alike. Mme. Dieulafoy is permitted by the French Government to wear masculine attire.

All three women have been converted to so-called Orientalism, that is to say, they have come under the influence of the old religions and philosophies of the East, which forbid the eating of meat, as it entails the taking of life for the purpose.

Try these WHEELING SMOKES

ORDER A BOX of these HAVATOBA clear Havana Cigars, or of any of our four brands of stogies.

Smoke as many as are necessary to determine whether they're what we claim and what you want.

BERNBERG CIGAR CO., Wheeling, W. Va.

Olive Oil Will Increase Your Appetite IS ALSO VERY NOURISHING

Pure unadulterated olive oil, your physician will tell you, will increase your appetite and is most nutritious. In addition to this, it is particularly valuable for stimulating the secretion of the bowels and in cases of chronic constipation. The particular advantage of using olive oil as a food or medicine is that its action tends toward upbuilding the system generally, and cannot create harmful results like so many tonics and stimulants.

It is probably not generally known that the maximum amount of nutritive value is contained in the oil which is extracted from the olive fruit grown in Southern Italy, known as Lucca Cream Olive Oil, from which locality the choicest olives are produced. The oil extracted from these olives has a rich yellow color and is heavier than the French Oil with the greenish tint. It materially differs from the American oils, much of which are mixed and adulterated, in that the American trees have all been transplanted from abroad.

There is one old Italian firm whose sole business for the past 100 years has been to market an ideally pure oil. Their virgin oil is pressed from carefully selected ripe olive fruit, gathered in their immediate vicinity, Lucca, South Italy. Because of the extreme richness of this oil, it has been found desirable to put it up in grape capsule form for the United States trade so that the absolute purity and superior quality might be maintained and the oil grape taken easily and tastelessly.

The Grape Capsule Company, 108 Fulton Street, New York, sell these Olive Oil Grapes in America, packed in boxes of 24 for 25c or 100 for \$1.00. For trial purposes, they offer to send a liberal sample and literature for 10c to cover the cost of postage. These Grape Capsules are known as

Olive Oil & Grape
In Capsule Form
"Nature's Food"

Easy Method.—"I'm tired of life."
"That being the case, go out to California and shout 'Banzai!'"—*Birmingham Age-Herald*.

Personal.—Poser for a butcher who gives short weight: If sixteen ounces go to a pound, where do you expect to go to?—*Sacred Heart Review*.

The Main Thing.—CUB REPORTER—"I guess I'll have all my work copyrighted."
CITY EDITOR—"Never mind that. Just have the copy right."—*Judge*.

The Grand Old Name.—"So you've bought a new painting for your hall? Is it by some artist with a well-known name?"

"Yes; his name is Smith."—*Boston Transcript*.

A Jewel Revealed.—"Your husband is willing to allow you the custody of the automobile, the poodle, and the rubber plant, with liberal alimony, while he takes the children and the graphophone."

"Stop the divorce," sobbed the wife.
"I'll never get another husband like that."
—*Louisville Courier-Journal*.

Hearty Welcome.—The little boy was waiting at the gate when the preacher rode up.

"Are you Brother Jones?" the little boy asked.

"Yes, my little man. Are you glad to see me?"

"You bet I am! Mama'll cut the cake now."—*Judge*.

Envy.—"It is vulgar to dress so as to attract attention on the street."

"Isn't it!"

"I saw Miss Knobby going down the street yesterday in a gown which caused every man she passed to turn and look at her."

"Sure enough! I wonder who is her dressmaker."

"I asked her, but she wouldn't tell me."
—*Houston Post*.

Knew It Well.—A man who had been troubled with bronchitis for a long time called on a rather noted doctor. After a few questions the doctor told him he had a very common ailment that would readily yield to treatment.

"You're so sure you can cure my bronchitis," said the man, "you must have had great experience with it."

"Why, my dear sir," confided the doctor, "I've had it myself for over twenty years!"—*San Francisco Argonaut*.

Reassuring.—A woman hired a taxicab. The door of the cab was hardly closed before the engine started with a jerk, and the cab began to race madly along, narrowly missing lamp-posts, tramcars, policemen, etc. Becoming frightened, the woman rapped on the window of the cab and said:

"Please be careful. This is the first time I ever rode in a taxi."

The chauffeur reassured the passenger as follows:

"That's all right, ma'am. This is the first time I ever drove one!"—*St. Louis Mirror*.

Tire Bill Payers!

You have demanded a vise-like rim grip—with no cutting or breaking above the rim—and here it is.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnall Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"C. S., York, Neb.—"How should the word 'to' be spelled in the following sentence so as to include all meanings and forms of the word 'to'?" "There are three kinds of (to, too, or two)'s in the English language." Is the sentence grammatically and logically correct?"

In the sentence as cited there is no way to spell the word. There are not "three different kinds of" the written or printed word but rather three absolutely different words. There are, one may say, "three kinds" of the spoken word. The written words are as different in written form as in meaning; the pronounced words are identical in pronunciation. Consequently, a sentence like that you cite could be said only of the spoken word. But how are you to spell a spoken word in English when English spelling does not represent the sounds in the word? English spelling does not represent the words we pronounce to-day, but the words English people pronounced five hundred years or more ago. All you can now say is that "there are three words in English pronounced like the preposition *to*, namely, the preposition *to*, the adverb *too*, and the numeral *two*." But there are not three *to*'s, nor three *too*'s, nor three *two*'s.

"A. A., Houston, Tex.—"How is the name of the celebrated picture *Mona Lisa* pronounced, also *Corot*, the artist's name?"

Mona Lisa is pronounced mo'na lee'za (a as in note, ee as in see, the s as in father, but shortened and lightened, and the accent on the first syllable, as indicated). *Corot* is pronounced Ko-ro' (both o's as in note, but the first shorter than the second; the accent on the final syllable).

"L. S. H., Waynesboro, Pa.—"Kindly explain the origin and meaning of the word 'mass' as used in the word 'Christmas'."

The English word *mass* is in Old English *masse*. The Old English word meant (1) the celebration of the Eucharist, and (2) a church festival—the latter meaning being an extension of its application. Hence *Christmas* was the church festival celebrating the birthday of Christ, as *Michaelmas* was the festival held on St. Michael's day; and so for other words of this class.

WHITE MOUNTAINS of New Hampshire

For those who live down in the big cities there is nothing so beneficial as a vacation in the mountains.

Almost overnight that wonderful

LIFE-GIVING AIR

restores tired brains and exhausted energies.

For a day, perhaps, you will be content simply to rest and drink in that air.

But afterwards the joyous out-of-doors will claim you. You will play golf on links right up under the clouds, you will motor on fine roads, climb mountain peaks for unimagined views, play tennis, ride, drive, tramp.

You will have an appetite that's a joy—and White Mountain cooking is famous. You will enjoy the people you meet—they are the nation's best.

You will delight in the social life.

Always the Shortest, Quickest and Best Line between New York and Montreal — The Highway to Canada's Famous Resorts

HENRY REUTERDAHL

Henry Reuterdahl, famous naval artist and expert on naval construction, says:

"You've got to smoke while painting out of doors in winter—it helps you to keep warm. And a pipeful of pure, mild Tuxedo tobacco makes me forget the cold, and the paint flows more freely."

H. Reuterdahl

GEO. P. JAMES

Geo. P. James, District Passenger Agent of the Atlantic Coast Lines, at Washington, D. C., says:

"I am a great admirer of Tuxedo. It's cool, pleasant to the taste, and has the happy faculty of keeping my brain clear for action."

Geo. P. James

CHARLES K. HARRIS

Charles K. Harris, well-known composer, author of "After the Ball" and other famous songs, says:

"I find a lot of inspiration in Tuxedo. It has a pleasant fragrance and nerve-toning qualities that are undeniable."

Chas. K. Harris

WHY You Should Smoke a MILD Tobacco

A MILD tobacco is soothing, restful, healthful. Strong tobacco irritates and may cause nervousness. Tuxedo is the *ideal* tobacco. It is the mildest tobacco—yet *rich* and has a delicious flavor and aroma.

You can smoke Tuxedo—pipeful after pipeful—with continued enjoyment. Tuxedo can't bite your tongue or irritate the delicate membranes of your mouth and throat—because in Tuxedo every unpleasant feature has been removed by the *original* "Tuxedo process" of treating the tobacco leaf.

Tuxedo

The Perfect Pipe Tobacco

Every new, good thing is imitated. Tuxedo was born in 1904, and is the *original* in its field.

Since 1904 many imitators of Tuxedo have appeared. Not one of them has ever been able to discover the secret process which makes Tuxedo the pleasantest, healthfulest, smoke in the world.

Compare the imitations with Tuxedo: *look* at them, and note the lighter, milder color of Tuxedo; *smell* them and note the marked superiority of the odor of Tuxedo; *smoke* Tuxedo in comparison with them and you will find a difference in *taste* so pronounced that you will never again smoke anything but Tuxedo.

Test Tuxedo by smoking it for a week. At the end of the week you will have had the most enjoyable smoke week of your life.

WILLIAM F. MURRAY

Congressman William F. Murray, of Boston, Mass., who in addition to other distinctions, is the youngest member of Congress, says:

"In my recent campaign for Congress, I had occasion to speak many times nightly. I found that Tuxedo tobacco and a good pipe have a very soothing effect on the vocal chords after a hard speaking tour."

William F. Murray

GEORGE E. PHILLIPS

George E. Phillips, Mayor of Covington, Kentucky, says:

"A good pipe, and Tuxedo to fill it, and I'm satisfied. The tobacco in the little green tin has no rival as far as I am concerned."

Geo. E. Phillips

ROY NORTON

Roy Norton, well-known writer, author of "The Plunderer," etc., says:

"As a veteran expert in tobacco, I have come to the conclusion that Tuxedo beats them all."

Roy Norton

SUMMER READING

WINSTON CHURCHILL'S **THE INSIDE OF THE CUP** *New Novel*

By WINSTON CHURCHILL, Author of "Coniston," "Richard Carvel," "The Crisis," "Mr. Crewe's Career," "A Modern Chronicle," etc.

"The Inside of the Cup" is undoubtedly the best novel Mr. Churchill has written.

The romance of "Richard Carvel," the realism of "Coniston," and the deep social significance of "A Modern Chronicle," are repeated in this powerful story of present-day problems vital to National welfare.

In conception, consistent character drawing and style, "The Inside of the Cup" reveals Mr. Churchill again as America's foremost novelist.

Illustrated. Cloth Covers, gilt top. \$1.50 net

How the *Standard Bible Dictionary* HELPS the Sunday School Superintendent, Teacher and Worker—

Likewise the Ambitious Bible Scholar who aspires to become an Active Worker in the Sunday School and Church Societies

Many Sunday School Officers, Teachers and other Workers have not had the benefit of a technical education in Bible study, and yet desire and appreciate all that Biblical scholarship can give them of its results. What more natural and helpful than to refer the many vexing problems arising in the preparation of Sunday School lessons, Bible talks and discussions, etc., to the *Standard Bible Dictionary* for explanation and light?

In no other way that we know of can you obtain so complete an understanding and *talking familiarity* with Bible persons, places and events through *only a few minutes' reference* than by means of the *Standard Bible Dictionary*, which James E. McCurdy, Ph.D., LL.D., University College, Toronto, calls "The best single volume handbook for Bible study that has ever appeared in any language." Rev. F. N. Peloubet, author of "Peloubet's Notes (on the International S. S. Lessons)" writes (in part):

"The Standard possesses some very great advantages over other Bible Dictionaries—460 unusually good explanatory illustrations—colored maps, a real help—*pronunciations of proper Biblical names*—labor-saving thumb-index—clear print," etc. Prepared under the editorial direction of Melancthon W. Jacobus, Andrew C. Zeno and Edward E. Nourse, 926 large pages. Handsome cloth binding, price \$6 including index, carriage prepaid; 15 morocco \$10. Full morocco \$12.

BRADFORD ACADEMY

FOR YOUNG WOMEN

Bradford, Mass. 110th year.

Thirty miles from Boston, in the beautiful Merrimack Valley. Extensive grounds and modern equipment. Certificate address to leading colleges. General course of five years, and two years' course for High School graduates. For catalogue address: MISS LAURA A. KNUTT, A. M., Principal.

FOR GIRLS

Many girls after leaving grammar or high school do not wish to go to college. But they often desire advanced work, in a new environment with competent instruction, and to select studies best meeting their tastes and needs. Graduation from high school not necessary for entrance.

We offer just these opportunities. Students take English or Literature, but the course otherwise is elective. All subjects count for diploma.

We send students to Vassar, Wellesley, Smith, Mt. Holyoke on certificate. Special work in voice, piano, violin and pipe organ with eminent Boston teachers. A finely equipped school. New building with new organ; new gymnasium and swimming pool.

All the opportunities of Boston in Music, Art and historical associations are freely used.

A girl, after leaving grammar school, can begin her studies at Mount Ida and continue them until she has an education equivalent to two years in College, taking through her whole course an elective program. Domestic Science, Art, Elocution. Send for Year Book.

Exceptional opportunities with a delightful home life. 71 Summit St., NEWTON, Mass.

A modern, efficient, preparatory and manual training school for boys. It will give your boy a thorough education, training, and good character preparation for college and life.

Exceptionally fine manual training work. Modern buildings, fine-dust, sanitary, clean, laboratories, gymnasium, swimming pool, and athletic field. An exceptional faculty. College certificate accepted. Efficient records made by attachment to 12 colleges.

Those addressing Secretary, will receive illustrated book.

4 ELMWOOD AVE., DETROIT, MICH.

Normal School of Physical Education

Box 406, Battle Creek, Michigan
Two Year Course and Summer Course. Physical Education and Physiological Work. Universal opportunity for men and women while studying. Two Internships for high school graduates. Summer School June to August 1912. For more facts of specialities. Address for booklets: WM. W. HASTINGS, Dean

STAMMERING Permanently CORRECTED

Don't let this distressing habit grow on you. We correct it in a few weeks. We have the most thorough, scientific, and successful method ever devised. To prove it we give A WEEK'S TRIAL FREE. Endorsed by highest authorities and all former pupils. Best method used in public schools. Teachers can greatly increase incomes, and secure immediate positions, by taking special summer course. Write today for catalogue. THE REED SCHOOL, 367 Hubbard Ave., Detroit, Mich.

UNIVERSITY SCHOOL Cleveland, Ohio

Offers thorough preparation of boys for college and business. Complete Manual Training School. Manual training is an essential part of the curriculum and develops concentration. Strong faculty, small classes result in perfecting of our own enter college. Equipment very complete. Gymnasium, swimming pool, seven acre athletic field, bowling alley. The many unusual features make this school worth investigating. For catalogue address:

HARRY A. PETERS, Prin. 7245 Hough Ave.

GRAND RIVER INSTITUTE

Thorough work. Home surroundings. Ideal location. Academic, Commercial, Music, Art, Manual Training Courses. BOARD, ROOM and TUITION ONLY \$175 PER YEAR. Large endowment makes this possible. Address, E. W. HAMBLIN, President, Ashtaburg, Ohio.

Miami Military Institute

A Leader in Fitting Boys for College or Business. Classed "A" by U. S. War Dept. U. S. Army Officer Commandant. Camp and Target Range at Camp Perry on Lake Erie. All athletics. Classical and Scientific Courses leading to degrees; graduates accepted at eastern universities. Business and Preparatory Courses. Write for catalogue. Col. ORYON GRAFF BROWN, M.L., Pres., Box 72, Germantown, Ohio

DEFIANCE COLLEGE Defiance, O. High grade. Co-educational. A select student body; strong faculty. New buildings thoroughly equipped. Collegiate, Domestic Science, Academic, Teachers', Commercial, Music, Art, Elocution, and Physical Training Departments. \$125 for board, room rent and tuition. Catalogue: P. W. McREYNOLDS, Pres.

Beverly Farm

Home and School for Nervous and Backward Children. 180 acres. Five buildings. Cottage plan. Open year round. If interested, address Dr. W. H. C. SMITH, Superintendent, Godfrey, Madison Co., Illinois

MORGAN PARK ACADEMY, Morgan Park, Ill. Box 15. A real school for real boys. Known for character building. A notable record for living boys, through personal attention, for College, Technical School, Business. Home influence, with military features. Thorough men teachers live, work, and eat with boys. Healthfully located. 14 miles from Chicago. Free illustrated catalog and "Results With Boys." Your boy will like Morgan Park!

Frances Shimer School of the University of Chicago

For girls and young women. Academic and college courses. Music, Art, Domestic Science. first year. Catalogue. Rev. Wm. P. McKee, Dean, Box 615, Mt. Carroll, Ill.

MINNESOTA

St. Mary's Hall

Faribault, Minn. A Home School for Girls

Established by Bishop Whipple in 1866.

Certificate admits to leading colleges. Excellent advantages in music and art. Write for catalogue.

THE
SCHOOL BUREAU LITERARY DIGEST

Snatch Excerpts from 6 Books on the Human Mind

Dr. Paul Dubois'
Psychic Treatment of Nervous Disorders

"A person is not neurasthenic in the same way that he is phthisical, uremic, cardiopathic, but he is neurasthenic just as he is lazy, undecided, timid, irritable, and susceptible. Tell me, please, what organic chemistry can explain these peculiarities of our psychic being? What is the toxin that makes of a poetic genius a Sadist or an invert? Do we bestow energy upon a patient who has lost his will-power by injecting glycerophosphates into him, by washing his blood with mineral waters, by making his cutaneous vessels contract by a cold douche, or by nourishing him exclusively on pap? No! It is a question of mental conditions and of psychic peculiarities. These can be fostered by influences which are entirely somatic; but they can be equally influenced by educative efforts."

Cloth, 466 pages, \$3 net; half-leather, \$4.50; postpaid, 15c. extra.

of Interest to Physicians and Other Independent Thinkers

The
Education of Self
Dubois

"I recognize," said an intelligent woman to me, the necessity for repression of emotions; but when something happens to upset me, REASON, that ought to save me, comes only five minutes later, which is too late. . . . It is the same with fencing; for a long time our parry comes only after our adversary's button has touched us. Little by little our defense becomes smarter, and one day we succeed in turning the point before it touches us. Let us exercise ourselves in moral defense, and we shall avoid defeat."

Cloth, 317 pages, \$1.30 net; postpaid, \$1.60.

Jules Payot's
Education of the Will

"Meditative reflection is marvelously fertile in results: It gives birth to strong affective emotions; it transforms vacillating tendencies into energetic resolutions; it utilizes the influence of the suggestions of language and passion; it enables us to get a clear glimpse of the future, and to foresee the dangers arising from our own nature and to avoid the external circumstances of our environment, that contribute to our natural indolence."

A truly great book—30 editions in French—translated into all languages.
Cloth, 424 pages, \$1.50 net; postpaid, \$1.60.

Dr. Schofield's
The Force of Mind, or the Mental Factor in Medicine

"In neglecting the systematic and scientific employment of mental influence in the course of disease, medical practitioners throw aside a weapon for combating it more powerful than all the drugs in the Pharmacopoeia. Indeed, so great is the mental factor in therapeutics, that it is not too much to say that inferior medical skill with a good and assuring manner is more likely to effect a cure than a superior skill with a diffident and depressing personality."

Cloth, 309 pp., \$1. postpaid.

Nerves in Disorder
Schofield

"A disease due to the imagination is not necessarily an imaginary disease, but may produce various functional and even organic disturbances. The diseases grouped under the heads of nervousness, hysteria, etc., are real in origin and effects, and formidable in their nature; and it is high time that the ridicule, the offspring of ignorance, with which they have so long been surrounded, be entirely done away with. A nervous invalid is a far greater sufferer than a man with a broken leg."

Cloth, 200 pp., \$1.50 postpaid.

Nerves in Order
Schofield

"If we daily spend what mental and physical force we have without strain, so as to produce a healthy fatigue of mind and body, that entirely disappears in sleep, so that we rise fresh and well; if we are conscious of no running down in weight or in our powers, especially of nerve force; if we have not to use any stimulants of any sort, we may justly believe we are spending our health income and not our capital."

Cloth, 291 pages \$1.50 postpaid.

NEW YORK, MAY 31, 1913

WHOLE NUMBER 1206

TOPICS OF THE DAY

A PACIFIST IN CHARGE OF OUR FOREIGN RELATIONS

IN THE BRIEF TIME that he has held the portfolio of State, William Jennings Bryan has shown, in the felicitous words of a fellow speaker at a recent banquet, "that so far as he can, he is not going to permit humanity to be crucified on a cross of war, but instead, that he will work to have it crowned with the golden crown of peace." Not that the universal recognition of the Secretary's stand means anything like a unanimous commendation of what he has said and done. His course "is winning him new and unaccustomed esteem," in the opinion of the *New York Evening Post*, which adds graciously that this is "not the least pleasing aspect of his peace policy." But other editors grumble at the sight of the Secretary of State "gadding about" to talk "generalities," and cannot find anything of practical merit in the plans he has announced. According to *The Army and Navy Journal's* way of thinking there is even danger that the Secretary of State may be hurting the nation's interest, at the present time, "by his attendance at peace meetings and his declarations that every question should be settled in a peaceful manner." Mr. Bryan evidently has no such misgivings. He has had to carry on difficult negotiations dealing with protests from a Power sometimes thought of as our great future rival, yet the faith within him remains unshaken, and he remarks serenely:

"I made up my mind before I accepted the office of Secretary of State that I would not take the office if I thought there was to be a war during my tenure. When I say this I am confident that I shall have no cause to change my view, for we know no cause to-day that can not be settled better by reason than by war.

"I believe that there will be no war while I am Secretary of State, and I believe that there will be no war so long as I live, and I hope that we have seen the last great war."

Mr. Bryan's fanciful "two-battleship program," a vision of the day when our Navy shall be made up of the dreadnoughts *Friendship* and *Fellowship*, whose "shells carry good-will" and "are projected by the smokeless powder of love," is of course received by the press either derisively or with kindly good humor. But the Secretary has offered a concrete plan for the promotion of peace which has compelled the newspapers to take it on its merits and to give it serious criticism or commendation. This proposition has been laid before the Senate Foreign Relations Committee, and has been presented to the entire diplomatic corps, assembled expressly for that purpose. The Brooklyn

Eagle sees in the Bryan plan simply an adaptation to diplomatic purposes of the homely advice: "When angry, count fifty; when very angry, count a hundred." "The prescription for the Bryan 'cooling off' and 'getting sober' medicine," as the *New York Commercial* calls it, is simply the suggestion that all nations adopt, in addition to any arbitration treaties they may be bound by, an agreement something like this:

"The parties hereto agree that all questions of whatever character and nature in dispute between them shall, when diplomatic efforts fail, be submitted for investigation and report to an international commission (the composition to be agreed upon); and the contracting parties agree not to declare war or begin hostilities until such investigation is made and report submitted.

"The investigation shall be conducted as a matter of course upon the initiation of the commission without the formality of a request from either party; the report shall be submitted within (time to be agreed upon) from the date of the submission of the dispute; that the parties hereto reserve the right to act independently of the subject-matter in dispute after the report is considered."

While this is evidently as much an Administration measure as the Taft arbitration treaties, and while Secretary Bryan insists that to President Wilson belongs all credit for "the latest and longest step toward peace," the *New York Herald* (Ind.) contends that W. J. Bryan is really "its proud daddy." And it quotes as authority this passage from Mr. Bryan's own *Commoner*:

"The peace plan which the President authorized the Secretary of State to present to the representatives of foreign nations was presented by Mr. Bryan to a peace congress in London in 1906 and unanimously indorsed by it."

At one of the many dinners that have been given to the delegates who are arranging for the celebration of one hundred years of peace between this country and England, the Secretary of State said of this Wilson-Bryan plan:

"I believe, my friends, that this proposition is as long a step in the direction of peace as has ever been proposed. It does not mean to take the place of arbitration treaties; make all you can; submit to arbitration every question which you can agree to submit; but when you are through you will find, at least we have found thus far, that there are certain questions that are excepted.

"And they are so important that they themselves become the cause of war. And it is the purpose of this plan to close the gap and to leave no question to become a cause of war. It is the

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted, and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 44-60 East Twenty-third Street, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

belief of the President, it is his earnest hope, that when these treaties have been made, or agreements if you prefer to call them such, agreements between this nation and all the other nations severally, by which there will be investigation before hostilities begin, it is his belief, it is his hope, that war will become practically impossible."

This proposition "places the United States in the leadership of the peace movement," declares the *Pittsburg Dispatch* (Rep.).

THE NEW MARINE PAINTER.
—Berryman in the *Washington Star*.

and the *Indianapolis News* (Ind.), *New York Evening Post* (Ind.), *Boston Advertiser* (Rep.), and *Chicago Tribune* (Prog.) are equally confident of its value. The *New York Times* (Ind.) speaks of it as "one of those rare ventures in the field of world affairs of which it may be said that it can do no possible harm, and may do much good." True,

"It would by no means necessarily prevent all wars, for war is sometimes the only final arbitrament. But it would tend to prevent all but the truly inevitable contests. It would, moreover, be in the direct line of the traditional policy of the United States with reference to the peaceful adjudication of international disputes, and it would very powerfully reinforce that policy. It would, indeed, in most cases, make resort to arbitration unnecessary, for if we engaged to study all causes of difference, in cooperation with the other Government, for a year or half a year, the chances are many that we should come to an agreement without outside aid. . . . It will be a national and an international gain if it be adopted."

Yet the *Brooklyn Eagle* (Dem.), which believes that nations would often find the "cooling-off" process of distinct value, notes this "serious objection" to the Bryan plan:

"It does not and can not prevent a nation secretly resolved on war from carrying on preparations for war during the whole period of investigation by the proposed international commission. It is quite conceivable that the opportunity given for the 'cooling-off' process might be abused by one of the contracting parties so far as to obtain a distinct advantage over the other when the time came to throw diplomacy and arbitration overboard."

Other dailies, like the *Philadelphia Inquirer* (Rep.), *Detroit Free Press* (Ind.), and *Chicago Inter Ocean* (Rep.), think the Administration's plan "harmless, but futile." The *Inter Ocean* argues that modern wars are not entered upon in sudden anger. It takes two typical instances:

"The blowing up of the *Maine* but struck into flame the smoldering conviction of two or three generations of Americans

that some day we would have to kick Spain out of Cuba. The Balkan declaration of war was unexpected to those who assumed the inevitable military superiority of the Turk, but the Bulgarians had been preparing to fight ever since the Treaty of Berlin."

In a recent Sunday peace sermon in Washington, Secretary Bryan paid his respects to the business interests and the newspapers which he says are behind the "war-scare" talk. To quote from his remarks given in the press accounts:

"The world is learning that back of much of the furor for war, back of much of the stirring of the passions of the people, is the interest in armor-plate and in battle-ships on the part of corporations whose business it is to build those battle-ships and to make this armor-plate. It has even been found that men in one country will spend the money to stir up in another country a feeling against their own country. If you can think of a baser use of money than that you will have an inventive genius of which you may be proud."

"Not only that, but I believe that with a larger intelligence the people will begin to discriminate between patriotic newspapers and newspapers which are more interested in big headlines and sensational news than in the spread of truth."

The new and "refreshing thing" in all this, according to the *New York Evening Post*, "is to have a Secretary of State, especially concerned as he is in maintaining friendly relations with other countries, take the public into his confidence and courageously point out the selfish and insidious enemies of peace."

But *The Army and Navy Journal* (New York) takes a far different view of Mr. Bryan's utterances. Such a remark as "I know no cause that can not be settled better by reason than by arms" may easily, it declares, "be misconstrued by foreign jingoes as an evidence of national weakness." Further:

"It may not only create in Japan a misinterpretation of the temper of the American people, but it is likely to show the people of California that the negotiations with Japan are being conducted by the State Department through the intermediary of a doctrinaire who is actuated more by devotion to his abstract theories of right than by a just estimate of the actual conditions confronting the Californians."

We have already seen, says *The Journal*, melancholy examples

BUSY DAYS FOR THE HANDY MAN.
—Sykes in the *Philadelphia Public Ledger*.

"of a wrong reading of the fighting pulse of a nation." One was the erroneous opinion in the South before the Civil War that the North lacked fighting spirit. "Again, before the Spanish-American War, the people of Spain had been deluded into the belief that their navy was superior to that of the United

THREE DIPLOMATS AND THEIR PROBLEM.

States." These examples inspire *The Journal* to ask whether, in this case,

"Mr. Bryan is not treading dangerously near the border-line not only of good taste, but also of diplomatic propriety, in raising his voice now in favor of settling all questions without war."

THE RACE ISSUE IN THE JAPANESE PROBLEM

THE ENACTMENT of the Webb-Bloodgood Act has, in the opinion of most press commentators, enabled California to exclude the Japanese from land-ownership without violating the treaty of 1911. Herein, and in passing the controversy entirely over to the Federal State Department, which must now defend California's action, Governor Johnson and the State legislature have admittedly triumphed. But they are reminded by a Japanese lecturer in the University of Chicago that "they have now raised an issue which, we presume, the Californians are not much enamored of—the question of the naturalization of the Japanese." Japan being "in a way pushed to the wall," this writer says in a letter to the *New York Times* that "one can see no other recourse for her than to ask the American Government to grant to her subjects the right of naturalization accorded to Europeans, or to give her a satisfactory answer that her subjects shall not be discriminated against." So, despite the objections of some Washington correspondents that Japan will never take any move to assist her citizens to expatriate themselves, it seems to be generally understood among newspaper writers that Japan has now made the issue "one affecting her national pride and honor rather than the mere question of alleged violation of treaty rights." Mr. John Temple Graves even goes so far as to inform readers of the Hearst papers of the "idea now generally entertained" in Washington "that Japan has from the beginning used this protest as a mere preliminary to a formal demand that its people should be eligible to citizenship." And it seems "more than likely" to the more conservative editor of the *Philadelphia Record* that "the purpose of the protest is to press the race issue to the front"—

"The California demagogues had better have left well enough alone. They have made acute a controversy that lay dormant and would have remained so indefinitely."

The race issue has thus superseded the land question in journalistic discussions in both Japan and the United States. Tokyo dispatches tell of newspaper protests against "racial prejudice of the whites" and quote a declaration by Mr. Tokutomi, editor of the *Kokumin*, that "the white men's clique must be overthrown in the interest of Japan and in the interest of humanity."

Dr. John R. Mott, who only lately refused the post of Minister to China and who has just returned from a visit to Japan, where he talked with leaders of public opinion, says that

"The Japanese, as a nation, want nothing more of us than a non-discriminatory attitude. They have no objection to the most rigid requirements both for immigration and naturalization; in fact, they have themselves some of the most drastic laws concerning the holding of property by aliens, but they do not want to be considered as a race inferior to the races of Southern and Eastern Europe whose immigrants we admit in such large numbers. They simply do not want to be discriminated against."

Dr. Mott, it should be added, in the course of a *New York Tribune* interview, warned Easterners that the opening of the Panama Canal "will bring the question that is now bothering California right up to our Eastern ports." "So long as the American attitude excludes the Japanese from rights accorded to Europeans, so long," writes the *New York Evening Post's* Tokyo correspondent, "will there be trouble." "Personally," he continues:

"I may say that I have lived in various parts of Europe, in Canada, and in every part of the United States, including the most congested immigrant regions, both East and West, and I do not hesitate to say, after some years of residence in Japan, that the Japanese is more worthy of American citizenship than the average immigrant from Europe. It is a mistake to wait until Japan asks for the right of citizenship. I can scarcely conceive of the Japanese authorities ever taking an attitude that many could be sure to interpret as disloyal, at least, to national tradition. It is a matter that, so far as Japan is concerned, must be left to individual initiative; but it would be a just and gracious act if America could see her way to granting, without formal

SHEDDING YOUR HORNS IS BAD ENOUGH, BUT HOW ABOUT SOMETHING TO EAT?

—Kemble in the *New York Evening Sun*.

THEIR HOUR OF NEED.

request, the same right to naturalization that she now concedes to nationals from Europe."

It need hardly be said that such a view is not fairly representative of newspaper opinion in this country. Says the *New York American*:

"Under existing economic and social conditions in this country, it is quite out of the question to open our doors to an unrestricted Oriental invasion. We can not possibly permit a horde of Japanese immigrants to become part and parcel of the American people."

"On this subject Americans are sure to be practically unanimous."

And with varying decisiveness and vigor of utterance we find such papers as the *San Francisco Star*, *New York Times*, *Chicago Tribune* and *Inter Ocean*, and *St. Louis Globe-Democrat* testifying to this practical unanimity. The *Chicago Tribune*, indeed, tries to convince the Japanese that exclusion from citizenship implies no inferiority, only essential difference in kind, "that the Oriental races might be excluded from citizenship with a full recognition of the eminence of their civilizations, of their great virtues." Others, however, are more outspoken. The *Newark Star*, for instance, declares that we are really facing the much-talked-of "yellow peril," that this is not a Californian, or even an American, but a "world question."

To the *Oakland (Cal.) Enquirer's* question, as to what Japan will do now, we find three suggested answers in the press. Suit may be brought in the United States courts to determine the validity of the California land law, or to fix the question of Japanese eligibility under our naturalization laws. Were the latter done, it would, in the *New York Journal of Commerce's* opinion, be a most desirable consummation. Or, Japan might negotiate a new treaty with this country "increasing the opportunities of immigration and guaranteeing real property rights." But, says the *Salt Lake Herald*, "should the Administration endeavor to nullify the California statute by the formulation of a new compact, the Senate of the United States is there to prevent it." And the *St. Louis Globe-Democrat* is convinced that the Senate would do so. Then, if diplomacy fails, we read in the *New York Tribune's* Washington correspondence, obviously "Japan's only resort is to The Hague, under the provisions of the arbitration convention, which expires by limitation on August 24 next."

To this we should object, protests *The Army and Navy Journal* (New York), which thinks that "the men at The Hague will be no better qualified to render a just decision on the points raised by the acts of the California Legislature than would be the people of the Western Continent to decide between the Turks and the Allies if the questions at issue between them were submitted to a tribunal made up of delegates from North and South America."

SETTING THE REPUBLICAN FRACTURE

AGAIN THE CRY of "Get Together" is raised for Republican and Progressive ears, the *Chicago Inter Ocean* (Rep.) remarks, in commenting on D. R. Hanna's appeal for union and a "purified and popularized" Republican party, while the same call is recognized by the *New York Sun* (Ind.) in the harmony conference at Chicago of such leading Republican progressives as ex-Governor Hadley and Senators Cummins, Kenyon, Borah, Crawford, Gronna, and Sherman, with thirty-two additional Republican leaders from nine States. The conferees adopted a resolution recommending that a national convention be held at as early a date as practicable this year in order to accomplish certain reforms in party machinery tending to restore harmony. The first of the new provisions affects the basis of representation, so that delegates shall represent the proportion of Republican voters, not the general population; and the second would have the primary laws of the respective States recognized in the election of delegates. The other provisions are general, and the *Newark News* (Ind.) hints of the whole manifesto of the conference that it should have contained a demand that the present members of the National Committee resign because it is "hopeless to hold out overtures to the Progressives" until there is a radical change not only in "the party rules, but also in the party management." Yet a different view is held by the *Rochester Post-Express* (Rep.), which explains that the assumption of the conferees is that the proposed changes in convention machinery "will meet the objections of the Progressives" and "reunite the party," as "there is no unbridgeable gulf between the factions."

A cheerful view is taken by the *Boston Advertiser* (Rep.), which avers that "many Republicans went out of the party without

surrendering any of the principles which make the basis of Republican beliefs," while the *St. Louis Globe-Democrat* (Rep.) holds that "the Progressives are swinging back to the Republican party, as shown by municipal elections in Chicago, St. Louis, and in towns in Colonel Roosevelt's neighborhood," as well as "in the State contest in Michigan." To keep up the split any longer, in the opinion of the *Ohio State Journal* (Rep.), is "neither good sense nor good spunk," and it throws out the caution that while both the Progressive party and the Republican party will have to make concessions, these concessions "will be more of party pride than of doctrine." The *Denver Times* (Ind.) captions the situation as "a living party: dead issues," admonishing the Republican party that as it was third in the race last fall, it must make the concessions "to the Progressive party," yet in any event both groups must unite to oppose the Democrats with a "definite, authoritative platform." That the Democrats need united opposition is also the injunction of the *Seattle Post-Intelligencer* (Rep.), which is "in hearty sympathy" with the plans of the Chicago conference; and in similar spirit the *Portland Oregonian* (Rep.) observes of the movement for a special National Convention that it should "receive the indorsement of all loyal Republicans." A like stand is taken by the *New York Tribune* (Rep.).

But while the regular Republican papers in all parts of the country seem keenly desirous of reunion, it is noticeable that the Progressive papers are mostly cynical or frankly hostile to the idea. The *Chicago Tribune* (Prog.) states that if another Republican convention is controlled by the same powers that controlled the last, "it will almost, if not quite, end the Republican party," and in mordant vein the *Detroit News* (Prog.) remarks:

"The progressive Republicans in fact and the progressive Republicans in pretense are getting together for an attempt at hybridizing the Republican progressives and the Republican stand-patters into one amiable, intelligent, and harmonious whole, on a basis that will please all parties."

"The reorganized party, in order to please all the elements in itself, must have a platform of rare and curious workmanship

the *Philadelphia North American* (Prog.) says of Senator Cummins' "penny project of a remodeled Republican party":

"However absurd the plan of Republican reorganization may be, it should be applauded and encouraged by all Progressives. For every successful move made by the projectors serves further

GET HER OFF THE ROCKS FIRST.

—Sykes in the *Philadelphia Public Ledger*.

to indict the Republican bosses, to prove the charges brought by the Progressives, to demonstrate the soundness of the Progressive position, and to commit still larger bodies of voters to the principles of popular government. We confidently believe the movement will do more—that it will eventually land Cummins, who is thoroughly conscientious, and Borah and Hadley, who let nothing but political expediency interfere with their adherence to principle, where they belong: in the Progressive party."

Even Mr. Munsey's *Baltimore News* (Prog.), we are reminded by the *Chicago Evening Post* (Prog.), which was one of the original proponents of the "amalgamation holding company," "does not take great stock in the new movement," asking, "what is to become of it if, having indorsed all these reforms, the National Committee still entrusts their administration to Barnes and his like of the old régime?" Unalterably Progressive, the *Oakland Enquirer* asserts that "Republican prayers for the return of the Progressives will be unavailing," because they could join the Republicans only by "retrogression, abnegation, and degradation," for theirs is "the second party of the Republic by right of conquest," and the first "by right of conscience." The *Enquirer* mentions some of the eminent men and women who have taken up the Progressive crusade and speaks of the platform as "a new declaration of rights" with a "humanitarian mission," and precisely such ideas impel the *New York Evening Post* (Ind.) to note that as "social service doctrines" are the live issues in which the Progressives have specialized, "if the Democratic tariff is a success, the chances of amalgamation are slim," for the tariff then passes from the field of controversy, and between the Republicans on one side and the Bull Moose on the other "there remains absolutely nothing in common." Another independent paper, the *Dallas News*, says:

"The prospect of winning control of the Republican party, even under fair rules, is hardly bright enough to lure the Progressives from the guardianship of their principles; for if they should cast and lose, they could become Progressives again only by 'welshing,' and the 'welsher' rarely prospers even in politics."

Their principles are of a radical age, remarks the *New Orleans*

HELP!

—Plaszke in the *Louisville Times*.

which will read to the stand-patter like an unwavering adherence to the old régime which went into the discard, and which will be equally pleasing to these ardent progressives."

Equally disdainful of the conferees are the influential *Los Angeles Tribune* (Prog.) and *Kansas City Star* (Prog.), while

Picayune (Dem.), and all the Republicans "who can not keep step with Colonel Roosevelt and the advance guard of the new party will either have to straggle in the rear" or try to gather up enough conservatives to make "some sort of an organization," which conviction is echoed by the *El Paso Morning Times'* remark that "the discordant elements within the Republican party can not be harmonized during the lifetime of Col. Theodore Roosevelt, except on one condition, and that involves the acceptance of Colonel Theodore Roosevelt as the supreme boss of the Republican party." A contrary view is taken by the *Atlanta Constitution* (Dem.), however, which points out that "through the length and breadth of the two opposing organizations there is evidence of an approaching understanding" against which the Democrats will have to put up a strong front; yet the *Montgomery Advertiser* finds that "from a Democratic standpoint the situation is all that can be desired," and proceeds to say that there seems "no possible chance for the Progressives and the Republicans to get together now, or at any time in the future."

FEDERAL RAILROADS FOR ALASKA

THE DARK FOREBODINGS of those who said that too much "conservation" would be the ruin of Alaska seem to have come true to the extent that when the "predatory" railroad builders were driven out, nobody else appeared to do the work. The claim of the critics has been that just such a result would follow a hostile crusade against capital that was needed for opening up the Territory. But the Wilson Administration has a remedy. Government ownership of railroads in Alaska, according to Secretary Lane, of the Interior Department, is "the one policy that will most certainly make for her lasting welfare," and while the proposal appears to the *Indianapolis News* (Ind.) as "neither new nor startling," yet it has "the strong point of practicability and availability." The plan is "at least worth a trial," thinks *The News*, which believes that if it had not been for "the many capitalistic scandals connected with private operations in Alaska," Secretary Lane's suggestion might have met with scant consideration; but now that "disgraceful plots to seize the vast riches" of the Territory "for the benefit of a mining syndicate or two" have been frustrated, nobody else seems ready to take hold, and altho Alaska is "no longer in danger of being taken over by these interests," her development is slow and halting. *The News* is ready to admit that the entrance of the Federal Government into the railway field in Alaska may be regarded by some as "the opening wedge of government ownership of railroads," but it denies that this is so, because conditions in Alaska are exceptional, and "what would be ill-advised in continental United States might prove the salvation" of Alaska.

The recommendation for the building of the Alaskan railways by the Federal Government is stated in a letter Secretary Lane sends to the Senate Committee of Territories, in which he suggests that we think of Alaska "as a land not only of mines and fisheries, but of towns, farms, and factories, supporting millions of people of the hardiest and most wholesome of the race," and, in defense of his policy of government ownership of the railroads, he argues:

"This is a new policy for the United States. Very true, this is a new part of the United States. And policies properly change with new developments. One determining question in all matters of government should be 'what is the wise thing to do?' The ancient method of opening a country was to build wagon roads. The modern method is to build railroads. To build these railroads ourselves and control them may be an experiment, but such a plan does not suggest scandals more shameful or political conditions more unhealthy than many we have known in new portions of our country under private ownership."

The success of the Government-owned Panama Railway Com-

pany is urged by the *New York Press* as an argument in favor of the Lane project. On the other hand, *The Wall Street Journal* is opposed to Secretary Lane's proposal, saying that Mr. Lane as a member of the Interstate Commerce Commission "long ago came under the suspicion of railroad men" as being in favor of government ownership of railroads. The *Chicago Inter Ocean* (Rep.) describes railroad men as puzzled by Mr. Lane's recommendation, as well as by "the proposed government purchase for \$20,000,000 of the Copper River and Northwestern Railroad, controlled by the Guggenheim interests, and the expenditure of \$30,000,000 on improvements and extension," from which *The Inter Ocean* concludes:

"It would appear to be only fair that the Government, if it is going into the railroad business in Alaska, should buy all the railroads and make whatever improvements and extensions are necessary for the development of the country. If the Government buys one road and uses its unlimited millions in improvements and extensions, it does not require the seventh son of a seventh son to read the future of all competing railroads. And as for future investment by private capital in Alaskan railroads—why, there simply will not be any."

Private capital will still be dominant in Alaska, the *New York Call* (Soc.) maintains, because the "public ownership" proposed in Secretary Lane's letter is seeming, not real, and *The Call* adds:

"We venture to say there will be no opposition to this project from the interests which control the resources of Alaska. They will figure that there is no need for them to go to the expense of constructing railroads when the Government itself will construct them out of the public funds. When built they will control them, practically, tho the Government may appear as the nominal owner. They will own or control practically all the freight handled by such roads, and as they are about the only 'public' that will be served by them, they have no reason whatever to oppose the project, but every reason to support it."

TWO "PROGRESSIVE" LEGISLATURES

THE MARKED tendency of the time in State legislation is apparent, the *Springfield Republican* (Ind.) notes, in the record of the recent sessions of the legislatures of California, Ohio, and New York, and it finds, in the cases of California and Ohio, that it is difficult to determine from the character of the laws passed which legislature is "the more progressive as that word is now commonly used in politics." *The Republican* sees further in the penal legislation in California and Ohio "a new spirit in dealing with the difficult question of crime," and adds that California's new laws in the matter of marriage and of the social evil are "of vital interest." The legislature and Governor of California are Progressive, while the legislature and Governor of Ohio are Democratic. The *Nashville Tennessean* (Dem.) remarks that these States "have demonstrated their progressiveness in government," and it gives the following list of some of the new Ohio laws:

- A "blue-sky" law.
- Torrens system of land tenure.
- State bank regulation with regular inspections.
- State survey of public schools to promote efficiency.
- Jury verdicts in civil suits by a three-fourths vote.
- Women made eligible to certain public offices.
- The short ballot in State elections.
- Primary elections for the nomination of all candidates for office.
- A model city charter law and home rule in municipal affairs.
- Thirty million dollars for good roads, to cover ten years.
- A State commission for regulating the liquor traffic.
- A widows' and mothers' pension act.
- A pension act for the blind.
- A compulsory workmen's-compensation act.
- Restriction on number of work hours per day for women.
- Convicts placed under indeterminate-sentence system, and prison authorities granted power to release those making good record when it can safely be done.

—Morgan in the Philadelphia Inquirer.

CARTOON GLANCES AT AN UNRECOGNIZED GOVERNMENT.

The *Tennessean* then gives a list of California's new reform legislation:

Workmen's-compensation act.
 Mothers'-pension act, establishing a fund for orphans.
 Rural credits commission to study European systems.
 Minimum-wage act, establishing welfare commission.
 A "blue-sky" law.
 Water commission to control power and irrigation supplies.
 Teachers'-pension act.
 "Red-light" abatement act, placing responsibility for houses of ill-fame on property-owners—to be voted on by the people.
 Law providing aid for discharged convicts and providing for wages to be paid convicts during incarceration.
 Act applying the principle of the Federal white-slave act to intercounty traffic in women.
 Act requiring all male applicants for marriage licenses to show health certificates.

Such legislation as this, *The Tennessean* concludes, "is a fair index to the sentiment of the American people," and yet those of them who are in California itself, where the echoes of the

legislative voice still ring clear, are not at all of one mind. The conservative *San Francisco Argonaut* (Ind.), for instance, speaks of the State legislators as "imbeciles" and calls their work "a sorry business." The *Progressive Los Angeles Tribune*, on the other hand, asserts that the criticism of the legislature has come from "reactionary political elements and their journalistic allies," and adds that the reform measures which have been converted into laws are not "freak legislation," but give "statutory effect to certain definite principles of social and industrial justice." In proof of this *The Tribune* cites the Minimum-Wage Law that—

"provides for the appointment of an industrial commission to investigate wages, hours, and conditions of labor of women and children, and the commission is given certain powers relative to the fixing of rates of wage. Few measures of social and industrial justice are comparable to this in importance. Every woman who toils should receive a wage sufficient to enable her to live in decency. Less than that constitutes industrial oppression and social injustice."

FOREIGN COMMENT

JAPAN AND THE LAND LAW

A FAVORABLE EFFECT appears to have been produced in Japan by President Wilson's efforts to stay the tide of anti-Japanese agitation in California. According to Tokyo dispatches to the San Francisco Japanese dailies, the *Shin-sekai* and the *Nichi-bei*, those speakers who stirred the warlike passions of the masses seem to be less in evidence, and the more thoughtful class, among whom Baron Shibusawa and his Japanese-American Association are a guiding

this: "We hold these truths to be self-evident—that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." If the United States connives at California's treating one of the most progressive races in the world like the scum of earth, she must forfeit all her claim to her vaunted doctrine of humanity."

The Tokyo *Yorodzu* is not satisfied with mere appeals to humanity, and suggests the organization of an anti-American league throughout the Orient. "The United States, should she permit California to perpetrate such outrages, deserves," this journal indignantly asserts, "to be ostracized by all civilized nations." And it adds:

"The European nations would not of course join us in this movement, but we can be sure of the sympathy of China and other Oriental nations. We shall see to it that not only are Americans treated as uncivilized people in this country, but that American trade and diplomacy in the Far East shall encounter obstacles."

The Osaka *Asahi* takes occasion to remind us how patiently and uncomplainingly Japan has borne the inconveniences and disadvantages which the "gentlemen's agreement" entailed to her. "The passport system necessitated by that agreement," says this journal, "is a barbarous system, restricting the right of travel of not only laborers, but students, merchants, and, in fact,

all Japanese who desire to leave these shores for America. The Foreign Office is so fastidious in adhering to the system that no Japanese, no matter how respectable or wealthy, can obtain a passport without much waste of time." And yet California does not seem to appreciate Japan's efforts, and the *Asahi* bluntly asks: "What is the use of being so careful about issuing passports?" The *Chu-gai-sho-gyo*, a commercial organ, points out that California is killing the goose that lays the golden eggs. How far Japanese commerce benefits the State is shown in Count Okuma's *Shin Nippon*, by the following comparative table for 1911:

IMPORTS TO SAN FRANCISCO		EXPORTS FROM SAN FRANCISCO	
Japan	\$24,095,918	Japan	\$12,380,222
China	7,334,312	England	4,995,871
The Philippines	2,720,113	The Philippines	4,597,286
India	2,148,640	Germany	3,179,076
England	1,791,673	Canada	2,348,372
Germany	1,709,735	Australia	2,187,475
France	1,688,525	Ireland	1,785,779
The Straits Settlements	1,612,775	China	1,383,412
Chili	1,126,772	Mexico	996,905
Italy	1,046,058	Chili	678,588
Australia	621,968	France	643,590
Mexico	478,889	India	126,288
		Italy	23,899

force, are now earnestly studying ways and means to solve the California question. The Association has just sent to California Baron Soyeda, ex-President of the Industrial Bank of Japan, an influential financier and publicist, to investigate the question on the spot. Both the "Kokumin-to" (Nationalists) and the "Sei-yu-kai" (Constitutionalists) are also sending delegates to the storm center. Meanwhile the leading newspapers in Japan continue to protest as vigorously as ever. "That California should pass the land bill," the Tokyo *Asahi* declares, "is a blot upon humanity, and it is the United States herself rather than Japan which is outraged by such a barbarous act." To which the Osaka *Asahi* adds that the passage of the bill indicates the "moral degradation of the United States, or at least a section of the Union." We read on:

"Japan received first lessons in humanity and freedom from the American nation. What irony of fate that its infant pupils should now have to act as teachers to their old schoolmaster! What is at stake in the California imbroglio is not the civil rights of this or that race, but humanity itself. No man, whether in his native land or in a foreign country, should be deprived of the elemental rights to live and to enjoy the fruits of his honest labor and the legitimate rewards of his brain. What is the fundamental principle and ideal which made the United States great and which she has every reason to be proud of? It is

HOSPITALITY TO AVERT HOSTILITY.

Count Okuma (facing the camera, in the middle of the group) holding a meeting of Japanese and American Christian missionaries at his residence to solve peacefully the California trouble.

A clever point is made by the *Jiji* (Tokyo), which recalls that the Baltimore convention which nominated Mr. Wilson adopted a platform containing an indorsement of the nullification of our treaty with Russia on account of the inequitable treatment accorded the American Jews by the Russian Government. "If the new Democratic Cabinet means to live up to that platform," it argues, "we may reasonably expect President Wilson to render justice to the Japanese in California." To the *Osaka Mainichi* the California incident appears especially deplorable as it came at the moment when Dr. Hamilton Mabie, a Carnegie peace envoy, was addressing appreciative audiences, creating genuine feeling of respect for the American nation.

The suggestion made in some quarters that Japan withdraw her promise to participate in the Panama-Pacific Exposition is indignantly rejected by the *Tokyo Niroku*, which regards such a means of reprisal as "womanish." It asserts:

"We are a nation of valiant, justice-loving people. Our dealings with foreign nations should accordingly be manly. We should do what is right, just as we expect America to do what is just. We have given our promise to the exposition, and it is incumbent upon us to fulfil it to the letter. . . . Justice is a thing which should be guarded even by the sword. We should

PRACTICAL WORK FOR "PEACE ON EARTH."

An American missionary addressing a Japanese audience in behalf of a peaceful settlement of the California land-ownership dispute. A forcible gesture unfortunately coincided with the flashlight.

have no fear or hesitation in pressing our just demands. If the land law of California does not violate the letter of the treaty with America, it obviously violates its spirit, and it is, after all, the spirit that counts. The present treaty was concluded in haste to be submitted to the Senate at Washington before its adjournment, and in consequence it has many loopholes. But the spirit underlying the letter was undoubtedly to give us all the privileges which were to be extended to other nations. Furthermore, the land law is in contravention of the fundamental principles of international law."

JAPAN'S ALLY ON CALIFORNIA

AN ODD FEATURE of the California-Japanese dispute is that the only other nation on earth that excludes Orientals is Japan's ally, the British Empire, which bars them from Australia, New Zealand, and South Africa. Instead of any war-talk over it, here we have a military alliance, but the alliance does not seem to keep the British press from having a good deal of sympathy with California. The *London Times* quotes Admiral Mahan as advocating the admission of the Japanese into "the European family," and admits their good qualities, but for all that it seems to think something is to be said for our Western State:

"The ultimate point of the dispute does not affect the United States alone, still less California. It is a world question essentially. The fears of the inhabitants of the Pacific slope are exaggerated and premature, but they are not entirely groundless. No useful purpose can be served by blind condemnation of the tendencies of public opinion in the Western States. They do not spring so much from race hatred as from the instinct of self-preservation, and if the present minor dispute is composed they will assuredly recur. The time has come when Japan is disposed to challenge the very essence of the attitude of Western nations toward Asiatics. She asks admission to the comity of nations on equal terms."

The *London Pall Mall Gazette* is even more pronounced in support of California's position. It remarks that "the point at issue, the exclusion of Asiatics from permanent settlement, touches the British Empire very nearly," and avers that "should war break out the sympathies of Australia, New Zealand, and

● PEACEFUL ARMAMENT.

Armed peace = armament for the sake of peace; therefore, peaceful armament—tho, perhaps, somewhat costly. All very good; but what say you about bee's fool. Amen-damn.—*Tokyo Puck*.

western Canada would be violently on the side of the United States," for—

"Asiatic immigration is not a question of sentiment, but of sheer existence for the white populations that are established on

NOT YET.

PEACE—"The Balkan War is over—now we'll go to the Peace Palace at The Hague."

MAIS—"No, no, dear lady, the fun is just beginning! Now for the fight over dividing the booty."
—*Jugend* (Munich).

the Pacific Coast, whether in British or American territory. The Asiatic brings cheap labor and a parsimonious scale of life to compete against high wages and habits of profusion. In such an economic contest poverty is a sure victor. The Asiatic will always undersell the European, and the latter must find himself evicted from any industry in which the gauntlet is thrown down. Californians and British Columbians read the Oriental menace as an intimation for themselves of impoverishment and ultimate exile from their own country. In a competitive industrial society a higher and a lower civilization can not keep company, and an Asiatic incursion is bound to bring about the submergence or expulsion of white labor.

"The friction of such a process may be tempered from time to time by international agreements; but if the Asiatic races persist in the attempt to seek a footing on the other side of the Pacific, the Governments of the Dominion and of the States will eventually have to look the fundamental question in the face and give it a plain answer."

The *London Daily Mail* thinks that danger lies in the fact that the views of America and Japan are really matters of honest and sincere conviction. Each country holds itself to be in the right. The result is a clear deadlock, and this paper has a rap at Mr. Bryan's serene optimism in considering that the quarrel will pass like a summer cloud, ending in smiles and compliments. To quote:

"Japan holds she has won the right to be treated with the same regard as a white nation, yet the whites refuse to admit that principle, and the reason therefor may be summed up in Lafcadio Hearn's pregnant utterance, 'The East can underlive the West.' This is why South Africa, Australia, and New Zealand exclude Orientals, but California, while following in their footsteps, does so with aggravation and is acting in open defiance of a treaty. . . .

"It would be well for Mr. Bryan to remember that he who declares that nothing will force him to fight is inviting his opponents to drive him into a position in which it will be difficult for him to keep the peace."

DISPUTES OF THE BALKAN ALLIES

FAST AND FURIOUS becomes the scramble among Serbs, Bulgars, Greeks, and even Italians for Turkey's conquered provinces in Europe. They certainly, as the Roman historian says, have made a desert and a howling waste of city and valley, but they can not, like the Roman conquerors, call it peace. Turkey is conquered and the Balkan League automatically dissolves, but who is to divide the spoil? Austria has her demands with regard to the northern part of Albania, and Greece claims a slice of the southern section of the same province. Even Italy has come into the quarrel and maintains that as she occupied some of the islands of the Levant during her Tripoli campaign, Greece must not lay a finger on them. In the original formation of the Balkan Alliance, Russia was appointed to be arbiter or umpire in case of misunderstanding. The European press are asking whether the Teuton disputant, Austria, backed by the Teuton Germany, will permit the intervention of Russia, as the lion who is to award to each a share of the booty?

Nor can the Allies agree among themselves. The Servians insist that they are entitled to more than stipulated in the treaty, because they furnished a larger army than their agreement called for, and they claim that the successful termination of the war is due directly to that. They declare that the division should be made on the basis of the losses suffered for the common cause. The Bulgars do not find such a solution satisfactory to themselves, and the controversy is reported to have been submitted to Russia for arbitration. The Greeks, too, have some differences with Bulgaria concerning Salonika. All that is very disappointing to some Slav newspapers, which built castles on the Balkan Alliance and predicted a dire fate to Austria and the whole Teuton race. *The Novoye Vremya* (St. Petersburg) thus sizes up the situation:

"Any one who has been reading Servian newspapers attentively can not help noticing that some portions of the Servian people

REMAKING THE MAP.

LITTLE BALKAN URSCHINS—"It's right!" "It's wrong!" "More to the left!" "More to the right!" "Higher!" "Lower!" etc., etc.
—*Kladderadatsch* (Berlin).

have long and persistently considered the possibility of an armed conflict with the ally of yesterday. They reason thus: The Greeks have claims against the Bulgars; the Serbs, too, have some claims against the Bulgars. If the Serbs and the Greeks

EUROPEAN SUSPICIONS CROPPING OUT IN CARTOONS.

The idea that Nicholas received a large sum for giving up Scutari gains just enough credence to inspire sketches like these in the comic papers.

should combine, they would drive the Bulgars from Lake Ochrida and would easily divide between the two of them those territories which, according to the original treaty, it would be necessary to apportion among the three conquerors.

"A second Serbo-Bulgarian war would be a disgusting spectacle, and there is no desire even to speak of it. But once the word has been uttered, public opinion has to express itself on the subject. The affair appears to us in this light: On the one hand, we have no serious faith in the longevity and the firmness of the Serbo-Greek understanding, which will form the basis of the war above referred to, and in the existence of which we do not believe. If Serbia will enter upon a struggle with Bulgaria, she will, evidently, decide upon such a step for the sake of some great, absolutely vital interest of state. What can that interest be? Only one thing—the right of a free outlet to the sea. It is obvious that for the sake of acquiring Valona, Ochrida, or even Monastir itself, it will not pay to ruin such a great and promising thing as the Balkan Alliance. The above-mentioned places are provincial Turkish towns, and the fate of Serbia can not be radically changed by the acquisition or non-acquisition of them.

"Summing up in a few words, we can say: It may pay Serbia to risk a war for Salonika, but not for Monastir. And once we recognize this thesis as correct, we are compelled to make from it a logical deduction: the Greco-Servian alliance can not be lasting, because the Greeks can not satisfy the fundamental Servian demand which may cause the Serbo-Bulgarian war. . . . The Greeks are at present quarrelling with the Bulgars over Salonika. Can it be sensibly supposed that after a second war, having conquered not only the Turks but also the Bulgars, the Greeks will voluntarily reduce their demands and cede to the Serbs the same Salonika which they are unwilling to give to the Bulgarians now?

"Thus we finally come to the conclusion that the Serbo-Greek alliance, from the standpoint of the only important Servian interest, would be based not on solidarity, but on a contradiction, because both allies would claim Salonika. From the standpoint of the Greeks such a treaty would . . . not be based on anything real, because on the day the Bulgars agree to give Salonika to the Greeks, King Constantine will have no cause for war.

"The Serbo-Greek alliance thus seems to be a fictitious quantity. It would expose Serbia to dangers which it would be highly imprudent to overlook. There are rumors afloat about advances Austria is making to Bulgaria. The Austrian diplomats will prove themselves little children if they do not grasp with both hands any friendly proposition that issues from Sofia. Why, they will in such case be killing two hares with one shot, and will secure in this way the final liquidation of the Servian Government, for the Serbs can oppose the powerful Hapsburg monarchy only so long as the Bulgars protect their rear. On the day a political

alliance is concluded between Vienna and Sofia, Belgrade will be stricken off the list of the living. On the other hand, entering into an understanding with the Bulgars, the Austrians will indirectly prepare the fall of the Sofia Government, the last bulwark of the Slavs in the Balkans. For Austria, having swallowed a considerable part of Serbia and having moved up close to the Bulgarian borders, will form such a center of attraction as will destroy Bulgarian independence within ten years. It may be considered absolutely probable that the Austrians will pay any price to be allowed to respond to the Greek-Servian understanding by an Austro-Bulgarian alliance. Is that what they want at Belgrade?"—*Translation made for THE LITERARY DIGEST.*

ENGLAND'S DEFEAT OF WOMAN-SUFFRAGE

THE SUFFRAGETTES of England have received their second setback from the Parliament at Westminster. The bill enfranchising women has been defeated in spite of the unwearied efforts of the followers of Mrs. Pankhurst to obtain what they consider their rights. Have they not broken windows innumerable, blown up and burned down houses, churches, and palaces, threatened the lives of Cabinet Ministers, destroyed costly works of art, defied the law, suffered imprisonment, and hurled bad language at the magistrates who sent them to the cells where they valiantly refused food, and dared starvation for the cause. In spite of their violence, their imprisonments, their fastings, the English suffragettes have so far signally failed. "The traitor Asquith," as they style the Prime Minister, has omitted to give the measure that unqualified support they were led to expect, because, as he remarked, the question had never yet been before the people in the form of an election issue. One member, Sir C. J. Compton-Rickett, objected to the bill because he said that women Members of Parliament would be as likely to riot and break windows, or throw brickbats and bombs in the House, as they had been doing outside of it. Mr. Asquith spoke among the nays, and said of the sex difference sometimes urged against women's enfranchisement:

"Now I go back to the general principle. Let me point out here, what I think is a truism, that the whole burden of proof is on those who assert that the distinction of sex in regard to the

exercise of political rights which has hitherto, with a very few exceptions, been universally recognized even in the most democratic communities, should in this country under this bill be ignored. It is not a question of the inferiority of one or the superiority of the other, either in intellect, character, temperament, or anything else. It is a question of the appropriateness or otherwise of a particular function, which is a totally different thing. Nor is it, in my view, a question of the application or the exclusion of democratic principles. Democracy aims at the obliteration of arbitrary and artificial distinctions. Democracy has no quarrel whatever with distinctions which nature has created and experience has sanctioned. I will put in one sentence what seems to me to be the gist and the core of the real question the House has to answer, and it is this: Would our political fabric be strengthened, would legislation be more respected, would our public and domestic life be enriched, would our standard of manners—and in manners I include the old-fashioned virtues of chivalry and courtesy—and of the reciprocal deference and reliance of the two sexes; would this standard be raised and refined if women were politically enfranchised? (Cheers, and a voice—"It has been in Australia.") I am not talking about Australia. I am talking about Great Britain, the country in which we live and which we know. I want an answer to the question, would it or would it not be the case? Every man must answer that question as his judgment and experience teaches. I answer it in the negative. I believe such a negative answer to be in no wise derogatory to the honor and dignity of the other sex."

Mr. Snowden, a Laborite member for one of the great industrial centers of Lancashire, Blackburn, famous for its cotton-mills, argued that "it would be for the good of the community if women had the power to vote." The action of the militants does not seem to him to impair the force of the argument in favor of enfranchising women. Nor does he think, either, that Parliament ought to be intimidated into saying yea to their demand. He observed:

"The members who declare that they will vote against the bill because they will not be intimidated by violence are allowing themselves to be intimidated from doing what they believe to be right because one woman in a thousand has done something of which they disapprove. The courageous thing for those members to do is to do what is right, and if they do that they can depend upon it that rebellion and revolution will cease, because revolution can not continue unless based upon a justifiable sense of grievance. Is the House of Commons to go on for ever mocking the women by its professions of sympathy? I appeal not to the sympathy, but to the chivalry of the House, and to its sense of justice, and I hope that a large majority of the members will declare by their votes that the time has come when a self-respecting House of Commons demands that this question be finally settled in harmony with those principles of democratic self-government on which alone the greatness and stability of Parliamentary government can be based."

The comments of the London press run much in the groove these speeches indicate. Of course it is a party question very largely, and the Liberal London *Daily News* naturally supports the Suffrage Bill and refers to the movements in England before the passing of the Reform Bill, when the Chartists rioted, destroyed property, resisted the military, and caused the loss of many lives, something less than a century ago. Thus we read:

"For the man who has once believed with understanding in the suffrage cause, the cause remains as sacred as ever. Its justice, and, what is not less vital, its necessity, remain as unquestionable; they can not be affected by the offenses of a few ill-balanced suffragists. What reason can be put forward to induce a suffragist to withhold himself at such a favorable moment? Is it the desire to punish the militants? Assuredly, of all classes of suffragists the militants will feel the blow least. They will answer that they have expected nothing better from the House of Commons, and that the rejection of the bill has confirmed their dreadful philosophy."

"Those who will be punished are the great host of suffragists, who have done nothing to deserve punishment, who have always set themselves against violence. These will suffer, and the state, which needs the enfranchisement of women for its political and social health. Can it be said that to grant women the suffrage

after a succession of outrages would be to create a dangerous precedent and set the seal upon violence as a political weapon in a free country? It would be historical pedantry to inquire whether the history of our franchise legislation contains no instances of concession to violence."

The London *Daily Chronicle* thinks the very fact that it was a Liberal bill lost it the vote of those Conservatives who approved of the women having a vote. This Liberal organ remarks, with regard to the leading woman suffragist in England, Mrs. Fawcett, a learned professor, political economist, and President of the National Union of Women's Suffrage Societies, that she and her followers killed the bill by their criticisms on its Parliamentary handling:

"The bill was killed by the folly of the women's suffrage societies—not merely that of the militants, whose leaders have long given up tactics which advance the cause in favor of tactics which attract money, but that of Mrs. Fawcett and her friends, who had hitherto been the chief feminine force on which the cause depended."

On the same point and on the Englishwoman's adherence to the "dog-eat-dog" principle, the Liberal Manchester *Guardian* somewhat bitterly remarks that "the fairness and sense of the electorate" will eventually overlook the fault of the militants and the folly of Mrs. Fawcett.

The Conservative and Anti-Suffragist London *Morning Post* thus summarizes the case for the antis:

"Altho there are many women of stronger intellect and sounder judgment than many men, yet the general average of feminine intelligence is neither so strong nor so well trained in public matters as the general average of intelligence masculine. We are not of those who hold that the present franchise is the best for the country; on the contrary, we think that very many men at present endowed with the vote are ill qualified, either in intelligence or patriotism, to use it. Nor have we much respect for the collective wisdom which results. But the vices of the present system are no argument for its extension. That some women who have not the vote are better qualified to use it than many men who have the vote is no argument for giving the vote to many women who are even less fit to use it than many men. As for the mandate theory, it is hardly pretended that the majority of the voters of this country, or even the women of this country, want woman franchise. On the contrary, most women have the sense to know that they could not use it to any advantage, just as they have the sense to know that their husbands do not use it to any advantage."

The London *Times* thinks that even those who voted in the Commons in favor of a second reading of the Women's Suffrage Bill did so hypocritically—without any serious desire to secure the change. But now women have only themselves to blame for their lost cause, for they have alienated the sympathy of their fellow countrymen:

"The change in the political barometer can not be mistaken. For some years past bills for giving votes to women have passed the second reading with respectable and even large majorities. They may not have been intended to get any further, and we think there has been a good deal of hypocrisy on the part of some members who have voted for the second reading. But that success has now been reversed. A majority of forty-seven is not very large, but in the circumstances it is decisive. It tells the militants as plainly as anything can that they are on the wrong road, if they really wish to get votes for women. Their cause is not ours, and we can not pretend to regret that it has been set back. There is no need to go over the arguments against woman-suffrage. Many of them were put last night with admirable clearness by Mr. Asquith in his extremely interesting and closely reasoned speech. The point on which we wish to insist is that women themselves have turned back the tide that was apparently running in their favor, and, tho we do not regret the fact, we do regret the means by which it has been brought about. Abusive epithets and strong language seem misplaced in the case of these unfortunate women, but we can understand the growing anger of the mob. Nor is it only of the mob. They have brought discredit on the sex, which is deeply felt and resented by women all over the country."

SCIENCE AND INVENTION

From *The Scientific American Supplement*

SIBERIAN TYPE CLOSELY RELATED TO THE AMERICAN INDIAN.

AN ALGONKIAN INDIAN OF THE PIEGAN TRIBE.

RESEMBLES THE INDIAN PHYSICALLY AND MENTALLY.

RESEMBLANCE OF INDIANS AND SIBERIANS.

ARE OUR INDIANS SIBERIANS?

EVIDENCE that the original home of the so-called American Indian was in Siberia, whence the ancestors of the present tribes emigrated to this continent after the close of the glacial period, is presented in *The Scientific American Supplement* (New York, May 17) by Carl Hawes Butman. According to Mr. Butman, the probable ancestor of our Indians has been unearthed in Siberia by Dr. Alex. Hrdlicka, of the National Museum, in a course of a recent trip made to northern Asia for this purpose. Dr. Hrdlicka believes that many modern Siberian tribes are closely related to our Indians and show that relationship, not only in their customs and traditions, but in their physical characteristics and facial traits. Anthropologists have long believed, Mr. Butman says, that some relationship of this kind exists. He writes in substance:

"If their views concerning the Indian's origin are correct, there must be archeological remains and even a residue of his descendants in some out-of-the-way corners of eastern and northeastern Siberia, where his ancestral stock lived in very early times. With this point in view, the students of anthropology have been searching long and diligently in eastern Asia for these supposed forbears of our Indians, but while their researches have not been without interesting results, no absolute proof has been brought forth. Up to last year no anthropological investigation had been carried on to any great extent in eastern Asia, and consequently many points remained to be examined and reported on before the home of the physical stock from which the original American was derived could be permanently established.

"While affairs were in this state, Dr. Hrdlicka was given an opportunity to visit a few of the most important parts of eastern Asia, and to ascertain what evidence could be found there relative to this subject.

"Among the interesting sites explored by Dr. Hrdlicka are the burial mounds, or 'kourgans,' as they are called, located on the banks of the Yenisei and Selenga rivers and their tributaries, and along the streams of northern Mongolia, especially on the banks of the Kerulen. These 'kourgans,' which number thousands, are of inestimable value to the student in this work, on account of the fact that their date extends from modern times back to the stone age of these regions. They are but little excavated and practically untouched.

"Oddly enough, the date of the mounds is established quite as readily as if the date of construction were carved on a stone, for

the different objects uncovered, be they of gold, copper, iron, bronze, or stone, identify the origin of the particular mound from which they came as falling within definite time limits. The skulls of the skeletons taken from more recent mounds are short and somewhat spherical, but the 'kourgans' of earlier date, containing no metal objects, yield skulls resembling the dolichocephalic type, long and narrow, and much like American Indian skulls of this type. It is difficult to assert to just what race the older skeletons and skulls belong, and yet, on the banks of the lower Yenisei River, and in several other localities, living dolichocephalic types are not unusual, and such natives frequently bear a strong physical resemblance to our native Indians."

The most important part of the exploration, however, had to do with the living descendants of the old races. Among these the investigator came into contact with representatives of many tribes and was present at a great religious ceremony where seven thousand Mongolians from all parts of the country were in attendance. We read on:

"Among all these tribes and clans there were individuals who apparently represent the older population, pre-Mongolian and pre-Chinese, and who belong partly to the brachycephalic type, tho in a smaller extent to the dolichocephalic type. These men and women are practically identical with the American Indians of similar head form. The particular individuals are brown in color, with straight black hair, dark brown eyes, and facial and bodily features which are strikingly like those of the native American. The men are practically beardless. Some of these people, if dressed in the costumes and regalia of an Indian, and placed among them, could not be distinguished from them. At least Dr. Hrdlicka states that there are no means at the disposal of the anthropologist by which to make such a distinction. It is not only in outward appearances that these natives of Siberia resemble the Indians, but mentally as well, and in numerous habits and customs which different environment and time seem not to have effaced."

On his return trip, Dr. Hrdlicka stopped at Geneva and made a brief report to the International Congress of Prehistoric Anthropology, then in session. In this report he said:

"The writer feels justified in advancing the opinion that there exist to-day over large parts of eastern Siberia, and in Mongolia, Tibet, and other regions in that part of the world, numerous

remains, which now form constituent parts of more modern tribes or nations, of a more ancient population (related in origin perhaps with the latest paleolithic European), which was physically identical with, and in all probability gave rise to, the American Indian.

"The writer is able to merely touch on the great subject thus approached. The task of learning the exact truth remains for the future. In relation to opportunities for further investigation, he has satisfied himself that the field for anthropological and archeological research in eastern Asia is vast, rich, to a large extent still virginal, and probably not excessively complicated. It is surely a field which calls for close attention not only on the part of European students of the Far East, but especially on the part of the American investigator who deals with the problems of the origin and immigration of the American Indians."

OUR FRIGID SUN

COMPARED with some other stars, our sun is rather cool. Recent measurements show that there is at least one star with a temperature 80 times as great. In fact, our sun ranks low among the brilliant stars. Yet the heat given off by our sun hourly has been reckoned as equal to burning a layer of coal twenty feet thick over the sun's entire surface—making our Coal Trust seem like a puny affair and its prosecution about on a par with pinching a baby. Measurements made in Germany are described in *Cosmos* (Paris, April 26), by a writer who tells us that Dr. Rosenberg, of the Osterberg Observatory at Tübingen, Württemberg, studied photographically, from 1907 to 1909, the spectra of the 70 most brilliant stars of the northern hemisphere, whose brightness is between the first and third magnitudes, to determine how differences of intensities are distributed in their spectra. By systematic comparison with the spectrum of the sun, he has deduced the effective temperatures of these stars.

"According to these investigations, the hottest star among those considered is Gamma of the constellation Pegasus, of the magnitude 2.87, according to the Harvard photometric classification, whose temperature reaches the astonishing figure of 400,000° Centigrade; and the coldest is Alpha Tauri, or Aldebaran (magnitude 1.06), with only 2,150°, a temperature lower than may be reached in our terrestrial laboratories!

"The temperature at the top of Dr. Rosenberg's scale is quite exceptional, for the next in order falls to 50,000°, that of the star Gamma of Cassiopeia. On the other hand, at the lower end of the scale we find a dozen stellar bodies whose temperature is only equal to, or lower than, that of the electric arc. . . .

"The lowest temperatures obtained by Dr. Rosenberg accord perfectly with those determined by Wilsing and Seheiner, of Potsdam Observatory, but the highest exceed greatly the measurements of these two astronomers. . . . It seems clear that the highest temperatures correspond to stars containing helium, and to these whose spectra are striped with brilliant hydrogen lines.

"It should be added that on this scale the sun, whose spectrum has served as a basis of investigation and comparison for these calculations, occupies a place near that of Capella, with a temperature of 4,950° C."—*Translation made for THE LITERARY DIGEST.*

GETTING "TURNED AROUND"

FEW OF US have not been "all turned around" upon occasion. Then the north end of the street was toward the south, or the train was running east instead of west; for this mental topsyturvydom consists usually of a revolution of the whole world through a half-circle. Apparently we never confuse top and bottom, up and down—but this is only one of the queer things about the phenomenon. It is explored by Yves Delage in a recent "Essay on the Constitution of Ideas," which is thus reviewed by Henry de Varigny in the "Revue des Sciences" of the *Journal des Débats* (Paris, April 17). Says this writer:

"It happens to every one, in a vehicle, on the cars, possibly even on foot, and most easily perhaps in a subway, to think that he is moving or facing in a particular direction and consequently to locate all objects—streets, buildings, etc.—according to the concept resulting naturally from one's situation, particularly the starting- and stopping-points.

"Now every one has witnessed the rise of a very strong doubt about the reality of this orientation. He notices a building—a shop, perhaps—that he ought not to see. Possibly, on a subway train, the name of a station seems to be wrong. This doubt continues, and nevertheless he says to himself that he can not possibly be deceived—front can not be rear and left right!

"Nevertheless a moment comes when the evidence is too strong to be rejected. A passenger in the subway becomes sure, from the names of the stations that he passes, that he is traveling in precisely the opposite direction to what he supposed, or perhaps that he is moving in the right direction, but has located the whole topography incorrectly. Generally he spends some time reasoning with himself and trying to reverse his mental landscape so as to put things right with reference to himself and to his line of displacement. In the end, he succeeds, and generally, or at least often, the thing takes place all of a sudden. Instantaneously the landscape turns and the standard points assume the desired positions; he has 'got there.' The queer thing is the physical impression that accompanies the

rectification of his notions. Mr. Delage appears to feel a sensation of illness. Doubtless this is variable with the subject. I have the impression of something resembling a slight vertigo—an impression of a material something taking place in the head—of a slight uncoupling that puts everything in order, and takes place, not in the frontal nor in the occipital region, but localizes itself clearly at the base of the skull. Is it through suggestion that I place it 'between the two ears,' as the sense of space has so much to do with the auditive apparatus? Perhaps. In any case, the impression is very clear, and so also is the localization of the material phenomenon accompanying the semirevolution made all at once by the mental image of the whole landscape, of the whole topography. What is not at all clear is the idea that one may obtain of the nature of the phenomenon. We see neither what takes place nor of what it consists. Many other things in psychology are equally illusive."

Mr. Varigny might have added that it is sometimes possible to bring the "landscape" back to its original false position by an effort of the will, and even to make the two positions, with their accompanying ideas and sensations, alternate quite rapidly. This ability would seem to be even more inexplicable.

TORNADO-PROOF BUILDINGS

THE PERFECT PRACTICABILITY of constructing tornado-proof buildings, either of reinforced concrete, or in some cases even of wood, is pointed out by Albert C. Arend, an Omaha engineer who has made a careful study of the effects of the recent tornado in that city, publishing his results in *Engineering News* (New York, May 1). Similarity to other whirlwinds of the same type was marked, but an entirely new subject for observation was the behavior of the reinforced-concrete structures, which had not been through an experience of this kind before on any large scale. Mr. Arend finds that they stood the test well. He believes that a good concrete building is practically tornado-proof. In fact, it is possible, by using special construction, to build even a wooden building so that it will withstand a "twister." Engineers and architects may now provide, he tells us, against the destruction of buildings and the loss of life; and it remains only for their clients to decide whether they will "stand for" such special features of design and moderate additional costs as may be essential. Says Mr. Arend:

"The well-defined and consistent stresses which were observed are as follows: There was a whirling or twisting motion which turned every house that was moved upon its foundation at all in a direction opposite to the travel of the hands of a clock; there were but few exceptions noted to this rule, and they were probably caused by the way the onrushing wind and debris happened to strike the house as this force released it.

"As the storm approached, the sudden relief of atmospheric pressure on the outside caused anything containing air to explode unless it could resist the stresses or be otherwise relieved, and as the pressure was less above than at the surface, it tended to lift or float things: windows blew out, roofs blew off entirely or lifted up to equalize the air-pressure and dropt back again; sides of buildings blew off, doors and partitions buckled or fell, and many frame houses were picked up bodily and carried distances from a few inches to a hundred feet. As the tornado cloud passed on and the onrushing wind restored the air-pressure equilibrium, these were dropt from the particular height at which they happened to be, resulting in the necessity for a house-mover in some cases and a mass of wreckage in most cases.

"Second-floor windows blew out more often than first-floor

windows. Porch-roofs lifted just enough to permit the columns to be carried away, and then dropt. Where roofs were well secured to cap-plates and brace tied to ceiling-joists, or where the space under the roof was cut up into rooms with partitions tied into the roof-joists, the roof structure was not lost; but the paper, tile, slate, or shingle covering was partly blown off to relieve the air-pressure and then shattered by the rain of debris which followed in the wake of the storm.

"Some frame houses withstood the full force of the storm with the loss of only windows, roof, weatherproofing and chimney. Bedford coping stones 4 x 14 in. x 4 ft. long were picked up from a wall which was laid in cement mortar and remained intact. Coping walls generally proved a particular hazard. All large undivided areas, such as church auditoriums and the second floor of a garage building without partitions, caused more complete wrecks than the surrounding buildings suffered.

"Brick and stone walls laid up in lime mortar usually failed. Where facing-brick had not been bonded into the backing walls with header courses and where air-spaces existed they exploded off. Concrete basement walls remained intact and did not injure the refugees in the basements when the house blew off; but there were many instances where brick walls did drag or tear off and cause injuries. Cement stucco on metal lath showed very little damage."

Mr. Arend's final conclusions, expressed in the form of rules that should be followed by those who wish to preserve their buildings from destruction by tornadoes, are as follows:

"A reinforced-concrete building will withstand the stress of an ordinary tornado without structural damage. Well-built frame houses may withstand an ordinary tornado.

"Windows are desirable relief valves, and should be regularly arranged and of liberal total area.

"Large and unbroken areas should be avoided as far as practicable.

"Brick walls should be laid up only in cement mortar, and face brick should be bonded into and laid solid with backing wall.

"Gypsum blocks and hollow tile are undesirable for partitions and walls.

"Sills should be well anchored to foundations and roofs to stud plates, and diagonal and knee braces are essential.

"Roof weatherproof coverings should be actually fastened on and should not be of a brittle nature.

"Partitions should be utilized to act as ties and braces.

"All studs and joists should be amply strong and should be secured at ends against internal and external stresses."

WHAT MAKES CLOTHES WARM OR COOL?

THE WARMTH felt by the wearer of a garment proceeds, of course, not from the garment itself, but usually from the wearer. A "warm" coat prevents the dissipation of this animal heat; a "cool" one favors it. There is no more objective "warmth" in wool than there is in silk, cotton, or linen. A writer concealing his identity under the pen-name of "Regent" contributes an article on "The Principles of Warmth in Clothing" to *The Textile World Record* (Boston), and in it he considers the main avenues by which clothing may "delay or accelerate the subtraction from the prime heater." As he analyzes them:

"First, there is conduction. Wool feels warmer to the touch than cotton, linen, or silk, because wool in contact with the body is a worse conductor of heat than are the other fibers. Any or all of these are worse conductors in a loose state than in a compactly twisted or woven shape, and for the evident reason that in a loose condition the molecular chain through which the conduction is transacted is broken by more air-spaces. Air, and especially dry air, is a bad conductor, and one reason why a sheer cotton twill is colder in wear than a cotton cloth with a raised nap surface is the comparative absence of bad-conducting air-spaces. Fur is the worst conductor used in making clothing, and wool, cotton, linen, and silk follow in the order named.

"Again, there may be loss of heat by convection. Warm air rises and cold air flows in through the interstices of fabrics or the openings of garments to take its place. In suits for wear by persons in a prone position the factor of convection is of especial moment. There is a long traverse of warm air—say, from knee to neck when one is upright, but a short traverse when one lies down. The air heated by the body escapes more quickly in the one position than the other, and the fact has more than a little to do with the need of a rug when taking a nap.

"Evaporation is the third of the means by which bodily heat is abstracted, and it is well known that abstraction always accompanies evaporation. . . . Obviously some conditions are more favorable than others. Warm air, it may be superfluous to point out, takes up more moisture than cold air. Dry air takes up more than an atmosphere that is already humid. When evaporation is at work within a sleeping-garment heat is being abstracted, and if the heat is dissipated quickly the wearer feels cold and perchance becomes ill. Conduction, convection, and evaporation may be separated for convenience of examination, but they operate conjointly. When the garment becomes wet by perspiration it cools the wearer by conduction, for water is a good conductor of heat. Convection steps in because some fabrics, notably cotton, linen, and silk, close up their pores when wet and prevent the circulation of air. These considerations all bear on the points raised and need taking into reckoning.

"There is no doubt but that bleached cotton becomes wet sooner than unbleached. How much sooner depends on the thoroughness with which the fatty or waxy matters have been removed from the fiber by the bleacher. Their fairly complete removal is necessary to the obtaining of a good white. So far as evaporation is concerned, it is necessary to say that a bleached fabric is likely to be cooler by conduction than an unbleached. In the bleached garment the process of convection will be checked earlier in a closely woven fabric, but this can not be looked on as a hygienic gain."

Experiments carried out by English and German chemists prove clearly that the removal of the fats from cotton cause it to become more absorbent. Capillary attraction contributes to absorbency also, and this is governed largely by the length and arrangement of the fibers and the pressure to which they are subjected. Any wearer of raincoats, the writer says, has the means of assuring himself that capillary attraction is greater in the case of cotton than of wool. Rain "creeps" up the inside of cotton coats more than that of woolen ones. To a correspondent who inquires whether perspiration leaves the body as a vapor by passing through the pores of the clothing, or whether it is absorbed and evaporated from the outside, he replies that the answer is twofold:

"In some circumstances undoubtedly by convection and in others by capillary force. For a homely illustration reference may be had to the not unfamiliar remedy of the cold pack. The patient is wrapt first in a wet sheet, of which the pores close by contraction. Heat would be transmitted quickly from the body, but the passage is checked by a thick covering of wool blanket or feather quilt. The water of the sheet is converted into vapor and the perspiration becomes profuse. The body is in a very bath of vapor, and it is easy to deduce that wool does not convey moisture by conduction or capillary attraction as readily as cotton. Convection proceeds longer where wool is worn because wool is longer in 'wetting-out' and closing its interstices. How a little wool mixt with a lot of cotton in a fabric for sleeping-suits will delay the regular processes obviously depends on numerous considerations. One which need not be forgotten is that wool will hold more moisture than any other fiber without itself feeling wet to the touch. . . . It is manifest that in practice much depends on the openness or closeness of the weave and something, too, on the slackness or tightness of the twist in spinning."

JULES VERNE UP TO DATE

IT SEEMS ODD to find in a scientific periodical a serious discussion of ways and means for flying from the earth to the moon and back. Jules Verne sent his hero and companions by shooting them off in a hollow projectile from a huge cannon. The more modern way is to use an enormous rocket, propelled by a powerful explosive, hundreds, or perhaps thousands, of times as effective as dynamite. Even so, the motor and its car would have to carry 300 times its weight of the combustible. All of which is only a scientific form of entertainment, no doubt; but, so far as it goes, it is logical and sensible. The inquiry, which was undertaken by R. Esnault-Pelterie before the French "Société de Physique," is thus condensed in *La Nature* (Paris, May 3), under the title "The Interplanetary Automobile." Says Mr. Esnault-Pelterie:

"Does a motor exist capable of propelling a machine through interplanetary space? Yes; such a motor does exist; or at least the principle on which it may be based. This motor is the rocket, or reaction-motor. The rocket rises by means of the reaction exerted upon it, in their escape, by the gases due to the deflagration of the powder. The exterior medium has nothing to do with it; the machine goes better in a vacuum than in air. The interstellar motor must then be a kind of huge rocket.

"The efficiency is unfortunately very bad. In fact, to remove to an infinite distance from the earth a mass of 100 kilograms, it will be necessary to furnish it with 6,371,103 kilogrammeters [of energy] and the motor will use up 2,172,000,000, or an efficiency of only 0.0293, which is very small.

"The consumption of the propulsive agent would doubtless be considerable, if we take account of certain physiologic conditions. In fact, as the attraction of the earth does not exist at a certain distance from our planet, bodies in the interior of the vehicle would then have no weight, particularly the passenger, who would float about his prison, with all the surrounding objects. If he then should desire to take nourishment—to drink, for example—the liquid, being no longer affected by gravity, would have no reason for passing from the bottle into the glass and the drinker's stomach. To do away with these inconveniences, it would be necessary to subject the vehicle to a constant artificial acceleration, so that the motion would be continually faster and faster. This would make it possible to attain formidable speeds, useful for traversing the enormous spaces under consideration, but the expenditure of energy would become still more enormous.

"We should have to store it in a form at least 400 times more condensed than it is in dynamite (for the journey to the moon and back alone), perhaps even 40,000 times more condensed, if we take account of certain physiological difficulties; and it would be necessary to consume nearly 300 pounds of this explosive of extra power for every pound transported. On the other hand, 25 pounds of radium would be sufficient, if we knew how to extract all its energy in the brief period of the journey; but unfortunately we do not, and it requires 1,780 years for radium to lose only half of its energy."—*Translation made for THE LITERARY DIGEST.*

A SMOKE-TELEGRAPH FOR AIR-MEN

SOMETHING BETTER than wireless telegraphy has been devised for use on aeroplanes—not better in general, but only for this particular case. Wireless demands heavy and complicated apparatus, while all that James Means, a Boston inventor, requires for his system of communication is a device for making puffs of smoke. A long puff for a Morse dash and a short one for a dot—and there you are! An optical telegraphic system using the dot-and-dash alphabet is the result. The "smoke" employed by the inventor is a cloud of fine black dust, blown into the air by turning the exhaust of the motor into a vessel containing lampblack. We translate the following from a description contributed to *La Nature* (Paris, April 19) by Major Sauvage:

"While the ordinary apparatus for optical telegraphy requires a mirror, sending the sun's rays to the receiving station by day and those of a sufficiently powerful lamp by night, which necessitates more or less complicated mechanism, the Means device has recourse to black clouds of smoke of variable size. A small cloud corresponds to a dot in the Morse alphabet and a larger one to a line. Such signals can be made by blowing into a receptacle made for the purpose, filled with lampblack.

"The advantages claimed by the inventor in favor of his system are its simplicity and the suppression of the considerable motive force necessary in wireless telegraphy, not to mention the possibility of establishing communication between two dirigibles or two aeroplanes in motion.

"The diagram shown herewith gives an idea of how the apparatus works. A is a reservoir full of lampblack, B a tube communicating with the exhaust-pipe, E, of the motor, or with a flask of compressed carbonic gas, C is a valve held in place by a spring, D, and worked with the hand or the foot through a cable, G. F is an air-funnel in the reservoir, A, to carry off the lampblack.

"It will be seen that a short pull on G will give a small cloud of smoke, while a longer pull will give a larger cloud. There is nothing simpler, then, than for one aviator to talk with another twelve or fifteen miles away, with the aid of a field-glass. The sole condition is that the aviator shall be moving nearly at right angles to the line joining him with his interlocutor.

"This mode of communication is particularly applicable to aviation in connection with artillery. It is well known that nowadays rapid-fire batteries operate almost exclusively with masked fire; that is to say, they are mounted in carefully concealed trenches and fire on enemies concealed with equal care. But the aeroplane can search out its adversary very speedily, and it will signal, for example, to an artillery group which it has been directed to place:

"Three batteries at 400 yards to the east of Bry'; which, being abridged, may be written,

3 B 4 E Bry
or, in the Morse alphabet,

..... — — — — —
and, in the Means smoke signals,

.....

"In France we have been seeking, up to the present time, to equip dirigibles, and even aeroplanes, with wireless-telegraph apparatus. But this is a complicated process whose working is always something of a 'gamble,' and which necessitates, in all cases, a trained operator. Wireless telegraphy must consequently be employed exclusively for great distances and seems limited to dirigibles. On the battle-field it might be advantageously replaced by the optical smoke-telegraph. The

observer in an aeroplane will thus be relieved of the necessity of interpreting a message and then sending it on to his correspondent, which always means delay. Now, of what use is it to have rapid-fire guns if we can not use them until the observer receives and interprets a message? The Means apparatus would appear to be of a kind to do away with all delays of this nature, and it is to be hoped that our artillerymen will as soon as possible make trial of this simple and ingenious mode of sending messages."—*Translation made for THE LITERARY DIGEST.*

SOAPSUDS AS A BEVERAGE

THE ADDITION of soapy substances to various drinks, to assist in the production of foam, has been proved in numerous recent analyses. *The Lancet* (London, April 26) states that the preparation most frequently used is one of soapbark (*quillaia saponaria*), whose property of producing a froth is due to the presence of a glucosid called saponin. *The*

Lancet enters two objections to the use of this substance in beverages. First, it gives to a flat, stale, and unprofitable fluid the appearance of healthy briskness. Secondly, saponin is a poisonous glucosid, and it is desirable to keep poisons out of liquids destined for human consumption. The writer goes on:

"That saponin is not altogether an inert body is evident from the fact that its lather has been used to kill pediculi of the scalp, and further . . . large quantities paralyze the respiratory vasomotor centers. Our references to these facts in relation to the use of saponin in common beverages, such as mineral waters and beer, were generally discredited on the score that the quantity sufficient for giving a 'head' was infinitesimal. In days, however, when the origin of many symptoms is obscure, it is well to have an eye to the possibilities of causation in the

manifold resources of modern methods of manufacture. It is significant, at all events, that the use of saponin was some years ago prohibited in Austria, but a more recent step in the same direction, for doubtless very good reasons, has been taken by the Department of Health of the City of New York. In a bulletin issued for the week ending March 22 last the use of soapbark in soda-water is prohibited. A preparation of soapbark (saponin), according to the bulletin, is used quite commonly in the country in the preparation of soda-water, in some kinds of 'soft' drinks, and in fillings used by bakers. Soapbark contains, it is further stated, a poisonous substance, and the Health Department considers the use of a soapbark extract or of commercial saponin in foods or food preparations in any quantity whatever an injurious adulteration, and forthwith prohibits its use."

The following quotation from the bulletin states the case pretty clearly:

"The average person who drinks soda-water, sarsaparilla, cream soda, root beer, and other so-called 'soft' drinks, probably imagines, if he gives any thought to the matter, that the creamy deep foam which tops his glass results naturally from the liberation of the carbonic acid gas therein contained. Such, unfortunately, is frequently not the case, the foam, especially when deep, white, and creamy, being sometimes produced artificially by the addition of a substance known as soapbark, various preparations of which are upon the market. 'Soapbark' is poisonous and markedly so, its toxic principle being sapotoxin. On this account the Department of Health has determined to prohibit its use, and henceforth if the cheaper grades of soda-water, etc., do not present so attractive an appearance as heretofore, they will, at least, exercise no detrimental effect upon the community."

THE SMOKE-TELEGRAPH.

LETTERS AND ART

SLIGHTING SOUTHERN LITERATURE

ARE OUR YOUNG PEOPLE being taught in the schools a one-sided view of American literature, a view in which the writers of the South are unjustly overshadowed by those of the North? This question has been raised by a Southern woman's protest against the use of Prof. Brander Matthews's "Introduction to the Study of American Literature" as a text-book in the high schools of the South. The protestant, Mrs. Townes Randolph Leigh, is State Historian of the Alabama Division of the United Daughters of the Confederacy, and she is convinced that Professor Matthews has failed to give due measure of recognition to the work of Southern authors. In making this indictment she says in part:

"Professor Matthews's book contains twenty-eight portraits of literary men, and of this number only two Southerners are represented—Edgar Allan Poe and Joel Chandler Harris. . . .

"Mr. Matthews says Benjamin Franklin and Jonathan Edwards were the first Americans known abroad. Why does not Matthews mention more fully Capt. John Smith, of Virginia, who, in 1624, published his 'Generall Historie,' an amusing and picturesque account of America, and whose story of the Indian Princess, Pocahontas, is related in United States histories?

"With Benjamin Franklin should be compared the author-scientist of Mississippi, William Longstreet. Washington Irving should be followed by John Esten Cooke, both writers of the same type of classic humor, tho their characters are divided by geographical lines. James F. Cooper is not greater than Simms, William Cullen Bryant than Wilde, Emerson than Beverley Tucker, who wrote the wonderful novel, 'The Partizan Leader.' Halleek and Drake can not compare with Hayne and Timrod, nor Hawthorne with James Lane Allen. Only Poe equals Sidney Lanier, as does Longfellow Father Ryan."

Mrs. Leigh's "extravagant" assertions, remarks an anonymous writer in the *New York Times*, are "only a lurid reflection of milder claims to the same effect put forth in a more reasonable manner by other Southerners," and are consequently not to be dismissed with a smile:

"Despite the unconscious humor of much of what Mrs. Leigh had to say—such as her criticism of the fact that there was no portrait of 'the patrician Lanier,' while much space was devoted to 'the plebeian Whittier'—she did put in direct and vivid form a complaint that has been made before about literature without getting such a wide hearing. The complaint is not limited to the text-books; it is that everywhere a false idea has been created about American literature by the ignoring of the Southern writers."

What ground is there for this complaint, asks the *Times* writer; and he devotes a page to an investigation of the facts and an examination of witnesses. From his presentation of the case we quote in part as follows:

"It certainly is true that Southern literature does not bulk large in the accepted literary histories. In 1898 George Stockton Wills made an elaborate study of the literature produced in the South before the Civil War, and the result is thus summarized by Prof. Barrett Wendell in his 'Literary History of America':

"A thoroughly trained student, he brought to light and clearly defined a number of literary figures whose very names have generally been forgotten. The more you consider these figures, however, the more inevitable seems the neglect into which they have fallen. They were simple, sincere, enthusiastic writers, mostly of verse; but their work, even compared with the less important Northern work of their time, seems surprisingly imitative. Up to the Civil War, the South had produced hardly any writing which expressed more than a pleasant sense that standard models are excellent."

"Professor Wendell accounts for the slow literary growth of the South by the theory that the slavery question turned the

higher Southern intellect into political channels almost exclusively."

The claims of the first slighted Southern writer, Capt. John Smith, are dismissed at once on the ground that he was not a Southern writer, but an English adventurer who spent two years in Virginia and wrote a book about it. And "Smith's 'History of Virginia' is no longer read, but the stories he tells have passed into immortality, including those, like that of his rescue by Pocahontas, which are probably not true." The case of John Esten Cooke, it seems, calls for more consideration. He died only a little more than a quarter of a century ago, and his books had even then been supplanted in popular favor by those of William Dean Howells:

"He wrote a number of novels, besides some biographical and semi-historical works. His best known novels were 'Leather Stocking and Silk,' 'The Virginia Comedians,' and 'The Youth of Jefferson,' all with scenes laid in Virginia in pre-Revolutionary times. 'Haste in composition,' says Dr. Cairns, 'and the inability to construct good plots account for the fact that his stories do not stand higher in their class.' Cooke, who died in 1886, lived to see himself no longer read, and gave the reason as he saw it in these words:

"Mr. Howells and the other realists have crowded me out of the popular regard as a novelist, and have brought the kind of fiction I write into general disfavor. I do not complain of that, for they are right. They see, as I do, that fiction should faithfully reflect life, and they obey the law, while I was born too soon and am now too old to learn my trade anew. But in literature, as in everything else, advance should be the law, and he who stands still has no right to complain if he is left behind."

William Gilmore Simms, whom Mrs. Leigh pits against James Fenimore Cooper, is conceded by the *Times* writer to be "doubtless the most eminent man of letters produced by the South before the Civil War—excluding Poe, of course." We learn further:

"He was born in 1806 in Charleston, then the only important literary center south of Virginia. For forty years he produced books at the rate of more than two volumes a year, besides which he wrote poetry and did a tremendous amount of journalistic work."

"He was the center of the Southern literary group, and its Mæcenas; for he did much to help and encourage the younger writers, including Hayne and Timrod. His works complement Cooper's, for he undertook to do for the South, in its conquest of the land from nature and the Indian, what Cooper did for the same struggle in the North. Even those who do not hold him Cooper's equal admit the power of his work."

"The Yemassee," a story of early colonial days, is considered his best, tho such stories as 'The Partizan,' 'The Scout,' 'Katharine Walton,' and 'Eutaw,' dealing with the American Revolution, are strong and powerful tales. 'Tho his work is often hasty, unpolished, and sometimes inexcusably careless,' says Professor Holliday, 'the strength of his imagination and the easy vigor of his expression save the multitude of his stories from weakness and imitativeness.'"

Of Richard Henry Wilde (1789-1847), for whom Mrs. Leigh claims poetical laurels equal to those accorded William Cullen Bryant, we are informed:

"He was born in Dublin and lived there eight years, but his father brought him to Baltimore, and five years later he went to Augusta, where later he became a lawyer and a Congressman. He was a student of Italian art and literature; he discovered the only portrait of Dante, wrote a work on Tasso and a number of poems, but is remembered by only one, 'My Life Is Like the Summer Rose.'"

ABRAM J. RYAN.

"Only Longfellow equals Father Ryan," declares Mrs. Leigh.

JOHN ESTEN COOKE.

For whom a place is claimed beside Washington Irving.

WILLIAM GILMORE SIMMS.

"James Fenimore Cooper is not greater than Simms."

DO THESE WRITERS DESERVE HIGHER NICHES IN OUR

Mrs. Leigh, for some reason not very obvious, couples the name of Emerson with that of Nathaniel Beverley Tucker, of Virginia, of whom our *Times* informant tells us:

"He was born in 1784, and died in 1851, and was the author of two novels, one of which, 'The Partizan Leader,' was famous in its day. It was subtitled 'A Tale of the Future,' and, like 'Looking Backward' and 'When the Sleeper Wakes,' undertook to foretell the conclusion of tendencies of the time. It imagined the destruction of our federative system by a long series of encroachments by the National Government, and the erection on its ruins of a consolidated government with the forms of a republic but the powers of a monarchy.

"This book created endless discussion, both North and South, and a good deal of it was bitter. When the war broke out the book was reprinted in the North as 'A Key to the Disunion Conspiracy,' for the purpose of proving that Tucker was party to the dark underground plot to overthrow the Union, in which so many honest Northerners then implicitly believed."

"Hallock and Drake can not compare with Hayne and Tim-

rod," declares Mrs. Leigh. Turning again to *The Times*, we read:

"Henry Timrod and Paul Hamilton Hayne were Charleston men and friends from boyhood. Timrod, born in 1829, died in 1867, after a sad life, full of misfortune. Hayne, born a year later than Timrod, lived until 1886. Timrod's best known poems were written in the Civil War period.

"Timrod, at any rate, has survived. He, unlike so many Southern poets, is neither forgotten nor remembered as 'the singer of one song.' 'He had in him,' says Professor Wendell 'the stuff of which poetry is made, and the circumstances of his career made some of his expression of it admirable.'

"Hayne's admirers call him 'the poet laureate of the South.' His first volume appeared in 1885, and he was recognized and welcomed by Bryant, Holmes, Longfellow, and the other leading Northern poets. Like Timrod, he was ruined financially by the war; his beautiful home in Charleston was lost, and he had to begin life anew in a shanty on a railroad line near Augusta.

"Here Hayne supported himself by his pen, while his delicately reared wife did the cooking and washing.

HENRY TIMROD.

THEODORE O'HARA.

PAUL HAMILTON HAYNE.

"Hallock and Drake can not compare with Hayne and Timrod," says Mrs. Leigh, who complains that this rating of the two Charleston poets is not recognized by Northern text-books. Theodore O'Hara is remembered as the singer of one song, "The Bivouac of the Dead."

TEMPLE OF FAME THAN THEY HAVE HAD?

"His merit," says Professor Holliday, "was recognized to an extent seldom known to writers from the South."

Of Father Ryan, whom Mrs. Leigh balances against Longfellow, we read:

"Abram J. Ryan, the Virginia priest (1839-1886), wrote poems which, Dr. Cairns says, 'stand to Roman Catholicism and devotion to the South as the more sentimental poems of the New England writers do to Puritanism and loyalty to the Union, respectively. They have a swing that catches the popular ear, and they are full of sincere emotion.' His best-known poems are 'The Conquered Banner' and 'The Sword of Lee.'"

Theodore O'Hara, the Kentuckian, whose "Bivouac of the Dead" is "probably the most famous poem ever written by any Southerner but Poe," was born in 1820, and died in 1867. He was a soldier in the Mexican War, and wrote this poem on the occasion of the burial at Frankfort of the Kentuckians killed at Buena Vista. His claim to literary immortality, says the writer in *The Times*, rests almost exclusively on this one song.

As a result of this survey, the writer in *The Times* concludes that "there has been no withholding of recognition from the Southern writers whose work warranted recognition":

"It is not the Laniers and Poes who have any reason to complain, only the A. P. Longstreets and the Hugh H. Brackenridges. The truth seems to be that the South is only now giving itself to literature; that in the antebellum days the Southern genius was turned by the necessities of the case into political fields. Most of the Southern writers of that time who are favorably remembered were lawyers and politicians, who wrote simply as a recreation.

"But with the sweeping away of that system which had demanded of the South a special aptitude for politics and had made it essential that politics should be dominated by the South, as a matter of self-preservation, there came a literary awakening, along with all the other changes which we lump under the name of 'the new South.' To it we owe Sidney Lanier and Joel Chandler Harris and George W. Cable and Maurice Thompson and Charles Egbert Craddock and Thomas Nelson Page."

In the literary supplement of the same paper, however, we find the following expression of editorial opinion:

"Mrs. Leigh insists that Fenimore Cooper is not greater than William Gilmore Simms. We say frankly that if we were compelled to choose to-day between reading 'The Last of the Mohicans' and 'Eutaw' we should choose 'Eutaw.' There is mighty good reading in Simms."

And in the same column we read further:

"Mrs. Leigh's protest as a whole ought to be gratifying to all American literary critics, anthologists, and writers of literary handbooks. For one reason, she suggests, if not the need, at least the possible acceptance of a new 'Comparative Study of American Literature.' For another, she indicates to Northern writers that the people of the South have literary ideals and traditions which must be recognized and respected in any authoritative account of American literary history. It was worth while to do this, even if the little [row over Mr. Matthews's little book has the qualities of a tempest in a teapot."

Professor Matthews himself is moved by Mrs. Leigh's attack to explain that "sectional bias is exactly what I tried to keep out of my book." And he adds:

"In fact, I am inclined to think that it is my effort at impartiality, my absence of sectionalism, my attitude as a citizen of the whole Union, which has been the exciting cause of the perfervid assault of the United Daughters of the Confederacy."

POPULARIZING OPERA IN NEW YORK

CAN OPERA BE DEMOCRATIZED in New York, as it has been in Vienna, Paris, Berlin, and Milan, or must it remain a diversion of the rich, like polo and the horse show? Can "opera for the people, in the people's language"—and at the people's prices—justify itself artistically and financially in a city where the "diamond horseshoe" has come to be regarded as almost as essential to grand opera as the orchestra, and the gowns in the boxes no less important than the costumes on the stage? Next winter promises an answer to these questions, thanks to the rapid development of a movement started by the City Club, an organization hitherto mainly associated with municipal reform. "The Century Opera Company," the result of the City Club's efforts, announces a season of forty-five weeks, beginning September 15, during which it will produce opera in English, French, German, and Italian at prices ranging from twenty-five cents to two dollars. The present plan is to devote the bulk of the season to grand opera, but to close with about ten weeks of opéra-comique. The home of the new company will be that much-advertised building erected four years ago as the New Theatre, but now to be known as The Century Opera House. This operatic venture is to be given at least three years in which to prove itself.

The management of the Century Opera Company has been placed in the hands of Messrs. Milton and Sargent Aborn, who, as the directors state, "are well known for their success and long experience in producing opera at popular prices," altho their activities hitherto have been in other fields than New York.

Mr. Milton Aborn gives an interviewer from the *New York Tribune* the following interesting account of his plans for the new company:

"We have always been believers in and exponents of opera in English, and the Century Opera Company will be devoted largely to this idea. Opera in English will be given every day of the week except on Monday evening, when opera will be given in the language in which it was written. We will run one opera through the week. If we open with 'Aida,' as we probably shall, it will be given on Monday in Italian, and on all other days in English. The week, however, will begin on Tuesday, the Monday performance being the last one of that particular opera.

"We believe in running each opera for a week, as our experience has been that if the public likes an opera it goes home and tells its friends, who, if the same opera continues, take the advice given them and come to the theater. If the bill is constantly changed they become confused and resent it. We believe that the great public wishes its opera in the vernacular, so that it can understand what is happening on the stage. Of course, many of the translations are clumsy, and we are to make an effort to remedy this fault. As to diction, there is no reason that singers should not pronounce English perfectly, and for this we are to establish a conservatory in the Century Theater, where we will employ teachers for diction, dramatic action, and singing. We shall continue the predominance of performances of opera in English, unless the public shows that it prefers opera in the original language, in which case we shall give it what it wishes.

"Our singers will be all Americans, or practically all, so that English will be their native tongue. As nearly all singers learn the operas in the original language, however, I do not expect any difficulty when they are called upon for the Monday night performances. We shall soon establish voice trials, and all

EDWARD KELLOUGH BAIRD.

He launched the City Club's movement to make opera democratic in New York, and has been elected president of the Century Opera Company's board of directors.

applicants are welcome. We do not intend to pay huge salaries, and if Mr. Hammerstein chooses to outbid us we will let him have the singer—there will be plenty of good ones left.

"Our orchestra will number sixty musicians, and we will have a chorus of one hundred and a ballet of twenty-four. The chorus will begin rehearsals in July."

To an inquiry as to what stars he expects to engage, Mr. Aborn replies:

SARGENT ABORN.

He will share with his brother Milton the general management of New York's latest "popular opera" venture.

"We do not believe in the star system, and do not intend to observe it in the opera season at the Century. When we engage artists of stellar magnitude they will not be featured, and each member of our casts must stand or fall by his or her own talents. Every star now in opera has had to rise from the ranks, and some of them sang better when they were making their reputations than they do now.

"It is our hope to secure virile and experienced young artists with fresh voices, and with their future ahead of them rather than behind them. Our aim is excellence in the ensemble and not in spots, and in following this policy we hope to give grand opera of the highest artistic quality."

For the training of new singers there will be established an operative conservatory in connection with the Century Opera Company. Says Mr. Aborn:

"Experience has taught us that there is a great deal of operative talent in America which needs only to be developed, and consequently this conservatory will fill a long-felt want here, for very few young American singers have the means with which to go abroad for study and experience, and those who do go over there and win success are only an indication of the greater number here who never have the opportunity."

These plans are given a cordial welcome by the New York press, altho here and there a doubt is expressed as to the ability of "popular" opera in New York to win the patronage of the people. Among the optimistic is *The Sun*, which admits that in the past New Yorkers have not supported low-priced opera, but maintains that since those earlier experiments a new public, largely recruited from the foreign-born residents, has sprung up.

Another suggestion, cited by a New York correspondent of *The Musical Leader* (Chicago), is that "there is a tremendous new musical public created by the phonographs and the player pianos." We read:

"This public, it is maintained, having heard the world's greatest singers through the advent of a scientific era, will flock to an opera-house where they may see and hear opera at prices within their means. This viewpoint is a practical one, too, and will be endorsed by the Messrs. Aborn, who each year find their audiences larger."

That the new company is not to be regarded as in any sense a rival of the Metropolitan Opera Company may be inferred from the presence among its directors and incorporators of such names as Otto H. Kahn, Philip M. Lydig, Clarence H. Mackay, Harry Payne Whitney, and others prominently associated with the financing of the Metropolitan Company. Something of the cross-

currents of surmise that have been set in motion may be gathered from the following paragraph in *The Musical Courier* (New York):

"Operatic chess is being played mentally even by those who are not active participants in the game itself. Thus, one set of wisacres has discovered that the Metropolitan Opera millionaire directors backed the City Club (Century) Opera solely to institute opposition to the Hammerstein Opera; a second group professes to know that the same wealthy gentlemen bought Andreas Dippel out of the grand-opera field; and a third band of know-alls insists that Messrs. Milton and Sargent Aborn have been selected to head the City Club scheme for three years because they had already made public a plan to build an opera-house of their own, in partnership with a well-known theatrical speculator and real-estate promoter."

In the face of these developments Mr. Oscar Hammerstein has not been silent. His first comment on the City Club's program was to challenge the assertion that opera could be produced at a cost of \$13,000 a week. "It cost me \$25,000 a week," said Mr. Hammerstein, and "it costs the Metropolitan Opera Company \$35,000 a week." These

figures were accompanied by a number of ironic suggestions, but his declaration of war is contained in an open letter addressed to the Metropolitan Opera Company. This letter is in reply to a communication from the Metropolitan Company, reminding him of a contract he had entered into with that company on April 16, 1910, in which he agreed not to produce grand opera in New York for ten years. Mr. Hammerstein's letter reads in part as follows:

"The contract you refer to you broke before the ink was dry. The fundamental intent and purpose, the whole morale, indisputably embodied in this contract, was a division of territory for grand-opera purposes. I was to leave New York, Philadelphia, Boston, and Chicago to you. You were to leave the rather narrow field outside of these cities to me. Immediately after the signing of the contract, you arranged and contracted to give opera in a dozen or more cities annually at longer or shorter periods; and when last Fall I made an effort to make use of my privilege, form a circuit of opera-houses, and the presentation of grand opera, I found my territory occupied by you. . . .

"I have purchased the Lexington Avenue property in my name; I am erecting an opera-house on the same in my name; I intend to devote it exclusively to grand opera all the year round. I have made and I am making contracts with great artists for this and sole purpose in my name. I intended to devote the edifice solely to a permanent institution for grand opera in English at \$3 the highest. You, twenty-four hours after my announcement to this effect, announced the creation of another institute at \$2 the highest. Under the guise of philanthropy, you, nevertheless, solicit alms from the public, inveigling the Mayor and others in public authority to further nothing else but a sinister scheme to destroy my absolutely financially disinterested efforts in a noble cause. Consequently, I will produce grand opera at certain periods at \$1—at others at \$6 a seat, in any language, excepting one particular one which your conduct deserves, but which is unfit to be printed."

MILTON ABORN.

Who has had more than twenty years' experience in producing light and grand opera at popular prices.

RELIGION AND SOCIAL SERVICE

RELIGION AND BIRTH-RATE

ANOTHER COUNTRY that has begun to worry over its decreasing birth-rate is Germany, where an interesting phase of the problem lies in the fact that this decrease is much greater among the Protestants than among the Catholics. In the current discussions in the German press the churches of all denominations are called upon to throw their influence against race suicide. The following facts and figures are taken from an article called "What Can We Do to Counteract the Growing Decrease in the Birth-rate?" by Johannes Kübel in the *Christliche Welt* (Marburg):

"In 1870 there were born in Germany in every 1,000 population 40.1 children; in 1910 it was only 29.8, a decrease of nearly twenty-five per cent. The decline in the thirty years to 1900 was 3.3 per cent.; in the last ten years it was 7 per cent. Since 1901 this percentage of decline has steadily grown, it being 2.1 in a single year. Compared with other European lands, the rate of decline in Germany is the most marked. Thus, in the year 1910 the decline of birth-rate in Spain was 1.7; in France, 2.5; in England and Wales, 5.1, but in Germany, 6.3, as compared with the figures of ten years before. Germany reports even an absolute as well as a relative decline. Since 1898, more than two million children were annually born in that country; in 1910 the number sank below the two-million line, altho the population had increased nearly ten millions since 1898; in 1910 the number of children born was 93,824 fewer than two years before. In some of the larger cities this decline amounts to a catastrophe, e.g., in Berlin the decline since 1876 was from 46 in ten thousand to 21.8 in 1909; in Barmer, from 47.7 to 23.4; in Solingen, from 38.3 to 21.2; in Dresden, from 41 to 25. The absolute retrogression is seen in such cases as Munich, in which in 1901, with a population of half a million, there were 14,103 children born, but in 1909, with a population of 570,000, only 10,535. These are only sample facts."

Turning to the greater decrease among Protestants than among Catholics, the writer says:

"In Prussia from 1875 to 1900 the average number of children in a Catholic family was 5, in a Protestant family 4. In 1871 the Protestant contingent in that kingdom was 64.9 per cent. of the entire population and the Catholic 33.6 per cent. In 1910 the ratio was 61.8 and 36.3 per cent. The percentage of Protestant children as compared with those born from Catholic parents has decreased from 54.4:38.6 in 1903 to 52.3:40.4 in 1910. Still more eloquent are the following facts: In 1901 the Protestant school children in Prussia numbered 3,491,373, in 1906 it was 3,706,962; in 1911 it was 3,851,647; while the Catholic figures were 2,057,272, then 2,321,926, and then 2,597,914. In ten years the three and a half million Protestant school children of Germany increased 300,000, while the two million Catholic children had an increase of 510,000. The problem has also a serious religious side, and, in addition, a political phase when it is remembered that the Polish families report the largest gains."

Discussing some of the causes behind these figures, he continues:

"The first and foremost cause is the industrializing of Germany and the rush to the larger centers of population, where Germany has built up its big businesses. Experience has shown that the workingman's family, if it has more than four children, is inevitably doomed to the proletariat. In addition, the employment of women in factories, the growth of greed for money, the modern culture of women, the fact that the Protestants more than the Catholics flock to the cities, and other reasons are the causes of this condition of affairs. One-fifth of the Protestant population of Germany is now living in cities of 100,000 and more, but only one-seventh of the Catholic contingent."

And of the possible remedies we read:

"Protestantism can unfortunately do little, except to preach

and to admonish. Minister Dr. Kirchner, in the Prussian Diet, recently declared that the Protestant clergy can do less in this matter than the Catholic because the latter have that powerful help, private confession and absolution. Just how much can be done in awakening the conscience of the people will depend on the trial. Things do not look encouraging in this respect. Medical science and economics, especially in antagonizing the theories of Malthus, must exert some influence. The state can assist by forbidding the sale of illegal instruments and medicines. But all these can be only experimental. The problem is new and the solution not yet found."—*Translation made for THE LITERARY DIGEST.*

CHICAGO'S "MORALS COURT"

CHICAGO LIVES UP to its reputation as a pioneer in establishing the first "Morals Court," thinks the *Chicago Tribune*, which says that the work of the court "will attract the attention of the world," while *Collier's Weekly* pronounces its methods to be "as scientific and humane as the average police-court methods are clumsy and brutal." The business of the Morals Court is to hear "all cases that have to do with violations of the city ordinances regarding the social evil," and as the *Cleveland Press* explains, its object is "to deal mercifully and helpfully with girls gone wrong." First offenders are spared the shame of public exposure, and none of the women on trial are thrust into contact with the regular petty criminals and drunkards of the police court. Attached to the court are women probation officers and women physicians, and it is proposed to have a hospital for such of the defendants as may need medical care. The probation officers cooperate with employment agencies and rescue homes so that the women who wish to make a new start in life shall have the opportunity. Another feature of the Morals Court is that it will deal severely with the men who "entrap and then prey upon these women," which leads *The Press* to wonder whether "society is getting ready at last to do justice to a pariah class?" Justice in these matters, according to the *Milwaukee Journal*, "has all too often been one-sided," but now the world is disposed to regard the men more sternly and to look upon the women, especially the first offenders, with more intelligent consideration, and *The Journal* asks:

"Is there any way in which humanity may be more greatly shown than in extending another chance, whether it is to the convict after his first sentence or to the woman who has erred? There is no danger that such a course will encourage crime. The penalty will still be heavy enough. Chicago with its Morals Court will not wipe away the grief and shame of sin, but it will take a step nearer the thought of him who said so many years ago what Christianity has been so long in learning: 'Neither do I condemn thee; go and sin no more.'"

In the view of the *Philadelphia Inquirer* the Morals Court is "admittedly an experiment and must be judged by its results rather than on any theoretical grounds," and yet "conditions are becoming so bad that any effort at betterment is to be encouraged," so that "if Chicago succeeds even measurably other cities will be prompt to follow her lead."

But plain skepticism as to the worth of the court is the feeling of *The New World*, a Catholic newspaper published in Chicago, which remarks:

"It is all very well to say that the court is intended to 'give every one a chance'; to afford those who have fallen from the path of virtue another opportunity with a change in life, but this is scarcely to be obtained by blazoning to the world the names and the sins of the fallen or degraded, with pictures of the court-

A CHICAGO EXPERIMENT—THE FIRST "MORALS COURT."

The object of this court is "to deal helpfully and mercifully with girls gone wrong." Judge Jacob H. Hopkins is presiding. On his right sits Gertrude Howe Britten, superintendent of the Juvenile Protective League, and on his left Mrs. Louise Tousey, the Court's chief probation officer.

flanked by sanctimonious individuals performing the work of moral regeneration. According to one of the printed accounts, a young girl who had been before the court for wayward conduct was 'sentenced' to be sent home, but the victim of the moral-court proceeding replied that the publicity given her case by the activities of the sociologist reformers, the proceedings of the court and the newspapers, made it impossible for her ever to enter her home again or rejoin the family. Is not this a case of the cure being worse than the disease? Are we not entering upon an era of too many public nostrums, too many quack 'reform' doctrinaires, too much smug notoriety-seeking and highfalutin in the administration of the law? It would seem that there are enough channels through which the laws can be enforced, crime punished, and vice corrected, without continually increasing the number by such institutions as 'Morals Courts' and 'Courts of Eugenics,' etc., which not a few are beginning to regard as a fifth wheel to the coach of law administration."

THE CROSS IN THE BALKAN WAR

WHILE MANY OBSERVERS, noting the atrocities committed by the Christian soldiers as well as by the Turkish troops, prefer to consider the Balkan War a secular rather than a religious conflict, at least one spectator of the struggle does not hesitate to call it "a triumph of the Cross," and to reproach the Christian nations with their failure to recognize the fact that "all Christendom has triumphed in the latest victory of the small states of Southeastern Europe over their old enemy, the Turk." This spectator is Ben Hurst, who discusses the religious aspect of the war in the *Notre Dame Ave Maria* (Catholic). Mr. Hurst quotes a wounded Servian soldier in a Belgrade hospital who said to him: "We knew God would not turn his back on us. After all, it was for his Son we were fighting." The writer goes on to say:

"The rank and file who bore the brunt of battle, who chased the Turks at Kumanovo, stood knee-deep in the marshes at Monastir, and fell in thousands under the walls of Adrianople, were men who clung to the creed of their forefathers as to a pearl of great price. National sentiment was indeed strong, but it was not nationality that bound four separate races together.

"Greek, Slav, and Bulgar (half Slav, half Tartar) were bound by a common faith, their best inheritance. The 'intelligent' classes, who had assimilated new doctrines in the Masonic circles of Paris, Berlin, or Geneva, whither the youth of the Balkans go in quest of modern knowledge, kept these out of sight during the solemn marshalling for the fray.

"Not one was ashamed, on crossing the Turkish frontier, to make solemnly in public the Sign of the Cross. It was impossible to find standing-room in churches that are usually empty. A wave of fervor fanned a faith that had slept. The

Cross was the rallying symbol for the Allies on the field of battle. Christians, pressed into the Turkish ranks, and deserting at every opportunity, ran toward the allied troops holding before them sticks or branches crudely put together in the hallowed form, or signing themselves continually, so as to insure recognition as a brother, and escape being shot. Among the prisoners whom I saw passing in the streets of Belgrade were many with rough crosses of white paper stuck on their caps. The persecuted symbol stood them at last in good stead. These men, mostly Greeks, were given free fare to their homes. It was everywhere, among the Allies, the triumph of the Cross."

Something of what this triumph may mean for the liberated states may be inferred from a comparison of conditions in Bulgaria under a Turkish and a Christian régime. The Rev. M. M. Popoff, a Protestant Missionary in Bulgaria, gives in *The Missionary Review* (New York) the following facts concerning Bulgaria's progress during the thirty-five years since she threw off the rule of Turkey:

"Once liberated from the unbearable yoke, the Bulgarians gave themselves to an all-round development. A system of free education was organized, for which the state expends annually 25,000,000 francs. Many young men had been trained in Robert College at Constantinople, who took leading positions in all departments of the Government and encouraged others to seek after higher education. A flourishing university was soon founded in Sofia, which has now nearly 2,000 students. Every town of any size has a gymnasium or a progymnasium, and there is scarcely a village without a free primary school upon which attendance is compulsory. As a consequence illiteracy has almost disappeared. Nearly every man in the army can read and write, and many a common soldier is a university man, speaking French, German, and English.

"In distributing Scriptures and tracts to the soldiers in Samokow, while they were starting for the front, out of 15,000 men, very few rejected copies on account of inability to read."

Those Balkan states which were still under the Turkish yoke when the present war began, says Mr. Popoff, have "absolutely no improvements" to show for 500 years of Turkish domination. We read further:

"The Bulgarians within thirty-five years made wonderful progress in education, industry, commerce, etc., as one will see at once on entering Bulgaria. The manner of living indicates that the national wealth is rapidly increasing. The Turks, on the other hand, leave behind them scarcely a single sign of modern civilization. They have established no schools, have built no factories, have constructed no roads. The great majority of their former subjects are left in distressing poverty, and the country is more desolate than they found it 500 years ago. This is unquestionably due to their utter inability to govern for the benefit of the people. If they had been better rulers they might still be the masters of the entire Balkan peninsula."

SOCIAL SERVICE AND THE PUBLIC SCHOOLS

NELLO was an undersized eleven-year-old Italian boy in an ungraded class of one of New York's public schools, where he distinguished himself by his "utter badness" and incorrigibility. But a "visiting teacher," sent to his home to investigate conditions there, found that Nello's mother was dying of cancer, and that he was her only nurse. He also had practically the entire care of three younger children. More than this, his father, a heavy drinker and often out of work, shared his beer with Nello instead of getting him proper food. Nello's school tantrums were then diagnosed as due to exhaustion, malnutrition, and alcohol poisoning, and when approached from this angle, promptly yielded to treatment.

The story of Nello, which is told by Eleanor Hope Johnson in *The Survey* (New York), is not unique or even exceptional, and for that reason she urges the extension of the social-service movement in connection with the public-school system. "The day is fast coming," says this writer, "when just as surely as social service is an inseparable and honored part of both religious and medical institutions, so it shall be of our educational work." Phases of this service, she points out, are already being slowly introduced into the public-school systems of some cities, while in many more cases the work is being done by volunteer agencies in connection with the schools. The most familiar form of this service at present is that of the "visiting teacher," who investigates the home conditions surrounding backward or incorrigible pupils, and with the knowledge thus acquired is often able to bring hope and progress into a situation which previously meant only bewilderment and despair to both teacher and child.

Yet "when the effort is made to introduce direct social service into the school system itself," this writer tells us, "a suspicion has often been felt on the part of the governing body, or on that of the taxpayer, that here is an attempt to turn the schools into charitable centers." Writing in *The Survey* (New York), she goes on to say:

"They do not seem to realize nor take to heart the message of that minister of twenty years ago that while it is all very well to talk about training the mind, no one has ever yet seen a mind that was not connected with a body. The obstacles which often prevent the mind's full development must be discovered and removed before the education the schools offer can be taken full advantage of. The same close relationship which hospital social service brings about with a patient's home must be established by the school with the homes of its pupils—as in the case of Nello—so that any hindrance to a child's education existing there may be ascertained and as far as possible overcome.

"Last year the social worker who was supplied to the Department of Ungraded Classes of the New York public schools by the Public Education Association proved abundantly the need for such work in connection with all the special classes for children who are backward from any cause whatever. Children who appeared to be hopelessly defective were taken by this worker to hospitals or clinics and found to be far more nearly normal than had been at first supposed. Children who seemed to be in immediate danger of getting into evil ways because of their mental defect, and whose parents were unequal to the task of keeping them from harming themselves or others, were placed in institutions where they could be taught and cared for."

The success of this visitor has led the New York Board of Education to instal two such visitors in the Department of Ungraded Classes.

Concerning the development of volunteer social service in connection with the schools, the writer tells us:

"The Home and School League of Philadelphia has done valuable work in arousing interest in this direction, and now a number of such visitors are at work in the city supported by various private organizations. They are doing the same sort of work as that done by the visitors in New York and Boston, altho from the reports it would seem that both in Philadelphia

and Boston special attention is given by them to vocational guidance. A particularly valuable piece of work has been done by the home visitor appointed by the Armstrong Association to work among the colored pupils of Philadelphia; the Friend's Preventive Association, the Juvenile Protective Association, and the Children's Aid Societies, also support visitors. These are being used to an increasing degree by the Bureau of Compulsory Education of Philadelphia in carrying on the preventive work connected with that bureau.

"In Boston there are now five full-time and seven or eight part-time school visitors. Each visitor is engaged by some private organization, such as the Women's Educational Association, the Home and School Association, a group of settlements, or by some individual. She is attached to a special school or district and does all her work there. This is the arrangement in all three cities. The work has been supervised by a committee of the Women's Educational Association, and this committee represents settlements and other social agencies. Work of this sort, but on a smaller scale, is being done both in Worcester, Mass., and in Rochester, N. Y. The visiting teachers, working under the Public Education Association of New York, have been increasingly effective in their efforts to solve for the often overburdened teacher problems connected with individual children."

POLITICS AS A "SPIRITUAL ENDEAVOR"

A MARKED IMPROVEMENT in the spirit of politics is noted, in an interview in the *New York Times*, by Norman Hapgood, one of the new owners and the editor-in-chief of *Harper's Weekly*, and also the chairman of the New York Citizens' Committee which is planning a fusion campaign in the metropolis for the fall election. "A semi-religious or acutely ethical feeling is the real dynamic force behind the change in our political conditions," is the belief of Mr. Hapgood, who maintains that politics is no longer a mere conflict of partizan points of view, but "a highly spiritual endeavor" to discover the means of giving "to the mass of the people the best things in life," and he holds that the objects of progressive politics to-day are in many details "identical with the objects that form the basis of the Christian religion." The willingness to change established customs and to reduce established privileges Mr. Hapgood terms "enthusiastic humanity," and remarks that it is much more in evidence in the Middle West, "where wealth and education are more evenly distributed, than in the great social and financial centers of the East." He adds that there are various reasons why it is hard to make the progressive feeling count in New York, one being that in any wealthy community the political organizations "are likely to be dominated by men of great wealth" and by vast business organizations; yet this has happened not in New York alone, as we read:

"Everywhere in this country the difficulties of city government have been increased by the fact that we have rarely brought the citizens forward in our politics, but have subordinated the individual to the political machine, which has invariably been a subordinate part of one or the other of the great national parties. These machines have not only included a great deal of inefficiency and considerable dishonesty, but, what is even more important, they have prevented the best intelligence of our cities from taking over the control of our city governments and bringing advanced and creative thought to bear on city problems."

That we shall eventually establish a system by which a great city shall be permanently free from the thrall of national partizanship is Mr. Hapgood's conviction, and he continues:

"City elections in the not remote days of the future will be won or lost on questions bearing only upon city problems; only such municipal officials shall be chosen as we the public have an interest in; the rest will be appointed. In no other way can the present advantage of the professional politician be wholly done away with. Among political devices for better city government the short ballot is the most important."

MOTOR TRUCKS

THE MOTOR-TRUCK AND THE RAILWAY

THE growing use of the motor-truck for short-distance transportation has raised the question whether, and how far, it may prove to be a successful competitor of the railroad. Much will depend on the existence of good roads. That the question is extending far beyond metropolitan limits is shown by a letter of inquiry that *Motor Age* recently received from Bowie County, Texas. In Bowie County good roads have been built by bond issues. One of the roads parallels a railway for a considerable distance, and it has been proposed that the road be extended for thirty miles further along the railway. Before doing this, however, information was sought as to the "actual cost of operating trucks on graded and graveled roads per hundred pounds of freight per mile." When these figures have been obtained some of the authorities in Bowie County intend to compare them with freight rates charged by the railroad. In answering the question *Motor Age* says:

"As a basis of figuring it will be advisable to look at the freight schedules for this territory on lots of 100 pounds. These throughout Texas are as follows:

Class of goods	1	2	3	4
10-mile haul.....	13	12	10	8
15-mile haul.....	15	13	12	10
25-mile haul.....	19	17	15	13
35-mile haul.....	22	20	18	16
50-mile haul.....	27	25	23	21

"If the motor-truck is to make good it must meet these rates and make a profit on them. With a simple system it can be done, but an elaborate freight line would be beaten by the railway.

"Motor-trucks already have competed with the railways abroad for certain classes of service and under certain conditions, with excellent success. This is over good roads, of course. As to whether it could be done in the case mentioned would depend entirely on the service conditions. Assuming some of these, however, one can easily outline a plan of figuring cost which will give a good idea of things, as a beginning to real figuring.

"In the first place, the road projected is 42 miles long altogether, and the motor-truck line is to compete with the parallel railway for this distance at 27 cents per 100 pounds maximum. If the line can take in towns near that are not touched by the railway, so much the better, assume that there would be ten stops or distributing stations along the route and that business can be had to keep the motor vehicles working to their tonnage capacity each trip.

"It has been contended in many previous articles in *Motor Age* that the business method of handling motor-trucks is of far more importance than the vehicle itself, and this case is no exception. The whole success or failure of the scheme would depend on the business connected with the trucks and the business

"All of this fixt expense has to do with the car alone, however. In actual work some kind of platform or shed would prob-

From "Motor Age."

MOTOR-TRUCK AT WORK ON GEORGE GOULD'S ESTATE IN LAKEWOOD, N. J.

MOTOR-TRUCK DELIVERING PIPES TO BUILDERS OF AN OIL PIPE LINE.

ability of the manager, statements which will explain themselves as the article proceeds.

"The average motor-truck in city use makes 42 miles a day, so for the first figuring, merely to arrive at a further basis, let us assume that there will be two machines, one making a trip each way each day, a third being held in reserve for breakdowns and for extra hauls. The mileage will be 42 per day, the stops 10. Thus the trip would be made in about 6 to 9 hours, not over 4½ hours being spent in actual motion by each machine and the rest spent in loading and unloading.

"The fixt expenses of a 5-ton truck would be about as follows:

Gasoline.....	\$1.62
Oil, etc.....	.43
New parts.....	1.31
Tires.....	2.63
Driver.....	2.50
Fixt expenses of truck.....	5.06
Total.....	\$13.55

"Fixt expenses on the truck would be as follows or thereabouts, car cost being taken at \$4,500:

Depreciation, 20 per cent.....	\$3.00
Interest at 6 per cent.....	.90
Insurance.....	.36
Garaging.....	.86
Total.....	\$5.12

ably have to be furnished as a freight station at each town shipping point, the expense depending on the business and equipment. If a number of motor-trucks were used this overhead would drop, but business conditions in several towns might require a good, tho small, freight building, lighted and heated, and a man in charge.

"Add to this the expense of two working trucks at \$13.50 each, including driver, and you have the total daily expense of \$49.48, or about 24 cents per ton-mile. This means an expense per 100 pounds per mile of 1.2 cents, or practically 50 cents for the 42-mile trip, including handling, etc. This is too high.

"If two drivers were used each truck could make a round trip of 84 miles a day without undue strain or hurry, provided the goods are ready at each station platform at stops. By building sheds which were mere platforms with a protecting roof and a box for shipping slips and orders, most of the small stops could be handled as now; the two machines would make two trips a day each way, or one could be used only to do as much work as formerly. The ton-mileage per day would be in this case 420 instead of 210 for the same vehicle."

SELF-STARTERS FOR TRUCKS

A subject on which there is much diversity of opinion in motor-truck circles is the wisdom of using a self-starting apparatus. At the public shows early in the year makers in general discouraged the introduction of it. They contended that the simpler

From "The Automobile."

MOTOR VEHICLE MADE IN 1873.

From "Motor Age."

MOTOR-TRUCK LUNCHING-ROOM USED IN GRAND RAPIDS, MICH.

a truck was made the better it would perform in the hands of a driver. It was desirable, so far as possible, to avoid giving drivers any opportunity for tinkering with new devices. In this way trouble could be avoided. On the other hand, it is contended that "everything possible should be done to save the energies of the driver." This ground is set forth in *Motor Age*, which insists that the contention is particularly good in the case of the vehicles of 1,500 pounds capacity now used for making deliveries of many parcels daily. A driver thus occupied will of necessity be compelled to spend a great deal of his time and energy in cranking the motor. A driver whose energies are not diverted by the necessity for cranking would be almost certain to produce better results. The writer adds:

"With the improvement that starters are receiving at present there is not any reason why satisfactory ones for the truck driver can not be produced. It is true the work on a starter in such service is ten times greater than that in a passenger car, and it will be up to the starter, manufacturer, and battery builders to cope with these extreme conditions.

From "Motor World."
MOTOR-CAR USED IN RAILWAY TRACK WORK.

"The fact that starters are desirable for one type of motor-truck does not necessarily mean they are desirable for all types. The truck used in transfer work between a store and its distributing warehouses, or between the depot and the wholesale warehouses, has not that requirement for a starter that the vehicle in the house-to-house service has. It is a moral certainty that when the starter movement takes hold of one department of the truck industry its influence will be felt in all of the others."

THE DEMAND FOR GASOLINE

L. S. Tainter writes in *Motor* of the magnitude of the demand in this country for gasoline. Motor-cars alone now consume in twelve months over 400,000,000

gallons. While these figures are not exact or authentic, they may serve as an estimate. They are based on the assumption that the average car will be run 5,000 miles in a year and will consume a gallon for each twelve miles. The number of cars now in the country is placed in round numbers at a million. Starting with these figures, an attempt is made to get at the cost of the gasoline consumed. With the average price placed at 15 cents per gallon, the result obtained is \$60,000,000. If to this price be added 5 cents per gallon, in order to reach the average price paid by consumers, the result would be \$80,000,000—"surely a nice, tidy sum to go into the coffers of the refiners and sellers of gasoline during the course of one year." Other items of consumption named in this article, their cost, etc., are gas, engine oil, grease, and kerosene. Mr. Tainter says:

"We find that each car in this country consumes thirty-five gallons of engine oil on an average during a year, making a total of thirty-five million gallons. The average wholesale price of this product is thirty-two cents per gallon, which figures up to over eleven million dollars.

"The next in line is grease, and of this motor-cars use during a year fully twenty million pounds, or ten thousand tons, and, at an average wholesale price of six cents per pound, this amounts to one million two hundred thousand dollars.

"A great deal less kerosene is being used per car now than was consumed a few years ago; this is on account of the increase in electric-lighting systems, but it is perfectly safe to assume that each car is responsible for an annual consumption of two gallons. This includes what is used for lighting, cleaning the motor, and washing, or a total consumption of two million gallons, and at ten cents per gallon it amounts to two hundred thousand dollars.

Only the widest kind of a guess can be made as to the value of the general petroleum lubricating oils and greases which are used in the manufacture of motor-cars and automobile accessories, but one would not be very far wrong if he put the annual figure at three million dollars.

Summing the matter up, we find that the automobile and its kindred industries are responsible for over seventy-five million dollars' worth of wholesale petroleum business during a year, which is divided as follows:

Gasoline	\$50,000,000
Gas-engine oils	11,200,000
Greases	1,200,000
Kerosene	200,000
General lubrication	3,000,000
	\$65,600,000

"Speculation as to the future is rather a fruitless business, but it is nevertheless vastly interesting. With motor-cars being launched on the roads of America at the rate of almost half a million a year, with motor-boats taking the water in fleets, and with a constantly increasing number of

From "Motor Age."
TRUCK TRANSPORTING BOATS FROM TOLEDO, O., FOR THE RELIEF OF DAYTON.

stationary engines being driven by gasoline and lubricated with the same oil and grease that the motor-car uses, it is obvious that the time is not far distant when the gasoline phase of the petroleum industry will take place in the list of staple 'crops' along with wheat, corn, and their fellows.

"In England the ordinary wholesale price of gasoline, or 'petrol,' is the equivalent of forty cents a gallon, while in France 'essence' has touched the sixty-cent mark. With gasoline in America

From "The Horseless Age."
LIGHT DELIVERY WAGON BUILT ON CYCLE LINES.

at the latter price, we would have the enormous total of \$240,000,000 as the actual cost to the ultimate consumer of the power to drive his car. Beyond a shadow of question, the rapid increase in the number of motor-cars will furnish the oil merchant with the needed excuse for an equally rapid increase in the cost of motor fuel. Two

From "The Automobile."
AUTOMOBILE USED TO DRIVE FARM MACHINERY, A CIRCULAR SAW BEING IN OPERATION IN THE PICTURE.

years hence, when the number of automobiles in America passes the two-million mark, we shall, unless some kindly hand intervenes, with another and cheaper fuel, have forty-cent gasoline. Assuming that the consumption would be just twice what it is now, we get the astonishing total of \$240,000,000 as the bill which the motorists

A LIGHT WEIGHT ELECTRIC TRUCK.

The Victor System of changeable needles gives you complete musical control

Full tone

Victrola Needle
30 cents for 200

Medium tone

Victor Needle
5 cents per 100
50 cents per 1000

Soft tone

Victor Half-Tone Needle
5 cents per 100
50 cents per 1000

Subdued tone

Victor Fibre Needle
50 cents per 100
(can be repointed
and used eight times)

The Victor system of changeable needles adapts the different selections to the requirements of different rooms, and to meet the tastes of different people—enables you to hear every record just as you want to hear it.

"But," you say, "when Caruso sings or Mischa Elman plays doesn't the Victor record it exactly as the artist sings or plays it?"

Absolutely true to life—but there is this important difference:

The Victor record is the artist just as you would hear him if you stood beside him on the stage, while what you want is to hear him as you would if seated in the audience—and the system of changeable needles enables you to sit in the first row or the last row or any place between, and to change your seat for each individual selection to hear it to the best advantage.

The Victor system of changeable needles and the tone-modifying doors of the Victrola give you perfect control over the music, and enable you to bring out the full beauties of each individual record.

The **Victrola Needle** produces the full tone as originally sung or played—particularly suited for large rooms and halls, and for dancing.

The **Victor Needle** brings out a volume of tone about equal to what you would hear in the first few rows of an opera house or theatre.

The **Victor Half-tone Needle** reduces the volume of tone and gives you the effect of sitting in the middle of an opera house or theatre.

The **Victor Fibre Needle** produces a rich, subdued tone that takes you still further back—a tone that will delight the discriminating music-lover.

The principle of the changeable needle is the only correct one to insure perfect results, and the reproducing qualities of Victor Needles are absolutely right.

Any Victor dealer will gladly play any music you wish to hear and demonstrate the value of the changeable needle.

Victor Talking Machine Co., Camden, N. J., U.S.A.

Bertiner Gramophone Co., Montreal, Canadian Distributors.

G. V. Electric Trucks

Give you 10 years' life and more. Are clean, silent and odorless.

Operate 297 days out of the 300.

Show economy in tires, parts replacements and general upkeep over a period of years.

Promote the highest efficiency in systematic trucking, transfer work and light deliveries.

Make possible undreamed of economies in real estate investment covered by stables and wagon yards.

Design standardized since 1907. All parts of each model interchangeable. Over 3000 in use, many ten years old.

The ex-teamster and the simple Electric are a saving over the complex motor vehicle and the expert chauffeur-machinist.

The Electric has economic law behind it and must dominate in its field. Show your business acumen by getting the right machine for the right place.

Six capacities: 750 lbs. to 5 tons.

Catalogue 106 on request.

MOTOR-TRUCKS

(Continued from page 1232)

of 1915 will have to foot for their fuel alone.

"Certainly the figures are alarming, but as the writer has before pointed out, every such contretemps brings its own solution with it. Motoring in America is the modest man's sport. It belongs essentially to a class which can spend only a certain amount of money. The minute the price of gasoline touches a figure beyond the reach of the half-filled pocket-book, some one will come forward with a cheaper fuel to take the place of gasoline, or else with a carburetor that will give a mileage for a given amount of gasoline so far in excess of the distance now obtainable that the increase in price will be nullified."

MOTOR-WAGONS FOR GROCERS

Henry Farmington, writing in the *Power Wagon* of the increase in the use of motor delivery wagons by grocers and other tradesmen who supply food, asserts that the cost of living in this country "is at least \$1,200,000,000 more than it should be," and that excessive sum "is directly attributable to the present wasteful methods of handling and distributing food products." What is wanted is "greater and more direct distribution of perishable food." This would largely decrease the cost of food to the consumer. Mr. Farmington makes the following other statements:

"In the movement now going on all over the country to reduce the cost of living, the more progressive grocers are doing their share by throwing out the expensive and obsolete system of delivery by horse wagons, and are installing motors in their places.

"A careful census reveals the astonishing fact that grocers in these United States have invested upward of \$5,500,000 in motor-wagons. About 2,000 grocers operate a total of 2,800 motor-wagons, varying in carrying capacity from 300 pounds to seven tons each.

"These are distributed in forty-six States and Territories. No fewer than 328 towns appear on the list, so it will be seen that the distribution is country-wide and fully representative of American progress. Most of these grocers own and operate only one machine each, but there are several hundreds with more than one.

"One of the biggest installations is that of a progressive concern operating a chain of retail grocery stores in Philadelphia. This firm has thirty-one motor-trucks at present, and has expressed the intention of buying 200 more in the near future. The largest fleet of motor-wagons owned by one grocery company is that of a big New York chain-store grocer. This concern has thirty-five machines, valued at \$150,000. A company in Detroit, Mich., has just bought twenty-three motor-wagons, after having fully tried out machines for some time previous.

"Other grocers having installations of more than one motor-wagon include: One with fifteen machines, one with ten, three with nine, two with eight, three with seven, seven with six, eight with five, forty-one with four, eighty-three with three, and two hundred and seventy-seven with two.

"Practically all of these commenced with a single motor-wagon, and bought the rest on the showing of their first machine—some because the machine brought extra trade—which is sufficient evidence of the ability of the power wagon to 'make good' in the grocery business.

"Compared with the use of motor-trucks in the country at large, these figures are comparatively insignificant. There are about 66,000 power wagons in road-service in this country. The total investment is \$150,000,000. There are one hundred and ten concerns with an average installation of over fifty machines each, and an aggregate investment of \$15,000,000, which shows the confidence of the big business men of this country in the motor-truck idea.

"A small grocer in Chicago said he would not consider the motor-wagon for some years, until it was properly developed. But he changed his tune when told of the foregoing particulars. And he was utterly astonished when shown a list of nearly 100 grocers in Chicago who have a total of 126 machines.

"This man is typical of thousands of others, and such men, when they finally do buy motor-wagons, often make the mistake of purchasing machines wholly unsuited to their needs. The obvious way to avoid this fatal mistake is to buy machines only from manufacturers who have an established reputation.

"If a motor-truck company has been in business for several years, or if its officials are men of known reputation in the power-wagon industry, it is usually a safe bet to buy its machines especially when it can refer to a long list of satisfied customers. There is no longer the slightest reason for a grocer—or any other tradesman—for not having motor delivery. In nearly every large city there are professional motor-truck operators who lease or rent the services of machines, some by the day, week, or month, others on long-time contracts of from one to three years. And it nearly always happens that the price for such service, considering the tonnage moved and the miles covered, is much cheaper than operating horse wagons.

"Thus, if a grocer wants to try out motor delivery, he can lease from a professional. Of course, the motor-truck operator makes a profit, but then he also guarantees service, and besides he can administer a large number of machines much more cheaply in proportion than an individual concern can one or two. There is another way in which the up-to-date grocer can have the benefits of motor delivery without taking the necessary money out of his business all at one time for the purchase of machines. In many of the smaller progressive communities of this country, some of the local tradesmen have clubbed together to buy motor equipment on the cooperative plan.

"Even in so small a place as Rushville, Ill., with a population of only 2,000, the grocers are doing their delivery work with two motor-wagons on a cooperative basis."

When Everything's Perfume.—A poetical old shopkeeper was always doing kind things and saying lovely ones. One spring he was having his shop repainted. He told the painter to leave a certain corner untouched for the time being; he explained that the young people at that season did all their courting there, and he didn't want them to get smudged.

"But," objected the painter, "these young folks would be fools not to know the smell of fresh paint."

"Young fellow," said the old shopkeeper, "you've never had a girl, that's plain. If you had, you'd know that when folks are in love, everything—wet paint included—smells like violets and roses."

—San Francisco Argonaut.

The Marmon is a fitting expression of the elegant luxury of modern life combined with the high efficiency of modern industry. Nothing that makes for comfort, convenience or beauty has been overlooked; marvelous results that make for durability, power, economy and capability have been achieved.

The reputation of the car and its makers warrants the careful consideration of every buyer who demands the best.

Detailed Information on Request

Nordyke & Marmon Co.

Established 1851

Indianapolis, Indiana

Sixty Years of Successful Manufacturing

The Marmon "Thirty-Two"

A sensible, logical car—a car of moderate size and capacity, meeting every requirement for touring and city use with the economy in tires, fuel and upkeep so important to the majority of motorists. Four-cylinder, 32 h. p. 120-inch wheel base, electric starting and lighting system, with body types to meet every requirement and corresponding equipment. Touring Car, \$3000, f. o. b. Indianapolis.

The Marmon "Forty-Eight"

Six-cylinder, 48-80 h. p., 145-inch wheel base—a large car with small car advantages, a car with short turning ability which eliminates the old objections to long wheel base—a car of wonderful and surpassing riding qualities; electric starting and lighting system, with body types to meet every requirement and corresponding equipment. Touring Car, \$5000, f. o. b. Indianapolis.

Diamond

(No Clinch)

Tires

made of Vitalized Rubber

are built with extra air-room

It's the extra air-room that does the work. The more air-room in your tires means more resiliency, and a greater ability of the tire to absorb the shock of the road, insuring more comfort for you and your passengers—*more comfort for your tires.*

This more air-room tire does the work easily and will not strain under road usage. The extra air-room is gained for you without lessening the thickness of the tread or weakening the side walls.

You can now get Diamond (No Clinch) Tires made of Vitalized Rubber, with Perfect 3-Point Rim Contact, No-Pinch Safety Flap for inner tube protection, and, if you wish, the famous Safety (Squeegie) Tread—at any of the

Silver City

New Mexico

DON'T let the season delay your coming. When U. S. soldiers are found to have tuberculosis, they are sent to this section immediately for treatment, no matter what season of the year it may be. When you find you have tuberculosis, don't wait until winter to begin your fight. Superior where you are may be as bad a handicap as winter. The U. S. Government chose this section for its \$4,500,000 Sanatorium, for the reason that

the climate here is favorable for the treatment of tuberculosis all year round.

The Government's report states: "The feature which constitutes the peculiar excellence of this climate and distinguishes it from all other sections, is its relative *equality*—outdoor life is pleasant throughout the whole year."

The mile-high altitude has much to do with keeping summer days here pleasant and nights delightfully cool. This altitude, too, is a big help in the treatment of tuberculosis. Statistics show that altitude increases the vitality by adding to the white corpuscles and by bringing the blood pressure of a tuberculosis patient to that of a person in full health.

The environment here is beautiful—no arid desert; ground is covered with herbage and is wooded near town and heavily wooded back towards the mountains. Beautiful scenery; good roads. Silver City is a modern town of 4000 with well-stocked stores and every convenience of telephones, electric lights, good water, etc.,—reached via Santa Fe or Rock Island and Southern Pacific.

SECRETARY, 501 CHAMBER OF COMMERCE, SILVER CITY, N. M.

If you realized what a vast difference in the chances of curing tuberculosis a few months may mean, you would plan at once to enlist every aid.

Plan now to come to Silver City this summer—write today for booklet fully describing the climate, the city, and its splendidly equipped sanitariums.

DOCTORS: The question of climate is of very great importance—you do not wish to send tuberculosis patients to distant resorts if as good results can be obtained nearer home. Let us submit evidence by members of your own profession about the *unquestionable* advantages of the climate here.

CURRENT POETRY

OF all the fixed forms of poetry the sonnet is the only one to enjoy general and long-continued popularity. In 1890 an attempt was made to introduce into the English language some of the highly artificial French forms. Austin Dobson, William Ernest Henley, Andrew Lang, Algernon Charles Swinburne wrote graceful ballades, villanelles, rondeaux, and triolets. But none of these forms have entered into the language. The sonnet, however, altho it has been condemned by many poets and critics—sonneteer was once a contemptuous name for a poet—retains its hold upon the affections of writers and readers of verse. The magazines of England and America print sonnets every month, and rare indeed is the volume of verse that does not contain exercises in this fascinating and difficult manner. Even *The English Review*, that ultra-radical periodical which publishes the work of John Masefield, W. W. Gibson, and William H. Davies, yields to tradition enough to print in a recent issue ten sonnets by as many different writers. It cannot be said that these poems are particularly distinguished; sameness of form and sameness of thought render them rather dull reading. Only one shows any striking beauty, and that one we quote below. Mr. Flint has expressed beautiful thoughts in beautiful phrases—" chiming in my soul like silver gongs " is admirable. The spirit of his poem is refreshingly joyous and eminently suited to the form he has selected.

Consolation

By F. S. FLINT

What if my life be cast in barren ways,
Between brick walls, where flowers do not grow,
Where golden fields of corn wave not nor glow,
And cold unfriendly faces meet my gaze—
There still are trees in London: in the maze
Of noisy streets I meet them as I go,
Dejected and bewildered, to and fro.
And my heart leaps and with rejoicing says:
Still have I golden books where men have limned
The flowers of their spirit and its songs—
Birds singing in the branches of my mind;
And, O my love, your image is undimmed,
While chiming in my soul like silver gongs
Your voice and laughter through its silence wind.

From the sonnet let us turn to the work of a scornful of sonnets. Mr. Herbert Kauffman's "Poems" (George H. Doran Co.) are written with little regard for convention; perhaps it would be juster to say they are written in deliberate defiance of convention. When a writer has striking new thoughts to advance this capriciously free writing is sometimes justifiable. But Mr. Kauffman has no new message, nor does his enthusiasm for profanity and exclamation points lend force to his Kipling-esque didacticism. In his quieter moods he writes verse well worth reading, and the two which we print below show him at his best. His personification of Hope is well sustained, and except for the clumsy expression " muscled meat " the poem called

"Courage" is excellent. It is a little too long, perhaps, but it is effective preaching.

Hope

BY HERBERT KAUFFMAN

I heard the walls of grief and shame
When Priam's walls were wrapt in flame;
I stood within the Forum place,
When Vandal ax and Gothic mace
Battered the pride from Caesar's face;
When Plague's foul legions filled the Seine
With corpses, and bestank the plain
Of France, from Paris to Lorraine;
When Flanders fell before the siege
That made the Spanish fiend her liege;
When werewolves wrought a guillotine
For Louis and his fragile queen;
'Twas I who staged anew the scene,
'Twas I who wiped away the scars
And set the heaven with fresh stars.

Courage

BY HERBERT KAUFFMAN

'Tis not because of muscled meat
We place men in the master's seat;
We do not reckon toughened-thew,
Nor breed, nor creed, nor bulk, nor hue,
The force with which the anvil rings,
Nor care how hard the hammer swings;
The might in brawn, the strength in bone,
Can never serve success, alone;
Think you 'twas Spartan steel and skill
That saved Greece from the Persian will?
Think you Horatius won the day
And held the bridge through nimble play
Of sword? Or when all Europe lay
Cringing beneath Napoleon's sway,
'Twas better guns and cannon-balls
That swept the fields and crumbled walls?
All that was splendid in every age
Was written by valor on history's page.
Giants in pigmy guise,
Prophets with groping eyes;
What matter sight or size
When men build to the skies?
What matter numbers, years,
If we disdain our fears?

Here, by a more experienced poet, is a poem that has no lesson whatever. It has, however, a charming old-fashioned sentiment and it illustrates the mysterious and enduring affinity of wild nature and the human heart. We take it from *The Independent*.

The Dittany

BY MADISON CAWEIN

The scent of dittany was hot,
Its smell intensified the heat;
Into his brain it seemed to beat
With memories of a day forgot.
When she walked with him through the wheat,
And noon was heavy with the heat.

Again her eyes gazed into his
With all their maiden tenderness;
Again the fragrance of her dress
Swooned on his senses; and, with bliss,
Again he felt her heart's caress
Full of a timid tenderness.

What of that spray she plucked and gave?
The spray of this wild dittany,
Whose scent brought back to memory
A something lost, beyond the grave.
He knew now what it meant, ah me!
That spray of withered dittany.

How many things he had forgot!
Far, lovely things he'd flung away.
And where was Love now? Who would say?
The dittany, whose scent was hot,
Spoke to his heart; and, old and gray,
Through the lone land he went his way.

International Motor Trucks

Proved by Years of Successful Service

Mack 12 years in use **Saurer** 18 years in use **Hewitt** 10 years in use

4 cents per ton-mile

Ten of our trucks are owned by the Baldwin Locomotive Works, who unquestionably understand transportation machinery. During 1909-10 they bought four of our trucks—saving 33⅓% in transportation cost—then they bought the rest of the ten. Their exclusive use of our trucks proves their confidence.

These trucks are operated with full load capacity 24 hours each day, and here are the figures:

104 to 120 miles each 24 hours per truck
80,000 pounds of freight per day per truck

Two days' work for each work day; yet upkeep remains only 4 cents per ton-mile.

Each round trip, from the works at Philadelphia to Eddystone is over 26 miles.

Load—5 tons going, 5 tons on the return
2 round trips in each 12 hours
4 round trips in each 24 hours
40 tons per day per truck

This story is but half told—let us tell you the rest

PERSONAL GLIMPSES

THE PASSING OF THE ASTOR HOUSE

IN Boston the tearing down of an old landmark is regarded as a kind of sacrilege, but in New York nearly everything must give way to economic pressure. In the metropolis dividends are usually the first consideration, and the people who pull down old buildings excuse themselves by saying that while from a sentimental standpoint it is rather bad to see places of historic interest wiped out of existence, there is a gain of architectural beauty in the erection of modern buildings. One by one a great many New York landmarks have passed, and now we learn that the old Astor House is soon to be torn down. The old hotel has an interesting history, some of which is told in the New York Sun:

There are probably more history, tradition, tragedy, and comedy associated with the weather-stained, gray-stoned old Astor House than with any other old building in New York. Shortly after the Revolutionary War Rufus King, once Minister to England, had his Colonial homestead and garden on the plot where the Astor House now stands. One of his neighbors was Cornelius Roosevelt, of whom Colonel Roosevelt is a direct lineal descendant.

John Jacob Astor, the founder of the Astor family in America, bought the house and ground from King, and while he lived there entertained all the authors and scholars of the day. He bought up all of the block between Vesey and Barclay Streets, and in the early 30's decided, much to the alarm of some conservative old Knickerbockers, to erect there the finest hotel on the western continent.

The corner-stone was laid on July 4, 1834, and beneath it was buried a silver casket containing copies of the daily newspapers of the day previous, a silver tablet, and a full-length portrait of Lafayette, who was a mighty popular figure in this country even at that date.

It took three years to erect the building, and the original cost was \$70,000. The opening ceremony was presided over by Mayor Cornelius W. Lawrence.

Perhaps there is no place in America where during the march of years so many celebrities from every field of endeavor have gathered. There have been murder, theft, and suicide between those grim stone walls. Some of the bitterest political campaigns of American history have been planned there.

A year after the place was opened Nathaniel Hawthorne and Charles Dickens registered there, and only a few months later Washington Irving spent several weeks there while on a visit to New York.

Every President of the United States since the Civil War excepting William H. Taft has had at least one meal in the Astor House. In the parlors upstairs the campaigns of Henry Clay, Zachary Taylor, and Winfield Scott were organized. Edgar Allan Poe, who in 1841 edited *Graham's Magazine*, dropt into the Astor House daily to pick up news.

On the Astor steps Louis Kossuth bade adieu to America, and the late King Ed-

AN ELECTRIC TRUCK Can Go Anywhere

It isn't prohibited from entering docks, warehouses or other places where fire underwriters' rules forbid inflammatory material.

This is only one of the advantages of an "Electric" truck. There are many others and business men everywhere are recognizing them, just as the large majority of electric vehicle manufacturers have recognized the superiority of

The 4 "Exide" Batteries

"Exide", "Hecap-Exide", "Ebin-Exide", "Bronclab-Exide"

Designed and perfected by the most experienced battery engineers who have carefully considered the service requirements of the "Electric."

Built by the oldest battery maker in the country in the largest plant in the country devoted exclusively to the manufacturing of storage batteries.

The worth of "Exide" batteries has been demonstrated, *proved beyond question*, in dependable service in all types of electric vehicles, under all sorts of conditions.

The people who buy the most batteries are the best judges of the best battery to use.

Whether you own—or intend purchasing—an electric pleasure car, delivery wagon or truck, it will pay you to investigate the four "Exide" Batteries.

Our interesting publications on request.

BUFFALO LITHIA SPRINGS WATER

Challenges comparison with any other known mineral water in the world on its record of results.

Dr. Roberts Bartholow Professor Emeritus of Materia Medica, General Therapeutics, etc., Jefferson College, Philadelphia, said in "Practical Treatise on Materia Medica and Therapeutics," 1899, that Buffalo Lithia Water "contains well-defined traces of lithia and is alkaline. It has been used with great advantage in gouty, rheumatic and renal affections."

Dr. George Ben Johnston Richmond, Va., ex-President Southern Surgical and Gynecological Association, ex-President Medical Society of Virginia, and Professor of Gynecology and Abdominal Surgery, Medical College of Virginia, says: "When lithia is indicated, I prescribe Buffalo Lithia Water in preference to the salts of lithia, because it is therapeutically superior to laboratory preparations of lithia, lithia tablets, etc."

Edward M. Eidherr, M.D., Ph.D., Ch.D., Ph.G. University of Vienna, Chicago, Ill., declares: "I have found Buffalo Lithia Water of undoubted service in the treatment of Uric Acid Gravel, Chronic Rheumatism and Gout."

Voluminous Medical Testimony on request. For sale by the general drug and mineral water trade.

ward, then Prince of Wales, with the Grand Duke Alexis, bowed from those steps to the crowds. Thackeray passed in and out of the hotel entrance, and down those steps P. T. Barnum escorted Jenny Lind to her coach, and Macready followed.

The old registers, preserved through the generations, show the names of about all the leading figures in American history of the time. The signature of Fenimore Cooper is there, as are those of Lydia Maria Child, Margaret Fuller, Peter Parley, John Burroughs, Fitz-James O'Brien, and George Arnold.

Walt Whitman used to sit by the hour on the Astor House stoop basking himself in the sun. Andrew Jackson was a regular guest. Fanny Elssler, the dancer, who seventy years ago introduced "La Tarentelle," was a familiar figure in the house.

In the old ballroom many of the finest social events of New York life were held.

HE "MADE" FLORIDA

WHEN Henry M. Flagler, famous for his work in developing the resources of Florida, was fourteen he left the home of his father, a poor Presbyterian minister, in a village in Ontario County, New York, and went to a little town in Ohio, where he was glad to take a job as clerk in a general store at five dollars a week. When he died the other day at West Palm Beach he was rated as one of the ten or twelve richest men in the country. The tangible compensations for weighing coffee and sugar, measuring calico, and cranking molasses faucets did not enable young Flagler to enjoy many popular pleasures, but his experiences behind the counter gave him the foundation for his business education. While there he acquired a sense of commercial values and learned the rudiments of business. The story of his success in the oil business and later as a railroad builder is told in the New York Tribune:

In that store Mr. Flagler learned a great deal. In the cellar there was a keg of brandy, which was a veritable magician's keg. In the neighborhood there were three separate communities—English, Germans, and Pennsylvania Dutch. Out of that little keg the English bought brandy at \$4 a gallon, the Germans paid \$1.50 a gallon, and the spirits were sold to the Pennsylvania Dutch for what the clerks or the proprietor could get. "That keg taught me to inquire into the merits of everything offered for sale," said Mr. Flagler, in telling the story.

The young clerk worked hard and saved his money, but he never earned more than \$400 a year while he was employed by others. Flagler continued to save, and when he had accumulated a little money he moved to Bellevue, a small place in the next county, and went into the grain business. John D. Rockefeller was then a grain and produce commission merchant in Cleveland and Flagler made consignments to him.

Flagler started a distillery—he always explained that the business was considered

KREG PECANS

Selected Paper-Shell Pecans

Not the ordinary, little, brown nuts you buy at the store, but large, thin-shelled, easily-cracked nuts, filled with delicious golden goodies.

Don't buy meats during the hot summer months. Kreg Pecans used in soups, salads, cakes, macaroons, icings, ice cream, garnishing, and almost every form of dessert will provide more nourishment and are altogether more palatable and healthful.

You Can Buy Only By Mail

The supply is limited, as our orchards in Georgia are not yet in full bearing. We are offering these nuts now simply to introduce them, and this is probably the first opportunity you have ever had to secure them, as their commercial sale has been largely confined to a few fancy grocers in the larger cities, at exceedingly fancy prices. We have only 200 of the 5-lb. packages to offer. We could readily dispose of these to planters and nurserymen, but as we expect to handle a big crop next fall, we want to begin to establish our trade.

We are including with each initial shipment an attractive table nut cracker. While the nuts may be readily cracked in the hand, the cracker brings forth the kernel whole and clean.

Orders will be filled as received. Send \$5 by Postal Money Order, Draft, or Check for 5-lb. package delivered by Parcel Post, prepaid. If our supply is exhausted before we reach your order, money will be refunded.

Reference—First National Bank and Northern Central Trust Company, of Williamsport, Penna.

No shipment of less than 5 lbs. will be made. Order 10-day. Send 25c for sample package.

KREG PECAN CO., Williamsport, Pa.

"RANGER" BICYCLES

Are equipped with puncture-proof tires, imported roller chains, imported English flanged sprockets, English leatherweight steel mud guards, imported Brompton pedals, motor style saddles, bars and grips, and other distinctive features possessed by no other bicycle. No effort or expense has been spared to make the "Ranger" the World's Best Bicycle. Improved factory methods and greatly increased output for 1913 enable us to make a marvelous new price offer. Something very special to the first purchasers of 1913 models in each town. Write us today.

WE SHIP ON APPROVAL

without a cent in advance, to any person, anywhere in the United States, and prepay the freight. We only ask you to examine and try the "Ranger" without a cent expense to yourself before you think of buying any other bicycle.

10 DAYS' FREE TRIAL

is allowed on every "Ranger" bicycle. Not a cent cost to you if you do not wish to keep it after riding it for 10 days and putting it to every test. Our "Ranger" bicycles are of such high quality, handsome appearance and low price that we are willing to ship to you, prepaid, for your examination and trial, and leave it entirely to you whether you wish to keep it or not.

LOW FACTORY PRICES Our great output, perfected methods and machinery enable us to offer you direct from the factory the best bicycle ever produced at a price that will be a revelation to you. Do not buy a bicycle or a pair of tires until you receive our large complete catalog and learn our direct factory price and remarkable special offer.

SECOND-HAND BICYCLES—a limited number taken in trade by our Chicago retail stores will be closed out at once, at \$3 to \$5 each. Descriptive bargain list free.

RIDER AGENTS WANTED in every town and locality to ride and exhibit a sample 1913 "Ranger" bicycle furnished by us. In your spare time you can take many orders for our bicycles, tires and sundries. Write at once for our large Catalog and a remarkable special proposition we will make you on the first 1913 models going to your town.

TIRES, rear wheels with coaster brake, inner tubes, lamps, fenders, chainrings, parts, repairs and everything in the bicycle line at half usual prices. Do not wait—write today for large catalog containing a great fund of interesting, useful bicycle information. It only costs a postal to get everything. Write it now.

MEAD CYCLE CO., Dept. S-172, CHICAGO

thoroughly respectable in those days and that he gave it up because of his religious scruples. He made about \$50,000 in Bellevue, and went to Saginaw, Mich., where he entered the salt trade. In three years he lost his money and owed about \$50,000. He managed to borrow enough to pay his debts and went to Cleveland, where he started in the grain commission business. That was in the 60's. John D. Rockefeller, his brother William, and Samuel Andrews, an Englishman, had started an oil refinery at Cleveland, and when it was decided to build a second refinery, Flagler borrowed \$100,000 from Stephen Harkness, who was related to him by marriage, and Flagler became a member of the firm of Rockefeller, Andrews & Flagler. The business developed rapidly, and in 1870 the partnership was closed and the Standard Oil Company was formed.

The company was capitalized at \$1,000,000 at first, but when the concerns of Lockhart, Frew & Co., of Philadelphia, and Charles Pratt & Co., were bought, the capital stock was increased to \$3,500,000, and then to \$70,000,000. Mr. Flagler was one of the main factors in the development of the vast oil industry, which later was considered a menace to business and which was dissolved by the United States Supreme Court. Mr. Flagler always maintained that there was no "freezing-out" process in the building up of the Standard Oil Company, and that the men who demanded cash instead of stock when they sold their refineries were the ones who cried loudest against the Oil Trust.

The State of Florida owes to Henry M. Flagler more than to any other man the rapid development that it has enjoyed since the latter part of the last century. A few Northerners seeking relief from the rigors of winter had gone there from time to time after the close of the Civil War, and there were a few small hotels. In the late 80's Flagler saw that the country could be developed, and he set about to do it. He built at St. Augustine the Ponce de Leon and the Alcazar hotels and increased the railroad facilities. The new hotels were then considered the finest in the world, and since they were opened there have been few to excel them, even in the great cities. He built other hotels and the Florida East Coast Railroad, and finally constructed the extension of that railroad from the mainland over the keys to Key West.

Key West, the southern terminal, is the most southern city in the United States, and by way of the Florida Keys is 106 miles from the mainland. The project to construct a railroad across these keys was smiled at at first, and it was not decided upon definitely until after years of careful study. Nearly six miles of the wonderful railroad are constructed on concrete arches that span the deep water between Long Key and Cane Key. The completion of the road brought Havana within ninety miles of railroad transportation to any part of the United States.

Flagler's work in Florida was recently referred to as follows: "It is to be doubted whether mere figures can give an adequate idea of the magnitude of Flagler's work. He has spent \$41,000,000 in Florida—that is, his investment in incorporated enterprise amounts to that, divided roughly as follows: Eighteen million dollars in the old railroads, including the development of

FEDERAL

THE TRUCK TRIUMPHANT

The Federal Truck Has Never Been An Experiment

The Federal truck was not offered for sale until its power, its strength, its durability, its economy, its success had been scientifically demonstrated.

The fact that there are in operation today 1000 Federal trucks of the original Federal design demonstrates the scientific soundness of that original Federal design.

The Federal was the first successful truck designed, built and sold by a company organized exclusively for the manufacture of trucks.

How Federal Trucks have "stood up"

Here is the history of the first five Federal trucks we built:

The first Federal truck is neither in the scrap heap nor in the relic room. It is in operation as a pick-up car for the Federal factory today. It is still averaging 75 miles per day, carrying capacity loads.

The second Federal truck built and the first sold was bought by Beecher, Peck & Lewis, wholesale paper dealers, and it is still operated daily by that company.

The second Federal truck sold was bought by the L. Bomb Floral Company, and is still operated daily by that company.

The third Federal truck sold was bought by the fire department of Tupelo, Miss., and is still in operation.

The fourth Federal truck sold was bought by the Portland Railway,

Light and Power Company, who are not only still operating that truck, but on the showing of that truck have since bought seven more Federal trucks.

We have never had to re-build a Federal.

We have never had to replace a Federal.

We have never had a serious interruption or complaint of Federal Service—with 1000 Federals in hourly operation.

That record is unique—also, we believe, conclusive evidence.

We experimented before we sold a single Federal, and 1000 Federal owners are satisfied because we sold them a scientific success.

Write for the Federal Blue Book of Traffic.

Price includes chassis, lamps, tools, etc.

\$1800

Body extra, built to meet individual requirements.

towns; \$10,000,000 in the Key West extension; \$12,000,000 in hotels, and \$1,000,000 in steamboat and outside enterprises. This sum does not include his charities, churches, and divers donations, for neither he nor any one else has kept the figures. The value of the taxable property in the counties exclusively reached by the Flagler roads has increased over \$50,000,000 since he began. And there are to-day only about 25,000 acres under cultivation for fruit and vegetables out of a total of about 3,500,000 acres now available for such cultivation. Flagler has "made" the East Coast of Florida.

HOW EVERS GOT HIS START

IN the spring of 1902 the "Cuban Giants" were billed to play an exhibition game at Troy, and the local club's short-stop, a boy named Pugh, failed to turn up. Manager "Lew" Bacon, finding himself "in a hole" for an infielder, asked if John Evers was in the grand-stand, and, as luck would have it, John happened to be "Johnny-on-the-Spot." If Evers had been absent that afternoon, maybe he would still be working in a collar factory, where he was employed at the time he broke into professional baseball. As it was, he gave a creditable account of himself, and Bacon had him play in several other exhibition games before the regular league season began. Pugh arrived the day before the opening game, and Evers was sent to right field, but the future "King of the Keystone Base" was not destined to stay in the outfield. Pugh did not play very well, and Evers was made the regular short-stop. The new manager of the Chicago Cubs tells his own story in an interview with a New York *Evening Telegram* reporter:

So that it may be understood that it was not a sort of haphazard guess on the part of Bacon in asking me to play, it is necessary for me to explain that previously I had been playing semiprofessional ball in and near Troy on Sundays.

I was the manager, captain, and financial backer of a team of youngsters. Some of them I paid as much as fifty cents a game, but the average salary was a quarter, which I paid out of my own pocket, and which, incidentally, used to keep me pretty nearly "broke," for I never made any money out of it.

During 1901 my team won the championship of a small league that we were connected with, and in the autumn when the local boys who had positions with minor and major league clubs returned home they formed a team to play us.

In that game I played third base, short-stop, and pitcher, and somehow or other we won. Bacon offered me a contract then, but I declined.

I never thought very much of my ability as a player. I was wanting in confidence and feared that I wouldn't make good. That was my real reason for declining.

It was funny the way I attracted the attention of "Tom" Seeley, then the manager of the Chicago Cubs.

There was a short right-field fence at Troy and on the other side was the river. I made so many home runs over that fence

that I was regarded as a sort of "demon slugger." If I remember correctly I made something like twenty-two homers. After I left they limited hits over the fence to two bases.

Seeley purchased me from Troy before the completion of my first season in professional ball.

I joined the Cubs in Philadelphia on Labor Day, 1902. A big parade was in progress and I could not break my way through the line of march. I tried a dozen times at different points, but each time was waved back by a policeman.

As a result it was late when I arrived at the hotel. The Cubs and Phillies had decided to play two games in the afternoon instead of one in the morning and one in the afternoon.

I remember as well as if it was yesterday that it was fifteen minutes to one o'clock when I arrived at the hotel. The first game was to be called at one-thirty.

Seeley met me. He informed me that it was so near game time, that I had better not eat anything, because he wanted me to play that afternoon. He suggested, however, that it would be a good thing for me to snatch a fifteen-minute nap until he found a uniform for me. In those days we drest at the hotel and rode to the ball park in a "bus."

Of course sleep was out of the question. It seemed like an age to me before a boy finally brought me a uniform. The only one available was old "Bill" Lange's. He was about as big as Ed. Reulbach, taking a fifty shirt, or something like that, and at the time I broke in I weighed exactly 105 pounds. It was like a Chinese puzzle for me to make the thing fit so that I would be presentable.

After a prolonged tussle I finally succeeded. When I was ready to start all the other players had been sitting in the bus for some minutes waiting for me. As I climbed up the rear steps I heard them remark: "Pulling the John Ward already." It was some time later that I learned that "the John Ward" was an epithet applied to all those who were late. It seems that Ward was seldom on time for the bus ride to the ball parks.

As I climbed aboard "Jack" Taylor, the pitcher, looked me over very carefully and cut me to the quick with, "He'll leave in a box car to-night." He meant that I wouldn't do at all. Some years later, I must admit, it gave me great pleasure to still be with the Chicago club when Taylor was released, and I refreshed his memory by remarking: "Well, I'm still here, 'Jack,' and I see you're getting the gate."

That first day in Philadelphia I played short-stop. I had a bad day, but Seeley wanted to see more of me in action, and the following day played me at second. I have been there ever since.

As a usual thing managers like to sign ball-players who have some weight. I can truthfully say that I have yet to see the day when I cared to be any heavier than I am now. The lack of weight has never been a handicap to me. In fact, I think it has helped me in my work at second to a marked degree.

Second base calls for a lot of agility, possibly more so than any other position on a team, and yet it requires very little blocking. You see, when a second baseman takes the throw from the catcher to

The second of the Hupmobile week-ends

The Patriarch of the Pen

He came with a rush out of the deep shadow of the pool, where the dead pine overhangs the bank—that old patriarch of the trout tribe—and nailed the fly on your first cast. You knew he was there—you had dreamed all winter that he was there. And "The Mitten," who pines the wilderness as you find it—can back to the Hupmobile for the net.

The dawn of that May morning had found you well out of the smoky city. Over the fragrant pine ridges and along the old "one-road" the Hupmobile had whirled you.

The whiff-pow will pitch his mysterious chant as the shadows lengthen. You whirled over, carelessly into the car. Back over the old "one-road" the Hupmobile flies with you. Once the wild little people of your trout stream were a rail-road just as away from you and your city home. The Hupmobile has brought them very close. You and yours are led back to nature in "The Car of the American Family."

NEXT MONTH

A Hupmobile week-end at camp.

Hupmobile

If you'll stop to think—there are very few cars in this country which possess a following that is utterly unaffected by any other car.

And it must be plain to you that the Hupmobile is one of the very few.

It is so individual, so distinctive, and is so widely known for long-continued-good-service, that it is almost non-competitive.

The Hupmobile owner does not change. He buys another Hupmobile. And for his used Hupmobile he asks and receives a price far above the ordinary allowance for second hand cars.

We have repeatedly said that we believe the Hupmobile to be, in its class, the best car in the world.

And that is precisely the way the average Hupmobile owner feels about it.

retire a runner attempting to steal the second baseman seldom if ever has to block the runner. He is running in the same direction as the runner, and it is a question of getting the ball and tagging the runner with it.

On the other hand, a short-stop and a third baseman have to block almost continually. The short-stop comes over from his position to take the throw, and the third baseman does not have to run nearly so far to get to his bag as a second baseman does, and therefore has to block the runner quite frequently.

DEFYING THE CANADIAN MOUNTED

THE Canadian Mounted Police, famous for their work in suppressing lawlessness in the sparsely settled regions of the Northwest, have many daring exploits to their credit, but they probably never clashed with a more troublesome desperado than Oscar Fonberg, a half-crazy homesteader in the backwoods of Alberta. Fonberg did not kill as many men as some other "bad" men who have defied the Mounted, but he gave his pursuers all the thrills that could be expected from one person. The solitude of the wilderness preyed upon Fonberg's mind, and he became the victim of a single delusion, which was the indirect cause of his clash with the officers. Francis J. Dickie, writing in the *Canadian Courier*, tells the story:

Obsessed with the idea that their shack stood on the site of a valuable silver mine, Oscar Fonberg and his brother Swan converted the building into a miniature fortress. Built into a hillside, and loop-holed like a Hudson Bay post of old and filled with high-powered rifles and a large stock of ammunition, the building overlooked and commanded a sweeping view of the whole valley. And here these two men lived for almost two years allowing no one to approach them. For the past six months they have been the terror of Ross Creek country, a territory lying in central Alberta near to Grassy Lake and about 20 miles due north from the town of Tofield on the main line of the Grand Trunk Pacific Railway thirty miles east of Edmonton.

On Sunday, April 20th, a Ruthenian homesteader named Antonik was fired upon when he passed near to the home of the Fonbergs. He next day reported the matter to Officer Tetley, in charge of the post at Tofield.

On Tuesday, April 22d, Tetley, armed with a warrant for the apprehension of the two Fonbergs on a charge of suspected insanity, went out to the Ross Creek homestead, but on approaching the place was greeted with a volley of shots. Seeing the uselessness of, single-handed, attacking two adversaries so powerfully entrenched, he returned to Tofield and wired to Commissioner Cuthbert, at the district headquarters, Edmonton. Detective Max Bailey, an old member of the force, and Officers Stead and Whitley were dispatched to the scene by the Commissioner.

Joining Tetley at Tofield the four men made their way back to the Fonbergs'

F. A. HARDY & CO.

Department D. CHICAGO, ILL.

stronghold, arriving late in the afternoon of April 23d. Approaching the dugout from over the ridge to within parleying distance, the police demanded the surrender of the inmates. From within the shack a voice ordered them away.

Crawling down the side hill, the Mounted Police attempted to fire the shack by rolling bales of burning hay upon the roof and, then deploying to the left, the four officers spread out and rushed the place.

Dashing across the open space Detective Bailey reached safely to within fifteen feet of the door when one of the hail of bullets which poured from the hut struck him in the mouth, killing him instantly. Whitley, seeing his companion fall, turned from this rush on the shack and picked his fallen brother officer in his arms, not then knowing whether life was extinct. A second later a bullet plowed through his thigh, bringing him to the ground. Wounded and still under fire in the open as he was, Whitley still attempted to lift the fallen man, but was unable to carry the body to the shelter of the near-by scrub. The two other officers, Stead and Tetley, gaining the protection of the scrub, carried Whitley to the rig in which they had come, and the driver started off across twenty miles of rough prairie roads to the town of Tofield, while the other two men remained crouched in the scrub to guard against the escape of the inmates of the shack.

When the wounded man arrived in Tofield wires were sent to Edmonton and the Mounted Police Barracks at Fort Saskatchewan for more men, and four officers the same night left the fort and were followed by a reinforcement of four officers from the district headquarters at Edmonton.

In the meantime back in the lonely ravine of Ross Creek the two Mounted Police, under cover of the gathering darkness, crept up and recovered the body of Bailey and dragged it out of fire range. Not a sound had issued from the hut since the encounter of the late afternoon, and, gaining courage, the two men rushed the shack, reached the door, and burst in, only to find the place deserted and empty. In spite of the fact that neither of them had taken his eyes off the place, the quarry had escaped into the night. A short time later, reinforced by nine more of the Mounted Police and a specially sworn-in posse of citizens from Tofield, a thorough search of the surrounding country was made but without avail.

Meanwhile it was learned that Swan Fonberg was employed at a brick-yard in Edmonton, and that the fight given the police was the work of only one man. The police had been under the impression that two men had done the firing, as the rapidity with which bullets had come from the dugout indicated that there must have been two men there, if not more. To conclude:

At 3 o'clock on the morning of April 25th, Mike Rechie, a Russian homesteader, living three miles from the Fonbergs' shack, was awakened by a feeble knocking at his door. He rose and was startled as he saw the shadow of a man in the gloom of the half-opened doorway and the next minute heard the newcomer fall.

Economy } in BUILDING

ADD to any business an efficient system, man the working organization from top to bottom with efficient members and economy is inevitable.

Efficiency eliminates waste. Economy is the sequel.

Under the Hoggson Single Contract Building Method, all the parts of a building operation dovetail like the cogs in a great machine.

Design, engineering, construction, decoration, furnishing, and all other factors entering into a building operation are united under one responsible, centralized control. Waste motion is obviated and continuous harmony in aim and action is maintained.

Result: Economy to a degree never before reached in building operations.

We effect direct economies by

1. Preparation of each operation to the point of *finality*, before construction is begun. The owner knows every detail of the appearance, arrangement, materials, equipment, furnishing and decoration of his building before he is committed to proceed with its construction. The progress of the work is scheduled from excavations to occupancy. He knows the limit of cost and the limit of our profit. Not until he is satisfied in all matters, does he say "Go ahead."

He has made a long step toward economy by effectively barring "extras."

2. By purchasing all materials on the most advantageous terms, securing lowest prices through our large buying power; placing all orders for materials well in advance of their requirement, insuring specified quality and deliveries when wanted.

3. By giving the operation such careful, incessant superintendence that faulty work, wasteful effort and misunderstandings are eliminated, and the progress of the operation is held systematically to the original schedule of performance.

4. By limiting our profit on the entire work to the percentage named in the contract.

5. By reducing the number of subcontracts, therefore reducing multiplication of profits.

NOTE:—We do a greater proportion of the work required in a building operation with our own employees, than any other building organization in this country.

We effect indirect economies

1. By completing the work on time, thereby keeping the carrying burden at the minimum; saving the owner from prolonged payment of

rentals elsewhere, and from loss of rentals from the new building.

2. By conducting the work of construction so efficiently that the owner's full time, thought and energy may be devoted to his regular business, without the least sacrifice of his interests in the new building.

3. By saving those totally wasted costs of the competitive method of building that are due to the rejection of nine out of every ten sets of plans and sixteen out of every seventeen contractors' estimates. (It is admitted generally that the expense of preparing these rejected plans and estimates, adds approximately 10% to the cost of the average building erected by the competitive method.)

THE Hoggson Single Contract does not mean any surrender of your rights, tastes, privileges, or opinions as owner. It simply means placing upon one financially sound and competent firm those responsibilities, cares and technical problems which, through lack of time or experience, you prefer not to assume.

In spirit, the contract we sign with you is one of equity. In letter, it specifically covers by guarantee (with a bond if you wish it) every essential of your undertaking.

If you are interested in economy for important building operations—Office Buildings, Banks, Residences, Clubs, Churches, Libraries—there is much to gain by an investigation of the Hoggson Single Contract Method of Building. Shall we send you a book describing it? May we call?

Book Cabinets

Do Not Look Sectional—
But They Are

MADE IN GRAND RAPIDS

THIS roof takes precedence over other materials for beauty, durability, fire protection and low cost. Rough-surfaced shingles of crushed slate or granite embedded in pure asphalt. Natural colors of garnet, red or gray-green, which never fade and never need painting.

Reynolds Asphalt Shingles

They have withstood the ravages of driving rain, pelting hail, hottest sun and heaviest snow. They lie perfectly flat—cannot warp, crack, split, curl, drop or blow off. They are as cheap as good wood shingles, yet are far more lasting, far handsomer, and cannot be set on fire by flying sparks. They save part of your insurance cost. Adaptable in every style of pitched roof, and make possible many unusual architectural effects.

Guaranteed for 10 years

We are the ORIGINAL MAKERS of Reynolds Asphalt Shingles and tested our product for ten years before putting it on the general market. Right here, in Grand Rapids, where climatic changes are extreme, our shingles, after ten years' exposure to every kind of weather, look as good as the day they were nailed on. It surely will be wise to waste your money in buying quick-setting wood shingles, which catch fire from the first spark, and enable you to pay exorbitant prices for heavy slate or similar materials.

Uniform in size—8 in. x 4 in.—and are laid 4 in. to the weather. Your building supply or lumber dealer can secure them shingles for you.

Let us send you a booklet showing photographs of modern houses covered with Reynolds Asphalt Shingles—actual specimens of the owners are included. Also opinions of leading architects and builders. Write for a copy TODAY.

SNUGTEX
The Fabric Belt

This Elastic Comfort Feature

is found only in SNUGTEX BELTS. The elastic extends beyond the two holes. It makes the belt pull over the shoulders without any effort. It makes the belt pull over the shoulders without any effort. It makes the belt pull over the shoulders without any effort. It makes the belt pull over the shoulders without any effort.

Washed \$1.00. Special Fabric \$1.50. If you are a dealer, write for a copy of our literature.

Smith Webbing Co. Pawtucket, R.I.

His clothes, tattered and torn, leaving one knee entirely bare from a long crawl through rough underbrush. Fomberg lay utterly exhausted at the door of the Russian homesteader's shack. One arm had been smashed with a bullet from the attacking party, and another had penetrated underneath his left armpit, passing clear through the outer wall of the chest. Yet badly wounded as he had been and with the blood flowing fast from two bullet wounds, the man had crept through a cordon of armed men, some of whom at one time or another must have been within a few yards of him, showing him to be a master-hand in the art of woodcraft. And even hurt as he was he dragged his rifle with him.

All unknowing of the great fight which had taken place so close to him the Russian, Reebie, took the man in and revived him with brandy and roughly dried the wounds. Fomberg quickly recovered some of his almost spent strength and requested to be driven to Chipman, a small way-station on the Canadian Northern Railway about forty miles across country from Tofield and fifteen miles from the scene of the fight. Fomberg paid the man five dollars, and in the early dawn they started out in a team-drawn buggy.

They were jogging along within three miles of Chipman when they were met by Constable McPhail, of the Mounted Police, and a newspaper man from the staff of the Edmonton *Herald*, who were on their way to join the marching posse. The boy who was driving the Mounted Policeman and the newspaper man recognized Fomberg as the two rigs approached each other.

Slouched far down in the seat and almost unconscious, the outlaw who a short few hours ago had given battle to a whole squad of police was no longer terrible. His rifle, which he had carried painfully across the miles of prairie before he reached the Russian's shack, had been left behind there and he was easily taken by McPhail and his companion, and the rigs returned to Chipman.

Alike After All.—A stunning specimen of the Princeton Tiger was fondly holding the hand of the pretty little Vasar lass, and at last he approached the leading subject courageously. "I have carefully studied the matter from the scientific point of view, and am thoroughly convinced that we are fitted one for the other."

"Please explain yourself," said she, looking up at him with her large, bright eyes.

"It is simply this," he continued, "according to science, which is the only way to approach the subject. You see, you are light and I am dark. You are short and I am tall. You are small and I am large and powerful. You are sprightly, vivacious; I am somewhat sober and phlegmatic. In short, we are opposites, and opposites should marry."

"Yes," she replied; "but there are exceptions to all such rules, and I know of one in this case that is sufficient. I cannot marry you."

"In what respect is this exception made?" he demanded excitedly.

"You see," she smiled up at him again, "you are like me in this: I could never love any other fellow." — *New York Tribune*.

DUTCH BULBS

From
Now
Until
July 1st
—Not
Later

Hyacinths, Tulips, Narcissus, Crocus, give, for a small outlay of time and money, an abundance of flowers in the house from December until Easter, and in the garden, from earliest spring until the middle of May. Bulbs are grown, almost exclusively in Holland, in enormous quantities, and sold at very low prices. Usually they cost double before reaching you.

By ordering from us now, instead of waiting until Fall, you make a large saving, get a superior quality of bulbs not usually to be obtained at any price in this country, and have a much larger lot of varieties to select from.

Our orders are selected and packed in Holland, and are shipped to our customers immediately upon their arrival in the best possible condition.

If you wish to take advantage of our very low prices, we must have your order not later than July 1st, as we import bulbs to order only. They need not be paid for until after delivery, nor taken if not satisfactory. (References required from new customers.) Our import price list, the most comprehensive catalogue of bulbs published, may be had for the asking.

A FEW PRICES	Per 100	Per 500
First Mixed Hyacinths	\$1.25	\$6.25
First Mixed Tulips	.75	3.75
Narcissus Primrose	.75	3.75
Double Tulips	1.50	7.50
Maroon Cupressus Miniature	2.25	11.25
Maroon Cupressus Major	2.25	11.25
Squash Lily, Subminiature	.45	2.25

THE SPICE OF LIFE

Cooperation.—MADGE—"Who helped you make such a fool out of that poor young man?"

MARJORIE—"He did."—*Judge.*

Never Even Tepid.—"Have you hot water in your house?"

"Have I? My dear boy, I am never out of it."—*Baltimore American.*

Unfit.—SHE—"Why do you work so hard?"

HE—"I am too nervous to steal."—*Cornell Widow.*

A Sign.—Tillie Clinger says that the only reason she has for suspecting her new landlady is a suffragette is because she arsons the biscuits about half the time.—*Dallas News.*

Delicate Hint.—BALLADIST—"Don't you think if I'd cut out one of my four songs it would improve my act?"

STAGE-MANAGER—"Yes, about twenty-five per cent."—*Brooklyn Life.*

Slowing Down.—The train that comes into Tickville every week will soon begin to run late, as the blackberry vines along the right-of-way are showing signs of a large crop.—*Paducah Hognallow Kentuckian.*

Her Reward.—GOODFELLOW (with newspaper)—"Here's an old bachelor in Ohio died and left all his money to the woman who rejected him."

CYNIC—"And yet they say there is no gratitude in the world."—*Boston Transcript.*

Dodging Promotion.—There is a chafing-dish period for every college girl; but when the time comes for the promotion to the higher position hard by a grand square cooking-stove, most of the graduates prefer to toot the alarm-whistle on a limousine.—*Dallas News.*

Reassuring.—OLD GOTROX (savagely)—"So you want to marry my daughter, do you? Do you think two can live as cheaply as one?"

YOUNG SORTLY (slightly embarrassed)—"I—I hardly think you will notice any difference, sir."—*Puck.*

Try It.—CRITIC—"The heroine of your story, old man, is simply wonderful."

AUTHOR (delightedly)—"You think so?"

CRITIC—"Yes. You say on page ten that she hissed, 'You are a liar!' and any woman who can hiss such a sentence as that can't help being wonderful."—*Boston Transcript.*

Ah, a Clue!—Sherlock Holmes glanced 'round the room. The pictures were torn into shreds—the chairs were broken—the table lying on the top of the piano. A great splash of blood was on the carpet.

"Some one has been here," he commented with wonderful insight.—*Brooklyn Life.*

United States Tires

are good tires

How many good points should a good tire have?

You know the qualities a *good* tire ought to have.

Generous mileage is the prime essential.

You want a guarantee against rim cuts; you want flexibility, ease of manipulation and security of fastening.

Have you ever been able to secure *all* these desirable qualities in one tire?

Probably not.

Single factory companies have generally been content to strengthen their tires at only one or two of these points.

But by our four-factory cooperative methods of tire building we have been able to combine into *one* tire *all* of the desirable features it is possible to put into a tire.

We have raised tire mileage to an unprecedented point

We have perfected and control *exclusively* a process that has increased the fabric strength of our tires practically fifty per cent.

The treads on United States Tires are made of the toughest, longest wearing rubber stock ever put into an automobile tire.

Flexibility and resilience have been improved to a similar degree.

In fact we have taken *all* the features that you yourself would like to find in the tires you buy and have them *all* put into *one* tire.

Made in three treads, Plain, Chain and Nobby and in three styles of fastening including the Dunlop (Straight Side).

Cost no more than you are asked to pay for other kinds

United States Tire Co. is guaranteed when their tires are at the recommended pressure and checked at a tire bearing either one or both of the accompanying inspection marks. When filled with any substance for use or attached to any other tire than those specified, our guarantee is withdrawn.

INVESTMENTS AND FINANCE

CAUSES OF THE DECLINES IN SECURITY PRICES

THE decline in prices for stock-exchange securities during the spring months of this year has been attributed to various causes. It has affected not only securities of the highest grade, but those intrinsically of low grade. The level reached has been the lowest for many months. John Moody, in his *Magazine*, finds the causes were general as well as specific, the general ones being those which caused recessions not only here but in Europe. A fundamental factor all over the world has been "the absence of real investment capital." In these circumstances the supply of securities for sale became greater than was the demand for purchase. In the months immediately preceding the declines there had been an increase in investment capital throughout this country, due to the large crops of last year. While this to some extent relieved the situation, the relief "was more than offset by a corresponding increase in the number of new issues of a more speculative nature which returned high rates of interest."

Had the character of these new securities been normal and their quantity not unusual, the recession probably would not have gone so far, but there had been for two years a demand from investors for higher returns on their money. This naturally and steadily lessened the demand for high-grade bonds and standard stocks giving only limited returns. Instead of being content with from 4½ to 5 per cent., investors have sought for 6 and even 8 per cent. The prospectuses for new issues were presented to them with so much optimism, and the favorable facts about them were so widely exploited, that "even the old-fashioned investor tended to lose his judgment." Among these issues were those of rubber-tire companies and makers of motor-cars. A little experience under keen competition soon demonstrated that the enormous earnings of the first two or three years could not be maintained.

Issues of this unseasoned class, having thus been tried and found wanting, came on the market in great volume and with rapidity. Not only were these securities depressed, "but everything else of a speculative or investment nature." Meanwhile, the unsettled condition of the foreign financial markets led to the liquidation of foreign investments in American securities and gold was drawn from America. This country instead of being in a position to look after its own affairs and to conserve its resources, was thus called upon to finance a European demand.

Mr. Moody believes it is a conservative statement to say that the highest grade stocks and bonds "have now pretty well discounted, not only recent events, but the uncertainty of the immediate outlook." On this point he says:

"Many of the good issues are to-day selling far below their asset or true values, and while they may naturally with further market unsettlement sell still lower, yet the real investor who to-day goes into the security market and makes selections with intelligence and discrimination will cer-

tainly be getting securities fairly cheap. No one can, except through accident, buy at the absolute bottom, and the stories we hear about people who bought Union Pacific at par in 1907 or United States Steel sinking fund 5s at 80 are not criteria of what the general investment public did at or about that time. Even those who bought the issues at those prices secured them by accident more than by process of financial reasoning. The people who bought securities two months later, paying 125 or 130 for Union Pacific and 90 and 95 for United States Steel bonds, were the class who acted with more conscious intelligence and who made their purchases on a much clearer analysis of the general situation. In other words, people who bought in the midst of the panic were naturally speculating to a pretty full extent, while those who bought two months later were clearly investing, as they had demonstrated facts back of their judgment which warranted them in doing what they did.

"The type of issues which from the purely investment standpoint appears to be desirable at the present time are high-grade railroad bonds or stocks and certain well-seasoned and well-tested industrial issues. For the bond investor there is probably nothing better just at this season, among the long-term bond issues, than St. Paul general 4s or 4½s, the Baltimore & Ohio first 4s, Northern Pacific 4s and refunding 4s, Atchison general 4s and adjustment 4s, and certain of the divisional 4s and 4½s of the Pennsylvania, New York Central, Chicago & North Western, and Illinois Central systems.

"All issues of this general type are to-day selling down around the abnormally low prices reached in the panic period of 1907. Even the investment conditions generally remain poor for some years, and these bonds do not rise very much in the immediate future, yet the liberal return on the investment at present prices is certainly a matter not to be overlooked. For example, Atchison adjustment 4s, really a very high-grade issue, are now quoted around 83, whereas 18 months ago they were selling at about 95. There is no better bond in this country in the railroad field than Northern Pacific first 4s. Two years ago they were selling steadily above par and to-day they can be bought below 95. And so it is all along the line."

THE OUTLOOK

The bright spot in the immediate outlook is afforded by the condition of the crops. Winter wheat early in May was in better shape than at any other corresponding date of which we have records. It is generally agreed that the promise this year is for a tremendous harvest—one better even than the bumper harvest of last year. We had a mild winter favorable to winter wheat, so that the acreage killed is small. Spring rains then followed with plenty of sunshine "just at the right time and just in the right amount," says a writer in *The Investments Magazine*.

Enormous crops may, however, prove to be an embarrassment, because they require heavy financing. It seems probable that more money will be required in the autumn to handle this year's crops than was ever required before. The banks are already striving to build up their reserves, in order to have cash with which to handle the harvest without undue strain. Their

efforts have been greatly assisted by a recession in trade, which has led to a contraction in commercial loans. This recession, so far as the general country is concerned, may therefore prove a blessing in disguise. Reports are at hand of a heavy movement in the grain that was held over by the farmers from last year. A large proportion of that crop remained still unmarketed as late as early in April. Reports since that time have indicated a heavy movement to market. Because of this, farmers who have borrowed money from country banks are able to pay off their loans. By this means the country banks promise to get into much better shape by the time when crop-moving demands set in. The requirements from New York and Chicago may prove not to be as heavy as they at one time were expected to be. Fundamental conditions, says the writer in this magazine (as many other writers say), "are sound, and there would seem to be no reason for pessimism or any serious change in the situation for the next year."

A reassuring interview on business conditions, with Theodore N. Vail, president of the American Telegraph & Telephone Company, was printed on May 21 in *The Wall Street Journal*. Mr. Vail is recognized as one of the biggest and wisest leaders in the industrial world of our time. "It seems to me," he said, "that the fundamentals are sound. Most of our troubles are superficial and are, therefore, susceptible of rapid and decisive improvement"; recovery in the security market to more normal and happier conditions "is merely a matter of time and patience." Mr. Vail believes the present cautious attitude in the money market to be "the very best guaranty in the world that we shall not have stormy times." He is not worrying over the tariff legislation or the depression in industrial New England. "What we want," says he, "is more courage and the disposition to make the best of things." He believes that an increase in freight rates "is the very biggest thing that could possibly happen in this country to-day." The railroads need the increases, they "must have them," and he feels "morally certain that they will get them." A rational solution of this problem would mean "a 25 to 50 per cent. expansion in general business." He has faith in the "enduring ability of the people of this great country to triumph over all obstacles." Finally, he says, any broad view of present conditions must have for its horizon "the Western wheat fields where nature is happily promising to pour out another wonderful harvest."

COMMODITY PRICES LOWER

Bradstreet's for the fifth time this year reports lower commodity prices. The index number for December was the highest on record; the number for May 1 the lowest that had been reached since July of last year. The net decline since December is 4.2 per cent. After May 1, for a fraction of the month, there was a further decline of 1.3 per cent. The index number for May 1, however—that is, \$9.1399—is still high, with one exception the highest ever recorded at this season of the year.

In another article *Bradstreet's* compiles from Government bulletins statistics of retail prices (the index number is for wholesale prices) during the past twenty-three years. They relate to fifteen articles of

Safe 6% Investment Secured By 17-Story Building in the Heart of Chicago

Fort Dearborn Hotel Building

WE OFFER \$650,000 six per cent First Mortgage Bonds secured by a direct first lien on the Fort Dearborn Hotel Building, La Salle and Van Buren Streets, Chicago; the property securing the loan being appraised at \$1,370,000—more than double the total amount of the loan. We point out the following strong features of this issue:

Security A 17-story fire-proof hotel building of the highest class, containing 500 rooms, together with 5 stores and 5 offices, located directly opposite the La Salle Street Railway Station, the terminal of the New York Central, Lake Shore, Rock Island, and other great trunk railways—one of Chicago's strategic hotel sites.

Earnings The entire building has been leased for 99 years to the Hotel Sherman Company, a corporation with a capital stock of \$3,400,000, owner of the Hotel Sherman, at a guaranteed net annual rental of \$67,000 a year. This net rental is almost exactly two and one-half times the greatest annual interest charge, assuring the prompt payment of bonds.

Valuation The property is appraised at \$1,370,000, more than double the total amount of the bond issue, thus leaving an equity of \$720,000, an amount in excess of the entire loan, for the protection of bondholders against loss.

Maturities Investors may purchase these bonds maturing in two to ten years, as they desire. The bonds mature serially in sums from \$15,000 to \$25,000 a year for nine years, \$200,000 of the principal being paid off before final maturity.

Denominations Coupon bonds, \$100, \$500, \$1,000 and \$5,000. We have purchased this entire issue after a thorough investigation, and recommend these bonds as a sound investment for income. No investor has ever lost a dollar of principal or interest on any security purchased of us.

"The Investor's Magazine," a semi-monthly publication, together with literature of value to every careful investor, will be mailed on request.

LIKE THE BANK

or the insurance company or the well supervised institution, when you buy first mortgage or underlying bonds of standard railroads and public utility corporations, you become interested in thoroughly high grade investments. When we stop to consider that such bonds now yield approximately 4% to 5%, it becomes evident that this is a time of unusual opportunity for the man or woman with ready cash. This thought becomes even more convincing when we remember that bonds of this type inspire the full confidence of experts as to their safety, their prompt interest payment, their marketability, and their promise of appreciating in value.

Buy Bonds

Good bonds have all the elements of security of real estate mortgages. They are fractional parts of carefully drawn mortgages on improved and productive property and, in addition, are backed by the credit of prosperous business enterprises. They are readily salable at all times and the interest can be collected at any bank by presenting the coupons as they become due. Long-term bonds assure permanent investment of funds and save the trouble and possible risk of changing or renewing investments every few years.

May we offer suggestions for the investment of your money in high grade bonds which we have examined carefully and which we can recommend?

Correspondence is invited

food, representing approximately about two-thirds of the expenditure for food made by the average workingman's family. The table, compiled for the Government and reproduced in *Bradstreet's*, gives both simple averages and what are known as "weighted averages." "Weighted averages" are computed by a process which gives to each article mentioned its weight according to the average consumption of it in a workingman's family. Following are the figures. They relate to the United States as a whole and cover the period from 1890 to 1912:

	Simple average prices	Relative prices weight'd		Simple average prices	Relative prices weight'd
1890....	103.0	101.9	1902....	116.8	114.7
1891....	103.6	103.4	1903....	116.9	114.7
1892....	101.7	101.6	1904....	118.3	116.2
1893....	104.6	104.1	1905....	118.3	116.4
1894....	99.5	99.2	1906....	122.4	120.3
1895....	97.2	97.1	1907....	128.0	125.9
1896....	94.9	95.2	1908....	132.5	130.1
1897....	96.4	96.7	1909....	140.3	137.2
1898....	99.4	99.7	1910....	148.5	144.1
1899....	100.6	100.8	1911....	146.9	143.0
1900....	102.9	103.0	1912....	157.9	154.2
1901....	109.5	108.5			

Special interest attaches to this table in its bearing on the assertion often heard that, when the high cost of living at the present day is dwelt upon, comparisons are too often made with the low prices of years of depression, such as 1896 or 1897. It will be seen from the table that while the prices in those years were low, they were not phenomenally lower than they were in the years immediately preceding or immediately following 1896 and 1897. Another table shows by percentages how much higher prices were in the year 1912 than in the other years from 1890 to 1911. It will here be seen that they were higher in 1912 by 66.4 per cent. than they were in 1896; higher by 53 per cent. than in 1900; and higher by 33 per cent. than in 1905. *Bradstreet's* remarks that the greatest percentage of increase in 1912 as compared with 1890 occurred in smoked bacon. Pork chops came next. Granulated sugar, however, in 1912 as compared with 1890, showed a decline, but when compared with other years sugar took a reverse course. Wheat, flour, and milk showed some of the smallest percentages of advance.

A FINE STROKE IN PHILADELPHIA

When it was announced in April that Philadelphia would offer an issue of \$4,000,000 4 per cent. bonds, incredulity was often expressed as to the success of the offer. Bond issues by railroads a few weeks before had not turned out auspiciously. Moreover, the low rate of interest was thought to be heavily against success. The result was that Philadelphia sold this issue at par and sold it promptly. This is declared by a writer in *The Analyst* of the New York Times to have been "a genuine triumph for the Blankenburg administration."

The success was due not to syndicates or bankers, but to small investors. Many of the bonds were sold directly "across the counter" to buyers who had been hoarding their savings for many months. Cases are mentioned in which the money was taken out of old stockings, out of tea-pots, and out of other hiding-places. Many of the bills and coins bore in their crumpled and tarnished condition unmistakable evidence of having been long out of circula-

tion. The writer gives further interesting details:

"One investor offered \$1,000 in five-, ten-, and twenty-dollar gold pieces, representing the savings of many years. In fact, one coin bore the date of 1879, the year in which it had been hived away. Individual subscriptions ranged from \$100 up to \$300,000, and there were requests for bonds of even smaller denominations. Fathers took their children to the treasurer's office to subscribe in person to the extent of \$100 and \$200. Youths drew their deposits from building associations and savings-banks to make investments in the city's 4s. A cripple passed a roll of crumpled bills across the counter and asked for a \$500 certificate. This same man has appeared at every direct sale in the past five years and taken \$500 in bonds. In some cases it took the clerks fifteen minutes to straighten out and count packages of crumpled notes. One old man who bought \$500 of the issue announced that his purchase represented the savings of almost a lifetime. Many of the small subscribers insisted upon shaking hands with Mayor Blankenburg and thanking him personally for placing the loan on popular sale.

"Subscriptions came not only from residents of Philadelphia, but from the investors in surrounding cities and towns in Pennsylvania. This small class of investors has been standing aloof from the bond market, discouraged by the weakness of seasoned securities, rendered timid by the reflection of battle smoke east across the Atlantic, and fearful of the semi-socialistic activities of legislators. But as soon as Mayor Blankenburg opened the window of the city treasury and went into the business of selling bonds across the counter, the hoarders began to come out. They were diffident and uncertain at first, but when the local banks began to buy and the initial day's dealings ran up a total of over \$1,000,000, the small buyer's confidence increased, and on the second day they were the mainstay of the market.

"While their purchases were extensive, the falling off of the demand for the loan on the part of the banks on the second day's business stirred the Mayor to activity. He solicited the interest of Edward T. Stotesbury, one of his advisers and the head of Drexel & Co. of this city. Mr. Stotesbury is credited with having made personal requests for subscriptions among those financial institutions in which he is interested. A general response followed. This response, coupled with the purchases made by those banks which carry city deposits, swelled the tide of small investments and finally ran the total subscription up to \$4,140,500, when the loan was withdrawn from sale on Wednesday night.

"This sum is \$640,500 in excess of the amount originally offered, \$3,500,000; but Mayor Blankenburg decided to accommodate the individuals who came as clients on the last day. The authorized issue was \$7,000,000. The balance will not be offered until later in the year, as the city is now provided with funds sufficient for its immediate needs. The Mayor makes the statement that he could have sold the entire \$7,000,000 at this time. His chief gratification lies in the fact that the greater portion of the new loan was taken by the people for permanent investment. Another feature of the sale of these 4 per cent. bonds at par was that it was made in the face of outside offerings of practically the same bonds at 99 1/4. A large private New York banking house has had several hundreds of thousands of city 4s for a long time. When it became known that Philadelphia proposed to put out another issue of the same kind, this firm endeavored to get rid of its holdings by offering them at a shade under par, and so advertised their sale side by

Nobody Can Expect

to buy securities at the bottom or sell at the top, but shrewd investors at the present time are buying sound bonds because they are cheap.

Their prices are affected by the only influence which depresses sound bonds, and that is, high rates for money.

Intrinsically, the values of sound bonds are unchanged.

In our opinion, all investors contemplating investments should now seek the advice of the reputable and established investment banker.

Possessed of broad experience, ample capital and facilities, we are in a position to render a superior service. Our present offerings are made on the basis of the present high rates for money.

Your inquiries are invited.

Our General list offers a wide selection of sound bonds yielding from 3 1/2% to 6%.

side with the Mayor's announcement in the newspapers. At the same time it was predicted that the new loan would fail; bankers declared that they would not buy the new bonds at par when they could secure them in the open market more cheaply; but Blankenburg had such confidence in civic pride, and the compelling power of the city's financial integrity, that he persisted and carried the sale of the municipal bonds to a distinct success."

THE PETITION FOR RAILROAD-RATE INCREASES

The Eastern trunk line and other railroads made application early in May to the Interstate Commerce Commission for a rehearing and modification of the decision of 1911 denying their application for increases in rates. The roads now ask for an advance in all rates on the basis of 5 per cent. on existing charges. If granted, the new rates would apply to all interstate freight traffic north of the Potomac and Ohio and east of the Mississippi. The reasons given for the petition were the familiar ones as to increases in wages, higher cost of material, and other items making for lower percentages of net earnings.

The expectation seems to be general that this petition may succeed. The commissioners have already taken the application under advisement, but it is not yet regarded as certain that hearings will be granted before the Commission adjourns for the summer. *Bradstreet's* learns that railway officials are "extremely hopeful of a favorable result," while in the financial market there exists a feeling that the Commission will give heed to the request of the roads. One significant and encouraging feature of the situation is that signs are wanting of any disposition on the part of shippers or similar interests to oppose the application. In 1910 when the roads petitioned for higher rates and met with a refusal, many commercial organizations interposed objections. Their action is believed to have been of considerable influence in bringing about the rejection of the petition at that time. It is now said that various business men, including large shippers, have express approval of the petition, a common reason for this attitude being a conviction that the credit of the railroads needs to be strengthened, in order that they may more rapidly obtain such new capital for improvements as the growth of the country has made imperative. *The Financial World* says on the subject:

"The Commission may refuse the application to reopen the case, but the probability is that hearings will be granted and the roads allowed to submit their proof. This proof will show, it is alleged, that the cost of conducting the business is being steadily increased by increases in capital charges, wage advances, tax increases, increased burdens imposed by new State laws, such as 'extra crew' laws, elimination of grade crossings, installation of various safety devices and appliances, etc. Existing rates are alleged to be unreasonably low and insufficient to afford a proper compensation for the service afforded. Many millions of dollars are necessary at this time to enlarge terminals, buy new equipment, tracks, shops, etc. The necessary capital, it is claimed, can not now be obtained except on terms which 'would be prohibitive or which the carriers would not be justified in assuming.' The increases would permit the necessary borrowing of new capital, it is declared.

"It is undeniable that the railroads have had their burdens greatly increased, as alleged, but shippers will naturally contest the proposed advance at this time when business is contracting and the tendency of prices of commodities is downward. It will undoubtedly be pointed out by the shippers that the majority of the Eastern roads are earning sufficient to pay dividends. Indeed, the Interstate Commerce Commission has held on several occasions that where a road is shown to be earning a net return, there can be no confiscation, and rates could not be altered. It will also be maintained, no doubt, that the roads have no right to capitalize the increased receipts which will be obtainable under the 5 per cent. increase, but should utilize them, if obtained, to make the improvements and extensions required.

"The carriers in their petition frankly admit that they intend to do more borrowing if the advances are granted, but it would seem that, all things considered, this policy of piling up debt upon debt to keep going should be altered. Creating new debts through issuance of long-term bonds is merely storing up material for trouble, and another increase in rates later on. If rate advances are granted, the paper of the railroads will be accepted by all those having goods to sell to the railroads, and this paper can be discounted at the banks. Such short-term financing is the soundest course to pursue at this time. No new financing will be necessary, nor should the roads be permitted to place any additional long-time, fixed charges ahead of existing securities. To do so would merely depress the values of such securities still more."

FEWER EXPORTS OF MEAT AND GRAIN

While our exports of all kinds continue to supply a formidable and increasing total, adding more and more millions this year to the balance of trade in our favor, the figures show a rapid decline in our exports of meats and grains. For the calendar year 1912 figures just issued by the Government show an exportation of only 33,000 cattle as against 164,000 in 1911, 270,000 in 1908, 494,000 in 1906, and 599,000 in 1904. In other words, eight years ago the total number exported was nearly twenty times as great as last year. In the matter of values, the cattle exported last year represented in round numbers \$3,000,000, while in 1911 they represented \$14,000,000; in 1908, \$24,000,000; in 1906, \$38,000,000, and in 1904, \$41,000,000. Stated differently, the exports of 1912 in value represented only about 8 per cent. of those exported in 1904. These figures mean, of course, a diminution in the cattle supply as well as an increase in our own population.

What is again impressive is the statement that the cattle imported by this country in 1912 amounted to 300,000, whereas in 1904 they amounted to only 16,000; their value last year having been over \$5,000,000, and in 1904 \$310,000. The decline in the number of cattle raised in this country is indicated by the statement that on January 1, 1912, there were 58,000,000 cattle on American farms, while in 1907 there were 72,500,000. Other items showing a decline in our exports of foodstuffs are set forth in *Moody's Magazine* in a summary of the Government statement:

"The exportations of meat show a marked falling off, especially those of fresh beef, of which the exports of the year were but 9,000,000 pounds, against

KAHN Building Products
TRUSSED CONCRETE STEEL CO.

Smiling-Faced Employees

The new "Human Efficiency" factory is known by its generous provision of the two main needs of its occupants—light and fresh air. United Steel Sash constituting the walls of the modern factory supplies these in ample measure. In a United Sash factory the operatives work with vim and increase production; they lose less time by sickness; they work more accurately; scrap piles decrease in size; accidents are less frequent; danger from fire is minimized.

UNITED STEEL SASH

In a United Sash factory the employees smile and so does their employer—and both with good reason.

United Steel Sash has these exclusive features: Continuous I-beam members unweakened by cutting or punching; double circular contact around ventilators; continuous bearing section for glass; simplified glazing; etc., etc. Made in all types and sizes.

Let us tell you more about it. Write now for Sash Book.

'Springie' Porch Swing

Lord Elgin is the Masterwatch

This enviable title is merited by Lord Elgin because of its makers, its make-up and its "make-good." It is a specialized watch, the consummation of Elgin half-century experience and expertness. Its dignified beauty is at once apparent. Built for men of power and prestige—for life-long service. The thinnest watch made in America with an enamel dial.

Lord Elgin

Lord Elgin contains the very latest devices for perfect timekeeping, including Micrometric Regulator and Compensating Balance, 15 or 17 jewels. Solid gold or 25-year filled cases. Made, cased and adjusted in the World's Greatest Watch Works.

Leading jewelers—Elginers, masters of watchcraft—in every town and city display, endorse and sell Lord Elgin. Examine it at your local Elginer's.

ELGIN NATIONAL
WATCH COMPANY
Elgin, Illinois

Lady Elgin

The smallest watch made in America. A dainty, beautiful, dependable watch for cultured women. An artistic ornament of permanent usefulness. A perfected product of Elgin skill—worthy to bear the time-honored Elgin name.

29,000,000 in 1911, 156,000,000 in 1908, 270,000,000 in 1906, and 354,000,000 in 1901, the fresh-beef exports of 1912 being less than 3 per cent. of those of 1901. In other meats there is a marked decline, tho less proportionately than that in fresh beef. The total value of meat and dairy products exported in the year approximated \$145,000,000, against \$181,000,000 in 1908 and \$209,000,000 in 1906.

"Breadstuffs exported in 1912, while showing a larger total than in 1911, are far below those of earlier years, the total for the calendar year 1912 approximating \$165,000,000, against \$215,000,000 in 1907 and \$277,000,000 in 1901.

"Further indication of the changing character of the export trade is found in the fact that the exportation of agricultural products as a whole, while larger in the fiscal year 1912 than in any previous year, except 1907, forms but 48 per cent. of the total exports, against 57 per cent. in 1907, 66 per cent. in 1899, 75 per cent. in 1886, and 84 per cent. in 1880."

Connected with this matter are some interesting figures set forth in the report of an investigation recently made for the University of Illinois. The report gives a cattle census of the world, which is reproduced with comments by *The Annalist* of the New York Times, as follows:

NUMBER OF CATTLE BY COUNTRIES

Country	Year	Total Cattle	Per Cent.
British India	1909	108,000,000	24
United States	1910	71,000,000	16
Russia	1908	47,000,000	10
Argentina	1908	29,000,000	6
Brazil	1908	25,000,000	6
Germany	1907	21,000,000	5
Austria-Hungary	1908	18,000,000	4
France	1909	14,000,000	3
United Kingdom	1910	12,000,000	3
Australia	1909	11,000,000	2
Canada	1910	7,000,000	2
Other countries		85,000,000	19
Total		448,000,000	100

"Not only has the United States 16 per cent. of all the cattle in the world, but in this country the number of cattle per capita is still very much greater than in India, France, Austria-Hungary, Germany, Holland, Russia, Great Britain, Belgium, or Italy. That is not so striking as the number of cattle per square mile, which is only 23 in the United States, against 164 in Belgium, 144 in Denmark, 135 in Netherlands, 99 in Germany, 97 in the United Kingdom, and 69 in France. The effect of increasing density of population upon the production of cattle is not what one might think. On this subject the report of the experiment station reads:

"Evidently a dense population and an intensive system of agriculture do not necessarily involve a decrease in the cattle-raising industry; but, on the other hand, it appears to increase. Only in Holland, where the cattle are chiefly of the dairy type, is a relative decrease noted, and this is so slight as to be considered insignificant. In general, the value of land increases more or less directly in proportion to the increase in population, from which it is apparent that cattle raising has not been found incompatible with high-priced land in the countries represented above. Had it not continued to be profitable as population and land values increased it would long since have been discontinued.

"It is impossible that the United States should ever have the number of cattle per square mile that can be produced in European countries, where a much larger proportion of the total area may be under intensive cultivation. However, it is statistically evident that before the United States need import its meat supplies it can continue for many years to supply itself by increasing home production, even on high-priced land."

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnall Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"A. A. J., Philadelphia, Pa.—"Can you give me the English pronunciation of Camembert as applied to cheese?"

The dictionaries do not recognize an English form of the word *Camembert*. Therefore, unless one knows that an English pronunciation does have unquestioned currency among educated people, one should use only the French pronunciation, which is ka-mang-bair' (first a as in *at*, tho hardly so "flat," and somewhat as *on* in *conquer* but with the vowel of *father* not of *fault*, and *bair* much like the English word *bear*).

"E., Allentown, Pa.—"(1) Are the following sentences correct? 'He will complete his series of talks with one on, etc.' 'He observed the day with feasting.' Should the preposition *by* be used instead of *with*? (2) Can you give any general rule governing these two prepositions, which are especially confusing?"

(1) The word *end*, *close*, *finish*, would be better than *complete* in your first sentence, and the preposition should be *with*. In your second sentence, say "with feasting," if you mean *feasting* to be synonymous with "a feast"—that is, if the word is a noun outright; but say "by feasting" if the word *feasting* is primarily a verb in a noun form—called variously "participle," "participial noun," etc. Compare "He celebrated his election with a trip to Washington" with "He celebrated his election by going to Washington."

(2) The difference here suggested between *by* and *with* can be formulated only in a loose way. Between the two is a neutral territory to which no briefly worded rule will apply. In the main, one may say that *with* introduces a passive instrument, *by* an active agent (tho the agent is not necessarily a living thing). "He was killed by a fall from his horse"—"with a dagger." Formerly this distinction was not observed. Shakespeare makes the shepherd in *A Winter's Tale* report that Antigonus "was torn to pieces with a bear."

"C. E. H., New Orleans, La.—"A and B are discussing the words 'farther' and 'further.' A claims that there is no real distinction between the two—that their use is determined by euphony solely. B contends that there is a distinction—that 'farther' relates to a distance that can be measured in feet and inches, while 'further' relates to a distance that can not be measured. Which is correct?"

There does not seem to be any difference of meaning in the words *farther* and *further*. It is rather the sound alone which guides speaker or writer to the preference of one to the other. Whenever one has in mind, or ringing in ear, the word *far* associated with the comparative form, that comparative form will be *farther* rather than *further*. "Is it farther to A than to B?" "Yes, five miles farther." "Is it as far to A as to B?" "It is farther." "Thus far, and no farther."—"go no further."

"H. L. B., Valencia, Pa.—"Within the meaning of 'cousin' and 'second-cousin' is it correct to speak of Elizabeth as the cousin of Mary Queen of Scots?"

James V. of Scotland, father of Mary Queen of Scots, and Queen Elizabeth of England were cousins, being children respectively of Margaret of England and Henry VIII. (sister and brother). Then Mary Queen of Scots was "first cousin once removed" to Elizabeth; see Funk & Wagnall's STANDARD DICTIONARY, page 429: "A first cousin once removed is the child of one's first cousin."

"G. P. W., Omaha, Neb.—"Is it permissible for a physician to sign his name as Dr. So-and-so, or should it be So-and-so, M.D.? In his printed matter should it be Dr. So-and-so or So-and-so, M.D.?"

Whether a physician (or any one else) should prefix or add his professional title depends upon whether the matter that he signs is wholly a social or in some degree a business communication. In business papers, it is in place for any one to indicate his professional character. In the case of a physician, this is done more specifically by adding M.D. than by prefixing *Dr.*

UNITED STATES TIRES ARE GOOD TIRES

They cut down tire bills

Name the features

that induced you to select the tires you are now using
and we will more than match them
in a United States Tire

Was it a reputation for high mileage?

United States Tires to-day yield an average mileage from 25 to 50 per cent. above the highest point ever reached by any tire maker previous to the organization of the United States Tire Company.

Was it protection against rim cutting?

United States Dunlop tires bear the first and only guarantee against rim cutting ever used by any tire maker.

Was it extra size?

Compare cross sections *for yourself*. Make a few caliper measurements, or ask any dealer or tire manufacturer who has investigated the matter, and you will find that *no tire made* has a larger average air capacity or larger diameter measurements than the United States Dunlop. **USE YOUR OWN EYES!**

Was it ease of manipulation?

The round toe, an exclusive feature of our Dunlop tire, makes this the most easily manipulated tire on the market.

Most Important of All—

We have perfected and control a process that has practically doubled the fabric strength of United States Tires and reduced blow-outs to a minimum.

Four-factory co-operative methods of manufacture (used exclusively in the manufacture of United States Tires) have enabled us to take *every* feature of superiority it is possible to put into a tire and combine them all in *one* tire.

Mr. H. Anthony Dyer has just written us: "I have motored in Europe for six years, but never before have I had such satisfactory results from ANY tires as I have had from yours."

Cost no more than you are asked to pay for other kinds

Tires by Satisfaction

United States Pneumatic Tires are guaranteed when filled with air at the recommended pressure and attached to a rim bearing proper use at both of the accompanying inspection stamps. When filled with any substance for air or stretched to any other use than those specified, we guarantee no mileage.

J. S. Ogilvie Publishing Co., 57-1 Rose Street New York City

Coming Features

By R. E. Olds, Designer

From this time on, when you buy a car, these are things to watch for:

- Left-side drive—**
- Center control—**
- Oversize tires—**
- Set-in dash lights—**
- Free entrance in front—**

Right-side drive has been abandoned by the leading cars. Hereafter drivers will sit close to the cars they pass.

Skimpy tires are out-of-date. So are projecting side lamps. So is a blocked front door. These features are absent in the best cars now. They'll be absent in all cars soon.

Reo Rod Control

Note that Reo the Fifth has all these new features. And our center control is a one-rod control—an exclusive Reo feature.

All the gear-shifting is done by moving this rod three inches in each of four directions. It's as simple as moving the spark lever.

R. M. Owen & Co., General Sales Agents for **Reo Motor Car Co., Lansing, Mich.**
Canadian Factory, St. Catharines, Ont.

30-35

Bearings
Demountable
Rims
Three Electric
Lights
190 Drop
Forgings
Speed—45
Miles per
Hour
Made with
5 and 2
Passenger
Bodies

There are no levers, side or center. Both brakes are operated by foot pedals. So the driver's entrance on either side is clear. He need never dismount in the street.

When you see these features you'll not want a car without them.

Other Advances

Then the Reo marks the latest practice in some other great respects:

- Analyzed steel—
- Vast overcapacity—
- 15 roller bearings—
- 190 drop forgings—
- A \$75 magneto—
- Doubly-heated carburetor—

Roller bearings cost five times what common bearings cost, but they do not break. Drop forgings cost twice as much as steel castings, but they don't have flaws.

In Reo the Fifth, steel is all made to formula. The gears are tested in a 50-ton crushing machine. The springs are tested for 100,000 vibrations.

Each driving part, for big margin of safety, is tested for 45 horsepower requirements. Each engine is given five long tests—48 hours altogether.

Parts are ground over and over. Important parts are hand-fitted. Nothing is left untested.

What They Cost

These things are costly. Oversize tires cost us \$60 extra. Our unusual features, all combined, add \$200 per car to our cost.

But we save this for you by building only one model. That saves about 20 per cent.

And these things are essential in a car that endures. A car without them may run well for a while, but the second season repairs and troubles come.

Reo the Fifth marks the best I know after 26 years of car building. I would not buy a lesser car myself, so I shall never build one.

In the years to come you'll save hundreds of dollars by having a car built like this.

Sold by 1,000 dealers. Showrooms almost everywhere. Catalog on request.

Reo the Fifth
The 1913 Series
\$1,095

Top and windshield not included in price. We equip this car with mahair top, side curtains and slip cover, windshield, Prest-G-Lite gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for \$100 extra (list price \$170). (Gray & Davis Electric Lighting and Starting System at an extra price, if wanted.)

The Psychological Origin of MENTAL DISORDERS

By DOCTOR PAUL DUBOIS

In this book Dr. Dubois shows how mental derangement may be caused by the exaggeration of ideas and emotions, impressionability in the face of the vicissitudes of existence, disappointed ambition, worrying temperament, tendencies to fear or indolence, unrestrained anger, vengeance, amorosity, etc. He contends that insanity is more a Psychical unbalancement than a Physical disease. He would prevent or cure the great bulk of mental disorders by developing the patient's reason, and inducing him to control his feelings and correct his follies.

10-Volume Set of POE—Given Away

To Literary Digest readers who send coupon at once for Dickens' Complete Works, we will send free, as a premium, this delightful \$7.50 Edition of the Works of Edgar Allan Poe.

EDGAR ALLAN POE is recognized by all as among the world's greatest writers. His creative imagination, coupled with his brilliant temperament and marvelous style, lend to his writings a fascinating interest which never fails to hold under his spell all who read his wonderful books. "The Gold Bug" is considered perhaps the greatest short-story ever written. "The Black Cat," "Murders in the Rue Morgue," "Manuscript Found in a Bottle," "The Oblong Box," "Thou Art the Man," "The Raven," and countless other fascinating and interesting stories and poems, we offer you free, in this splendid 10-Volume Edition of Poe, as a premium with your order for a set of Dickens' Complete Works as offered below.

CHARLES DICKENS is the greatest master of story-telling the world ever knew. His delicious humor, his command of pathos and keen perception of character, coupled with his quaint originality of thought and expression, lend a fascination to all his writings which appeals alike to both old and young. Breathlessly we follow the fortunes of David Copperfield, laugh at the adventures of Mr. Pickwick and let fall a tear for Little Nell. Dickens characters are famous the world over. Quoted as they are in literature, used constantly in conversation and referred to in a thousand ways; he is indeed unfortunate who is unacquainted with Sam Weller, the Cheeryble Brothers, Mr. Turveydrop, Captain Cuttle, Sairy Gamp and Tom Pinch. No other writer in the history of literature ever exerted so powerful an influence for the betterment of the social conditions of his day as did Charles Dickens. When you read his wonderful books the hours are charmed away, and you read on and on from page to page and from chapter to chapter unmindful of time and surroundings. Charles Dickens has won his place in every heart, and his complete works should be in every Christian home.

Dickens' Complete Works

This handsome Library Edition consists of 15 beautiful volumes measuring 8 1/4 x 5 1/4 x 1 3/8 inches. The volumes are bound in a beautiful deep blue Imported, genuine Library Cloth, with gold stamping, gold dust proof tops, head bands and deckled edges. The set contains 12,000 pages and embraces everything that Dickens ever wrote. Send for it at once and get as a premium, the 10-Volume Edition of Poe as offered.

BOTH SETS for the PRICE OF ONE

WE do not ask you for any deposit or any guarantee, just tear off and mail coupon at the right, and we will ship you Dickens' Complete Works in 15 Volumes for 7 days' examination in your own home. You can then examine each volume carefully, and if satisfactory, and you wish to keep them, send us \$1 as first payment and \$2 per month thereafter until our special price of \$23.50 is paid. But if the books are not satisfactory and you do not wish to keep them, then all you have to do is to notify us, and we will send you shipping instructions for their return at our expense. As a special inducement to prompt action, we will give the 10-Vol. Set of Poe free, as a premium, to those who order Dickens at once. Please remember, we have only a few sets of Poe to dispose of in this way, so in order to get the Poe as a premium, it will be necessary to fill out and mail coupon at the right without delay.

The Thompson Publishing Company,
 1127-29 Pine St.,
 St. Louis, Mo.

Send me for examination, one set of Dickens' Complete Works in 15 volumes Library Edition. If I am satisfied with the books, I will send you \$1 as first payment, and \$2 a month thereafter until the special price of \$23.50 is paid. If I do not wish to keep the books I will notify you in 7 days and the books are then to be returned at your expense. In consideration of my prompt reply, I am also to receive free, as a premium, the 10-Vol. Edition of Edgar Allan Poe, as offered Literary Digest readers. (6-13)

For centuries a swaying fan in human hands was the only means of imitating Nature's cooling breezes—you had to be rich to be fanned. But now that electric breezes are made to obey the turn of a switch, this comfort in warm weather is no longer restricted to the few. Thus the popular electric fan of today takes rank as another important result of Electricity's crusade to increase human comfort without needless human labor.

The development of the G-E ELECTRIC FAN to the point where it can be operated four hours for a cent—where it can be attached to any lamp socket, any time—where it gives a lifetime of satisfactory service—is the result of years of continuous effort in the laboratories and factories of the General Electric Company.

These years of effort have perfected also that modern wonder the EDISON MAZDA LAMP, as marvelously superior to the rude light that was once the luxury of kings as the

modern G-E Electric Fan is superior to those first breeze-makers in the hands of slaves. The Edison Mazda is the most perfect small lamp yet made by man—and one of its chief wonders is its economy—for it uses but *one-third* of the current required by old style carbon lamps.

Light your home with Edison Mazdas. The current actually *saved* will not only run your comforting G-E Fan, but also such time saving and labor saving devices as the G-E ELECTRIC FLATIRON—an invention for which one is always particularly grateful in warm weather, when its quickness, convenience and heat-concentrating power, coupled with its "Even Heat," makes ironing an easier, cooler and shorter task.

Ask your electric dealer or lighting company to show you the G-E Fan, the G-E Flatiron and the various sizes and styles of the current-saving, money-saving Edison Mazda Lamp.

TOPICS OF THE DAY

By the time this issue reaches our readers we shall be located in our new and larger quarters, 354-360 Fourth Avenue, at the Corner of Twenty-sixth Street.

THE PRESIDENT'S WAR ON THE TARIFF LOBBY

THE DELIBERATE and emphatic assertion of the President that "Washington has seldom seen so numerous, so industrious, or so insidious a lobby" as is now working against the Underwood Tariff Bill, is received here with approval, there with incredulity. But it is accepted everywhere as a significant indication of the Administration's attitude toward changes or delays in the Democratic Congressional tariff program. Taking it in connection with President Wilson's earlier statement that he has taken his "stand with the House leaders for the present bill," and is "not looking for or accepting compromises," Washington correspondents view his "lobby warning" as a virtual announcement that he will veto a mutilated measure. That is, remarks the *New York Evening Sun* (Ind.), "President Wilson has not the slightest intention of going to Winona." While "everybody else admits the possibility, even the probability, of an error," Mr. Wilson does not, says the *Philadelphia Public Ledger*, which adds, almost scoffingly, that he "has taken a stand, and with the immobility of a titanosaurus he will keep it." But this very attitude commends itself to two New York papers which opposed Mr. Wilson's candidacy for the Presidency last fall. "By driving through his tariff measure," says *The Press*, which preferred Mr. Roosevelt, President Wilson "may cause loss to the American people; but they must respect him for having the same principles after he was elected as he said he had before he was elected, and for fighting for those principles in the White House when members of his party seek to confound them and to repudiate their campaign pledges." And *The Sun*, whose predilection was for Mr. Taft, now declares itself "quite in agreement with the spirit" of the Wilsonian warning—

"The Senators opposed to the bill have a right to express their dissent in toto or in detail, but dilatory tactics, or talk only for political consumption, or obstructive enterprise, or filibustering of any sort against the Underwood Tariff Bill of 1913 is something which an overwhelming majority of the people of the United States are in no mood to tolerate; and it is just as well that the

main fact should be understood with crystalline clearness at the Senate end of the Capitol."

The President's "demand for prompt and final action" opens with a reaffirmation of that reliance upon "publicity" which has been so notable a feature of his political acts. He says:

"I think that the public ought to know the extraordinary exertions being made by the lobby in Washington to gain recognition for certain alterations of the Tariff Bill. Washington has seldom seen so numerous, so industrious, or so insidious a lobby. The newspapers are being filled with paid advertisements calculated to mislead not only the judgment of public men, but also the public opinion of the country itself. There is every evidence that money without limit is being spent to sustain this lobby, and to create an appearance of a pressure of public opinion antagonistic to some of the chief items of the Tariff Bill.

"It is of serious interest to the country that the people at large should have no lobby, and be voiceless in these matters, while great bodies of astute men seek to create an artificial opinion and to overcome the interests of the public for their private profit. It is thoroughly worth the while of the people of this country to take knowledge of this matter. Only public opinion can check and destroy it.

"The Government in all its branches ought to be relieved from this intolerable burden and this constant interruption to the calm progress of debate. I know that in this I am speaking for the members of the two houses, who would rejoice as much as I would to be released from this unbearable situation."

Without actually contradicting the President, the *Boston Transcript* (Rep.) reminds him that if he were not a newcomer, "he would not be astonished at the appearance of an energetic lobby interested in the Tariff Bill," for "scenes of activity" such as this "have always attended the making of a tariff." And the *New York Times* (Ind. Dem.) wonders if it may not be possible that

"the President has mistaken for lobbying the ordinary, usual, and perfectly legitimate measures taken by protected interests to present their case to Congress. Washington is full of representatives of these interests whenever a tariff bill is under consideration, and sometimes it is to be feared that undue

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as Second-class Matter.

influence has been exerted. We should be inclined to doubt whether that is the case now. The command of the country that the tariff be reduced is unmistakable. It has been twice uttered, and every sensible man knows that whether the protected interests want it or not, the duties are going to be lower. The manufacturers must be very foolish to spend money without limit to oppose the irresistible will of the people. . . . We hope Mr. Wilson will discover that the gentlemen who are asking

WILSON'S WELCOME.
—Gage in the Philadelphia Press.

some consideration at the hands of Congress in respect to the schedules that affect them are not so wicked, or so rich, as he takes them to be."

Even in the Senate, where the tariff fight is now on, Messrs. Oliver (Rep., Pa.), Burton (Rep., O.), and Warren (Rep., Wyo.), as quoted in the *New York Herald*, have seen no evidence of activity in the lobbies. Senator Ransdell (Dem., La.), who is fighting for a retention of the sugar duties, tells us that "there are no lobbyists" among his constituents. Senator Brandegee (Rep., Conn.) takes the opportunity for a little fling at the President, remarking that "the country ought to have realized before this that no one has any right to discuss the provisions of the Tariff Bill except the White House." Representatives of the wool, sugar, and other industries now visiting Washington insist that the shoe does not fit them, and that their activities are entirely legitimate. The wool and sugar lobbies have been very busy, admits the *New York Journal of Commerce's* Washington correspondent, but they are spending their money in "information" and "enlightenment." This, he says, is just what Congress and the people want. "There is no complaint in Congress over the information left there," or of the lobby declared to exist. "The first real complaint has come from the White House." Finally, the Democratic *New York Telegraph* reminds President Wilson that the Constitution "guarantees to every citizen the right of petition," and informs him that "the lobby is nothing more nor less than this right systematized."

But Senator John Sharp Williams would not be surprised, he says in *The Herald*, "if there was a great deal in what the President has to say." He adds that the lobbyists are, of course, "intelligent men" and "know whom to approach." Chairman Simmons, of the Senate Finance Committee, is willing to say that the opponents of free sugar are at least "exceedingly active." Senator Tillman, also quoted in *The Herald*, points out what a "lot of money" is being used by "some one." To a representative of the *Indianapolis News* the venerable South Carolina Senator said, "This is the greatest tariff fight I ever saw in the

United States Senate and greater and more bitter than I ever dreamed would be fought there." And the *News* correspondent goes on to corroborate the Senator:

"Never before have the big interests of the country poured so many men into Washington, nor used so many powerful and divergent influences on members of the Senate. Every arriving train brings additions to the army of assault, and the hotels are choked with guests individually and financially able to buy out the landlord on the spot if such a transaction were desirable."

The lobby has concentrated upon the Senate, explains the *New York World*, because the big Democratic majority in the House of Representatives offered it no chance, while in the upper house the narrow majority of six shows it to be "the weak spot in the people's lines."

Most of the activity in Washington, says a dispatch to the *New York Evening Post*, "is of the open and relatively legitimate sort, represented by attorneys for interests affected by the bill, and press agents who flood the offices of newspapers and correspondents with arguments, chiefly about beet sugar." But, we read further:

"The lobby whose activities are giving anxiety to the Administration and to the Democratic leaders whose support of the bill is undoubtedly sincere is not at Washington at all, but is working in the rear through influences of various kinds in the home States of Senators. One Senator has been told, it is said, that he will be driven out of business unless he yields to the pressure, and has felt it necessary to withdraw from a valuable business connection in order to remove embarrassment from his associates therein. Others have been threatened through family and social channels. Seldom in the past has so powerful a concentration of artillery been brought to bear for the emasculation of a tariff bill."

"It is not supposed that the bill as a whole is in danger of defeat. The danger is that there will be a repetition of what happened four years ago, when the Payne-Aldrich Bill was laid on the desk of President Taft—a tariff bill, to be sure, but so manipulated that it was worse than no bill at all. President Taft signed the measure under protest."

Under these circumstances, comments *The Evening Post* editorially, the President's warning will have a double effect:

THE FIRST CUT.
—Murphy in the San Francisco Call.

"It will serve notice on the tariff lobbyists that their schemes are under close observation. And it will be a constant warning, and a kind of useful external conscience, to members of Congress who are exposed to temptation. They will know that any swerving on their part will subject them to the most odious suspicion."

SIFTING WEST VIRGINIA WRONGS

ALL IS NOT SO QUIET along the Kanawha as earlier reports indicated, we now hear. "A temporary settlement on Cabin and Paint Creeks," declare representatives of the miners, "neither provides a remedy nor makes permanent peace." Correspondents of Socialist papers learn

"OPEN YOUR MOUTH AND SHUT YOUR EYES."

—Murphy in the San Francisco Call.

that this strike is likely to be renewed, and other news-gatherers tell of 15,000 newly organized miners in the hitherto quiet New River field who have left their work, angered at their employers' hostility to their union. But in the United States Senate, where the appointment of a committee to investigate West Virginia labor conditions has aroused nation-wide interest, "the strike is not the question." At least, so says Senator Kern, who has led in the demand for investigation. "Peonage is the question," according to the Senator; "reports of the hunting of men across the hills as tho they were convicts or wild beasts. . . . Charges of violation of contract-labor laws and use of martial law are among the things we will probe." "You know," said 200 delegates from the 15,000 striking miners, in a telegram to the senior Senator from West Virginia, protesting against his opposition to the Kern resolution—"you know the conditions are bad, you are aware that coal operators control post-offices, public roads, and schoolhouses, that circulation of progressive newspapers and periodicals is curtailed, and that free speech and lawful assemblage is not permitted; you further know that a fraternity could not be instituted or a church organized without the consent of the mine managers." All these complaints are to receive due consideration, for the committee, consisting of Senators Swanson (Dem., Va.), Shields (Dem., Tenn.), Martine (Dem., N. J.), Borah (Rep., Id.), and Kenyon (Rep., Ia.), have been given full powers under a resolution which provides, according to a press summary:

1. For an investigation as to whether or not peonage exists in the coal fields.
2. Whether or not the postal facilities have been interfered with, and if so, by whom?
3. Whether or not the immigration laws have been violated, and whether or not there has been discrimination against the district in the administration of these laws.
4. To investigate and report all facts and circumstances relating to the charge that citizens of the United States have been arrested, tried, and convicted contrary to or in violation of the laws of the United States.

5. To investigate commercial conditions with a view to discovering possible infractions of the Sherman Antitrust Law.

6. To investigate and report whether or not firearms have been imported into the disaffected district for the purpose of excluding the products of said coal fields from competitive markets.

7. To investigate the causes leading up to the alleged conditions.

The one fact, however, which in the opinion of the press may be held to justify Senatorial investigation of West Virginia's domestic affairs, is the trial of civilians by military tribunals created under martial law instead of by the civil courts. Such papers as the *New York World and Press*, *Madison Wisconsin State Journal*, *Boston Advertiser*, *Columbus Dispatch*, and *Indianapolis News* agree with the *New York Evening Post*, which declares that:

"Martial law must stop at the door of the court room. The troops may run down and arrest criminals and hold them under guard; but when it comes to ascertaining their guilt and fixing their punishment, that is a work for judge and jury. For officers of the militia, untrained in the law, to attempt it, is almost certain to lead to actual injustice, and in any event creates an angry feeling that the ordinary processes of justice are being arbitrarily set aside. Into such an obvious irregularity it is proper for the Senate to inquire; and we may hope that the evidence elicited and the conclusions reached will be such as to prevent the will of a military commander from being substituted for the decision of a court of justice—whenever, that is, the courts are open and accessible."

Governor Hatfield, who at one time was reported to have used rather strange language in giving his opinions of Senator Kern's activity in the matter, now says:

"I court the fullest and freest investigation of my actions by any impartial body. I have been governed solely by a desire to aid humanity, promote peace and harmony in the unfortunate industrial trouble, and to give a 'square deal' to all concerned. My actions have been sustained by the Supreme Court of this State and will be approved by all law-abiding citizens."

The Governor's position is strongly commended by the *Montgomery Advertiser*, while the *New York Journal of Commerce* doubts the wisdom of the Senate's action. The Federal

MAKING FRIENDS.

—Harding in the Brooklyn Eagle.

Government, it says, "has no lawful or constitutional authority over such labor struggles within the States, and ought to eschew interference where it can do nothing of a direct and effective nature." The *Brooklyn Eagle*, too, thinks that the investigation "will be abortive, the more or less sensational." Governor

Hatfield's answer to the charge of having allowed illegal prosecutions under martial law would be, in *The Eagle's* opinion,

"that it was ordinary criminal law, not martial law, that the military courts enforced, and that is the question decided by the West Virginia courts. So Mr. Kern is really attacking the State of West Virginia. . . . But the only constitutional function of the United States in relation to a State is to guarantee a republican form of government, and in form as well as essence the government of West Virginia is republican."

But such arguments as these were taken up by Senator Root in his speech supporting the Kern resolution. In the West Virginia situation the Senator apparently sees another indication of that "twilight zone" lying between the clearly defined boundaries of State and Federal jurisdiction. He says in part:

"The question arises above the interested persons in West Virginia. It is a question of the Government guaranties of liberty under the Constitution. There have been provided in West Virginia grounds upon which we may well consider whether we should enact legislation to draw about the executive and judicial officers of the States some regular definition of the circumstances under which suspension of the rights of the citizens under the Constitution may be effected.

"It may become the duty of the Congress to define and to delegate to the Department of Justice and the executive branch of the Government the right to make investigation so that the weakest citizen may be protected by the strong arm of the general government in the enjoyment of his fundamental rights, the rights handed down to him and to us from Magna Charta, which must be guaranteed now and forever to every citizen of the United States wherever he may find himself."

Many of the charges against the mine operators and the authorities have been set forth at length in these columns, especially those of abuse of martial law and the mine-guard system. Some of the later stories of wrong-doing, which have been given wide circulation in the Socialist and labor journals, are summed up editorially by the *New York Press*:

"The charges which are made, and buttressed by most convincing ex-parte evidence, are such as to startle everybody who looks into them. It is alleged that within recent months carloads of men, practically shanghaied in New York and other cities, have been hauled right through Washington, under guard, destined to work under conditions tantamount to peonage in the mines.

"It will be testified that men were enlisted under promises of wages, working conditions, etc., that were utterly dishonest;

that as soon as they agreed to go to the coal fields they were huddled into box cars, securely locked in, placed under heavily armed guards and rushed through to destinations frequently entirely different from those to which they had intended to ship.

"Arrived there, they were still held under guard; they were treated exactly like convicts in a Siberian gang; efforts to escape resulted in their being beaten up by guards, or shot. They were underpaid for their work and compelled to trade at extortionate 'company stores' where they never had a chance to do better than pile up increasing obligations that their wages would not pay.

"More than all this, it will be charged that young women were enlisted at various places in Pennsylvania and Ohio under similarly false representations as to the employment and wages that would be afforded them and carried away to lives of the most degrading shame in these mining-camps. It is charged that the business of shanghaiing and holding women was conducted just about as brutally and lawlessly as in the case of the men.

"Those conditions are alleged to have grown up in the last twenty years and to have become a part of the settled social and industrial situation in West Virginia. It is well-nigh impossible to believe the half of the horrors that are charged. If they are not entitled to belief, West Virginia ought to have its name cleared of the imputation they put upon it; if they are true, an industrial plague-spot ought to be cleared up."

Not content with the Government's investigation, the Socialists will have a West Virginia inquiry of their own. Their committee, appointed by the national executive committee of the party, will consist of Eugene V. Debs, Victor L. Berger, and Adolph Germer. Among offenses they declare to have been committed by "the military dictatorship set up by the mine-owning oligarchy of West Virginia" they emphasize the suppression of Socialistic newspapers. The United Mine Workers, says Mr. Berger's *Milwaukee Leader*, were "instrumental in bringing the issue before Congress," where Senator Kern's investigation resolution was adopted despite the protests of the two Senators from West Virginia, one a Democrat and the other a Republican, but both "devoted to the mine owners," that "the 'rights' of the State should be respected." Now,

"With the Socialist party voicing the protests of its million supporters, determined that the West Virginia infamy shall be brought before the American people for judgment, the truth no longer can be concealed or the facts suppressed.

1913-

CUBA'S PRESIDENTIAL LINE.

Between the Administrations of Presidents Palma and Gómez the island was governed provisionally by a United States Commission.

MENOCAL'S TASK IN CUBA

A PREDICAMENT faces Cuba at the inauguration of her third president, in the opinion of some of our editorial lookers-on. Menocal "should have little difficulty in making a favorable impression by comparison with Gómez, his predecessor," thinks the *New York World*, but it occurs to the *Cleveland Plain Dealer* that a man of too high ideals is not "likely to be popular in Cuba." So failure threatens the man who is too good for the turbulent element or too bad for the conservatives. Then, too, some of the propertied class would like to force American intervention to gain the protection of the Stars and Stripes, and hence are suspected of aiding uprisings against any president, good or bad. But *The Plain Dealer* is led to hope that Menocal will work out his country's salvation if he is given half a chance. His qualifications may be inferred from this thumb-nail sketch of his career which appears in the *Troy Standard-Press*:

"He is a civil engineer, an agricultural and business expert, in addition to being a soldier. His uncle, Anisette Menocal, was an American citizen, a commander and engineer in the United States Navy. It was under his direction that young Menocal was educated. Since his thirteenth year most of his time has been spent in the United States. He graduated from Maryland Agricultural College in 1884 and from Cornell University four years later."

Another good sign is seen in the fact that through this course of education and training Menocal has become "thoroughly imbued with American sympathies and ideas," as the *New York Commercial* tells us. It speaks of his numerous qualifications for the presidency, but points out that unless he has at his back the support of a congress "sharing in some degree his own high qualities," the task ahead of him is one to try the resources of even a great man. Much more hopeful is the *New York Evening Post*, which recalls "the fierce party animosities of our own first years of independence" in order to make allowance for much that happened during the Gómez Administration. While it was not an economical Administration and "has generally been accused of being something worse than that," *The Post* finds it only fair to remember that Gómez came into office as the leader of the democratic masses, who, having borne the toil and dangers of the war with Spain, resented the fact that the ruins of gov-

ernment under the new republic should pass "into the hands of the conservative classes under Estrada Palma." Now a conservative is again elected, and *The Post* considers it "no mean tribute to a president in the Caribbeans that his successor is a legally elected candidate, taking office in peaceful circumstances." It is our business not to make the new Administration's task more difficult than it is, *The Post* reminds us, "by turning too critical an eye" on Cuban affairs or by allowing the American lust for land, sugar, and tobacco "to play a provocative rôle in Cuban politics," for—

"We are legally pledged not to leave the Cubans to themselves when the safety of the republic is in question; but we are morally pledged to refrain from empty cries of panic, to make allowances, to be patient. By causing it to be clearly understood that American intervention in Cuba is possible only in the last extreme, we shall go far toward removing the threat of our meddling as a factor in the internal politics of the island."

TRUST-MADE OR HOME-MADE ARMOR?

THE HIGH PRICES that have driven many a man to insist that his bread and pie be baked at home instead of at the bakery have seemingly been working on the mind of our Secretary of the Navy, who has come out for a government plant for making armor-plate for our battle-ships to escape the exactions of the steel manufacturers. And just as objections are raised in the family that home-made cake and biscuits will cost more than the baker charges, so we find some of the editors recalling that government-built battle-ships cost more than private-built ones, and opining that Mr. Daniels may discover that a government plant will be a losing experiment. But Secretary Daniels maintains that his plan is the best solution of the Navy Department's problem in dealing with the armor-plate companies, whose competitive bidding, he says in a public statement, is "a farce that can not possibly deceive any one acquainted with the facts." In illustration, the Secretary cites the case of three companies—the Carnegie Steel Company, the Midvale Steel Company, and the Bethlehem Steel Company—all making bids so strikingly similar that he wrote to two of them asking how it happened. Both replied that it was due to the Government's practise of "dividing the contracts at the lowest price bid," so that in submitting their

bids they put them "at the same figure as the last divided contract awarded." Mr. Daniels further reminds us that the matter of a Federal armor-plate plant has been taken up before, when in 1896, a Senate Committee estimated that one could be built for \$1,600,000. Precisely this amount is fixt upon by Senator Ashurst, of Arizona, in his bill for a Federal armor

"LIPS THAT TOUCH LIQUOR SHALL NEVER TOUCH MINE."
—Kirby in the New York World.

plant introduced in the Senate on May 22, yet on May 28, Rear-Admiral Twining, Chief of the Bureau of Ordnance, testified before the Senate Naval Affairs Committee that a factory capable of producing 8,000 tons of armor a year would cost \$8,000,000 to build and nearly \$1,000,000 a year to operate.

In support of Secretary Daniels's proposal, the *Brooklyn Eagle* (Ind. Dem.) calls attention to the fact that the Government now builds warships and makes guns, and does both jobs well, producing magnificent fighting craft, and so managing to keep the bids of construction firms within moderate bounds, from which *The Eagle* infers—

"It is reasonable, therefore, to suppose that a government plant could make as good armor-plate as any private concern, and that its establishment would at least act as a brake upon contractors who now may easily control prices by agreement among themselves."

An opposite stand is taken by the *Philadelphia Public Ledger* (Ind.), which remarks, "it is notorious that it is more expensive for the Government to construct its own ships than to have them built in private yards," so an armor-plate plant might very easily prove an additional expense, instead of an economy, especially as the building of a Government plant "would mean probably the destruction of the present plants," the Government being practically their sole customer. *The Ledger* says finally that—

"If robbery has been going on, and comparisons do not indicate it, it can be stopped without the Government going into the manufacturing business on its own account. Abuse, if there has been any, Secretary Daniels admits, has been due to administrative delinquency in evading the intent of Congress. The Government wants the best armor at a fair price; this it can get without building a plant of its own."

If there is any combination fixing prices of armor-plate so that free competition is impossible, the *Washington Post* (Ind.) points out, there are statutes of the United States which can be enforced against it, with stated officers and courts to see that they are enforced, but—

"there is no more ground for the Government engaging in the manufacture of armor-plate than there would be for appropriating money for the cultivation of wheat to feed the army, the erection of woolen mills to manufacture clothing for the navy, or for the raising of cattle, hogs, sheep, and poultry to feed the armed forces of the Union."

MR. ROOSEVELT'S BEVERAGES

AN INCLINATION toward levity in the comments upon Colonel Roosevelt's libel suit is, in the *New York World's* opinion, "the strongest tribute to the general faith in the Colonel's temperance." The press in general appear to take little stock in the stories of Mr. Roosevelt's drunkenness. After his own testimony and the corroborative evidence offered by a host of his intimates, we find papers of varying degrees of friendliness or hostility to the Colonel expressing confidence in his sobriety. And the *New York Times*, *Sun*, *World*, and *Evening Post*, and *Philadelphia Record* are just as positive in their statements as the pro-Roosevelt *Detroit News*, *Washington Times*, and *Kansas City Star*. The appearance of the Roosevelt intoxication rumors during the last Presidential campaign, it will be remembered, brought from the Colonel a vigorous denial and an equally emphatic defense from Dr. Lyman Abbott. About that time Mr. Roosevelt informed a *New York Times* reporter: "If this slander is ever printed in so many words, and by a responsible newspaper, I will bring suit for damages and settle it once for all." Subsequently *Iron Ore*, a weekly paper with a circulation of 3,750 copies, published in Ishpeming, an "upper peninsula" Michigan town of some 12,000 inhabitants, made the charge that Theodore Roosevelt "curses, lies, and gets drunk frequently, and all his friends know this." Whereupon action for libel, with damages set at \$10,000, was brought against the editor and publisher, Mr. George A. Newett, and the case was tried before Judge Richard Flannigan, in Marquette, Mich., last week.

Among the many papers that accept Colonel Roosevelt's own statements concerning his drinking habits, we find the *Brooklyn Eagle*, *Syracuse Post-Standard*, and *Richmond Times-Dispatch* of the opinion that he might better have ignored the charge. As the *Syracuse* daily puts it:

"Fair-minded men accepted his own denial, or if not, were certainly convinced by the weight of evidence brought to support his word. That his trip to Michigan to make his reputation for temperance a matter of court record and to punish his detractor will serve any good purpose we doubt. Those by whom the slander is believed, in spite of the angry and emphatic denials of those who have been in closest contact with him, will not alter their belief or put check on their tongues because he gets

a verdict from a jury. The whole proceeding will serve no good purpose, and it is not a pleasing spectacle."

Yet the *New York Times* believes that "Mr. Roosevelt has acted both courageously and wisely." In this case "neither silence nor a vigorous denial would have sufficed," and the Colonel has "taken the one way to settle this matter for all

ILLUSTRATING ONE CHAPTER FROM A POSSIBLE AUTOBIOGRAPHY.

time." Indeed, say the *Washington Herald* and *Philadelphia Public Ledger*, he is "rendering real service to the country." It is undesirable, in the opinion of the *Philadelphia daily*,

"that American youth shall con the story that a President had great qualities, but, alas, he was a 'drunkard.'"

"Mr. Roosevelt is taking proper steps in behalf of his own fame and the history of the country. He is also consciously or unwittingly rendering another service that will be of value in political debate and in future campaigns. He is making a powerful and effective fight for temperance—for sobriety and temperance in the use of language."

In Marquette, interest centered in the ex-President's own testimony, which was followed and corroborated by the statements of men close to Roosevelt in private or public life. The Colonel's story was detailed and interesting. Its most significant statements are here given, as selected by the *New York Times*. Said Colonel Roosevelt:

"I have never drunk a cocktail or a highball in my life.

"I don't smoke and I don't drink beer, because I dislike smoking and dislike the taste of beer.

"I never have drunk whisky or brandy except when the doctor prescribed it, or possibly on some occasion after great exposure.

"The only wines that I have drunk have been white wines, Madeira, champagne, or occasionally a glass of sherry.

"At public dinners I sometimes drink a glass of champagne or perhaps two. I think that on the average this means that I will drink champagne once a month.

"At home I often at dinner will drink a wine-glass or two wine-glasses of Madeira.

"Mint juleps I very rarely drink. At the White House we had a mint bed, and I should think that on the average I may have drunk half a dozen mint juleps a year. Since I left the White House, four years ago, to the best of my memory I have drunk mint juleps twice.

"During the last fourteen years I do not think I have drunk whisky straight or with water more than half a dozen times.

"As for brandy, I never drink it any more than I do whisky when I am at home or on a hunting trip, but on very hard campaign trips I have frequently, just before going to bed, drunk one or two goblets of milk with a teaspoonful of brandy to the goblet.

"I never made a practise of drinking at a bar, and I don't believe that I have drunk at a bar for twenty-odd years.

"I never in my life, while in the White House or anywhere else, have ever left a room for the purpose of getting a drink between meals.

"For the last fifteen years I can give you in detail just about what I have drunk, and neither during those fifteen years nor since I have been of age have I ever under any circumstances been in even the smallest degree under the influence of liquor."

Mr. Roosevelt's "unpardonable sin," comments the *New York Evening Sun*, "was that he was a temperate man and not a total abstainer." But, concludes *The World*, "where the thoroughness of a man's temperance can only be gauged by the number of teaspoonfuls of intoxicants that he has absorbed, smiles must become the order of the day."

TURKEY, it is reported, will be amply represented at the London peace conference, her only regret probably being that universal peace didn't come a little sooner.—*Southern Lumberman (Nashville)*.

FOREIGN COMMENT

A CHINO-JAPANESE FLIRTATION

THE ANTI-ORIENTAL activities in California seem not unlikely to bring about a closer understanding between Japan and China. Already such Tokyo journals as the *Yorodzu* have begun to talk about the organization of an anti-American league among Oriental nations. On the Chinese side, sentiment in favor of an alliance with Japan is also manifest. Dr. Sun Yat-sen, during his recent visit to Japan, delivered at a gathering of Chinese residents in Nagasaki a speech in which he came out squarely for a Chino-Japanese alliance. "It was the Manchus," he said, who stood in the way of Chino-Japanese friendship, but now that the old régime is gone we should have no difficulty in realizing what ought to have been realized long ago." It is significant, too, that almost simultaneously with the arrival of Dr. Sun in Japan, the Chinese Government asked Dr. Hirai, of the Railway Bureau of Japan, and Dr. Ariga, one of the foremost scholars of jurisprudence, to come to Peking as advisers to the Department of Communications and the Department of Judicial Affairs, respectively. Upon his return to Shanghai from Tokyo, Dr. Sun stated to the representative of the Tokyo *Asahi* that his chief mission in Japan was to find out the real attitude of the Japanese Government and people toward China. He further said:

"When I returned to China two years ago, after an exile of twenty years, I found to my great surprise that my fellow countrymen entertained intense suspicion and even hatred toward Japan. They thought that Japan, hand in glove with the European Powers, was contemplating the partition of China. I could not believe it. To ascertain the real situation, I went over to Japan and there met and talked with men of all classes and of all shades of opinion. To my great satisfaction I discovered that the Japanese desire to befriend us is deep-seated and sincere.

"Japan, the entering into world competition much later than China, has gained a deeper and wider knowledge of international affairs as well as of modern science and arts. A commercial alliance with such an alert nation would be a signal advantage to us. It is my intention to tour China and propagate the gospel of Chino-Japanese friendship.

"As for a political alliance with Japan, it is possible and advisable, but at this moment I do not care to say anything definite about it."

In spite of the guarded expression of Dr. Sun, however, the Shanghai correspondent of the *Asahi* thinks that he really recommended to President Yuan Shih-kai the ultimate formation of a Chino-Japanese alliance, both political and economic.

As if echoing Dr. Sun's sentiments, Mr. Ka, editor of the *Peking Jipao* (Tien-tsin, China), contributes an article to the popular Tokyo monthly, the *Shin Koron*, advocating a bond of friendship between China and Japan. The *Chung-kuo Jipao* (Shanghai) also publishes an editorial asserting that a Chino-Japanese alliance would be even more desirable for Japan than for China. It argues:

"As long as China remains weak and impotent, Japan's posi-

tion will be in constant danger. An invigorated, resuscitated China means the strengthening of Japan's position as a world Power. The outcome of the war with Russia gives us an apt illustration. Japan was victorious, to be sure, but she failed to drive Russia from Manchuria, neither could she obtain an indemnity from Russia, which left her depleted treasury un-replenished. Had China only been powerful enough to throw her influence on the Japanese side of the scale, the result of the war would have been different."

JAPAN'S FOREIGN POLICY.

—Puck (Tokyo).

to promote friendly feeling between the two nations, and that the Japanese and Chinese newspaper editors in Manchuria have recently held a conference at Kirin, which resulted in the formation of a Chino-Japanese press association, whose object is to remove mutual misunderstandings between Japan and China with regard to the Manchurian question.

"WEAK AND BOWING" IS A FITTING DESCRIPTION OF OUR DIPLOMACY. IT IS BADLY IN NEED OF PROPS LIKE THESE.

—Puck (Tokyo).

But these rosy views with regard to China and Japan are not shared by Professor Katsumi Ukita, of Waseda University. The professor is a man of learning in a very wide sense, and teaches history and sociology in the institution presided over by the brilliant and sagacious Count Okuma, whose ideas of statesmanship we may be warranted in believing he shares. Professor Ukita has studied at Yale and is well acquainted with the principles of our Republic. Writing on "The Future of China," in the *Japan Magazine* (Tokyo), he declares that "China is to the Orient what Turkey is to the Near East." "The solution of the Chinese problem is a much more difficult problem than the problem of Turkey." China, at present, can not rule herself. "Her sovereignty is in name only," with Russia, England, and Japan hemming her in. Before Japan will ever recognize the Chinese Republic, Tokyo will have to wait until Peking shows true mettle. The article concludes with the following threat to manage Chinese affairs if China is too weak to do so:

"At the present time, Japan, with the rest of the world, is anxiously awaiting the outcome of China's efforts after stable government. If Yuan Shi-kai fails, then there will

be nothing for it but to let the Powers take a hand, and see what can be done for China. As to results, Japan is particularly concerned with having no alien Power in possession of Manchuria. She has fought two wars to keep alien Powers away from her borders, and her annexation of Korea to insure this safeguard is now an accomplished fact. Indeed, Japan must hesitate to recognize the Republic of China until she has a proper guaranty to this effect. One thing is certain, either China must be in a position to defend Manchuria against invasion or she must be content to permit Japan to do it."

Translations made for THE LITERARY DIGEST.

TO EUROPEANIZE TURKEY

HISTORY HAS ITS IRONIES and its revenges. At one time the Mohammedans were the intellectual and artistic leaders of Europe. It was an Arab who first introduced the Christian scholars of Europe to Aristotle, and practically made possible the scholasticism of Aquinas. Professor Jowett tells us that Greek intellectualism as interpreted by Averroes has entered with all the potency and persistency of a natural force into the literature, the politics, and the social system of Europe. But the Islam that conquered Spain, North Africa, and Persia has degenerated, and now the conquerors who once regarded Christian Europe as infinitely beneath them are crying out aloud for European teachers to remodel their political system and to teach their youths those lessons which have kept to Europe her preeminence among the continents. The result of the Balkan War has brought Turkey to the confession expressed in the most advanced of her Constantinople papers, as the lesson of "dearly bought and fruitless experience." Ahmed Effendi Aghaieff writes in the *Jeune Turc*:

"All hope of regenerating and reviving the country is not yet lost. Our Asiatic possessions are vast and full of natural riches; they could sustain a population five times their present one. Indeed, if we succeed, by a sustained effort, in reorganizing them on a rational basis, if we succeed in reviving them and giving them the glow of life, we may hope to regain soon our place among the nations."

"Besides, European instructors must be called for all the branches of the governmental machine and of the social system. To content ourselves with the reorganization of the army, the police, and the gendarmerie, would be to condemn ourselves once more to failure. We must think of the gendarmerie and the police, and also of the revival and good organization of our schools, our agriculture, our means of communication, our commerce, and our industry; for otherwise, even with the best police in the world, a people that does not have good schools to train its youth, or highways to move about and send off its products, or industries and agriculture to keep it busy and feed it, will be irrevocably doomed to misery and to all the antisocial consequences of misery."

The writer cites the example of other races and nations who have derived all their advantages from more advanced civilizations, as Peter the Great learned from England the secrets of a mercantile marine, and Frederick caught from Voltaire the inspiration which became the foundation of German literature, while Italy was the quarry out of which the men of Western Europe dug their costliest treasures. So of the vast Empire of Turkey this writer remarks:

"We absolutely need the help of European specialists; it is to-day acknowledged that, left to ourselves, we can not reorganize any branch of life in a satisfactory way. This may seem somewhat humiliating to our national pride; but all nations that have wished regeneration and revival have gone this same road. We may name among others Japan, Russia, and the Balkan States themselves. And this is perfectly natural; to have, for example, a good school, one must have seen such a school and to have directed it; one does not make it up out of the heart, by divine inspiration! Let us cherish no illusions about ourselves;

this haughty arrogance has already cost us too dear; let us at least have learned this hard lesson. If for the past five years we had had the grace and the modesty to recognize our faults, perhaps we should to-day have been cured of them and could already dispense with foreigners. So let us not hesitate; in our appeal to the foreigners let us not stop with such and such a branch of life alone, but let us call them for all branches, and give them plenty of liberty to reorganize these departments."

DESIGNS ON ARMENIA

TO SUPPOSE that the European Powers have their hands full with present complications, and are not looking for any more trouble, would be a mistaken view. Not yet being done with the Balkan problem, they are cooking up an Armenian question. Russia, whose hopes to gain a foothold in the Balkans did not materialize, is accused of trying

to compensate herself elsewhere. The Russian Government has been making overtures to the head of the Armenian clergy, the Katholikos of all the Armenians, as he is officially styled, and his mission, recently sent to St. Petersburg, was received with great honors. The object of that mission was to get some concessions for the Armenians in the Caucasus. The concessions were granted, and the Government has somewhat relaxed the iron grip in which it held the Armenians in that quarter. It was a good beginning, and it is hard to tell what the next move would have been, but just about that time Europe became aware of Russia's activities in Armenia, and all began to discuss the future of that country. This seems regrettable to the *Novoye Vremya* (St. Petersburg), which thinks that Russia alone can "solve" the Armenian question. To quote its words:

"For some time articles have been appearing in the *Berliner Tageblatt* and other German newspapers in which now the Asia Minor correspondents of these newspapers, now prominent Armenians in the capitals of Western Europe, have tried to prove the identity of German and Armenian interests in Asia Minor."

"The Germans, as ever, have proceeded methodically in this matter. From the beginning of the construction of different sections of the Bagdad Railroad the Germans began to penetrate into the obscure corners of those vilayets in which the Armenian population struggles with the terrible oppression of the Mussulman fanatics. They appeared not only in the rôle of traveling salesmen, but—what is much more dangerous—in the rôle of missionaries and preachers. The majority of these missionaries were not even native Germans, but American Germans who, as in neighboring Persia, shielded themselves under the credentials of the American Evangelical Mission Society in the Orient. These missionaries have opened schools in some Armenian cities and begun with great fervor the work of educating the younger generations. The results of their several years' work in the educational field are beginning to tell. Among the Armenians there are more and more of young ministers, physicians, and teachers who are convinced that Russia, this ancient protector of Christians in the Orient, can not undertake the solution of the Armenian question, and that the only Power which can alleviate the lot of the Armenian people is Germany. The German consuls in Asia Minor, the railroad officials of the German branch, have given employment to a number of Armenians,

ROAD CLEAR?

MONTENEGRIN BANTAM (having got out of the way at the last moment)—"Ha! ha! gave you a nasty scare that time."

—Punch (London).

and use them for agitation not only among the Armenians in Turkey, but even in Russia. It is characteristic, for example, that the editor of the German paper in Saratov, which is published for the German colonists of the Volga region, is of Armenian extraction, one of the pupils of the German Evangelical Society."

Stating that the Austrians are siding with the Germans in this question, and quoting from an article in the *Oesterreichische*

THEIR WAR FOOTINGS.

William has only to stamp the ground to raise soldiers.
The more John stamps, the deeper he sinks in the mud.
—Kikeriki (Vienna).

Rundschau (Vienna) by some Austrian general, in which attention is called to the activities of Russia in Asia Minor, the *Noroye Vremya* continues:

"The last Russo-Turkish war raised the hopes of the Armenian Christians in Asia Minor. But the solution of this question at the Berlin Congress . . . retarded their cause for forty years. Large numbers of Armenians, persecuted by the Turks, fled to Russian dominions; many of them got rich in Russia and became the natural promoters of the Russian policy among the Armenians. After the Adana massacre, England interested herself in the Armenian question, but did not bring any relief to the Armenians. At the present moment, not seeing any desire on the part of the Powers of the Triple Entente (England, France, and Russia) to help the Armenians, some of the Armenian leaders turn for assistance to the Powers of the Triple Alliance (Germany, Austria, and Italy), which has proved that it actually directs the destinies of the universe by creating, before the eyes of the whole Christian world, a special kingdom for one million uncivilized Albanians."—Translation made for THE LITERARY DIGEST.

FRENCH ARMY INCREASE OPPOSED

SERIOUS OPPOSITION has been aroused among French soldiers and members of the Socialist party in the French Assembly by the law increasing the time of military service for conscripts to three instead of two years. We read in the French press that in the garrison at Nancy sixteen soldiers have been tried for uttering their opinions against this new ordinance, and thirteen non-commissioned officers have been reduced to the ranks for conniving at such rebellious utterances. At Tourelles 150 soldiers made an open demonstration against the new law. The same disaffection has been so manifest in various quarters that the Republican-Democratic party in the National Assembly has placarded Paris with a declaration in favor of the new law, the principal passage of which runs as follows:

"The increase in the military power of Germany ought to be met by an increase in our armament, without any wish, however, that France could be anything but an advocate of peace. Who can deny that our added strength would guarantee the maintenance of peace? We should be in such a position that no one would be tempted to attack us; and if any one did attack us, we should be in a condition to resist victoriously such aggression. We have seen during the past few years one or two instances of the brutal and sudden attack of one nation against another. We shall not be safe against being thus surprised unless we have sufficient troops under arms to sustain the attack and prevent invasion. We have seen that by October next the German

Army will have 866,000 men ready for active service. Our own Army under the present law of two years' service will consist of only 457,000 men, the majority of whom are raw recruits. The projected law will increase our troops in active service by about 200,000."

A somewhat similar manifesto has been issued by Mr. Le Hérisse, president of the Military Commission in charge of the army question. Speaking at a banquet he is reported in the *Paris Figaro* as saying:

"One fact is plain—we must have a reorganization of the Army, which will require a large addition in men and money. Every one must allow that this truth can not be too often dinned into the ears of the country. It is the future of France, it is the country's unity and greatness, which are at stake in our relation with the great Power on the other side of the Vosges. We do not desire to see repeated the catastrophe of 1871."

The speaker recalled to his hearers the saying of the German Chancellor in the Reichstag: "We ask for more money because if we have to fight we must fight to conquer." Mr. Le Hérisse finished his speech by saying: "We shall take as many men and as much money as we need, for if we must fight to-morrow, we do not wish to be beaten."

The new law is favored strongly, too, by Mr. Clemenceau, in the daily *Homme Libre* (Paris), in every issue of which appears an article over his name. In one such we read:

"Is it not evident that the measure for which Mr. Barthou, the Minister of War, is being blamed in many quarters is nothing more than a wise provision for the future and is really intended to be no more than a safeguard against the inferiority of our Army and of our general military situation?"

Mr. Léon Bourgeois also approves the army increase. He said at a recent meeting of the National Congress of Peace that Germany has made the proposed law absolutely necessary. To quote his words:

"The first fact that strikes us with alarm and might lead us into discouragement is that the law at this moment before the Reichstag increases the armament of Germany to a formidable degree, and makes it necessary that France should make extraordinary efforts and great sacrifices in order not to be left behind."

Which leads the *Paris Figaro* to remark:

"We may hope that the Radicals and the Radical Socialists

HOW WARS ARE MADE.

DIRECTOR OF GERMAN ARMAMENTS FIRM—"Insert this article in the French newspaper we own to stir up feeling against Germany."
—*L'Humanité* (Paris).

of the Chamber of Deputies, who are making common cause to defeat this measure, will yield themselves to the arguments put forth by such leaders in the legislative body."

Speaking for those Radicals who are opposed to the law, *L'Humanité* (Paris) says:

"We have had enough of this hypocrisy. There is no need at present of such a law. When the legislature in former times has foreseen exceptional circumstances which made the executive take such measure of safety, we could approve of such action, but now there is no such occasion. Criminal are those followers of Mr. Barthou who think that such an emergency is at present before us. . . . The Republican party should deeply ponder the

THE NEXT ARMY INCREASE IN FRANCE.
The cripples and hunchbacks will be called to the colors.
—Fischetto (Turin).

gravity of the decision which they are now called upon to make. The whole Army is interested in that decision, and the whole Army is, we are told, to be a reformed Army, an Army reformed as to its command, its education, and in the rule by which Parliament is to regulate and control its movements. We wish Frenchmen to understand that there should be no army reform possible in this country except by the popular will and by the Frenchmen who are to be affected by the measure; the men who are called upon and shall be called upon to serve under the colors."

A most remarkable instance of what Bebel, editor of the *Vorwärts*, and Jaurès, who controls the *Humanité*, both extreme Socialist organs, call internationalism and pacifism occurred in the recent meeting of the German and French Socialists at Berne. Teuton and Gaul are supposed to be at daggers drawn and to be rivals in their increase of national armaments. But on the platform of Socialism they present an admirable example of harmony. The final result of the Berne Congress was embodied in the following resolution, which was practically a protest against the increase of armaments both in Germany and France:

"The French and German Socialist party fight against militarism and demand that the military organization of their several countries be democratized, and that permanent or standing armies be replaced by militia whose sole duty shall be the defense of the country. Each people shall thus be left free to maintain its liberty and autonomy. We demand that all international differences shall be decided by arbitration. Modern warfare, with all its horrors, cruelties, and indescribable devastations, is always a particular menace to the middle classes. Every effort made by the political parties representing this middle class against aggressive nationalism, against the policy of foreign conquest and the folly of modern armaments, may count upon the support both of German and French Socialists. The two peoples are united in the brotherhood of a high culture, and are advancing in accord with the view of doing something for the good of a common humanity."

A leading German paper, the *Frankfurter Zeitung*, gives emphatic adherence to the resolution passed at Berne, declaring:

"The resolution contained a series of thoughts which are not new, but are noteworthy because this conference at Berne has given utterance to them. We see in this incident an intimation of a desired reconciliation between Germany and France. The most practical result of the conference and of its resolution may well be considered as showing that the wish for peace is becoming more wide-spread among the populations of both countries. This is not unnoticed by the press; many papers of each side of the frontier have left off their mutual recriminations and have tried in a great measure to repair the harm which has thus been caused. In any case a good beginning has been made in Berne. We hope that the work of the conference will increase and spread abroad and bear rich fruit in Europe."—Translation made for THE LITERARY DIGEST.

PORTUGAL RULED BY CARBONARIOS

IT WAS THE CARBONARIOS who organized the assassination of King Carlos and his son, in accordance with their old Italian motto, "We drive the wolves out of the forest." The forest of these "charcoal-burners," or "colliers," is the Government of Portugal and the "wolves" are the Monarchists, or those who are not in sympathy with the Republican régime. Such is the statement of the Duchess of Bedford in *The Nineteenth Century and After* (London). She has recently been visiting the westernmost republic of Europe and making notes on the condition of political prisoners there. The account she gives is horrible, and she blames the corruption of a government which is kept in power by means more cruel, relentless, and unjust than those which propped up the throne of Ivan the Terrible in Russia's darkest years. "The whole land is lying under the desolation of Jacobin rule," she declares. A secret society who call themselves Carbonarios, after the Carbonari who formed a league to rid Italy of the Bourbons in the early years of the nineteenth century, we are assured, govern Portugal. The Monarchists of Portugal have the sympathy and support of the nobility in many parts of Europe, and we find many articles denouncing the present régime. This is one of the most notable,

THERE'LL SOON BE LITTLE ROOM FOR FARMING IN GERMANY.
—Stimplicissimus (Munich).

and it has attracted wide attention. Formerly these Monarchist articles concluded by predicting the early fall of the Republic, but such prophecies have grown fewer and less confident. The Duchess of Bedford, who bases her stirring impeachment of the

Republic on personal observation, is the daughter of an Arch-deacon of the Church of England and the wife of a Duke who not only holds a lofty place in the British nobility, but is a man of wealth, learning, and military distinction. She writes:

"The fact that King Manoel had been allowed to leave the country without hindrance, and that the change of government had been effected with the minimum of bloodshed, reflected some credit on the moderation of the party in power, and, in due course, the diplomats accredited to the fallen Monarchy were instructed to recognize the Republic. But all the hopes which might have been entertained of a sane administration of affairs were clouded when it became obvious that the Government was indifferent to the general state of the country, confining its operations to the capital, which thus became the center of opposing groups of intriguing politicians. But from the midst of this confusion one power has risen supreme. A secret society had organized the assassination of King Carlos and his son, and this nucleus, during the two years which elapsed before the revolution of 1910, grew and developed into the body of men now known as Carbonarios, who may be fitly described as practical anarchists."

Carbonarios occupy the highest posts in the Government, we are told, and hold complete sway over the destinies of the country:

"Among the prominent patrons of this society are the present Prime Minister, the Minister for Foreign Affairs, and other members of the Government. The editor of *O Mundo*, the principal organ of the Democrats, is one of its high officials. The roll-call is said to number at least 32,000, and every member is pledged by oath on initiation to kill by pistol, poison, or dagger any person whose removal has been decided on at headquarters. As is usual with all such bodies, the names of the head centers are unknown to the rank and file. These 'groups of defense'—to use the high-sounding name bestowed upon them by their chiefs—are content to do their sinister work for a consideration of 4s. a head per day; and, in order to justify their existence they are bound to manufacture crime if none can be discovered. Patrolling the country in bands, they forcibly enter private households, bribe the servants to make false depositions, arrest the masters, and drag them amid the opprobrious insults of the mob to the police-stations, whence they are promptly consigned, without trial or investigation, to the nearest prison. The terrible efficiency of the Carbonarios is the most formidable asset in the possession of the present Government, and proved an effectual instrument in crushing the Royalist rising of 1912."

Political prisoners, after being conveyed to the convict island of Trafraria, are subjected to every hardship—sometimes to starvation and death. A typical example of Government methods is the fate of Father Henriques, a curate of the Cathedral at Lisbon, who was ordered by his physician to go abroad for treatment at the baths and set out on board the mail steamer *Araguaya*, a British vessel. He was arrested and taken from the ship, and the Duchess declares that when the British authorities inquired into the matter the priest was released on being proved to be a perfectly innocent man. But this writer adds:

"In order to justify the arrest and imprisonment of the absolutely innocent Father Henriques, the Carbonarios asserted that he had been seen speaking to Portuguese refugees in Spain, and from this they evolved a lurid 'Jesuit conspiracy,' particulars of which were furnished by them to the news agencies. On the 10th of August it was announced that

"A Portuguese Jesuit was arrested yesterday on board the English liner *Araguaya*. The Jesuit had taken his passage at Vigo for Brazil, and documents were found upon him proving him an agent of Paiva Couciro, the well-known Monarchist leader. A complete plan for the invasion of Portugal has been thus discovered, and with it a list of all the Monarchist conspirators, many of whom are officials now in service. The Jesuit had been commissioned to travel with the object of increasing Royalist propaganda, and of collecting the necessary funds for the purchase of an armed cruiser."

"This dramatic paragraph, it may be incidentally remarked, is the class of fiction in which the Carbonarios excel, and for the composition of which, as has been already stated, they receive a steady wage."

Confinement in his cell for seven months proved fatal. He was released in March, 1912, but died in the early autumn. As this writer says:

"His release came too late. The prison hardships—cold and damp, bad food, insanitary conditions, and indescribable misery and discomfort—had so reduced his strength that he did not live quite seven months longer. His death was caused by rapid consumption, contracted in the damp cell at Trafraria; and he is only one of many martyrs. His old father died the same day, a few hours afterward, from grief and shock; and his brother's health has been seriously impaired by nerve-strain and acute distress in contemplation of so much undeserved and cruel suffering."

"It must not be supposed that the case given above is an exceptional one; on the contrary, it is absolutely typical. During my recent visit to the Limoeiro Prison, in Lisbon, I listened to narratives from the prisoners of an equally tragic character."

Political prisoners have to buy their own food, a system that aggravates the hardships of the jail. In the case of Father Henriques:

"In common with other prisoners in Trafraria, he often went without anything to eat, inasmuch as whenever there was a storm and the boat from Lisbon was delayed or could not cross—a very frequent contingency in winter—no food arrived, and the prisoners practically starved. Tuberculosis, rheumatism, feverish complaints, and skin diseases were rife among them in consequence of their incessant hardships."

The Duchess, who is something of an Elizabeth Fry as well as a highly educated and advanced woman of the day, visited also the political prisoners in their cells at Oporto, Coimbra, Chavas, Braga, and elsewhere, even to "the foul and sunless dungeons of the military castle of San Jorge, in Lisbon." But she found that "the prisons in the capital, compared with those in the provinces, were graphically described to me as representing the Ritz and Carlton Hotels contrasted with a wayside pothouse."

The whole of Portugal is under the Carbonarios, and lies fettered by Jacobinism as by iron chains. Who is to deliver the people of the land excepting England? As the Duchess earnestly, almost passionately, exclaims:

"What power, it may be asked, is strong enough to break the chain which holds it captive? Will it be a man? Or will it be a measure? Will it be the overthrow of the Republican Government, or can a large scheme of reform rekindle the hope which shone bright in its earlier days? Some statesmen, well versed in the history of nations, expect a return—the perhaps at a distant period—of the fallen Monarchy. Others look forward to a renaissance on lines such as Europe has seen in the recent history of the great French Republic. Whatever may be the issue of a situation still shrouded in gloom and sorrow, some practical points emerge."

"The disbanding of the Carbonarios by the withdrawal on the part of the Ministry of all official recognition must be the initial step. A general amnesty of all the political prisoners, whether awaiting trial or already condemned, would then be received throughout the country with enthusiasm."

"Is it not just and right that England, in the name of her old friendship for Portugal, should demand and obtain these guarantees of further reform?"

The views of the Duchess of Bedford are shared by influential sections of the French press. The *Soleil*, monarchical and ultramontane, confirms all that the writer in the English review says about the Portuguese Government, and regrets that France, being Republican, lost her power of intervening when she chose the non-monarchical consequences of the revolution. To quote the editorial referred to:

"If to-day the Portuguese Carbonarios ravage at their pleasure the kingdom that Dom Manoel (alas!) defended so badly, this reign of iniquity is the direct consequence of our defeat in fighting for a monarchy. A Monarchical France would long ago have delivered Portugal from its tyrants and officers. A Republican France is unhappily condemned to compromise with the persecutor and spoilers of honest people."

SCIENCE AND INVENTION

WHERE THE EARTH QUAKES ONCE A WEEK

EARTHQUAKES are more common in Japan than thunderstorms are with us. In Tokyo people talk of them as we do of the weather. In fact, the slightest shocks are barely noticed, and a tremor that would bring out the scare headlines in Boston or New York attracts about as much attention as a heavy frost. The bigger shocks, of course, do much damage, tho not so much as they would if the Japanese were foolish enough to employ our methods of construction. No other country, writes Miss Blackford Lawson in *Knowledge* (London, May), probably affords such facilities for the study of earthquakes as Japan, nor is there anywhere else such necessity for their scientific investigation. She goes on:

"Nearly one thousand four hundred of these phenomena are recorded annually in the whole of the Empire, and in Tokyo alone there are, on an average, fifty earthquakes that can be felt during the year, or about one a week. Earthquakes, as every one knows, occur in all regions adjacent to active volcanoes, as in the neighborhood of Teneriffe, Vesuvius, Etna, and Stromboli, which are simply the safety-valves of a single earthquake district. So also Japan, Sumatra, Java, and the islands of the East Indian Archipelago are liable to fearful earthquakes; and geologists say that much of Japan would never have existed but for the seismic and volcanic agency which has elevated whole tracts above the ocean by means of repeated eruptions.

"It is, therefore, only to be expected that it occupies an unique position in the world as regards seismology. Consequently, there is a special Chair of Seismology and an Institute attached to it in the University of Tokyo, and also a special committee for the investigation of earthquakes, under the direct control of the Minister of Education. Besides this, all the provincial meteorological stations throughout Japan are equipped with instruments for recording and measuring earthquakes, and seismic phenomena are systematically studied.

"In the interior, the writer frequently met, in an out-of-the-way cave or on the mountain-side, members of the Seismological Society of Japan, originally organized by Professor Milne, who, with their delicate instruments set up, were mapping down every quiver of the earth's crust."

Miss Lawson quotes Professor Omori, a great Japanese expert, as criticizing severely the ignorance of Occidentals, especially the British in India, in their construction of buildings in earthquake lands. He said:

"It is almost criminal on the part of the Government to build bad structures for public purposes, such as schools, jails, and barracks, and my advice to the Indian Government would be to build more substantially, always on a sure foundation, with

good binding either of wood or iron, and to use good material, especially in the case of public buildings."

The British engineers were going ahead on a totally mistaken idea, it appears:

"In Calcutta, Professor Omori found that the theory of the engineers was that the soft soil of Calcutta acted as an elastic cushion, and, by absorbing the earthquake motion, prevented it from being communicated to structures standing upon it. Now this was quite an erroneous idea, earthquake motion being invariably felt more in soft than hard ground; and even within the confines of the city of Tokyo a shock varies considerably, one in the upper part being one-half less in intensity than it is in the lower and softer parts. The same fact was also made evident in San Francisco, where at the time of the earthquake 'made ground' and soft land suffered more than the hard.

"Speaking generally, the most important principle in construction is to make the structure a *single body*, simple and compact, avoiding the possibility of different parts assuming different movements or vibrations. For example, chimneys are dangerous, because a chimney vibrates differently from the main building, and in the event of earthquake it will be found that a chimney is always broken at its junction with the roof."

Some of the older structures in Japan, we are told, have shown wonderful powers of resistance to shocks. Among these are the walls of Nagoya. Says Miss Lawson:

"They withstood the great earthquake of 1892, when thousands of houses fell in Nagoya and Gifu, and in the smaller places round about, and when all the new brick telegraph- and post-offices and other European buildings came crashing down like ninepins. On that occasion, Japanese houses did not fall, unless they were old and frail, when in many cases the supports gave way and the roof came down, imprisoning the inmates until they were rescued, sometimes from a house in flames. The walls of the Castle of Tokyo show the same remarkable state of preservation, the blocks of cyclopean masonry, there also uncemented, being neither cracked nor displaced in the least degree.

"[On the next page is seen] an earthquake-proof structure erected in the grounds of the Imperial University, Tokyo, which has been built according to mathematical calculation on a solid concrete foundation, and is intended for use as a Seismological Observatory, and as a standard with which to compare the effects of a shock on ordinary brick buildings. In its most interesting investigations into the stability of various structures against earthquake shocks are carried on, artificial earthquake motion being produced by means of a 'shaking table,' which can be made to move with independent horizontal and vertical motions by the use of steam-engines.

"Another remarkable fact in Japan is that pagodas built

From *Illustrations*, copyright of H. M. Wilson, New York.

IT SWAYS, BUT DOES NOT FALL.

A typical Japanese pagoda. It is a remarkable fact that these pagodas, built hundreds of years ago, embody the principle of the modern seismograph. A huge pendulum within preserves its stability.

hundreds of years ago embody the principle of the modern seismograph, which is union of a stable and an unstable structure, to produce a neutral stability which renders the whole building least sensible to earthquake shock. In the hollow well of every five-storied pagoda a heavy mass of timber is suspended freely, like an exaggerated tongue, from the top right to the ground, but not in contact with it, and at the shock of an earthquake this large pendulum slowly swings, the structure sways, and then settles back safely to its base. This is also the principle followed in the construction of all bell-towers throughout Japan, where the bell acts as pendulum, and the roof, supported by posts, forms an inverted pendulum, as in the seismograph. When an earthquake occurs, a pagoda or a bell-tower may be rotated or displaced, but it can not be overturned as a whole."

IS THE KEROSENE-ENGINE COMING?

KEROSENE is perhaps our best-known liquid fuel. It is manufactured in large quantities and may be purchased cheaply almost everywhere. It is non-explosive and easily handled. Why is it so little used in motors? If our present motors are not adapted to it, why not invent one in which it can be used? In *The Horseless Age* (New York) Harrington Emerson gives an answer to these questions. The main trouble seems to be that kerosene is a mixture of several substances, and that it does not always contain these in the same proportions. A motor built to use one kind of kerosene would not run with another. Then, too, the very fact that kerosene is non-explosive militates against it, for all our internal-combustion motors, except the Diesel, operate by explosion. To quote Mr. Emerson's article:

"If the Standard Oil Co., instead of furnishing 'kerosene' boiling all the way from 300 to 500 degrees Fahr., and of a specific gravity of .79, could or would furnish commercially 'pentadecane' . . . of the specific gravity .784 and boiling neither below nor above, but just at 496 degrees Fahr., the problem of converting the oil into an explosive gas would be much simpler than it now is, especially as, short of chemical analysis, the usual and ready way of ascertaining the probable quality of an oil is to determine its specific gravity, a crude and utterly unreliable method of determining anything, for one might have of the same specific gravity .784 pure pentadecane, or a mixture of equal parts of .684 gasoline and .884 lubricating-oil. The 'pentadecane' is reliable, trustworthy, easy to manage, and free from objections; the other mixture difficult if not impossible to use. . . ."

"If to-day gas-engines using natural gas or illuminating gas work year in and year out, reliably, without any trouble, it is because the fuel used is of constant quality, containing much hydrogen and other fixt gases and less carbon, and if to-day the difficulties of using kerosene have not been overcome it is because too much has been attempted at once."

After many experiments, Mr. Emerson concludes that the best way to use kerosene in an explosion-motor is with what he calls a "combined atomizer and flash vaporizer," in which the oil is fed in regulated quantity to a funnel at the outer end of a flash vaporizer, and immediately in front of a self-acting air-valve. He says:

"On the suction stroke of the engine air and oil were sucked together through the valve, the oil thoroughly atomized and also

mixt with the air, but not in sufficient quantity for ignition or combustion. The mixt air and oil were drawn through a small but red-hot vaporizer, and whatever carbon deposit might have occurred on the walls of the vaporizer was swept away by the following rush of air. At the end of the vaporizer the atomized and vaporized oil and very thoroughly mixt vapor of oil and air met the incoming main supply of air and were thoroughly mixt with it. . . . This mixture was forced back into the red-hot vaporizer and suddenly exploded."

This procedure insures almost absolutely perfect combustion of the complex elements of which the kerosene is made up, but no workable engine has yet been made of this type, owing to various technical difficulties which Mr. Emerson explains in detail in his article. If we ever have a commercially usable kerosene-motor, however, it will probably, he thinks, be built on this model. But, he adds:

"It is our belief that a kerosene-engine with perfect combustion will be heavier than a gasoline-engine of the same power, because the kerosene-engine cannot run so fast and will not have so high a mean effective pressure."

All authorities, however, are not so cautious as this writer. That under ordinary working conditions any engine with a good gasoline carbureter can use kerosene is asserted by John A. Secor in an address before the Society of Automobile Engineers at Indianapolis, printed in *The Scientific American Supplement* (New York). The engine, however, must be kept at medium speeds. Says Mr. Secor:

"A car was thus taken from New York to Boston, operating entirely on kerosene except for starting. But the lack of adequate flexibility becomes increasingly apparent as the speed and power are reduced. If slowed down the car will not 'pick up.' . . ."

"Nearly all engineering authorities have held that in order 'for internal-combustion engines to work successfully with any of the kerosene oils, they must be provided with some form of volatilizer, vaporizer, gasifier, or its equivalent,' or in other words, supplementary means of heating the fuel, which would be unnecessary in a gas-engine."

AN EARTHQUAKE-PROOF BUILDING.

A GASEOUS GHOST

THE VERY etymology of the word "spirit" indicates a kinship with the gases; indeed, we are frequently told that ghosts "melt into thin air." A Boston ghost composed entirely of gas did not vanish so harmlessly, but, before the stern and unromantic hand of science had caught and analyzed him, he

had injured the health of a whole household, not to speak of searing the inmates nearly to death. This ghost was composed of gas from a furnace, and the sensations that convinced these twentieth-century Bostonians of his existence were produced by breathing him. The story is told in *Science* (New York, May 9) by Franz Schneider, Jr., of the department of biology and public health of the Massachusetts Institute of Technology, who was employed professionally to examine the "haunted house" in question—a handsome residence in the Back Bay district. Where but in Boston, by the way, would the dwellers in a haunted house call on a chemist to help them out? The event certainly proved that they had gone to the right man. We read:

"The trouble centered in the third and fourth stories, which

were occupied by the children and servants—the slumbers of whom were disturbed by strange sensations. It was said to be a common occurrence for servants to awake in the night with a sensation of oppression, 'as if some one were tapping upon me,' or with a 'creeping feeling going all over me with a feeling of being paralyzed.' Sounds were also said to be heard, as if some one were walking about the house or overhead. These sensations often continued after the sleeper was thoroughly awake and even after the lights had been turned on. The children of the family, who also slept on the upper floors, were similarly affected. A little boy, for example, awoke one night and inquired of his nurse why she had been lying on him, and persisted for some time in his delusion. Another child rushed screaming into the nurse's room crying that a man was waking him up, and asking why she let the man frighten him so. The children appeared sluggish in the morning and pale, even cold water losing its power to enliven them.

"These and other symptoms were well defined and often repeated, and had extended over the period of about two months during which the family had occupied the house as tenants. Upon inquiry it appeared that previous tenants had been troubled in the same way, matters having reached the point where the servants actually talked of seeing walking apparitions. The present occupant, altho not entertaining any vitalistic theory of the phenomena, was fully alive to the reality and gravity of the situation, and anxious to find the underlying cause.

"A comparatively simple and mechanistic solution of the problem soon appeared. It had been suspected that the trouble might have its origin in undetected leaks of illuminating gas, and the writer was called in to verify this theory. It developed, however, that the large amount of 'furnace' gas escaping from a viciously defective hot-air furnace was quite sufficient to cause the trouble. In this furnace the separation between the fire-box and the hot-air ducts (upon which the hygienic integrity of the apparatus depends) was badly broken, and as a result the inhabitants of the house were bathed in an atmosphere of diluted flue-gases."

In the light of these facts, Mr. Schneider goes on to say, the symptoms are readily explained. Flue-gases contain considerable amounts of sulphurous oxide and carbon monoxide, both distinctly poisonous gases. The trouble was aggravated on cold nights—when windows were closed at the top of the house, as naturally would be the case. Probably the belief in walking spirits was nourished by real noises from an adjoining house, of course exaggerated in the minds of persons awakened in the night while suffering from carbon-monoxide poisoning. The writer goes on:

"The hygienic lessons are patent. Here is a clear case of thoroughly serious poisoning which might have had at any time a fatal result, and all due to a defective hot-air furnace. This apparatus, often praised for its ventilating effect, and probably with justice when in sound condition and properly operated, may evidently become a distinct menace to health. And may not there be similar cases of a milder order, such as escape detection while still causing slight poisoning? Emphasis is also thrown on to the entire question of the possible dangers from flue-gases. Brick sewers have been found to be sometimes permeable to illuminating gas; may not these poisonous flue-gases sometimes escape into houses through porous or leaky chimneys? Slight leaks of illuminating gas have often been suggested as a cause of headaches and anemias of obscure origin; perhaps we should look to leaky furnaces and flue-gases for similar effects.

"This case should also be of interest to experimental psychologists and investigators of psychic and spiritualistic manifestations, since the reputation which this house was gaining as being haunted apparently arose in large measure from genuine sensations of apparitions and the like, induced by the breathing during sleep of a tainted atmosphere."

ANCIENT DRUGS FOR MODERN DOCTORS

THAT the United States Pharmacopœia, the official list of curative substances, is "a book of ancient drug lore" is asserted by Dr. Oliver T. Osborne, Professor of Therapeutics in the Yale Medical School, in *The Journal of the American Medical Association* (Chicago, May 10). A committee on revision has been preparing a new edition of the Pharmacopœia since 1910, and its decisions have been made public. Dr. Osborne charges that the new list will contain hundreds of unnecessary drugs, many of them old-fashioned remedies now superseded, some that are deleterious, others that rapidly deteriorate. Says Dr. Osborne:

"In this age of exposure of 'patent-medicine' frauds, and the age of education as to the danger of some drugs, the uselessness of others, and the limitations of all, the people have a right to expect that the next Pharmacopœia will be a book that can be relied on as a standard of purity and of chemical and pharmaceutical perfection in all its drugs and preparations. They have a right to expect that this book will represent the drugs found by medical experts to be of the best therapeutic value at this date, namely, 1913 A.D.

"Can there be any other guide for the acceptance of a drug or preparation for officialization in an up-to-date book of this age than that:

"1. The drug must have therapeutic value.

"2. The drug must be pure.

"3. The preparations must be the best.

"What, then, determines the best drug? Investigations in the laboratory and clinical experience; and almost every drug that is known to have clinical value shows laboratory activity. If a drug has no activities,

or only dangerous activities, when used on animals in the laboratory, it is not a drug that should be dignified by recognition in a 1913 book of standard valuable drugs. . . .

"At this date the new Pharmacopœia will contain at least 845 drugs and preparations. About half of these are not needed. One hundred and fifty-eight drugs and preparations were recommended for omission from the last Pharmacopœia by the subcommittee on scope. Just half of these, namely, seventy-nine, were voted in by the executive committee over the adverse recommendation of the subcommittee on scope. . . .

"It was 'love's labor' absolutely 'lost' to collect 117,000 prescriptions from all over this country in order to ascertain how many times a given drug or preparation was ordered. How many times a drug or preparation is ordered is no criterion as to its value. Beer is in enormous demand, but it has not yet been shown that it has any medicinal or food value. Is the nutrient value of a food determined by the frequency with which it is used? The turnip is a vegetable that is constantly bought and constantly eaten, but its food value is almost nil. The Pharmacopœia is supposed to be a book of standards for drugs, and each drug should have some valuable activity."

CREDULOUS AMERICA—That Americans, as a people, are easily deceived—readily imposed on by fakers, and quick to accept any kind of occult explanation of what they see or hear—was asserted by Prof. M. V. O'Shea, of the University of Wisconsin, in a recent address at Wheeling, W. Va. He is quoted in *The University of Wisconsin Press Bulletin*:

"A nation can not prosper when the majority of its people are so easily deceived as our American audiences are. The American people are particularly prone to believe mystical explanations of every-day phenomena.

"There are dozens of new pseudo-sciences established every

HE INDICTS THE PHARMACOPŒIA.
Dr. Oliver T. Osborne declares it is overloaded with a mass of unnecessary and sometimes deleterious drugs.

year in America. A considerable proportion of the vaudeville shows are based on 'mysteries' of one sort or another. Through special investigations it has been found that a large number of men and women in this country make their living by playing on the credulities of the people. There are regular schools that teach people these 'mysteries,' many of which have to do with 'mind-reading' or with so-called 'superhuman' bodily powers.

"The average American audience is so ready to look for supernatural explanations that they can not detect what is actually occurring when a man or woman is 'reading the minds' of subjects. There is one remedy for this deplorable attitude of mind, and that is training in scientific methods in the common schools. American schools in many places are behind those in one or two of the foreign countries, in giving children training in the appreciation of natural law. Every pupil in the public school should have some training every day in tracing cause and effect in the phenomena occurring around him. He should acquire the habit of explaining things on the basis of natural causes rather than supernatural causes."

A SEA TROLLEY

AN INGENIOUS SCHEME for doing away with harbor-pilots and guiding ships into port through tortuous channels by the aid of a submarine cable has been devised by F. W. Fitzpatrick, of Washington, D. C., who describes it in *Cassier's Magazine* (New York, June). Mr. Fitzpatrick's plan involves the use of the cable simply as a guide, but some marine inventors have proposed sending a current over it and letting vessels go in and out of port by electric power. This plan the inventor believes impracticable, but he regards his original scheme as the best ever worked out for the abolition of human pilotage, which he considers an extra-hazardous and very primitive method. Says Mr. Fitzpatrick in substance:

"The scheme here described has been thought out more particularly for New York's harbor, but it is applicable to the San Francisco ferry lines, or any port where the depths are not prohibitory. In the New York harbor I would lay a heavy wire cable from a point near the Battery, through the channel, the Narrows, and preferably the outer east channel to a point between the Scotland and the Sandy Hook lightships. At that point is safe water, 60 feet deep and more.

"This cable I would continue back, at a safe distance from the other course, a half mile or so, to the point of departure, and there splice the ends. Then we would have a continuous cable, a loop, anchored at suitable distances, so that it might not be tugged out of place and become a source of danger.

"At the sea end of this loop there would be maintained another lightship, or one of the existing ones shifted to that point. She would be armed with the most powerful fog-horns, bells, and guns, or whatever scientists prescribe as the best noise in a fog. It would not be a warning of danger, but a call to safety, and every incoming vessel would steer for it.

"On this cable would be a number of specially devised rings, to which other and lighter lines would be attached. All these lines, from a sufficient number of rings, would be held on this 'safety,' or lightship, and a similar number of them held on a tug or other boat at the shore end of the loop.

"In foggy or thick weather, or when indications would point to the probability of such weather—or, for that matter, at all times—there should be a harbor regulation prohibiting all sailing craft from entering or anchoring inside of this 60-foot depth, unless in tow of a tug or steamer; and another regulation compelling all such tugs, boats, and steamers whatsoever or by whomsoever piloted to steer direct to this lightship and there receive one of these trolleys. In calm weather it would be handed over by a lighter 'casting line,' such as is used in handling heavy landing or tow lines, and in rough weather it might be shot across a vessel's bow.

"This trolley would be taken on astern and the vessel would then proceed under its own steam at a safe and prescribed rate, dragging its trolley along the main cable. As long as the pull is fair astern, the ship is on its right course. There would be the assurance that he was safe, that no one could run into him if he kept to the rate given him. He would have to watch that rate most carefully so that he would not run into the fellow ahead of him, and he would have to make noise enough to insure the

ship following him from colliding with him from behind. For all the world it would be the same as navigating a cable car, minus the inherent dangers of the cable and the passing of teams and people.

"The amount of line he would have to pay out would indicate the depth of channel the pilot was in and would tell him positively where he was. The pilot, in other words, would direct from the stern instead of from the bridge.

"All incoming vessels would follow along the right cable and deliver over their trolleys to the tug or other boat charged with the mission of receiving them at the shore end of the loop. Outgoing vessels would receive the trolleys from this tug and also follow along the right of the loop, handing over their trolleys to the lightship at its outer end—a system of double-track street-cars, pure and simple.

"The trolley would be a guide, friend, and compass, a sounding line, a guaranty of safety to the holder and to all other craft. The anchorage of the cable would be such that the pull, being upward and the trolley ring being provided with rollers, it would be bound to pass through the opening left for it in the anchors.

"The cost of laying forty miles of such a cable and anchoring it at every half or quarter mile would be insignificant when compared with the cost of collisions that so often occur, the delays, the lengthened scheduled time that has to be counted upon, the cost of pilotage and towing; not to speak of the imminent dangers and the other disadvantages of our present antiquated way of getting into and out of New York and other ports."

TO TEST DIAMONDS

HOW TO TELL real from false diamonds is briefly explained by a contributor to *Neueste Erfindungen und Erfahrungen* (Vienna, May). In the first place, he says, real brilliants may be recognized by their great hardness and high refractive index, which are not found together in any imitation stone. The diamond stays brilliant because it is hard, while other stones and imitations become scratched and dulled by friction. He goes on:

"For an experienced eye it is not difficult to decide from the appearance of the facets whether a stone is genuine or not, for those of real diamonds are seldom so regular as those of fine imitations. With the latter the greatest care is taken, in grinding, to smooth and polish not only the facets, but also the whole form into such shape as to avoid differences in the reflection, refraction, and scattering of the rays.

"In the grinding and polishing of real brilliants, on the other hand, effort is made to keep the original size, as nearly as possible, and some little irregularities in the faces and angles are preferred to any diminution in weight. In the imitations the superfluity of cheap material which may be wasted without making any difference enables a perfect counterfeit to be made.

"A necessary tool for testing is the file, which is not able to injure or scratch a real diamond, while on an imitation it quickly makes its mark. Better than the file is a fragment of sapphire, because the sapphire is the next hardest stone to the diamond. Any stone that can be scratched with a sapphire is surely no diamond.

"If a small drop of water is placed on the upper face of a brilliant and touched with a pointed pencil, the drop will keep its rounded form, while the stone remains clean and dry. If the same thing is done to a glass imitation, the drop spreads out at once.

"A diamond plunged into water will be plainly visible and will glitter through the liquid, while an imitation stone is almost invisible.

"If a person looks through a diamond, as through a bit of glass, at a black dot on a sheet of white paper, one single point will be seen clearly. If several points appear, or a blur is seen, it is an imitation.

"The white sapphire, the white topaz, and rock crystal are commonly sold as diamonds, but more often imitations are made of glass.

"To recognize these glass imitations, treatment with acids is also recommended, which removes the polish on the faces, while it does not affect the diamond, ruby, sapphire, or emerald. However, an imitation made of glass yields to the hardness-test, so that a chemical test is superfluous."—*Translation made for THE LITERARY DIGEST.*

GOAT'S MILK FOR EVERYBODY

INSTEAD of having our cows tested for tuberculosis, or worrying ourselves to death for fear our dairyman, despite his solemn oaths, has not made the tests that he should have made, why not obtain our milk from an animal that could not have tuberculosis if it tried? That the milch goat is such an animal we are assured by Dr. W. Sheldon Bull, of Buffalo, in a pamphlet entitled "Money in Goats." Dr. Bull calls the goat "the only dairy animal immune to tuberculosis." He believes the virtues of goat's milk and the ease of obtaining it are too little known in this country, and he is applying himself to the task of filling this need, long existent, but apparently not yet sufficiently felt. Anybody can keep a goat, Dr. Bull tells us; and everybody ought to. He says:

"While it is true that the ideal locality for goats is one that is high and rocky and overgrown with weeds, briars, brush, and small trees, as they are by nature and preference browsing animals, in this respect being an exception to all other domestic stock, it is a fact that such a location is not essential. The milch goat will thrive and produce a plentiful supply of rich milk when tethered on grass land, in addition to stall-feeding, if comfortably housed at night and during bad weather; or even when kept constantly in a barn and supplied with all its rations there.

"This adaptability to confinement, together with its productiveness, makes the milch goat particularly valuable to the residents of cities and suburban places who desire to secure a regular supply of pure, new milk, without being dependent upon the milkman, whose 'milkman's milk' is not always of the best quality and which, under the most favorable circumstances, is received and consumed with more or less suspicion as to its freshness, its cleanliness, and its healthfulness.

"That the milch goat would supply a long-felt want to dwellers in villages and country towns where cow's milk is difficult to obtain at any time, and especially so in winter, needs no argument, as it will readily be seen that any one possessing a back yard large enough to contain a shelter in which to house a goat or two may have a constant supply of sweet, rich milk for a very trifling outlay.

"For with a couple of these hardy and productive little creatures, housed in a cheap, roughly constructed shed, and pastured on a common, the owner may enjoy greater advantages from an economic and hygienic point of view than does the proud possessor of a pampered, pedigreed cow of the most fashionable breed.

"First, because milk, the exclusive diet of many infants, children, and invalids, and a most essential item on the daily bill of fare of every member of the household, is furnished more cheaply by the goat, as the yield of milk, when the size of the goat and the amount of feed and care are considered, is proportionately much greater than that of the cow.

"Second: Because goat's milk is richer, more nutritious, and more easily digested than cow's milk. Aside from its greater degree of richness, there is no appreciable difference in appearance or taste. And, also, because the milch goat is practically immune to tuberculosis, while 'the apparently healthful and therefore unsuspected cow may be, and often is, dangerously tuberculous.'"

A good goat will yield from one to two quarts of milk daily, we are told, and costs from \$2 to \$20, altho fancy imported varieties go as high as \$50, or even \$100. Dr. Bull gives detailed

advice about selection, purchase, and care. All these are points that one will look for in vain, he says, among government agricultural reports, usually so helpful:

"It is much to be regretted that, while the experts of the United States Department of Agriculture have been for years engaged in working out many other important problems in plant and animal breeding, apparently the goat has been considered of so little value that no systematic or practical investigations have been made along scientific lines, with a view toward determining which of the foreign breeds of milch goats are best suited to our needs; nor regarding the development of native breeds of 'deep-milking' goats; nor with reference to the improvement of our common goats, by increasing the size and quality of the short-haired varieties, and thus making them more valuable for their flesh and for their skins, and as foundation stock for grade Angoras and milch goats.

"So far as attempting to overcome the ignorance and prejudice regarding the goat by any organized or systematic effort toward educating the public with reference to the economic, dietary, and sanitary value of the animal, we are far behind other civilized countries.

"Considering, however, the fact that during the five fiscal years ending June 30, 1910, goat-skins to the value of \$137,404,900 were bought by the United States from other countries, as practically none were produced in this country, is not here, alone, an 'infant industry' well worth 'investigating' and 'fostering'?"

LOOKING TOWARD A BRIGHTER FUTURE.

The goat is to be promoted from the tin cans and posters of shantytown to a future of aristocratic respectability. This is a lifelike portrait of Habbette, an imported Saanen milch goat.

BOTTLED SUN-POWER—The solar energy now going to waste in vast amounts in such parts of the world as the Sahara Desert may some day be stored and brought to habitable lands, where it can be used. So we are assured by James O. Handy, president of the Engineers' Society of Western Pennsylvania, in his retiring address recently printed in *The American Machinist* (New York). All that we need, Mr. Handy says, is "a method of converting the sun's energy in dry, tropical countries directly into a form which may be

transmitted to habitable countries where it may be used." This would appear to be a job of some magnitude, but Mr. Handy thinks some one will perform it. He says in part:

"In the tropics the heat per square kilometer will equal that produced by the complete combustion of 1,000 tons of coal. A surface of only 10,000 sq. km. receives in a year, calculating a day of only six hours, a quantity of heat corresponding to that produced by the burning of 3½ billion tons of coal, or more than three times the annual production of coal. The desert of Sahara, with its 6,000,000 sq. km. receives daily solar energy equivalent to 6,000,000,000 tons of coal.

"It is estimated that the earth produces yearly 32,000,000,000 tons of vegetable matter, which, if burned, would correspond to 18,000,000 tons of coal. We can prepare for the exhaustion of coal by studying which types of vegetation produce woody fiber most rapidly, and can use extensive methods of cultivating them for fuel and afterward convert this fuel into energy.

"There is reason for hope, however, that we may be able to do more than to improve agricultural methods of producing fuel if we take advantage of the fact that many chemical changes are produced by the action of the sun's rays, and that some of these now known, or which may be discovered, may be the basis of a method of converting the sun's energy in dry, tropical countries quite directly into a form which may be transmitted to habitable countries where it may be used."

LETTERS AND ART

A CRITICIZED MEMORIAL OF A GREAT NATIONAL EVENT.
The *Maine* disaster started one unpleasantness—its memorial seems to breed another.

FLAWS IN THE MAINE MEMORIAL

AN ART DISPUTE of more than local interest promises to develop around the national *Maine* monument unveiled in New York on Decoration Day to the accompaniment of a naval and military pageant. This memorial, which was erected by popular subscription in honor of the officers and men who went down with the battle-ship *Maine* in the waters of Havana Harbor, is the work of H. Van Buren Magonigle, architect, and Attilio Piccirilli, sculptor, and was chosen by the special committee in charge, acting in consultation with an advisory committee of prominent artists, as the most appropriate and beautiful of the forty-seven models submitted. It was approved, moreover, by the Municipal Art Commission. Yet no sooner had the hoardings which concealed the finished monument been removed than the correspondence columns of the New York press began to resound with what *The Evening Post* describes as "a chorus of unfavorable criticism from artists and art-loving laymen of this city," and a movement is afoot to make these protests effective through the cooperation of the Fine Arts Federation.

The monument, which stands at the Columbus Circle entrance to Central Park, consists of a massive shaft of Tennessee marble, forty feet tall, surmounted by a gilded bronze figure of Columbia Triumphant, and surrounded at the base with groups of symbolical statuary. Columbia, who stands erect on a chariot drawn by three fabulous horses of the sea, is cast from guns recovered from the *Maine*. The figures at the base are all of pink Tennessee marble. On two sides single figures represent the Atlantic and Pacific oceans, thereby suggesting, we are told, the national scope of the memorial. The remaining groups are thus described in the *New York Times*:

"At the foot of the shaft, and facing the Circle, is a group of sculpture—Courage awaiting the flight of Peace, while Fortitude supports the feeble. These are figures nearly twice actual life size.

"Above the group is the following inscription:

"TO THE VALIANT SEAMEN WHO PERISHED IN THE MAINE
—BY FATE UNWARNED, IN DEATH UNAFRAID."

"On the lower part of the pedestal supporting this group is a conventional boat-prow on which kneels a figure of a boy holding wreaths of olive and laurel, suggesting the new era inaugurated in Cuba through the Spanish War.

"A low fountain-basin extends toward the Circle from this side of the monument, approached by three broad steps, forming a stylobate.

"The corresponding group on the side facing the Park is post-bellum in motif—Justice, having intrusted her sword to the Genius of War to execute her mandates, receives it again at his hands, while History records its deeds.

"The inscription over this group reads as follows:

"TO THE FREEMEN WHO DIED IN THE WAR WITH SPAIN
THAT OTHERS MIGHT BE FREE."

Now for the complaints. Some say the color of the pink marble is too garish; some, that the figure at the top is dwarfed by those at the base; others, that it is badly placed. A member of the Academy who prefers to be quoted anonymously said to a representative of *The Evening Post*:

"The first consideration in designing a monument should be bulk, mass, composition—detail comes second. If the large forms are good, the detail will appear to advantage. But you must take the whole from a distance, and if you get the impression that it is well balanced, then the designer has won his most important point.

"And that is where this monument has failed. Some of the detail is quite good, but the central group appears small and on a different scale from the lower figures. The pedestal is heavy and big, and on top is a lot of little things which have no connection with such a base, demanding, by its shape and bulk, an enormous figure or group. But here there is no composition, no line, no harmony, no feeling of nature—those horses, if they are horses, are quite dreadful and ungraceful, from whatever angle you view them—all is clumsy and badly drawn. And it was an unpardonable error to place it so close to the Columbus monument, in the center of the Circle. Generally considered, I regard the monument as a distinct blemish to the city and its erection the more regrettable because it mars one of the finest of our open spaces."

Even more emphatic is the disapproval of another painter, Mr. Leon Dabo:

"This monument is of the same character and quality as the Dante monument, now in cold storage on the steamship docks in Hoboken, which the same Municipal Art Commission refused. As stone carving and modeling, it is in the same class as Ettore Ximenes's pseudo-classic monument sculpture at its best. These monuments may be seen in South American cities, but that is no reason why we should have them here in New York.

"That beautiful vista of green trees, driveways, with a rose-and-gold suggestion of houses in the distance, is spoiled, and the spoiling of that lovely spot is not excusable, since we are supposed to have a Municipal Art Commission composed of artists, architects, and art-loving, public-spirited laymen, whose business it is to prevent just such things from disfiguring our open spaces.

"What possible relationship the various groups have to one another is a mystery. The strange beasts supposed to be horses are crawling out of the hollow shaft; the stone figures around the base have no relationship with the pedestal, nor with the figures on the top. . . .

"Architecturally, constructively, the whole thing is cheap, and therefore bad. Judged in its relation to the landscape beyond, it fits about as well as an enlarged wedding-cake model would—in fact, the pink-tinted stone does suggest ice-cream, only—and unfortunately—unlike our national dessert, it will not melt in the sun. Maybe the militant suffragettes will help us there."

In justice to the members of the Art Commission who approved the design, says *The Evening Post*, it should be remembered that the small sketch submitted probably did not show the difference in scale between the lower groups and the figures on the top. "The principal change which the Fine Arts Confederation may be asked to consider," we read, "would be the substitution of another group for the gilded Columbia and her dolphin-horses, or their elimination, and the filling of their place by a simple cap to the plinth."

Gen. James Grant Wilson, chairman of the Maine Memorial fund committee, issues the following statement:

"It is right, I think, that the million and more subscribers should know that in conjunction with the committee, of which the undersigned is chairman, there was a committee of prominent artists acting in an advisory capacity.

"This committee consisted of Frederiek Dielman, then president of the National Academy of Design; John La Farge, president of the Society of American Artists and Mural Painters; Walter Cook, chairman of the New York Chapter of the American Institute of Architects, and the well-known sculptor, W. R. O'Donovan.

"Out of forty-seven models submitted, three were selected, and two received money prizes. These three were of about equal architectural merit, but the one finally selected was of obviously superior merit in the matter of its sculpture, and the committee has found no reason—now that the memorial is completed—to reverse its opinion, or to regret its choice."

A NEGLECTED ARTIST REDISCOVERED

TO BRUSH THE DUST of a century's neglect from the work of a master and restore him to his rights in public esteem was one of the achievements of the great millionaire collector who recently left us. A very interesting book, says Charles H. Caffin, might be written on the revival of interest in certain artists and periods of art long after they

seemed to have fallen into permanent neglect. As an instance, he cites the work of Jean Honoré Fragonard, which is now enjoying a vogue with the collectors after an eclipse that lasted nearly a hundred years. It was the late J. Pierpont Morgan, Mr. Caffin goes on to say, who stimulated the demand for Fragonard's pictures, these having shared the general disfavor into which the rococo period of French painting had fallen during the nineteenth century. It is fifteen years now since Mr. Morgan added five Fragonards to his collection, at a cost of \$250,000, and a few weeks ago four decorative panels by the same brush brought \$71,000 at the Kraemer sale in Paris. Fragonard was born in Grasse, Provence, in 1732, and died in 1806. Says Mr. Caffin, writing in the *New York American*:

"It is an interesting fact that while Fragonard in the days of his prosperity found the nobility eager to possess his work, they

were becoming too impoverished to be handsome buyers, so that his important patrons belonged to the class known as 'fermiers.' These were the financiers who farmed the public debt, advanced money on the land and collected the taxes, and thus became the actual land owners of the richest provinces of France.

"Did the knowledge of this help to interest J. Pierpont Morgan in Fragonard's art? At any rate, so far as Fragonard was concerned, history repeated itself. His art, which had been patronized chiefly by the banker-financiers of the eighteenth century, owed largely its revived vogue a hundred years later to the great banker-financier of America."

The five canvases purchased by Mr. Morgan, in 1898, form a decorative series, the theme being "Love and the Maiden." Mr. Caffin thus briefly describes them:

"In the first panel she is sitting in a wood at the foot of a column, weary of walking alone, while Love, hovering above her, seems to be beckoning a lover to console her. Later, as she is seated on a terrace, her lover's form appears above the balustrade. He has mounted by a ladder and she, in the surprise of the moment, waves him away with her hand. But later he pursues his suit, and coming upon the maiden with her little sister, holds out a rose to plead his cause. In another scene he has the loved one in his arms, while she reads his amorous verses. Finally, as she pauses in her singing, she crowns the kneeling lover who has inspired the song, and the artist, seated in the

A FRAGONARD PORTRAIT THAT RECENTLY BROUGHT \$60,100.

Madame de Noreval, reader to Marie Antoinette.

shadow of the foreground, is making a picture of their happiness."

Of this artist's place among the French painters we read:

"While Fragonard had not the high artistic seriousness of Watteau or, possibly, the invention of Boucher, he excelled the latter as a painter, and in this respect as well as that of color and design, was superior to all the other artists of the 'scènes galantes.' His work links up with Watteau's in maintaining the tradition of Rubens, whose Medici pictures, then in the Luxembourg and now in the Louvre, have been, together with Venetian painting, the inspiration of what is most characteristic of the Gallic spirit in French art."

OUR FUTURE DRAMATIC CENTER

CHICAGO IS OVERTAKING New York as a theatrical producing center and will some day become our dramatic metropolis, is the striking prediction advanced by A. Milo Bennett, in the *New York Dramatic Mirror*. Basing his argument on facts and figures set forth in the report of the Chicago Association of Commerce, Mr. Bennett maintains that the relative positions of New York and Chicago in matters theatrical are changing rapidly, and that "ultimately Chicago will inevitably become the theatrical-business center of the United States." Already, he says, "Chicago is being recognized as the natural focus of the demands of the country at large, and is found to reflect more accurately the artistic tastes of all sections and their consequent demands upon theatrical producers than any other point." For this reason "the number of plays produced in Chicago is constantly growing, and the time when Chicago will be the production center of the country, therefore, can confidently be predicted." To give substance to his prediction, Mr. Bennett cites the following statistics:

"There are at least five theaters in Chicago housed in buildings which represent an investment of more than \$1,000,000 each. The rental paid for one theater is \$67,500 a year, and probably the lowest rental for any theater property in the Loop District is not less than \$20,000, such rentals in general ranging from \$25,000 to \$50,000.

"The land occupied by the theaters in the business district, from Chicago Avenue to Twelfth Street, is worth approximately \$20,000,000. The buildings and furnishings represent \$17,000,000 more. Adding \$3,000,000 for the value of outlying theater properties and \$5,424,000 for the numerous picture theaters, the total investment for the entertainment of Chicagoans exceeds \$46,000,000.

"Some people think that the amusement business in Chicago is overdone, but according to recent records there are more than 100 permits pending for new theater buildings—this notwithstanding the fact that the theaters within the city limits which present either musical comedy, vaudeville, drama, burlesque, or stock shows, number 116. With the 452 picture theaters and eleven park theaters open in the summer time, there is at present a total of 579 theater buildings in Chicago.

"But Chicago's theatrical business is not measured alone by the productions of local playhouses. There are thirty-five or more companies maintaining attractions 'on the road.' Several of these have as many as ten companies under one management. Since 1903 upward of 150 companies have been organized in Chicago each year for what in theatrical parlance is known as one-night or one-week stands. Nearly as many repertoire companies are organized here each year as well as seventy-five stock companies.

"The average number of people in a repertoire company is about fourteen, including the manager, the agent, and the musical director, the same average holding for the one-night-stand troupes. The average stock company requires about fifteen actors. The larger manufacturers of moving-picture films also maintain stock companies of large size, one such concern giving employment to nearly 300 actors. All told, about 4,000 actors are employed out of Chicago in the foregoing branches of the profession.

"Chicago is the great booking center of the country in vaude-

ville lines. Very nearly all of the agencies maintaining large vaudeville circuits have their principal office in Chicago, and these circuits extend across the entire country. Some of these chains of vaudeville houses number as many as 300. In practically every vaudeville house in the country west of Pittsburg the bookings are made in Chicago.

"Some 3,372 vaudeville artists book out of Chicago touring these vaudeville circuits. When we include the 4,000 actors who leave Chicago with various other companies and more than 7,000 employed in Chicago, either as actors in the production of local plays or in the management of the city's numerous theaters, the number of professional people given employment in Chicago exceeds 16,000.

"If it were possible to estimate the total amount of money spent by the Chicago public each year for theatrical attractions, it probably would be easy to prove that more money is spent on amusements in this city than for any single commodity or merchandise or for any of the 'necessities' of life. In the down-town theaters alone a single year's receipts approximate \$6,500,000, the box-office receipts of a single playhouse being \$635,000 during 1912. The average attendance of ten of the larger theaters of the city was 350,000 for the year, while, according to authoritative figures, there are fourteen theaters in Chicago which together play to 40,000 a day."

YALE'S DENATURED "TAP DAY"

THE UNDERGRADUATE REVOLT against certain undemocratic developments in Yale's famous senior societies—Skull and Bones, Scroll and Keys, and Wolf's Head—is a matter recently made familiar to the fiction-reading public through Owen Johnson's "Stover at Yale." That this insurgency is bearing fruit is indicated by newspaper reports of the latest Tap Day, that breathless occasion when the forty-five chosen juniors are "tapped" on the shoulder to notify them of their election to the senior societies. Tap Day has been regarded as the outward and visible sign of the undesirable tendencies complained of in these societies. Thus in a protest issued by the insurgent element in the sophomore class we are informed that the undemocratic spirit finds shelter behind "the excessive secrecy" that envelops the senior societies, and that the effect of this secrecy "is greatly magnified by the extreme publicity of Tap Day." In this protest we read further:

"Tap Day is not only an unnecessary and sensational display, giving undue advertisement to the societies themselves, but also overemphasizes the distinction between those who are chosen and those who are not. Moreover, the secrecy which this publicity makes doubly evident immediately places the senior societies, peculiar institutions as they are, still more conspicuously before the undergraduate mind, resulting in a tendency to overrate the senior social system, making it an end, not a means; thus stimulating a too keen pursuit of extra-curriculum activities in order to attain to the desired end, with a corresponding depreciation in curriculum interest and attention.

"It has been asserted that secrecy is essential in upholding a proper respect for the societies; we maintain that if the societies can not command respect, with or without secrecy, purely through the esteem which people have for their members, they have not then chosen men most deserving of the societies.

"We believe that there should be a recognition of merit, not on the basis of actual accomplishments alone, but to a large degree on the basis of what men have attempted to do and on the revelation in that attempt of qualities of character and of personality. We believe that the forty-five men who have so gained the esteem and respect of their classmates and represent to that class the highest ideals of Yale should be elected without undue regard to family influence or personal interests; furthermore, that they should be judged on their characters as revealed here at Yale, rather than on any indefinite assumption of future possibilities."

This year not only was Tap Day shorn of much of its pomp and ceremony, but the elections were of a nature to win approval even from the insurgents, the men chosen being for the most part really representative of the undergraduate body. For the first time the public were excluded from the ceremony, the

faculty had business elsewhere, and the campus was left almost entirely to the two classes directly concerned. The denatured event is thus described in the *New York Times*:

"'Billy' Weiser and 'Jim' Donnelly, the veteran campus policemen, never before witnessed a Tap Day of which the ceremonies were cut by most of the sophomores, with non-society seniors gibing from their perches in overhanging branches and with freshmen kept in the background. The back-slapping and the fateful 'Go to your room!' did not resound with such terrific earnestness as of yore, and at least a quarter of the men who were tapped had worked with their books.

"The rest of the forty-five, with few exceptions, fairly represented the university in its athletics and in literary, dramatic, religious, and social activities. Few were taken in simply because they were to be heirs to millions."

These matters "are of an importance far transcending that of the usual undergraduate activity," declares the *New York Nation*, because they involve "a question of Americanism, and the democracy of our American colleges." Enlarging on this point *The Nation* goes on to say:

"The great fact is that here is one college community which has taken in hand the most serious problem of our American college and university life—the controlling of the spirit of caste which, in the East at least, tends to separate it from the spirit of the nation and its democratic institutions. It was precisely along these lines that Woodrow Wilson fought at Princeton, and it is the same evil situation at Harvard which led President Lowell to take the lead in the establishment of the freshman dormitories. The protest of the sophomores at Yale went straight to the point in that they denounced the Tap Day elections because the successful were chosen in the main for wealth, athletic success, or social position. It is precisely this state of affairs that has arisen, or has threatened to arise, whenever the undergraduate societies have been permitted to flourish unchecked and uncontrolled.

"As one looks back the wonder grows that trustees and faculties have been so blind as to what was coming. Take Harvard, for instance. The growth of the 'Gold Coast' of luxurious dormitories was gradual. It did not come overnight. But faculty and overseers did nothing. No effort was made to compete by modernizing the college dormitories, and no special campaign was made to induce the graduates to erect new ones. The attitude assumed was one of hopeless impotence. If capital would invest in Cambridge and parents would pay the high rents—why, what could the president or any one else do? It never occurred to them that they might check the whole thing by building proper dormitories themselves, and by refusing to permit students to reside in buildings whose appointments were not in keeping with the best traditions of our universities. With despotic power in their hands, trustees have not dared to use it.

"Now the responsibility for all this—it is merely another phase of the same disease they began to cauterize at Yale yesterday—can not be shirked by trustees and faculty. Their power is too evident; their shortcomings of the past too clear. The day can not be far off when enlightened public sentiment will compel these gentlemen to move, if their own consciences do not.

"The side-show, to use President Wilson's expressive phrase, must not be allowed to overshadow the circus; our undergraduate must be kept in touch with the democracy of our American life. Where that has been impaired by twentieth-century standards and the rise of great fortunes, it is no excuse to say that our colleges are but cross-sections of the nation's life. They were not created and are not maintained for that purpose; but to uphold the standards of simple democratic living, free from all snobbery and luxury, which are inseparable from scholarship and the truly intellectual life."

MUSIC AS A PEACE FACTOR

MUSIC IS "a language that requires no translation," and this quality of universal comprehensibility, says Daniel Gregory Mason, assistant professor of music in Columbia University, gives it "a strong claim on the attention of those interested in international friendship and the cessation of wars."

"If it be true," he argues, "that music is, in sober fact, the only international language, the only emotional and spiritual coinage that is honored all over the world, then it must surely be an invaluable influence toward peace," because "after all, the acts of governments are ultimately dependent on the temper of the people behind them." And until the masses in different countries are more conscious of the spiritual inheritance that they have in common than of the superficial differences that separate them there can be no secure basis for a lasting peace. In developing this mutual understanding between nations, all the arts, of course, do their share; but music's contribution, says Mr. Mason, is more far-reaching than that of any other art, unless it be literature. The plastic arts, "by nature more objective than the arts of literature and music, may be of great service in familiarizing us with the external aspects of distant countries, and thus making us feel at home there." But literature and music "exercise an even more important influence, perhaps, toward international fellowship," since "they are not obliged to go indirectly at the spirit through the body, but are privileged to express directly and poignantly the most intimate facts of mental and emotional life."

And even over literature music has one advantage—it does not have to be translated. To quote further from Mr. Mason's argument, which is published in pamphlet form by the American Association for International Conciliation:

"The work of art in words must be translated if it is to make its appeal beyond its limited audience; the work of art in tones appeals to every human being in the measure of his capacity to hear and to understand intelligently what he hears. Moreover, the habit of reading is confined to certain classes; some people who never open a book listen with ardor and a certain degree of intelligence to music. . . . Probably for every ten Americans who have gained a sense of sympathy with Germany through Goethe's or Heine's poetry there are a dozen who love Beethoven's music. Few except special students could give an intelligent account of a great literary masterpiece of an out-of-the-way country like the Norwegian Ibsen's 'Peer Gynt'; how many have delighted in the melodious orchestral suite founded upon it by Grieg!

"It would of course be absurd to claim that music can give us anything like the detailed information that literature can, or that its message is at all comparable to that of literature in concreteness and definiteness. In any such comparison music must suffer. So far as international peace depends upon the communication of facts and concrete thoughts from nation to nation, literature is doubtless its chief servant. But the present point is that it depends not only on these, but also, and perhaps even more intimately, on profound temperamental affinities and sympathies that can best be nurtured by such an art as music, with its wonderful power of illuminating the depths of our emotional life. It can not show us the other man's intellectual ideas; but if, by way of compensation for this shortcoming of vagueness, it has an incomparable power to reveal what is even deeper, his loves and hates, his hopes and fears, in a word, the temperamental soil out of which all his ideas must grow, is not that an even more vital revelation? Music thus seems to bring us into contact at a deeper level than that of the spoken word."

DANIEL GREGORY MASON.

Who emphasizes the value of music, "the only language that requires no translation," as an influence for international peace.

RELIGION AND SOCIAL SERVICE

HEALTH CERTIFICATES FOR MATRIMONY

MORAL HEALTH has not yet been required by the clergy as a prerequisite to matrimony, but physical health is being demanded as an indication of it. Dean Sumner, of Chicago, who more than a year ago began demanding health certificates in addition to marriage licenses from all couples married in his church, stated in a recent address that over fifty ministerial associations, representing 3,500 clergymen, have adopted the same rule in order to restrict marriage ceremonies performed by them to those who are fit to marry. Since this statement was made the convention of the Protestant Episcopal Diocese of Pennsylvania adopted a resolution requesting the clergy, according to a dispatch in the *New York Tribune*, "to safeguard the integrity of the race and the home by spreading educational matter before their congregations, and to insist on the presentation of a health certificate from a reputable physician to the effect that those whom they are to marry have neither an incurable nor a communicable disease." A similar plan is under consideration by the Protestant Episcopal clergy of New York State. In fact, as *The Times* remarks, "hardly a week passes that the news does not include the announcement of some minister that he will solemnize no more marriages the would-be parties to which do not present assurances from competent authority of their fitness to assume the responsibilities hitherto always, and still usually, undertaken in lightness and ignorance." "It is a notable fact," says *The Times*, "that clergymen are the leaders in proving sincere belief in the principles which have developed from the observations of the Galton school and the more definite and accurate deductions of the Mendelians." This paper continues:

"It is, of course, as showing a tendency, rather than as accomplishing results, that these announcements are important and significant. Whoever will can still get married, anywhere, regardless of the consequences to themselves and others, and the ending of this dangerous facility seems remote, but progress is really making, and the leaders of it are of a quality to vindicate the innovation from the charges formerly supposed to be a sufficient answer to its advocates.

"At any rate, not much more will be heard about the imagined and assumed extension of 'stock-farm methods' to human beings. That phrase has been as effective, and with as little reason, against the eugenicists as was the refusal to believe that men are descended from monkeys—which no Darwinian ever asserted—against the evolutionists. Well as it is that clergymen should accept and heed eugenic truths, and better still as it will be when the State acts upon them, as it must, sooner or later, best of all would be such a wide spreading of information and intelligence among the public that no compulsion of any kind would be necessary. For that the millennium will probably have to be awaited. Yet, without any laws to forbid, the unfitness of certain marriages once common has become obvious to so many that they are almost unknown."

In another issue of the same paper Mr. Edward Marshall reports an interview with the Rev. Charles K. Gilbert, executive

secretary of the Social Service Commission of the Diocese of New York, in the course of which this Protestant Episcopal clergyman says that Dean Sumner's plan is "an interesting outgrowth of the earnest thought upon this general subject which to-day is growing everywhere." But:

"There are probably almost insurmountable difficulties attending the enforcement of a State law requiring this. These difficulties constitute one of the objections most persistently offered in the several States where legislation of the sort is pending. Another obstacle, in the belief of many, is that extreme care would be essential to its administration without graft.

"Here in New York State a plan designed to accomplish similar results was embodied in the Duhamel Bill, which provided that health certificates should be required before the performance of marriage ceremonies. We made a systematized effort to learn the judgment of the clergy of this diocese upon this bill. To date, sixty-six replies have been received, representing the views of the rectors of most of the important parishes.

"To the question, 'Do you regard this as a matter for legislative regulation?' 55 answered in the affirmative, 4 in the negative, and 7 were doubtful. To the query, 'Do you regard the provisions of the Duhamel Bill as practical and desirable?' 48 said 'yes,' 6 thought them desirable but doubted their practicability, 1 objected wholly. A request for suggestions for the modification of the measure brought 60 plans, 12 expressing the belief that a broader classification of objectionable ailments should be adopted, 8 offering various plans to guard against evasion of the law, 5 urging that it be made applicable to men only. To the question, 'Have you any recommendations for dealing with the conditions upon which the Duhamel Bill bears?' 21 replied by suggesting various provisions for education of the young in matters of sex; 10 suggested the adoption by the Church or our own Cathedral of the marriage regulations in force at the Chicago Cathedral.

"Personally I feel sure that something should be done. The Dean Sumner plan provides that clergy shall exact health certificates, the Duhamel Bill provides for their requirement by the State. I believe much may be done by urging parents to exercise greater care."

This eugenic movement in the churches is uncompromisingly condemned, however, in a caustic article from the pen of the Rev. Henry Woods, of the Society of Jesus. Writing in *America*, a Catholic weekly, published in New York, he says:

"The exercise by the Catholic Church of its rights in putting matrimonial impediments is a favorite theme with Protestant ministers. They disagree on almost every point of positive doctrine, but they are always ready to unite in an attack on Roman tyranny. The *Ne Temere* agitation, apparently on the wane, showed this. Episcopalian bishops on both sides of the Atlantic, High, Low, and Broad clergy, Methodists, Presbyterians, and Baptists, all spoke the same word with equal passion. Did we not know that inconsistency is an essential quality of Protestantism, we should be surprised at seeing it engaged at the present moment in doing what a few months ago it was denouncing so vigorously in the Church, the more so as, out-Heroding Herod, ministers are attempting, on their own responsibility, what in the Catholic Church is the exclusive function of its supreme authority.

DEAN SUMNER.

Who, after serving on the Chicago Vice Commission, became a pioneer in the movement to supplement marriage licenses with health certificates.

"An Episcopalian minister in Chicago announced a few weeks ago that he had made up his mind to establish a matrimonial impediment. He did not use these very words; but in saying that he would not marry any couples who did not bring with them certificates of perfect health, he made constitutional weakness an impediment as far as he could. Other ministers took up the idea with enthusiasm—ministers, like children, are always ready for a new toy—and the other day the Episcopalian ministers of Manhattan demanded from their denomination a law embodying it.

"Evidently those ministers do not understand human liberty.

One deaf and dumb, or blind, or consumptive, does not therefore forfeit the right to marry, nor even to marry another afflicted in the same way. It is said that the children will inherit their parents' deficiencies. In the first place, this is by no means absolutely certain. In the second place, existence, tho with such defects, is better, naturally and supernaturally, than non-existence. Moreover, the idea of protecting the offspring by forbidding the marriage is hugely absurd. One can not protect the non-existent; and for the hypothetical children to become actually existing, the marriage of their parents is a condition *sine qua non*. Others urge the right of society to protect itself against such weaklings. Certainly public welfare must prevail over private right when there is a real collision and a due proportion between the two. But before a private right can be so suspended, public authority must demonstrate both the collision and the due proportion. As to the collision, we do not see how it can be maintained. Society consists in the association for the common good of human beings in all their natural limitations; and as death is the common lot of all, these limitations must include those physical defects that lead to death. As Christians we recognize that death, the natural ending of man's life on earth, is the entrance into immortality, and therefore not to be dreaded too greatly. The existence among us of the feeble and the defective gives scope to the exercise of charity, patience, and other virtues, the exercise of which makes up much of our preparation for the life to come."

Suffering and physical defects, continues this writer, have not been detrimental to intellectual welfare. "Indeed, in weakling bodies have been found the noblest intellects." And he goes on to say:

"Whether individual ministers, or even a whole sect, establish this novel impediment to matrimony will be of little moment. If the Rev. Mr. Smith will not marry persons without certificates of health, the Rev. Mr. Brown will be more reasonable. If every sectarian minister should follow Mr. Smith's example, the great Catholic Church, the mother of the weak as well as of the strong, is ready to protect the former in their natural right, to make their children, whatever the constitution of these may be, children of God and heirs of everlasting glory, to which constitutional weakness is no impediment, and very often is a very profitable means of attaining it. What should disturb every right-minded person is that the Episcopalian ministers, interfering as usual in what does not concern them, call upon the State to legislate according to their new fad. Should this ever take place it will be time to blot out from the Declaration of Independence certain familiar words about the right of every individual to life, liberty, and the pursuit of happiness."

MINISTERIAL LAZINESS

A NEW ANSWER to the question, "What is wrong with our churches?" is contributed by the Rev. Mark Allison Matthews, of Seattle, pastor of the largest Presbyterian church in America, if not in the world, and ex-Moderator of the General Assembly. "The trouble," says Dr. Matthews, "lies in the indolence of many of our pastors, and what I say applies to all denominations." That Dr.

Matthews, who is described as a gray-eyed, black-haired, clean-shaven man, six feet five inches tall, and "of Lincolnian spareness," does not belong among the drones in the churchly hive may be inferred from the fact that, beginning his ministry with a church of sixteen members, he now preaches to congregations of 2,500 and 3,000, of whom from 55 to 80 per cent. are men. In the case of his own denomination he extends the charge of laziness to include the elders as well as the ministers. His views on this subject are recorded by Mr. James B. Morrow in the *New York Sun*. Says Dr. Matthews:

"A preacher has no boss right on the spot to make him diligent about his business. He gets up in the morning when he pleases and goes to bed at night when he feels like it. No whistle reminds him of his coming tasks. Customers are not waiting to enter his store. He goes out into the street, meets a man and talks for half an hour. Bankruptcy would overtake the merchant who wasted his time in that way.

"I have four assistants. One of them was gone three hours to a funeral. I had a funeral the next day in the same neighborhood, and was back in my office again in an hour and twenty minutes. I called the assistant in and told him he would be a failure unless he made profitable use of every minute during a day's work.

"Organization also is necessary. Some preachers thought when I was elected moderator that I merely had a big mob in Seattle instead of a church, that people swarmed in and then out, just as they did with Dr. Talmage. After Dr. Talmage died nobody could find his church. Well, the Seattle congregation is not a mob, but a disciplined and cohesive body of Christian workers."

When Mr. Morrow asked what plan a mediocre preacher could follow to achieve success, it merely served to lead Dr. Matthews back to the subject of indolence:

"The word mediocrity is made to cover a good many shortcomings. It is often a handy refuge for laziness. A worker is never a mediocre man. Being a Christian, let me tell you, is a man's job. And the people in the pews like to work under intelligent, energetic, and sincere leadership.

"A minister must be very much in earnest. He must be intense and filled with zeal and conviction. And the Holy Ghost will help such a man, but the Holy Ghost can't be expected to take any more interest in a mechanical preacher than the mechanical preacher takes in himself.

"There are 40,000 elders in the Presbyterian Church. Some of them call themselves 'ruling elders.' Well, elders don't do any ruling these days.

HE ACCUSES THE MINISTRY OF LAZINESS.

"The trouble with the Church lies in the indolence of our pastors, and what I say applies to all denominations," says the Rev. Mark Allison Matthews, pastor of the largest Presbyterian church in America.

"Mostly they loaf. I believe in team work. If our elders in the United States would get together in twos we should have 20,000 teams. And if each team were to bring one person into church every week, Presbyterianism would grow at the rate of 80,000 converts a month, or 960,000 a year. In 1912 only 73,000 persons joined the Presbyterian Church. I charge the elders with the loss of nearly 900,000 new members of our denomination."

To another question, "What message would you give to the American people?" he replied: "A love of work must be taught at the fireside and at school." For—

"Young people no longer like to work. They have free schools, free books, and sometimes free doctors. They are obtaining many things without personal effort or sacrifice. We are trying schemes hatched in the convict colony of New Zealand, most of which have failed there. The Government, we think, should help us, whereas we should help the Government. We are parting from independence, initiative, and the habit of industry."

SOCIAL SERVICE VS. SPIRITUALITY

THE DANGER that confronts American Protestantism, according to Dean Shailer Mathews, President of the Federal Council of the Churches of Christ in America, is that its churches may become "mere agents of social service," a statement described by *The Episcopal Recorder* (Ref. Epis., Philadelphia) as "a warning which comes with peculiar force just now." Many people think the sole business of the Church, Dean Mathews maintains, is "to push social reform," and it is not surprising they should think so, because social workers have found out that the Church is "the greatest force by which their ideals can be put into operation." This "valuing" of the Church is grateful to those that labor in the vineyard, but they are reminded at the same time that social service can not "take the place of God." It is impossible to amuse people into conscientiousness and, we read, "piousness are not the equivalents of prayer-meetings, and Sunday-school baseball leagues have not yet developed into revivals." It is natural, however, that men should expect the Church to "stand for every good cause," forgetting in their consciousness of the social obligations of Christianity that "a church as an institution does not have the same field of responsibility as Christian individuals." The latter, Professor Mathews explains, may be organized into a variety of institutions performing various functions, and to these institutions church leaders may delegate certain duties, but not the duties of spiritual parentage.

"A Protestant church," we are told, "can not be an ethical orphan asylum; it must be a home in which souls are born into newness of life." True, the Church wants its ministers to be "alive to the needs of the hour in politics and in industrial reform" and to deliver a message from the pulpit "heartily in sympathy with our modern thinking." Yet most of all do Americans want to be assured of "God and immortality and the worth of righteousness," so that they would be defrauded "if the awakening of Protestantism were to mean simply a renaissance of ethics or a sort of bescriptured positivism." When they ask for "the bread of life" they will not be satisfied with "treatises on eugenics," which inspires *The Cumberland Presbyterian* (Nashville) to rejoice that men like Dean Mathews are not only coming to realize, but are also speaking out their conviction, that "when people go to the house of God, they do not go merely for amusement or entertainment, but because their hearts long for God, even for the living God."

Similarly *The Canadian Churchman* (Epis., Toronto) points out that in the laudable enthusiasm for social service "there is grave danger of the fundamental purpose of Christianity being overlooked," and in this connection it cites the remark of a writer sympathetic with projects for social betterment, but who does not regard them as the chief business of the Church:

"You can not save the world by going into antituberculosis societies. The needs of the age are not to be met by the mere practising of Good Samaritanism. Christ is a great recreator, not a reformer. The Church is not the Jack-of-all-reforms. The Church has a function, and the first item in it is to convict the world of sin."

That the function of the Church is being distorted through the emphasis laid upon social service is also the belief of a writer in *The Advance* (Cong., Chicago), who fears as a result "that religion may be socialized instead of Socialism being spiritualized." He dreads that a day should come when the world shall see "in Jesus nothing but a social-settlement worker" and in the Gospel merely a "program of social service." Admitting that Jesus was interested in social problems, this writer argues that they were not all his mission, and concludes:

"Humanity must not supersede religion—social settlement must not displace the Church—human comfort must not take the place of spiritual truth. Our social program must express itself in terms of the spirit—all social betterment must proceed from a spiritual life. The life is more than meat, the body more than raiment, and no man ever lived by bread alone."

If social service in the Church means giving only the flesh-pots to the people, says *The Churchman* (Prot. Epis., New York), it will but help to nourish discontent, and men of the ministry and members of congregations are warned against playing at it at a distance or making it "a substitute for religion." *The Churchman* adds that social service in the spirit of Christ and with his methods "will leaven the masses," but, "divorced from religion, which is the great power for self-control in the individual, it makes for the might of the great giant of Socialism." While *The Churchman* recognizes the need of helping the poor and oppressed, yet it cautions against spoiling or pauperizing them in settlement and in church. Moreover, there is danger for the benefactors:

"At a recent meeting of a religious press club one of the leaders in the field of journalism pointed this out. He commended the work of students in the American universities along social-service lines, but he deplored the fact that with their growing industry went a decreased attendance at the Church's worship and especially at the service of Holy Communion. This was the criticism of a man of the world and a competent observer. Social-service commissions exist in many dioceses and have made their way in face of apathy and prejudice. They can not be commended too strongly, and the Church at large must stand behind them, but the balance must be kept. The need of it is seen in any working parish. There are men and women most active in good works who seldom come to the services and are impatient when they do. They find solace in many tasks, but shirk the harder and the more needful task, the patient waiting upon God in worship, prayer, meditation, and study. Some day they find that even church work does not satisfy them, and that they lack the essential religious content. There is no oil in their lamps, and they have lost instead of gained in character."

On the other hand, that social service practically is religion is the stand taken by an ardent supporter in *The Baptist Commonwealth* (Philadelphia), who tells us that "in his teaching the Master threw the whole weight of eternity into the emphasis upon the duty of helpful service," and recalls that—

"The rich man of the parable goes to the place of torment because he allowed a beggar to suffer and remain in poverty at his gate. In the great parable of the Judgment the fitness or unfitness of men for eternal life is shown in the way they fulfil or neglect the simple humanities of life, feeding the hungry, giving drink to the thirsty, visiting the prisoner, helping the sick. To say that all this teaching is to be taken in a 'spiritual' sense is an utter misinterpretation of the Gospel record."

Another believer in the unquestioned virtue of social service is *The Christian Evangelist* (Undenominational, St. Louis), which calls it "just simple Christianity coming into its own," and adds that "it is to the Church to-day what the missionary movement was in the last great religious awakening."

SUMMER VACATION TRIPS

AMERICA'S INLAND WATERWAYS

FOR tourists who seek to escape from the heat and dust of land travel, no continent is richer than ours in attractive inland waterways. Here are the Great Lakes, the largest bodies of fresh water in the world. Here, too, are many smaller lakes and rivers in which scenic charm and historical association are commingled. No inland waterways in the world are provided with more attractive resorts or better transportation facilities. Our lake and river steamers excel any to be found in Europe.

THE GREAT LAKES

Among deep and expansive inland waters the Great Lakes stand preeminent. There are grandeur and dignity in them. To these inland seas, with their perfection of scenic, climatic, and historical association, come each year increasing thousands of tourists.

Lake Superior, with its great depth of one thousand feet, has 1,500 miles of rock-bound coast, including fantastic sandstone cliffs known as the Pictured Rocks. Huron, next in area, holds within its bosom Mackinac, that gem of islands, a State park, far famed for its ancient fort, curious natural formations, and incomparable lake views. Opening to the east of Huron is that fairyland, the Georgian Bay, with 30,000 rocky and forest-clad islands. From the Straits of Mackinac, Michigan stretches southward, her northern shores a land of Indian legend and romance. At Petoskey each year the Ojibways give the play "Hiawatha." Grand Traverse and Little Traverse Bays and Harbor Springs attract many tourists. Lake Erie is historically celebrated for Perry's naval battle and victory at Put-in-Bay, the centennial of which will be observed on July 6-12, at Erie, Pa. Ontario is the gateway to the St. Lawrence Valley.

With unsurpassed facilities for waterborne commerce, the Great Lakes support fleets of ships that represent one-third the tonnage of the entire American merchant marine, and more than double the tonnage of British shipping that is employed entirely, or in part, in the coastwise trade of the United Kingdom. Through the great locks at Sault Ste. Marie, which connect Lakes Superior and Huron, passed during the thirty-two weeks of open navigation of 1912, 72,472,607 tons of freight, or more than seven times as much

as the entire world's shipping that was sent through the Suez Canal during the entire year. Besides this enormous freight traffic, there is passenger transportation handled by steamships which compare favorably with ocean liners. Tourists are afforded a variety of trips, both long and short. The longest single trip is over the 1,091-mile waterway extending from Duluth, through the "Soo," down Lake Huron, through the St. Clair and Detroit Rivers, and across Lake Erie to Buffalo.

This thousand-mile trip is made by steamships of the Anchor Line, leaving either port at four days' intervals, from June to September. Calls are made at Erie, Cleveland, Detroit, Mackinac Island, the "Soo," Marquette, and Portage Lake. About five days are occupied by the voyage.

Buffalo and Chicago, 859 miles apart by water, are served by the passenger steamship *Northland* of the Northern Steamship Company (Great Northern Line), and also during the coming summer by the steamship *Minnesota*, of the Crosby Transportation Company. The *Northland* leaves Buffalo every Wednesday evening; the *Minnesota* every Tuesday evening. Both ships leave Chicago Saturday afternoons. The *Northland* calls at Cleveland, Detroit, Mackinac Island, Harbor Springs, and Milwaukee; the *Minnesota* only at Mackinac and Milwaukee.

Two passenger-carrying lines are operated over Lakes Superior and Huron. The Northern Navigation Company (Grand Trunk Line), by its Lake Superior division, operates ships between Sarnia, at the foot of Lake Huron, and Duluth, with calls at the "Soo," Fort William, and Port Arthur. The distance is 730 miles, the time three days. The Georgian Bay and Mackinac Division of the same line affords sailings at intervals of about two days, between Collingwood, Meaford, Owen Sound, and North Channel ports, the total sailing distance being 569 miles.

Travelers over the Canadian Pacific Railway system either east- or west-bound may avail themselves of a break in the rail journey by taking Canadian Pacific lake steamers at either Port McNicoll, on Georgian Bay, or at Port William, on Lake Superior. Five sailings are made each week, with calls at Port Arthur and the "Soo." The time for the 555 miles is about two days.

A week's cruise of 2,200 miles, from Chicago, on Lakes Michigan, Huron, and Superior, is made possible this season by the new passenger steamship *North American*, just put in commission by the Chicago, Duluth & Georgian Bay Transportation Company. On this cruise ample stops will be made at Mackinac Island, the "Soo," Port Arthur, Duluth, Houghton, Collingwood, and Owen Sound.

Through service between Chicago, Collingwood, and Parry Sound is given from Chicago by the Goodrich Transit Co. and Northern Michigan Transportation Co.

North shore ports on Lake Superior and Georgian Bay are reached by the United States & Dominion Transportation Company (the Northwestern Line), between Duluth and Port Arthur and Owen Sound and the "Soo." The Mackinac region is served by steamers of the Arnold Transit Company.

A day's trip through the heart of the 30,000

islands of Georgian Bay is made by the steamer *Waubic*, of the Northern Navigation Company, which winds in and out among the labyrinth of islands and tortuous channels found between Penetang and Parry Sound.

Overnight trips between Detroit, Cleveland, Toledo, and Buffalo are so popular that two large steamer fleets are kept busy handling this traffic.

The Detroit and Cleveland Navigation Company operates eleven passenger steamers over four divisions. Both day and night trips are afforded by its Detroit and Cleveland division between these two cities, and overnight trips between Detroit and Buffalo by another division. Day trips are also made between Cleveland, Toledo and Put-in-Bay. A fourth division of this line maintains service between Cleveland, Mackinac, and St. Ignace, calling at intermediate ports.

A vacation trip on a freight steamer is provided by the Port Huron and Duluth Steamship

ARCH ROCK, MACKINAC, WITH ITS VISTA OF GREAT LAKES WATER.

Company—from Port Huron to Duluth. This service is becoming deservedly more popular every year.

Other trips on Lake Erie may be made by the Cleveland and Buffalo Transit Company, with steamers plying in three divisions between Cleveland, Erie, and Buffalo, Cleveland, Put-in-Bay, and Toledo, and Cleveland and Port Stanley, Ontario. This line will put in commission this season the biggest of the lake passenger steamers, the *Seandee*. This ship, with a length of 500 feet and a beam of 98 feet, has sleeping accommodations for 1,500 persons, with a licensed carrying capacity of more than 5,000.

Weekly sailings from Cleveland to the "Soo," via North Channel and Georgian Bay, are made by Star Line. Still shorter excursions between Toledo, Detroit, and St. Clair River resorts are made by the White Star Line steamers, and between Detroit, Sandusky, and Lakeside by the Ashley and Dustin Put-in-Bay route. Local excursions from Chicago to Michigan City are made by steamers of the Indiana Transportation Co.

The Chicago & South Haven Steamship Company have an attractive service between Chicago and South Haven (one of Lake Michigan's most popular resorts).

The Graham and Morton Transportation Company operate the only line of large steel side-wheel steamers on Lake Michigan, performing frequent service between Chicago and Benton Harbor and St. Joseph. The Chicago, Racine & Milwaukee Line run boats all the year between the three cities shown in their corporate name.

Over the waters of Lake Ontario many attractive short trips may be made. The Richellen and Ontario Navigation System operates steamers crossing the lake from Lewiston, near the mouth of the Niagara River (connecting with Niagara Gorge Route), to Toronto; from Hamilton to Toronto; from Toronto to Charlotte, thence to Kingston, Ont. In connection with the Canadian Northern's Niagara Falls electric service, steamer service is provided between Toronto and Port Dalhousie. North shore points are reached by the Lake Ontario and Bay of Quinte Steamboat Company.

Through optional arrangements as between rail and steamship companies, all

NEW HUDSON RIVER STEAMER "WASHINGTON IRVING," WITH PASSENGER-CARRYING CAPACITY OF 6,000.

tickets reading via rail lines between Buffalo and Cleveland, or Buffalo and Detroit, will be accepted for transportation on all steamship lines without additional charge. All tickets reading via rail lines between Buffalo and Chicago, Cleveland and Chicago, Detroit and Chicago will be also accepted for transportation by steamship lines on payment of five dollars additional to the clerk on board the steamer.

OTHER INLAND LAKES

IN ADDITION to the Great Lakes the Continent is rich in other inland waters.

NEW ENGLAND LAKES

New England is dotted with attractive inland-lake resorts. The State of Maine, which furnishes so many attractions for the summer tourist, has a number of navigable lakes. The largest of these is the Moose Head Lake, on which the Coburn Steamboat Company maintains regular service in connection with Bangor & Aroostook Railroad. In this State also are the Rangeley Lakes (reached by Maine Central Railway); Winnepesaukee, New Hampshire's biggest lake; Lake Sunapee, in the same State (both on the line of the Boston and Maine); and that "crystal trinity," Lakes Memphremagog, Willoughby, and Massawippi, on the northern border of Vermont (reached by Canadian Pacific and Boston and Maine systems). Each of these lakes is provided with passenger steamers.

LAKES GEORGE AND CHAMPLAIN

Across and along the New York State border lie the historic waters of Lakes George and Champlain. The idyllic beauty of Lake George with more than three hundred islands and mountain-lined shores, and the broad expanses and mountain barriers of Lake Champlain, are famed. The shores of both lakes are dotted with excellent resorts.

A continuous water trip over these lakes, with the exception of a five-mile stretch that separates them, which is traversed by rail, is made possible by the modern steamers of the Champlain Transportation Company and the Lake George Steamboat Company. The Lake George trip of 32 miles occupies three hours; the sail on Champlain, of about 100 miles, six hours. The termini on Lake George are Lake George Station on the south

and Baldwin on the north; on Lake Champlain, there are Montcalm Landing on the south, and Plattsburg and St. Albans Bay on the north. This trip offers a delightful break in the rail journey between Albany, Saratoga, and Montreal over the Delaware and Hudson system. Through train connections are made with steamboats on either lake.

OTHER NEW YORK LAKES

Chautauqua Lake, in western New York, 1,450 feet above sea-level, is not only the center of attractive summer resorts, but the seat of the well-known Chautauqua Educational Institution. The principal gateways from which lake steamers are operated are Jamestown, on the Erie and Mayville on the Pennsylvania. The series of central New York lakes, Cayuga, Seneca, Keuka, Canandaigua, Oneida, etc., are visited by many vacationists.

The Adirondack lakes are famous with campers, canoeists, and fishermen. The "North Woods" are dotted with lakes, many being joined by connecting rivers or small streams. Among the most noteworthy are Upper Chateaugay, Saranac, Placid, the Fulton Chain, Raquette, Long, Loon, Upper Ausable, Schroon, Tupper, and Indian lakes, all reached by the New York Central or Delaware and Hudson Lines and connecting boats or stages.

CANADIAN LAKES

North of the St. Lawrence River in Canada lie the Rideau Chain of ten lakes and connecting waterways, set among forest-clad hills. An interesting sail over this waterway from Kingston, Ontario, at the efflux of the St. Lawrence, to Ottawa on the Ottawa River, is by steamer of the Rideau Lakes Navigation Company, from both Clayton, N. Y., and Kingston, Ont. Ottawa, sur-named "Ottawa the Beautiful," stands at the foot of the Rideau Canal, and at the confluence of the Rideau and Ottawa Rivers. It is to the Dominion of Canada what Washington is to the United States, and hence full of interest to tourists. The chief attractions are the scenic beauty of its surroundings and its imposing \$7,000,000 group of Government buildings situated on a lofty bluff commanding a magnificent view of the Ottawa River and Laurentian mountain-range.

In the Highlands of Ontario, a few hours' ride northward by rail from Toronto, is a land studded with beautiful lakes. Here are literally thousands of bodies of water, large and small. Most famous are Lake Simcoe; the waterway chain known as the Muskoka Lakes; the Lake of Bays; Kawartha Lakes; Temagami; the myriad waters of Algonquin National Park, and Temiskaming.

The Muskokas may be combined delightfully with a trip to or from Georgian Bay. This tour is made from Toronto to Penetang (via Grand Trunk), from Penetang to Rose Point, or Parry Sound, by day steamer Wabigoon, and thence to Maple Lake by rail. From Maple Lake a stage is taken to Port Cockburn, or to Rosseau, and a steamer of the Muskoka Navigation Company for the sail down the lakes to Muskoka Wharf, where a Grand Trunk train may be taken back to Toronto. Lake St. Joseph, of the Muskoka chain, is also directly accessible by the Canadian Northern Railway. The Muskoka Lake district and Parry Sound are reached also by the Canadian Pacific Railway.

The Algonquin National Park lake country and the Lake Nipissing and Temagami region are reached by the Grand Trunk, the latter also by Temiskaming and Northern Ontario Railway and Temagami Hotel and Steamboat Company, Ltd.

In western and northwestern Canada are Rainy Lake, Lake of the Woods, Winnipeg, and Great Slave Lake, with steamer lines for tourists who are willing to "rough it"; also Canadian Northern Steamers on Lesser Slave River, and Lesser Slave Lake connecting with a 600-mile trip by Hudson Bay Company's steamers on Peace River.

LAKES OF THE WEST AND MIDDLE WEST

In northern Illinois, Michigan, Minnesota, and Wisconsin are regions of many lakes of great popularity as summer resorts with summer home-seekers of the Central States.

In Michigan are Pine, Glen, Crystal, Portage, and White Lakes, besides many smaller ones, reached by the Pere Marquette and Grand Rapids and Indiana Railways. Wisconsin boasts of Lake Winnebago, the largest body of fresh water within the confines of any one State, Geneva, North Lake, Beaver, Mendota, Ocono-

THE MAJESTIC SNOW-CAPPED PEAK OF THE MATTERHORN, IN SWITZERLAND.

mowoc, and others reached by the St. Paul and Chicago and North Western systems. In Minnesota are approximately 10,000 lakes, including beautiful Minnetonka, whose overflow forms the falls of Minnehaha, Prairie Lake, Detroit Lake, Lake Traverse, White Bear, etc., located on the Great Northern, St. Paul, or other lines.

The lake regions of these States about half-way between the Atlantic and Pacific Oceans are accessible by rail lines from Chicago, Duluth, Minneapolis, and St. Paul, Omaha, and St. Louis. In Iowa are Clear Lake and the Spirit Lake region, also the vast recreation country of Minnesota, an attractive vacation center reached by through train service on the Rock Island system.

The Great Salt Lake is often called an inland ocean, and, with some reason, as its waters are six times as salt as that of the ocean. Skirting the lake is the San Pedro, Los Angeles, and Salt Lake Railroad, which runs south through the picturesque Utah-Nevada country, at one part for 150 miles beside a mighty, varicolored rock wall, and passing the famous rainbow cañon and a series of other grand cañons and gorges, and further on through the heart of the orange groves of Southern California to Los Angeles. Across Salt Lake runs the Lucin cut-off of the Southern Pacific system.

In the western United States is the California Gem of the Sierras, Lake Tahoe.

INVITING RIVER TRIPS

WHO has not felt the charm exercised by a river! Each has its personality, its individual traditions, its own historical story. Henry van Dyke has said that: "A river is the most human and companionable of all inanimate things. It has a life, a character, a voice of its own, and is as full of good-fellowship as a sugar-maple is of sap." America offers many attractive river trips to the summer tourist.

THE PENOBSCOT

The Penobscot, with its island-dotted mouth at Rockland and picturesque upper reaches, offers a pleasant trip, partly by ocean to Rockland, thence to the head of steamer navigation at Bangor.

Through steamer service on this river is given from Boston to Bangor with landings at Rockland, Camden, Belfast, Bucksport, Searsport, and Winterport by the turbine steamers *Belfast* and *Camden*, of the Eastern Steamship Company.

THE CONNECTICUT

The historic valley of the Connecticut between Saybrook and Hartford may be explored by the steamers *Hartford* and *Middletown*, of the Hartford and New York Transportation Company, sailing from New York and calling at the chief river landings.

HEAVY CAR TYPE FISK TIRES

HEAVY CAR TYPE FISK TIRES, Built for Greatest Service on Heavy Cars, Practically Eliminate Tire Troubles on Lighter Vehicles

HEAVY CAR TYPE FISK TIRES have in their exclusive construction strength and resistance for *Greatest Service* on heavy cars. This means for the light car a surplus approaching the practical elimination of tire troubles.

In perfecting Fisk Tires to the point of *Greatest Service* the requirements of the heavy car were taken as standard and the aim of the entire Fisk design was towards meeting the severe strains of carrying great weights. The user of the light car is a *great gainer thereby*.

In the exclusive **HEAVY CAR TYPE** Construction there are four plies of fabric used in the 3-inch sizes—more fabric than found in the same sizes of other makes. The greatest tire value obtainable today is in the **HEAVY CAR TYPE FISK EQUIPMENT** for light cars.

Fisk Pneumatic Tires are guaranteed when filled with air at the recommended pressure and attached to a rim bearing either one or both of the accompanying inspection stamps. When filled with any substitute for air, or attached to any other rims than those specified this guarantee is withdrawn.

CURRENT POETRY

WHAT material is best suited to poetic treatment? Of late years many writers of verse have become convinced that it is their duty to deal exclusively with the circumstances of the civilization in which they live, to write of subways, skyscrapers, telephones, phonographs, and other modern phenomena. Certainly there is an immediate appeal in work of this sort; the public likes to read about things with which it is familiar. But the poet who thinks of his posthumous fame—and perhaps no poet is so modest as not to have his intimations of literary immortality—will do well to consider that when the invention or discovery that now seems so tremendous becomes commonplace there is a possibility of the poetry celebrating it becoming likewise stale and uninteresting. For instance, who remembers any of the poems commemorating the first railway? To come to more recent times, thousands of poems have been written on the subject of aviation, yet only two of these (the two sonnets by Florence Earle Coates) seem to retain their hold on the attention of the public. And this is because Mrs. Coates wrote of aviation not as an isolated fact, but as a phase in human progress; a thing inseparably connected with the eternal passions of the soul. It is the humanity of a poem which keeps it fresh; the poet who describes a marvelous new cannon must be content with the praise of his own generation, but the world has never ceased to listen to him who sang of arms and the man. So the poet's safest course, it seems, is to deal with the unchanging substance of life, with love, hate, fear, and hope. Miss Sylvia Lynd writes on one of the oldest of themes in the *London Nation*, and we reprint her splendid lines below. The metaphor is excellently sustained, the song is full of lofty courage, and its thought is in no way limited by race or generation.

Hunting Song

BY SYLVIA LYND

I

The hunt is up! the hunt is up!
It sounds from hill to hill,
It pierces to the hidden place
Where we are lying still;
And one of us the quarry is,
And one of us must go,
When, through the arches of the wood,
We hear the dread horn blow.

II

A huntsman bold is Master Death,
And reckless does he ride,
And terror's hounds with bleeding fangs
Go baying at his side;
And will it be a milk-white doe,
Or little dappled fawn,
Or, will it be an antlered stag
Must face the icy dawn?

III

Or will it be a golden fox
Must leap from out his lair,
Or where the trailing shadows pass
A merry, romping hare?
The hunt is up, the horn is loud
By plain and covert side,
And one must run alone, alone,
When Death abroad does ride.

THE MOST COMFORTABLE PLACE ABOUT THE HOUSE

THE place where the morning papers can be read in peace and seclusion, the place where you find a shaded retreat during the hot hours of the day, is your own porch if you equip it with

AEROLUX
PORCH SHADES

These shades, built of prepared woods, stand all heavy adverse winds and deliver you from the sun's rays in all weather conditions and being constructed with our patented "AEROLUX" ATTACHMENT, they will not flap in any wind. They come in sizes to fit any porch or veranda.

Be particularly interested in the tables describing the shades and telling at which season they may be ordered or purchased, and how to use them.

Send us a post card, and we will send you a catalog.

THE AEROSHADE COMPANY
325 Oakland Ave., WAUKESHA, WIS.

What Does Your Car Weigh?

The expense of running an automobile is in direct proportion to its weight. As the weight goes down, the expense decreases. A light car is safe, comfortable and easy to drive. In emergency it is readily controlled or stopped.

Tire mileage, gasoline mileage and up-keep are all intimately connected with weight. The most economical engine made cannot show low cost of operation, if to move a certain number of passengers it has also to move a body and chassis of excessive weight. Excessive weight handicaps ability; cuts down hill climbing; and makes outrageous expense for tires and fuel. The remedy for heavy tire expense is a light, resilient car equipped with large tires.

Weights and tire sizes of the fact-backed Franklin

Six "38" touring or phaeton, 3328 pounds, tires, 4½ in. and 5 in.
Six "38" 7-passenger touring, 3480 pounds, tires, 5 in.

Little Six "30" touring, 2993 pounds, tires 4½ in.
Four "25" touring, 2520 pounds, tires 4 in.

These weights include full equipment, gasoline and oil, ready for the road. Compare these weights and tire sizes with other cars. Franklins, 700 to 1200 pounds lighter, are equipped with larger tires.

You may think your car is light; weigh it.

The capacity of a tire to carry its load comes practically all in the width or cross section of the tire and not in its diameter. A 4½" tire is 25 per cent. more tire than a 4" tire of the same diameter. A 34x4½" tire is 19 per cent. more tire than a 36x4" tire and costs 15 per cent. more.

10,746 Miles Average Tire Service

Franklin owners in 1912 reported an average of 10,746 miles per set of tires. Write for our "tire folder" which gives these reports in detail. Ninety-eight per cent. of Franklin owners do not carry extra tires, so sure are they of reliable tire service.

Franklin cars are built for the lowest total cost during the use of the car. They are built for superior service, a service that, combined with low operating cost, makes the total figure—**satisfaction**. The start of Franklin service and Franklin light weight is direct cooling.

Particularly notice the refined forward lines in the Franklin.

Engine and Vehicle patented July 2, 1908

Franklin Six "38," a commodious, luxurious 5-passenger car

\$3600

The Fact-Backed Franklin is also made as follows:

Franklin Six "38," 4-passenger Torpedo Phaeton	\$3600
Franklin Six "38" 7-passenger Touring	3850
Franklin Little Six "30" Touring car or 2-passenger Phaeton	2900
Franklin Four "25" Touring	2000

What is Direct Cooling?

Direct cooling is sending a continuous, vigorous stream of fresh air directly over and around the cylinders, which does away with the air-cooled water radiator, water pump, jackets, pipe and hose.

Into the Franklin flywheel is built a sirocco fan. This exhausts the air below the cylinders and causes fresh air to rush in through the front of the hood over and down through the sleeves that surround the cylinders with their radiating fins. This vigorous air current literally wipes the heat right off the cylinders. There is no water to limit the efficiency. The Franklin is the only motor engine that can be operated with consistent success in hot climates, in mountainous and sandy sections.

The Franklin direct-cooled engine operates at the most efficient temperature. It holds the world's record for gasoline economy. There is nothing in direct cooling to get out of order, nothing to oil or fill up.

Motor Cannot Stall

The Entz electric starting and lighting system used on Franklin cars, makes it impossible for the engine to stall. Take your seat in the car, throw a switch and your starter is at work. Give the motor gas and it goes to work. If you should by accident cut off the gas, the starter picks the motor right up and, as you give it gas again, away it goes.

takes all the mystery out of the subject of heating; tells what heat is good, what bad, and why—and it is free. Write us for it.

CURRENT POETRY

(Continued from page 1284)

IV

But idle 'tis to crouch in fear,
Since Death will find you out;
Then up and hold your head erect,
And pace the wood about,
And swim the stream, and leap the wall,
And race the starry mead,
Nor feel the bright teeth in your flank
Till they be there indeed.

V

For in the secret hearts of men
Are peace and joy at one,
There is a pleasant land where stalks
No darkness in the sun,
And through the arches of the wood
Do break like silver foam.
Young laughter, and the noise of flutes,
And voices singing home.

The mood portrayed in the following poem (from the June *Harper's Magazine*) is common, surely, but it has seldom been put into verse. Certainly no poet has expressed it with more epigrammatic grace.

Loss

By JESSIE B. RITTENHOUSE

Once was the need of you
A pain too great to bear,
And all my heart went calling you
In work and song and prayer.

But now dull time has brought
A sadder, stranger lot—
That I should look upon the day
And find I need you not.

From *Harper's Magazine*, too, we take this charming picture of a simple rural homestead. Miss Cook writes melodiously and sympathetically, and her pathos never degenerates into sentimentality.

The Old House

By ETHEL AUGUSTA COOK

How lost in trees a gray house stands with flowers
about the door;
A gravel path leads to the gate, a white road
sweeps before.
O brooding house, and shadowy grass, and flowers
red and sweet!
The white road sweeping straight away was made
for children's feet.

Long years ago child voices thrilled among the
swaying trees,
Long years ago a blithesome laugh was borne on
every breeze.
In every mossy hollow then a goblin treasure kept;
In every fragrant blossom then a fairy lightly slept.

All day a horde of flying feet beat down the
willing grass;
All day a bow of widened eyes watched mystic
wonders pass
In shadows gray, and circling cloud, and showers
that brightened all.
And through the hours a little bird made music
with his call.

The wall closed out a world unknown and drew a
world about.
But when the gate blew open once, wide wistful
eyes looked out.
O brooding house, and shadowy grass, and flowers
red and sweet!
The white road sweeping straight away was made
for children's feet.

The road so white lay here in shade, and there in
sunlight gleamed.
While all the way tall laughing grass its wayward
tresses streamed.
So far it ran no one could say what place was at its
end;
Wide, white, and straight, it swept away with
never any bend.

CURRENT POETRY

(Continued from page 1286)

The rushing feet have now grown slow, and go with quiet tread.
The fairies sleeping in the flowers woke long ago and fled.
The gate swings wide, the wall is down, the mystic road is clear;
But no one goes with dancing feet, or ever journeys here.
They fare, staid pilgrims, far and wide; the round world is their home.
They go on every road but this; on this they never come.
O brooding house, and shadowy grass, and flowers red and sweet!
The white road sweeping straight away was made for children's feet.

Except for the third stanza, which is rather prosaic, the following poem (from *The Westminster Gazette*) is musical and full of color. Mr. Vale has put into his lines much of the charm of the Orient—that charm which, as he says, is fast disappearing before the advance of Western civilization:

Old Japan

BY EDMUND VALE

I can hear the children clapping
Hidden in the misty morning
On the shores of Old Japan—
I can see the junk sail flapping
Red with light that's ruddier dawning
On the snows of Fuji San.

While the filmy haze is lifting
I can see through many a riftling
Shaggy fir-trees, little islands,
Like a painted Nippon fan.
Like a fan that's silver rounded,
For the bay is sandy bounded.
Stretching to the flowery highlands
Of the heart of Old Japan.

Here are things that Westerners share not,
Here business, time, and haste compare not
In the dull or in the clever
With the peace of mind of man.
Here with joy in mist and glamour,
Droning chant, and ringing clamor
Naked children play for ever
Simple games of Old Japan.

Play on then till bats are dipping,
Till the shades of night come tripping
And your souls in dark are hidden,
Sweet Kodomo and Nôan.
For a darker shade approaching
From the westward is encroaching.
Pressing onward unforbidden
Round the shores of Old Japan.

And while temple gongs are booming
By pagodas dimly looming
And by many an ancient torti
And by paper lanterns wan,
Progress comes with fingers stealing,
Without mercy, without feeling,
Waiting but to grip your story;
Then they'll close it, Old Japan.

Here is the brief expression of a great thought. We take it from *The Outlook*.

The Great Voice

BY CLINTON SCOLLARD

I who have heard solemnities of sound—
The throbbing pulse of cities, the loud roar
Of ocean on sheer ledges of gaunt rock,
The chanting of innumerable winds
Around white peaks, the plunge of cataracts,
The whelm of avalanches, and, by night,
The thunder's panic breath—have come to know
What is earth's mightiest voice—the desert's
voice—
Silence, that speaks with deafening tones of God.

PERSONAL GLIMPSES

A FEARFUL HUNT

THE PERFECT coolness and intrepidity with which Mark Twain watched his guide climb the Alps has been matched by Strickland Gillilan in a dare-devil tiger-hunt in the back pages of *Outdoor World and Recreation*. Other hunters have quailed and quivered, and shrunk and shivered, but not he. Hemmed in on every side by high-class advertising matter, his pen dripping at every jump, we see him advancing with *sang-froid* and *savoir faire*, and without a trace of *saute qui peut*. In a similar environment here we will put him through his hair-raising feat again. He begins by saying that he started for the hunt mounted on a strawberry roan elephant with docked tail, roached mane, and three white feet. Follow him:

I tried to get a dark bay elephant, to match my complexion, but the only one in the barn was suffering with a light attack of heaves, caused by his having been overdriven and fed on muddy hay by a traveling man from Peoria.

In a cane-brake full of bamboos—the cane-brake must not be confused with the cane rush, tho almost anything would be confused with a cane rush—in a bamboo thicket, I say, we went seeking the tiger. These thickets are the most unsatisfactory places in the world to hunt for tigers, because that is where tigers are usually found. This makes the sport unsafe. Tigers constitute one of the principal drawbacks to this sort of hunting. Many otherwise sportive persons would go tiger-hunting were it not for the possibility of being successful. I would advise an envious person to hunt tigers in the hay-mow, under a spare bed, or in the turnip patch, rather than in a bamboo thicket. That is no place for a nervous person to hunt tigers.

I sent one of my native beaters into the jungle to see if any tigers had been misplaced there. While an egg-beater is a machine for beating eggs, native-beaters are not machines for beating the natives. Those are known as slot-machines. If I had sent this fellow into the brush after birds' eggs, he would have been, himself, an egg-beater, according to the formation of the term.

This fellow picked up a tiger under a thorn-bush. I do not know who had carelessly dropt it there.

Perhaps I should hasten to explain to the trustful reader that picking up a tiger does not mean lifting him bodily as one would pick up a windfall apple. An adult he-tiger is not a thing to be fondled with the ungloved hands and prest passionately to one's throbbing bosom.

Picking up a tiger, as we big-game hunters use the term, means catching the trail—not the tail—of one of those convict-garbed jungle cats.

A few yards further on the beater came face to face with the game. It was twelve feet from tip to tip, which is about eight feet further than it usually is between a

Pullman porter's tips. This proves to us that the shark is smaller than the tiger.

Our certainty as to the dimensions of this tiger comes from two things: First, he got away, which proves that he was monstrously large; second, the beater took immediate and effective measures—to escape.

The tiger coughed fiercely at the native. The first cough was delivered with the native about six feet from the tiger; the second, which followed in rapid, staccato-like succession, was delivered while the native was swimming the Ganges River, two provinces away. The beater lingered only long enough after the first cough to warn the tiger against spitting in a public place, and then he went to hunt a drug-store to purchase something for the tiger's cough. He told us so, when we found him the next summer, in Tibet.

We tried to induce our elephant to charge the tiger, but he insisted on cash. He had been in the livery business long enough to know the danger of opening a charge account with a stranger of that stripe.

So, after discharging our elephant gun, our express rifle, our parcel-post revolver, and most of the hired help, we left a fresh catnip ball in the jungle to coax the animal back during the night, and returned to Singapore for rest and refreshment and a new supply of stationery.

THE NATIONAL LEAGUE PENNANT RACE

THE anxious seat is full of baseball managers just now, because the season is about one-third gone and some of the teams which were counted on strongly to get far in the lead seem to find some difficulty in striking their gait. Particularly is this so in the National League, where the St. Louis Cardinals and the Brooklyn

You could

Waterproofing—Dampproofing—Technical Points

June Mornings

In these early-summer mornings serve Puffed Wheat or Puffed Rice with berries.

These are royal dishes. The tart of the fruit forms an ideal blend with these crisp, airy wafers, these almond-flavored grains.

Or serve the grains with cream and sugar. They taste like toasted nuts. Gigantic grains—eight times normal size—with walls as thin as tissue.

Use them in candy making—for frosting cake—as a garnish for ice cream. Wherever nut-meats taste good, try these nut-like grains.

We sold in March forty million dishes of Puffed Wheat and Puffed Rice. That shows how people like them.

Puffed Wheat, 10c
Puffed Rice, 15c

Except in Extreme West

June Evenings

For suppers or luncheons or bedtime, serve Puffed Wheat or Puffed Rice in milk.

The grains float like bubbles. They are four times as porous as bread. They are dainty morsels—brown and crisp and toasted. Also whole-grain foods.

Then remember this: These grains are steam exploded. All the hundred million granules inside of each grain are literally blasted to pieces.

So the grains don't tax the stomach. Prof. Anderson's process makes cereals digestible, to an extent unknown before.

That fact helps to make Puffed Grains an ideal evening dish.

The Quaker Oats Company

Sole Makers—Chicago

The Noiselessness of the Siwelclo Is an Advantage Found in No Other Similar Fixture.

This appeals particularly to those whose sense of refinement is shocked by the noisy flushing of the old style closet. The Siwelclo was designed to prevent such embarrassment and has been welcomed whenever its noiseless feature has become known. When properly installed it cannot be heard outside of its immediate environment.

SIWELCLO Noiseless Siphon Jet CLOSET

Every sanitary feature has been perfected in the Siwelclo—deep water seal preventing the passage of sewer gas, thorough flushing, etc.

The Siwelclo is made of Trenton Pottery Co. Vitreous China, with a surface that actually repels dirt like a china plate. It is glazed at a temperature 1000 degrees higher than is possible with any other material.

The most sanitary and satisfactory materials for all bathroom, kitchen and laundry fixtures are Trenton Pottery Co. Vitreous China and Solid Porcelain. Your architect and plumber will recommend them. If you are planning a new house or remodeling, you ought to see the great variety and beauty of design such as are shown in our new free booklet *"Bathrooms of Character."* Send for a copy now.

Accredited Representatives Available Everywhere. Men without Credentials Are Impostors.

Dodgers have been playing surprisingly fast baseball, while the Pittsburgh Pirates have been lingering in the second division and the New York Giants have been barely able to keep in the first. Bozeman Bulger, of the New York *Evening World*, believes the Pirates have struck their natural gait and will soon be one of the three competitors in the pennant race. The Giants have not yet pulled themselves together just right, but Mr. Bulger has an idea that they will be one of three leading teams in the final struggle. Just now they have too many weak spots, and we read:

McGraw fully realized this when he shoved in a big stack to get Arthur Fromme. He needs to get his machine on a smooth, steady basis and do it quickly. Unless the team strikes a stride consistent with its natural strength by the middle of June the Giants will have blown the pennant.

This time last year, it will be remembered, the Giants were so far in the lead that the race already had assumed the proportions of a huge joke. Even at that, the lead was so well eaten into by September that the Cubs came within an inch of nipping them at the finish. It was the enormous lead at the jump that saved the team of 1912. The team of 1913 has no such margin to fall back on, but has fallen just the same.

The failure of a championship machine to get under way after winning two pennants is not without precedent. After the Giants had won the World's Championship in 1905 they cracked so badly the following spring that McGraw found it necessary to get rid of six men, and then the best he could do was to finish fourth. The Cubs also cracked after winning the big prize, but came back after one off year. Then the machine went to pieces completely. The Pirates, Athletics, and Tigers all had the same experience. There is a difference, however, between the New York Club of 1906 and 1913. The former failed through outliving its usefulness. The players grew old and worn out. That is not true of the present team. The Giants of to-day are young and should be at their top form. Most any manager in the league will tell you that McGraw has more natural strength on his club than has any team in the league. The problem is to bring it out and get value received.

The Phillies have gone far enough now to convince fans throughout the country that they are not at the top notch through accident. Dooin has been blest with the best pitching in the league. His men are fighters at all stages and, while they haven't the hitting strength of the Giants, they are working what they have for all it's worth. Philadelphia and Brooklyn have played consistent baseball since the race began. Indications are that Brooklyn has begun to crack, and the players around the circuit are prophesying that the Phillies will take the toboggan as soon as they hit the road after next week. There is no reason for believing that, except that Pittsburgh and New York are still regarded as stronger clubs.

Of all the clubs that have played at the Polo Grounds I have seen none that looked better than the Pirates. After a bad get-

away they appear to have struck their regular gait and ought to be up around the top within a short while. The chance is before the Giants to do the same thing, and they had better jump in while the opportunity lasts.

Mr. Bulger got a favorable impression of the Cardinals when they played in New York, but he does not believe Miller Huggins's team can cope with the Giants, the Phillies, and the Pirates. They need, he thinks, two more good pitchers and a couple of .300 hitters. To conclude:

Next to Pittsburg the Cardinals showed the best baseball of any of the visiting clubs. While Miller Huggins hasn't a team that looks good enough for a pennant winner, he has got those fellows smoking things up on the bases. The Cardinals are wonderful base runners, and will take desperate chances on the slightest provocation. With two more good pitchers and a couple of .300 hitters the St. Louis club would be dangerous.

The Cubs appear pitifully weak as compared with the wonderful machine led so many years by Frank Chance. They haven't the punch. Moreover, the Cubs do not go about their work with that smooth, concerted action that formerly made them appear so deadly against the Giants. Evers will have to start at the bottom and build up a new machine. He cannot expect to go very far on the remnants of the one left by Chance.

On paper Cincinnati has a team that ought to be a wonder. But it isn't. Joe Tinker has been unable to get anything like a machine organized. He has a good infield and a really wonderful outfield, but for some reason they don't appear to get results out of the natural strength. The acquisition of Devore, Groh, and Ames ought to put Tinker on his feet. That gives him a fast outfielder, a strong utility infielder, and a pitcher who has always won more than half his games.

George Stallings has one of those teams that seem to be organized for no other purpose than to upset the dope. The Braves are liable to lose five straight to a weak club and then turn right around and beat the life out of a champion. Stallings has hitting strength, but no pitchers. In Maranville he has one of the best shortstops in the league, and at second Bill Sweeney is just about as good as they come. These two men, however, are not a ball club. Stallings gave a very good line on his club when McGraw asked him the other day where he thought he would finish.

"That isn't worrying me," replied George. "What I am worrying about is where will we start?"

Realizing that the scorn of all Brooklyn will smite me, I've got to say it just the same: From this neck of the woods it now looks as if the race in the National League will be a triangular one and the three clubs will be New York, Pittsburg, and Philadelphia.

They Helped.—GIBBS—"Doctor Smart says it requires lots of patience to run an automobile."

DIBBS—"Well, he's got the patients."—*Boston Transcript.*

How This New Six-Tone Hearing Device Makes the Deaf Hear Perfectly

Sent On 10 Days'

Free Trial

Without Deposit

THE ACOUSTICON was the first instrument devised to successfully enable the deaf to hear; so invariably efficient has it been that there are now over one hundred thousand of them in use, not only by individuals, but in churches, theatres, and public buildings.

Heretofore the Acousticon has been fitted to the weakness of the individual ear by a personal application, after the manner that glasses are fitted to suit the requirements of the individual eye.

This most recent contribution of Science, however, will bring great relief and convenience to the hard of hearing, for the problem of fitting the ear has been solved so that it will not be necessary for those desiring an instrument of this character to make long expensive journeys to secure the most satisfactory results.

"Well! Well! I hear you perfectly now."

The One Difficulty Heretofore

Conditions of the ears vary with weather, health, voices of speakers, and environments, so that while the fitting was perfect under the old system the strength of the Acousticon could not be altered to meet changing conditions. If a person with a soft voice spoke to you at an ordinary distance you would hear perfectly, but a harsh, penetrating voice speaking at the same distance would be disagreeably loud and discordant, perhaps unintelligible.

The voices of public speakers, actors, and others vary, while the location in a church or theatre makes it desirable to be able to adjust the Acousticon instantly to secure at all times the most satisfactory results. After seven years of incessant endeavor and experiments we have at last succeeded in developing to the highest degree of efficiency

A Six-Strength Sound Regulator

which gives you the same results that you would obtain if you carried SIX COMPLETE INSTRUMENTS about with you. By the simple movement of a tiny lever from one button to another the sound is regulated to six different strengths, from the loudest to the softest.

Think what this means!

If you are carrying on a personal conversation the mildest strength will be sufficient—if you are listening to a general conversation in a room-full, however, you can instantly regulate the strength so as to hear distinctly all that is said.

If you go to a Lecture or Theatre you can quickly adjust the Acousticon to your exact requirements—The voices of actors are never the same, and if one sounds too loud and another too soft, you can instantly change the instrument to suit those voices. The same way, but perhaps more so, at the Opera; singing voices vary greatly in their power and penetration, and here again you can change to suit your pleasure and comfort.

If you are deaf you know that both ears are never alike in their degree of deafness—you also know how desirable it is to be able to use both ears. With the Sound Regulating Acousticon you can change from one ear to the other at will, regulating the instrument to the requirements of the ear you wish to use.

HOW YOU MAY TEST IT BEFORE PURCHASING

Our confidence in this new Acousticon is supreme. We invite everyone who is interested to make a thorough test of it before purchasing. We have many offices at convenient points throughout the United States and Europe—If, however, we find that you are not convenient enough to one of these to call in person and test the Acousticon, we will gladly send you particulars how you may test it at your own home before a purchase is concluded.

TO OUR CUSTOMERS

You will thoroughly appreciate, we believe, how great an improvement this Sound Regulating Acousticon is over the old instrument.

We therefore invite you to write for the particularly liberal arrangements we have decided to make with our Patrons in the exchanging of our new instrument for the one which you now have.

For Booklets, Full Particulars and Test Before Purchase, address

Vitalized Rubber in Diamond {No-clinch} Tires calls a halt on "Short Mileage"

All types of Diamond Tires are made of Vitalized Rubber—a new process discovered by our chemists which toughens pure rubber.

It will give you the greatest mileage—stand the friction of the road and the pull of the engine—adapt itself from one end of the thermometer to the other—from high speed to low. Under all these conditions you, at the wheel, are riding with mind comfort, free from possible tire worries.

Additional Diamond advantages—Perfect 3-Point Rim Contact, No-Pinch Safety Flap for inner tube protection—and, if you wish, the now famous Diamond Safety (Squeegee) Tread.

So this time buy Diamond Vitalized Rubber Tires—you can get them to fit your rims at any of the

25,000 Diamond Dealers always at your Service

From Nature's Laboratory

Nature has given us water—her one great solvent—and she has given us FLAKE GRAPHITE—her one great aid to better lubrication. The tiny, oily FLAKES cling tightly to the bearings, making a veneer-like coating of marvelous smoothness and endurance.

DIXON'S Graphite Greases

have received most remarkable endorsements from the "Speed Kings of Motorland."

DIXON'S GRAPHITE GREASE No. 877 makes better lubrication, less noise and less wear.

Send name and model of car for free booklet, "Lubricating the Motor," No. 247.

JOSEPH DIXON CRUCIBLE CO.
Manufactured in U.S.A.
Jersey City, New Jersey

BY L. ENDICOTT

Trim your hedge 4 times faster

You can do the work in one-fourth time, with the time, and get cleaner, even results, if you use either of the

UNIQUE HEDGE TRIMMERS

On well-kept, frequently trimmed hedges the Unique Hedge Trimmers cut a 13-inch swath, trim on both sides, easy to operate, save time, strength and energy.

For older growths, use the Unique Hedge Trimmer and Cutler combined.

Has an extra cutter for individual branches, up to 3-inch diameter. This tool will reduce hedge trimmer, saving time, space, grass, weeds and branches.

Either tool sent postage prepaid on receipt of \$4.00. Money back if not satisfactory after one week's trial. Return to our bank in Philadelphia.

Send for Free Illustrated Booklet.

THE SPICE OF LIFE

Going Down.—GABE—"He claims he is a descendant from a great family."

STEVE—"Yes, and he is still descending."—*Cincinnati Enquirer*.

The New Way.—"Come to our suffragette house-warming."

"Whose house are you going to burn?"—*Louisville Courier-Journal*.

Pretty Close.—FIRST STUDE—"How near were you to the right answer to the fifth question?"

SECOND STUDE—"Two seats away."—*Widow*.

Not Unusual.—KNICKER—"Congress is to hold night sessions on the tariff."

BOCKER—"Well, you are generally kept up at night with infant industries."—*New York Sun*.

Rapid Revision.—"Bloop has turned cubist."

"Rot."

"Sold his first picture for a thousand."

"Fine!"—*Cleveland Plain Dealer*.

Ladies, Read This.—"What's the trouble at your house?"

"Hunger strike for a new bonnet."

"Your wife refuses to eat?"

"No; she refuses to cook."—*Kansas City Journal*.

Not So Bad as That.—"Women are certainly trying hard to become man's equal."

"Oh, I think you wrong us. All the women I know seem ambitious to go forward rather than backward."—*Houston Post*.

A Manly Man.—"Doesn't it humiliate you to have to go through life this way?" asked the sympathetic woman as she purchased a photograph.

"Yes, mam," replied the Bearded Lady. "If it wasn't for the wife and the kids I'd throw up the job to-day."—*Cincinnati Enquirer*.

Ouch!—"Why am I gloomy?" demanded the undesirable admirer, to whom she had given the cut direct. "Isn't it enough to make one gloomy to be cut by one he loves best?"

"The idea!" exclaimed the heartless girl. "I didn't even know that you shaved yourself."—*Catholic Standard and Times*.

No Rest.—"My old barber has left the city."

"You seem very regretful."

"Yes; he had been trying to sell me a bottle of hair tonic for the past fifteen years, and so far I had succeeded in standing him off. Now I shall have to start the battle all over with a new man."—*Pittsburg Post*.

Political Economy.—"What's the wrangle about in Plunkville?"

"Some of the community want to maintain mudholes and swell their private fortunes by hauling automobiles out. Others want to improve the highways, pinch 'em for speeding and apply the proceeds to public works of all kinds."—*Kansas City Journal*.

CURRENT EVENTS

Foreign

May 22.—Mexican rebels defeat Federal troops near Sacramento, Coahuila, gaining possession of all towns between Saltillo and Monclova. A hundred Federals are reported killed.

A Rome dispatch says Italian troops under General Gambretti were severely defeated by Arabs at Sidi Garba, Tripoli, on May 18. A thousand Italians were reported missing after the battle.

May 24.—Princess Victoria Luise, daughter of the German Emperor, and Prince Ernst Augustus of Cumberland are married in Berlin.

The steamship *Nereida* is accidentally sunk by mines in the Gulf of Smyrna and more than a hundred lives are lost.

May 26.—Mrs. Emmeline Pankhurst, the suffrage leader, who was recently released from jail because of illness, is sent back to prison.

May 27.—Owing to a deadlock, the adoption of a constitution and the election of a President are deferred indefinitely by the Chinese Parliament.

Domestic

WASHINGTON

May 22.—Gen. John C. Black, of Illinois, President of the Civil Service Commission, and William Washburn, of New York, the Republican member, resign, and Charles M. Gallo-way, of South Carolina, is named for General Black's position and George R. Wales, of Vermont, for the other vacancy.

May 26.—The Senate adopts a resolution authorizing an investigation of armor-plate contracts by the Committee on Naval Affairs.

President Wilson issues a statement denouncing the activity of lobbyists in trying to thwart the Democratic tariff policy.

The Supreme Court decides that retailers may cut prices on patented articles without the permission of the patentee.

May 27.—By a five vote the Senate authorizes an inquiry into the West Virginia coal strike by the Committee on Education and Labor.

May 28.—Postmaster-General Burleson issues an order discontinuing the use of the special ten-cent registry stamp and providing no additional registry stamps be printed after the present supply is exhausted.

GENERAL

May 24.—Stephen J. Stillwell, State Senator from New York City, who was recently exonerated by the Senate, is found guilty of bribery by a jury.

Thirty-three are killed and about 200 injured when a pier at Long Beach, Cal., collapses.

May 26.—The trial of Colonel Roosevelt's libel suit against George H. Newell is begun at Marquette, Mich.

May 27.—The Federal District Court at St. Louis appoints receivers for the St. Louis & San Francisco Railroad Company, known as the 'Frisco, and ancillary receivers are appointed for the Chicago & Eastern Illinois, a subsidiary line, by the Chicago District Court. Governor McGovern, of Wisconsin, vetoes a bill ordering a referendum vote on equal suffrage in 1914. His reason is that woman-suffrage was defeated last November by a majority of 92,000.

Unanimous.—"The Lord loveth a cheerful giver," quoted the Wise Guy.

"Well, who doesn't?" retorted the Simple Mug.—*Philadelphia Record*.

Referred to Lexicographer.—TEACHER—"What is the derivation of the word lunatic?"

PUPIL—"Luna, the moon, and—er—attic, the upper story."—*Town Topics*.

SUMMER VACATION TRIPS

(Continued from page 1282)

THE HUDSON

Nature has endowed the Hudson with a variety of charm. Guarding her portal are the beetling Palisades. Further north stand the towering Highlands. Along her more northern reaches are picturesque hills and green meadows. Nowhere is monotony. Man, too, has made her valley famous. Her story is that of a great explorer, of Indian and early Dutch traditions, and of battles. The spell which rests over her waters has been the inspiration of poets and prose writers who have lived along her banks. Her many attractions draw to her each year from far and near thousands of tourists.

River transportation facilities on the Hudson are undoubtedly the best of those provided for any American river. For sixty-five years the Hudson River Day Line has been celebrated for its splendid steamers and excellent service. The newest accession to this famous fleet, the *Washington Irving*, has been just put in commission. This steamer, 416 feet long by 85 feet wide, is the largest steamboat ever constructed for river day traffic and has the distinction of having the highest passenger-carrying capacity of any vessel of any type yet afloat—6,000 people. The Day Line is operated in three divisions daily, except Sunday, with calls at the chief river landings: the *Washington Irving* and *Hendrick Hudson*, plying between New York and Albany; the *Robert Fulton*, making a daily round trip between New York and Poughkeepsie; and the *Albany*, making a round trip each week day between Kingston and New York.

The night line service on this river is also popular. The Hudson Navigation Company maintains a fleet of five modern well-appointed steamers equipped with powerful searchlights. This line has placed in commission this season a new steamer, the *Berkshire*, 340 feet long, with a beam of 30 feet and having 600 staterooms, the largest river steamer for night service in the world. This boat is equipped with exceptionally powerful searchlights, fore and aft. These steamers are operated in two divisions, the *Trojan* and *Hercules* between Troy and New York; the *Berkshire* and *C. W. Morse* between Albany and New York. A special Sunday day service in either direction between Troy and New York is maintained by this line during the summer months. Other prominent lines affording local service are the Central Hudson, the Saugerties Evening Line, and the Catskill Evening Line.

THE ST. LAWRENCE AND ITS TRIBUTARIES

With the features of many rivers combined in one, this majestic waterway yields an infinite variety of scenic attractions. The St. Lawrence bears the waters of five inland seas to the ocean, carrying them past the Thousand Islands, tumbling them down eight dashing rapids, guiding them across two broad lakes, along mountains and meadows, and finally, after 600 miles, debouching them into the Atlantic by a channel many miles wide. Romance and history cling to this valley. Here stand ancient Quebec, Tadoussac, one of America's earliest trading ports, and Montreal, Canada's commercial capital. Into the St. Lawrence flow two large tributaries, the Ottawa near Montreal, the Saguenay at Tadoussac. Of these the Saguenay is most noteworthy, a river unlike any other on the continent. Rising at Lake St. John, into which fourteen other rivers flow, the Saguenay in its outflow penetrates a mighty fiord. Its characteristically black waters, in many places 2,000 feet in depth, pass in silence between granite cliffs upon whose steep precipices are few signs of civilization. The highest of its mountain sentinels are Cape Trinity and Eternity, rising from the river perpendicularly nearly two thousand feet.

Passenger navigation on the St. Lawrence is almost entirely under control of the Richelieu and Ottawa Navigation Co., operated under the fol-

Judge for Yourself

The Melton-Rhodes Sectional Bookcases are MUCH cheaper than any similar cases, but naturally mere cheapness without quality would not interest you. Therefore we leave it entirely to you to decide whether their quality makes them worthy of a place in your home. We have good reasons for believing that they are better than any other make, but we are quite willing to let you be the judge. We will gladly ship your order with the distinct understanding that unless the cases come up to your expectation you have the privilege of returning them at our expense.

Melton-Rhodes Sectional Bookcases

are made of selected quartered oak, in golden, stained, weathered or Early English finish or of mahogany finished with and have receding doors that fit close but will not bind. They are made with the most painstaking care, water-proofed and hand-polished or waxed. They are designed on plain lines, without any tawdry "gilt" or "brass" work and have an eminently good look.

Running Water in Your Country Home

Install a Niagara Hydraulic Ram in your country home and you will have running water every morning, at a moderate cost, and it does not need any fuel or electricity.

Niagara Hydraulic Ram

Install and water pressure from any source—spring or flowing stream. Never needs attention. Can't get out of order. Perfect in every way. Write for details. **NIAGARA HYDRAULIC ENGINE CO.** P. O. Box 1001, Chester, Pa.

The Baldwin Camp Lamp

Gives white, penetrating light. Lamp 3 1/2 inches high, weighs (ready for use) 5 ounces. Burns acetylene gas. Can be fastened to cup or held, carried in hand or stood upon table.

Will not blow out—absolutely safe. No oil or grease. The Baldwin Camp Lamp is a pleasure and safety to camping, boating, sporting, fishing, hunting and mountaineering. Gives excellent light and good reporting of the thermometer at night. For sale by leading Hardware and Sporting Goods Dealers—send prepaid, on receipt of price \$2.00, highly polished nickel plated handles \$2.00. Larger lamp in catalogue. Send for free illustrated catalogue and descriptive booklet, "Knoke and How to Use Them." Give name and address of your dealer.

JOHN SIMMONS CO.
18 Franklin St., N.Y. City
100 N. 10th St., Montreal
100 N. 10th St., Montreal

lowing main divisions: Toronto to Prescott; Prescott to Montreal by special "rapids" steamer; Montreal to Quebec; Quebec to Tadoussac; thence up the Saguenay to Chicoutimi. Steamers of each division connect with those of the other, thus enabling the tourist to make the through trip from Toronto to the head of the Saguenay, 361 miles, in a little more than two days. Steamers to or from Toronto call at Charlotte, N. Y., and all chief river ports. The American Line division is operated by steamer *Rochester* between Toronto and Ogdensburg, N. Y. Local service in the Thousand Islands region is given by the Clayton and Alexandria Bay Route, also by steamers between Kingston, Ont., and Cape Vincent, N. Y.

Regular steamship service between Montreal and St. John's, N. F., is being operated by Black Diamond Line, sailings weekly, with calls at Sydney and Charlottetown eastbound and at Sydney westbound. At St. John's, steamers connect with Red Cross Line for New York.

The chief resorts on this river are the Thousand Islands, reached by R. & O. steamers, New York Central Lines to Clayton, and Grand Trunk across the Canadian border; Murray Bay, which lies between Quebec and Tadoussac, and Tadoussac at the mouth of the Saguenay. Montreal and Quebec are full of interesting places and draw many visitors.

The Ottawa River Navigation Company in connection with the Grand Trunk Railway provides a charming water trip between Caillan and Lachine, thence Grand Trunk to Montreal.

NIAGARA RIVER

The Niagara has the distinction of being one of the shortest of rivers with most spectacular scenic attractions. With but little more than two score miles of length, she pours her waters received from the four Great Lakes over one of the grandest cataraacts in the world, and then sends them leaping through a rocky gorge in one of the wildest rapids on the continent. It is little wonder that the Niagara draws nearly a million tourists each year.

The Falls and Rapids may be viewed from many excellent vantage-points, including both shores of the river, Goat Island, the Cave of the Winds, the decks of the little steamers below the Falls, and from electric cars traversing both bottom and top of the Gorge. From Canada the Falls are reached by Canadian Northern electric lines, the Michigan Central, the Grand Trunk, and the Hamilton & Ontario Steamers. From the United States, directly or with connection by the trunk lines. Stopover privileges are allowed by all roads on through tickets.

JAMES RIVER

A trip up the James River from Norfolk and Newport News, Va., to Richmond is one which carries the imagination back to the early history and traditions of the South. We are here in the land of Captain John Smith and Pocahontas; we pass the site of Jamestown and those famous manors, the two Brandons, Berkeley, Shirley, and Westover.

The trip may be made by daylight (a full day's sail), on steamers of the Virginia Navigation Company, with connections by Old Dominion Line steamers from New York or Chesapeake Bay and Washington steamers.

THE MISSISSIPPI RIVER AND TRIBUTARIES

Of the "Father of Waters" Mark Twain has said: "We move up the river—always through enchanting scenery, there being no other kind on the Upper Mississippi. The water is a beautiful olive-green. The majestic bluffs that overlook the river, along through this region, charm one with the grace and variety of their forms and the soft beauty of their adornment. The steep, verdant slope, whose base is at the water's edge, is topped by a lofty rampart of broken turreted rocks, which are exquisitely rich and mellow in color—mainly dark browns and dull greens, but splashed with other tints. And then you have the shining river, winding here and there and yonder, its sweep interrupted at intervals by clusters of wooded islands threaded by silver channels; and you have glimpses of

"Standard"

GUARANTEED PLUMBING FIXTURES

If you are going to build a New Home or remodel the old one—send for a copy of "Modern Bathrooms"—100 pages—illustrated in color.

NO room in the house is so important as the bathroom and too great care cannot be given to the selection of fixtures to make it sanitary and beautiful. That you may be able to select for yourself the equipment best suited to your home and your means, we have published "Modern Bathrooms," an elaborately illustrated book, showing many attractive model interiors and giving floor plans and costs of each fixture in detail. Modern kitchen and laundry interiors are featured—decorative ideas explained and accessories suggested. It shows the artistic values of "Standard" Guaranteed Fixtures—and faithfully demonstrates their sanitary excellence and the economy of their use.

A study of "Modern Bathrooms"—the most complete and authoritative work on this important subject, will enable you to plan your own bathroom, kitchen and laundry to your complete satisfaction. *Send free—on receipt of 6c postage.*

distant villages, asleep upon capes; and of stealthy rafts slipping along in the shade of the forest walls; and of white steamers vanishing around remote points. And it is all as tranquil and reposeful as dream-land."

A series of attractive trips on the Upper Mississippi are offered by steamers of the Streckfus Steamboat Line from June to September, inclusive. These trips include cruises between St. Louis and St. Paul; St. Paul, Winona, or Dubuque; St. Paul, Davenport, Rock Island, and Moline. Special tours to New Orleans are also conducted by this line. Passenger service on the Mississippi and Ohio Rivers is afforded also by Lee Line, between Cincinnati, St. Louis, Cairo, Memphis, and Vicksburg. All points on the Ohio between Louisville and Evansville are served by Louisville and Evansville Transportation Company, and between Evansville, Bowling Green, and Mammoth Cave by Evansville and Bowling Green Packet Company. On the Tennessee, Ohio, and Mississippi Rivers trips may be made by St. Louis and Tennessee Packet Company.

COLUMBIA RIVER

The Columbia, next to the Yukon, the largest Western river, has 754 navigable miles, while its chief tributaries, the Willamette, Snake, and Clark's Fork, furnish several hundred more. No other river has grander scenery, the stream flowing through cañons, some of which are thousands of feet deep. Pacific coast steamships ascend the Columbia as far as the mouth of the Willamette River, thence go twelve miles up the latter river to Portland.

The Regulator Line of steamers operates between Portland and the Dalles. Passenger service between Portland and Astoria at the Columbia's mouth is given by the Vancouver Transportation Company. Combination rail and steamer trips are offered by the lines of the Oregon-Washington Railroad and Navigation Company.

THE YUKON

The mighty Yukon, rising in Summit Lake, only twenty miles from Skagway, on the Pacific, flows for 2,044 miles north and west to Bering Sea, through cañons and plains, crossing and recrossing the Arctic Circle, and affords an Alaskan water trip full of unusual experiences. A writer thus describes the Yukon scenery:

"The river is tortuous and rapid, its banks generally green with luxuriant vegetation and the meadows gay with an endless variety of flowers; one species known as the fireweed spreading a flamelike color over patches of hundreds of acres of sloping country. Again the river leaves the meadow lands and pours its flood against the solid masonry of earth on whose seared and broken face is written for the geologists the history of time."

More than 2,000 miles of this great river are navigable to stern-wheel steamers. Passenger steamers are operated during the summer months from White Horse to Dawson, Fort Yukon, and St. Michael, at the Yukon's mouth.

Tourists to the Yukon take coastwise steamships (described elsewhere) from British Columbia or United States ports to Skagway, north of Sitka (about 1,000 miles), and thence go by the White Pass & Yukon Railway to White Horse. Here a river steamer of the same system is boarded for the 460-mile journey to Dawson, the time, 18 hours. New steamer of the same line may be taken here down to Fairbanks (time, 4 days). From Dawson down the river steamers of the Northern Navigation Company may be also boarded for St. Michael. Connections are more or less uncertain, however, and the lower reaches of the Yukon are somewhat monotonous. At St. Michael an ocean steamer calling at Nome is taken back to Seattle, a voyage of 2,500 miles; the time, 8 days. This entire trip covers 6,200 miles, occupies about 40 days, and costs \$240.00. A trip through a chain of mountain-girt lakes to Atlin, revealing scenery which rivals, if not excels Switzerland for beauty and grandeur may be taken by leaving the White Pass and Yukon Line at Caribou, 68 miles north of Skagway. The tourist stops overnight here, departing next morning by steamer through the lakes to Atlin; time, about 12 hours. Delightful excursions may be taken from this place, including trips on another steamer up Atlin Lake to the great Lewlyn Glacier.

People Judge Your Auto
by Its Appearance

LIQUID VENEER

will make and keep its fine finish like new; give it that right-from-the-factory appearance that every one notices and admires.

Easy to use—just mix with a cheese cloth with it.

Economical—a five bottle goes a long way; reasonable use will save the cost of at least one refitting.

Get it at your Auto Supply, Grocery, Drug or Department Store—guaranteed to satisfy or money refunded.

ATTRACTIVE COASTWISE TRIPS

OF the entire American merchant marine, representing 7,714,183 tons, coastwise fleets on the two oceans alone represent 6,782,082 tons, or five times more tonnage than that of Great Britain's coastwise trade and more than Germany's entire merchant marine engaged in both foreign and coastwise trade.

For those who have not the opportunity for a transoceanic voyage there are many little journeys, varying in time from a few hours to several days, which will give the traveler a taste of the sea. Many of these trips combine rivers, sounds, and bays with the broad expanse of the ocean. Next year New England coastwise trips will be materially shortened by completion of the Cape Cod canal.

Winter is the most favorable season for visiting Panama, but so great is the interest in the Canal that many visitors will be journeying to the Isthmus during the summer months. Entire fleets of ships are now building for coastwise and transoceanic routes via Panama Canal.

ATLANTIC COASTWISE

On the Atlantic the most attractive coastwise trips radiate from Boston and New York. Special summer cruises from New York to Quebec with stops for sightseeing at Halifax, Hawkesbury, Gaspé, and Tadoussac on the St. Lawrence are made by the Quebec S.S. Company from New York. Fifteen separate lines are operated by the Eastern Steamship Corporation. These include the Metropolitan Steamship Line, with fast steamers making all water trips during the summer season between New York and Boston; the Maine Steamship Line between New York and Portland; the Kennebec Line between Boston and points on the Kennebec River; the Boston & Portland Line between Boston and Portland; the Bangor Line between Boston, Rockland, Penobscot River landings and Bangor; the International Lines, affording direct service between Boston and St. John, N. B.; also a line between these cities with calls at Portland, Lubec, and Eastport; the Boston and Yarmouth Line between these cities, and local lines along the New England coast and estuaries, including Bath and Boothbay; Mt. Desert & Blue Hill Lines between Rockland, Mt. Desert, and other neighboring points, and this season the Frontier Line between Eastport and St. Croix River points. From Boston both Halifax and Charlottetown may be reached by Plant Line steamers.

Between Boston, Savannah, Providence, Philadelphia, Baltimore, Norfolk, and Newport News steam the ships of the Merchants' and Miners' Line. Between Boston, New York, and Savannah an ocean trip may be taken by Savannah Line steamers. Another extensive coastwise system is that of the New England Navigation Company, operating the Fall River Line between New York, Newport, and Fall River (from the last city to Boston by rail connection); and lines between New York and New London, New York and New Haven, New York and Bridgeport, Providence and Block Island, New York and New Bedford (connecting with New Bedford, Martha's Vineyard, and Nantucket Steamboat Company), New York and Providence, and New London and Block Island. A popular water route between Norfolk, Old Point Comfort, and New York is provided by the Old Dominion Line steamers. One of the longest coastwise trips is that between New Orleans and New York by Southern Pacific steamers. Other Southern coastwise trips are afforded by Clyde Line, Mallory Line, N. Y. & Cuba Mail S.S. Co., and New York & Porto Rico S.S. Co. Tourists to Nova Scotia may sail direct from New York to Halifax and St. John's, N. F., by Red Cross Line ships. This line maintains also a coast line for Newfoundland ports and Battle Harbor, Labrador. To or from Newfoundland steamer service between North Sydney and Port au Basques is afforded by the Reid Newfoundland steamers. This line also affords fortnightly service to Labrador.

In Chesapeake Bay and connecting waterways trips may be taken between Norfolk and Washington by the Norfolk and Washington Steamship Company; between Baltimore and Norfolk by the Baltimore Steam Packet Company; and between Baltimore and Philadelphia by the Ericsson Line.

Tourists desiring to visit the Panama Canal during the summer months may journey thither by the Panama Steamship (Government) Line from New York; the United Fruit Company's ships from both New York and New Orleans to Colon; or the Royal Mail Steam Packet and Atlas Line (Hamburg-American), both from New York. The last-named line offers a series of summer cruises to Panama with visits to Cuba, Jamaica, and South and Central American ports.

Do You Know that Heinz Peanut Butter is Good for Children?

Children like it because it tastes so good.
And Wise Parents encourage them to eat it.
Food Scientists will tell you that

Heinz Peanut Butter

peculiarly supplies the solid nutriment that makes thin legs grow plump—that builds firm flesh—gives rosy color. Use it, not as an occasional treat, but as an every day diet. Everyone likes it. Selected fresh peanuts ground and prepared with the care that is given all the famous

PACIFIC COASTWISE

On the Pacific coastwise, trips may be taken as far north as Nome, Alaska, and southward to the Isthmus of Panama. Cruises northward to and along Alaska treat the tourist to the most wonderful coastal scenery to be seen anywhere along the edges of the continent. The famous cruise along the Inside Passage of Alaska reveals a labyrinth of islands, huge glaciers, fjords, and towering snow-capped mountains. In addition to thousands of miles of nature wonders there are in Alaska, to interest tourists, the totem-pole Indian villages. All transcontinental rail lines sell tickets over the chief coastwise steamship lines from San Pedro (the harbor of Los Angeles), San Francisco, Seattle, Vancouver, or Prince Rupert.

The Pacific Coast Steamship Company operates fleets between San Francisco, Victoria, Seattle, Vancouver, and Nome; between San Francisco, Seattle, Vancouver, and Skagway via the Inside Passage, at Skagway connecting with the White Pass and Yukon route; southward between San Francisco, San Pedro, and Mazatlan, Mexico. Special summer cruises accommodate the tourist traffic. The Alaska Steamship Company's steamers operate over the Southwestern Route between Seattle, Skagway, and intermediate ports; the Southwestern Route between Seattle, Cordova, and Seward (connecting at Cordova with the Copper River Railroad), and at Seward with the Alaska Northern Railway; also the Nome-St. Michael route for those ports with connections with Yukon and tributary river steamers. The Humboldt Steamship Co. offers sailings every five days between Seattle and Skagway. From Vancouver and Victoria other routes are covered by Canadian Pacific steamers to northern Alaska points.

North Pacific coast service is afforded also by the Grand Trunk Pacific S.S. Company from Seattle via Victoria and Vancouver to Prince Rupert, with connecting lines from Prince Rupert to Portland Canal and Queen Charlotte Island points. In conjunction with Yukon and connecting river steamers the Northern Navigation Company operates steamers between San Francisco, Seattle, Nome, and St. Michael. Tacoma, Seattle, and Everett are reached by the Island Navigation Company's fleet. Portland, San Francisco, and San Diego by the North Pacific S.S. Company; Portland, Astoria, San Francisco, and San Pedro by the San Francisco and Portland S.S. Company. The turbine steamers *Yap* and *Harford* make trips between San Francisco, San Pedro, and San Diego. Between San Francisco and San Pedro also ply ships of the Independent S.S. Company.

Tourists from the Pacific coast for the Isthmus of Panama are afforded service by Pacific Mail S.S. Company's steamers from San Francisco.

EASTERN MOUNTAIN RESORTS

MOUNTAINS are beloved by all who are receptive to natural attractions. They are citadels which hold the records of past ages. Monotony to them is unknown. As Ruskin has said: "Mountains are the beginning and end of all natural scenery."

THE WHITE MOUNTAINS

The White Mountains in New England for many years have been the mecca of tourists. With scenery of rare beauty, easy accessibility, and excellent hotel accommodations their popularity continues to increase. These mountains have the distinction of including the highest peak east of the Rockies and north of North Carolina—Mount Washington, whose altitude is 6,283 feet.

Chief among the many White Mountain resorts are North Conway, Plymouth, Fabyans, Bretton Woods, Crawford's Notch, Franconia, North Macdouglass, Bethlehem, White River Junction, and Wells River. The railway systems reaching the White Mountains include the Boston and Maine, Maine Central, Canadian Pacific and Grand Trunk.

THE GREEN MOUNTAINS

This Vermont range, while less rugged than the White Mountains, is noted for the loveliness of its scenery and the long-standing popularity of its resorts, including Manchester, the Dorsels, Pawlar, Salisbury, and Shelburne.

Through routes to the White Mountains are the Portland, Central Vermont, and American Maine Railroads, and the Lake Umbagog Ferry.

DUTCH BULBS

From
Now
Until
July 1st
—Not
Later

Hyacinths, Tulips, Narcissi, Crocuses, give, for a small outlay of time and money, an abundance of flowers in the house from December until June, and in the garden, from earliest spring until the middle of May. Bulbs are grown almost exclusively in Holland, in enormous quantities, and sold at very low prices. Usually they cost double before reaching you.

By ordering from us now, instead of waiting until Fall, you make a large saving, get a superior quality of bulbs not usually to be obtained at any price in this country, and have a much larger lot of varieties to select from.

Our orders are selected and packed in Holland, and are shipped to our customers immediately upon their arrival in the best possible condition.

If you wish to take advantage of our very low prices, we must have your order not later than July 1st, as we import bulbs to order only. They need not be paid for until after delivery, not taken if not satisfactory. (References requested from new customers.) Our import price list, the most comprehensive catalogue of bulbs published, may be had for the asking.

A FEW PRICES	Per 100	Per 500
Large Mixed Hyacinths	\$1.20	\$4.75
Large Mixed Tulips	.75	3.25
Narcissi Double	.75	3.25
Small Mixed	1.00	4.75
Large Mixed Crocuses	2.25	12.50
Small Mixed Crocuses	1.50	7.50
Large Mixed Mixed	.50	1.75

Cool, Easy Ironing

Now is the time that you will appreciate the great amount of labor that the Simplex Ironer can save you. Think of doing 4 hours' ironing in one hour without a red hot stove to scorch you. No carrying heavy flat irons. No aches or tired feeling. It makes ironing so easy.

Simplex Ironer

"The Practical Household Machine"

Prevents a household fire. Insures longer life to your clothes. Irons 40 lbs. of your ironing can be done in 1 hour. Cost only 1 cent per hour to heat by gas or electricity. Also heated by electricity. Simplex Ironer.

30 Days' Free Trial Offer

Let the Simplex Ironer be your home for 30 days. Try it. You will never again be without it. Free booklet "Ironing Hints" and catalog on request.

AMERICAN IRONING MACHINE CO.
504-168 N. Michigan Blvd. Chicago, Ill.

THE ADIRONDACKS

The North Woods present a vast region of mountain and lake with balsam-laden air far famed for health-giving qualities. These mountains are within easy reach of New York, Chicago, Toronto, or Montreal.

From the south and east ingress to the Adirondacks is by the Delaware and Hudson main line and the Adirondack and Chateaugay branches; from the west and north by the Adirondack and New York & Ottawa Divisions and connections of the New York Central Lines. From these lines, stages, motor-cars or boats may be taken into the heart of the mountains.

BERKSHIRE HILLS

The Berkshire region is one that for "the gentle loveliness of a hill-country, as contrasted with mountain country, is unsurpassed in the United States." Through these green hills flow the Housatonic and Housatonic Rivers. Besides these great mountain streams are many lakes.

Lenox, Great Barrington, and Stockbridge are among the notable summering places. Train service to the Berkshire region is afforded from New York or Boston by the New Haven system and New York Central Lines.

THE CATSKILLS

By reason of their short distance from New York City and the low fares, the Catskills are a popular resort for thousands of vacationists each summer.

The main gateways to the mountains are Kingston and Catskill. Both points are reached by Hudson River steamers and by Hudson River and West Shore Divisions of the New York Central Lines. At Kingston connection is made with the Ulster & Delaware line, entering to the western slope of the mountains; at Catskill, with the Catskill Mountain Railway to Cairo in the foothills and Tannersville on the mountain top via the Old Elevating Railway and Catskill and Tannersville Railway.

ALLEGHANIES AND BLUE RIDGE REGION

The Southern Appalachian Mountains, with individual ranges known by various names, offer strong inducements to those who desire rest and recreation in the environment of fine scenery. Summits of these mountains have less sharply defined peaks than those of the White Mountains or Adirondacks. Beautiful valleys with streams and rivers are frequent, and much of the country is of pristine wildness.

Among these southerly ranges of the Appalachian system are the Poconos of Pennsylvania. Adjacent to them are the Delaware Water Gap (on the Lackawanna Railroad) and Mauch Chunk (reached by Lehigh Valley and Central Railroad of New Jersey lines).

Southward lie in parallel ridges the Alleghenies and Blue Ridge. In this region are the Pen Arg group of resorts, Doubting Gap, Mount Gretna, Blue Ridge Summit, and Bedford Springs. Here, too, are the Shenandoah and Cumberland Valleys, far famed for their natural beauty. This region contains several natural wonders including the Luray Caverns and Natural Bridge.

Following the Alleghenies southward we find a region of even greater picturesqueness. Here are Virginia Hot Springs, 2,500 feet above sea level, White Sulphur Springs, and other notable resorts. These mountains are reached over direct or connecting lines of the Pennsylvania, Chesapeake & Ohio, Norfolk and Western, Western Maryland, Cumberland Valley, and Baltimore and Ohio Systems.

Western North Carolina, often termed "The Land of the Sky," is a region of high altitudes, with lofty plateaus and mountain peaks, topped by Mt. Mitchell, rising to 5,712 feet, the highest point east of the Rockies. This territory, with its mountain streams, waterfalls, and lakes, including the beautiful Toxaway and Sapphire Lakes, offers the vacationist all varieties of outdoor sports, including riding, boating, golfing, motorboating, and mountain climbing.

The principal resorts include Asheville, Hendersonville, Tryon, Waynesville, Brevard, and Lake Toxaway, all of which are reached by through train service of the Southern Railway.

THE AMERICAN ROCKIES

PROBABLY no great mountain-chain is more accessible to the tourist than the American Rockies. Rail lines have been pushed into valleys and cañons and up to the top of some of the highest peaks. Only a brief outline can be given here of a few of the vantage-points from which this mountain scenery may be viewed. Many attractive trips originate from Denver, reached from eastern points by the Santa Fé, Rock Island, Union Pacific, and Burlington systems. Another starting-point for mountain trips is Colorado Springs reached by through service over the Rock Island Lines, Chicago & Northwestern. A few hours' ride from Denver over the famous Georgetown Loop brings the traveler to the Gray's Peak Route, the rails of which ascend to the summit of Mt. McClellan, nearly three miles above sea-level, or to the aerial tramway which lifts visitors 3,300 feet to Sunrise Park. Another railroad ride above the clouds may be taken by Manitou & Pike's Peak cog-wheel line, supplementing the Colorado Midland and Denver & Rio Grande Railroad in the 14,000 feet climb from Manitou to the cap of Pike's Peak. Many other points in the Rockies may be visited by Denver & Rio Grande-Western Pacific, Denver, Northwestern and Pacific to Dixie Lake and Corona, Union Pacific, Santa Fé, Colorado and Southern. In Arizona is that "sublimest of gorges, Titan of Chasms," the Grand Cañon, reached by the Santa Fé route to Williams, and thence northward by branch to the cañon's brink.

A writer thus describes the Grand Cañon: "The wonders of the Grand Cañon can not be adequately represented in symbols of speech nor by speech itself. The resources of the graphic art are taxed beyond their powers in attempting to portray its features. Language and illustration combined must fail. The elements that unite to make the Grand Cañon the most sublime spectacle in nature are multifarious and exceedingly diverse. Besides the elements of form, there are elements of color, for here the colors of the heavens are rivaled by the colors of the rocks. The rainbow is not more replete with hues."

"But form and color do not exhaust all the divine qualities of the Grand Cañon. It is the land of music. The river thunders in perpetual roar, swelling in floods of music when the storm gods play upon the rocks, and fading away in soft and low murmurs when the infinite blue of heaven is unveiled."

THE ROCKIES IN CANADA

IN Canada the Rockies tower to their most gigantic proportions. Tourists through this sublime scenery should linger as long as possible among the boldest and most awe-inspiring of this mountain scenery. Every accommodation desired by tourists seems to have been anticipated and provided by the Canadian Pacific Railway Co., by whose transcontinental system this favored place is served. Tourists are thus delighted at the anomalous conditions that while they are apparently roughing it in the wilds they are really living in highly civilized luxury.

In this region among the most attractive resorts and natural wonders are Banff, Bow Valley, Yoho Valley, and The Valley of

WESTERN MOUNTAINS AND NATIONAL PARKS

THE Western United States and the Dominion of Canada are both blest with a wealth of sublime scenery. The Government in both is wisely reserving large tracts of the most scenic and striking portions as national parks to be enjoyed by the people in perpetuity.

GLACIER NATIONAL PARK

The latest and one of the largest of these reservations is the new Glacier National Park in the northwestern part of Montana, on the border of British Columbia.

From this triple "divide" of the Rockies mountain torrents flow in three directions—to the Pacific Ocean, Hudson Bay, and the Gulf of Mexico. In extent this park is greater than the State of Rhode Island. It has sixty living glaciers, 250 crystalline lakes which are the delight of fishermen; its sky line is a series of mountain peaks. When first opened (in 1910), it was visited by more than 7,000 persons, a record which far surpasses that of other National parks; and, judging from early indications, the Government at Washington will have to report this as another record-breaking year. An element of legend and romance lends itself to this park; adjoining it is the famous Reservation of the Black-foot Indians. These Indians number 6,000 and are all protégés of the United States Government. So here, if you choose, you can be brought into close contact with the Indians and can note their habits, customs, and modes of living. It is said that there is more Indian legend connected with this park than with any other 1,400 square miles on the face of the globe. To the lover of scenic and stupendous beauty, Glacier National Park is a paradise. It can be reached by the Great Northern Railway, which is practically the park's southern boundary, with stations at both gateways. Glacier Park Station is on the east side and Belton on the west side of this "great divide." Besides hotel accommodations, there are chalets of the Swiss variety which may be rented.

CALIFORNIA'S NATIONAL PARKS

California has three national parks—the General Grant National Park, of 2,536 acres; the Sequoia National Park, of 61,597 acres; and the Yosemite National Park, of 719,622 acres.

Of these the Yosemite is by far the most interesting. A wonderful vastness seems the crowning characteristic of this creation of nature nestled far up on the side of the sky-scraping, snow-capped Sierras. Altho the floor of this tremendous rift, or cañon, is eight miles long and from half a mile to two miles wide and 4,000 feet above sea level, its enclosing walls of rock on each side tower up almost vertically about 5,000 feet. The feelings of a tourist when standing and gazing up at these mighty and eternal walls of rock with no sign of an exit visible can be more easily imagined than described. In this park are the famous Falls of the Yosemite, fifteen times higher than Niagara. Here, too, at altitudes from 3,000 to 7,000 feet are found the gigantic big trees (sequoia). The height of these forest giants is from 250 to 300 feet, their diameter 25 to 35 feet, and their age about 5,000 years.

The Yosemite is reached by the Southern Pacific and Santa Fé Railroads to Merced and thence by the Yosemite Valley Railroad to El Portal, the gate of the Yosemite Valley.

Both Sequoia and General Grant Parks are exceedingly wild, lying high on the Sierras. The

100 Edwin's Havana Seconds \$1.90

GENUINE FROM FACTORY DIRECT TO YOU BY PARCELS POST

Will you pay \$1.90 for 100 Edwin's Genuine "Havana Seconds"—cigars made of the quality of tobacco used in cigars that sell over the counter at "3 for a quarter"? Made of Havana Picadura, which is the trade name of tobacco leaf that is too short to roll into the high priced cigars. It doesn't make a pretty cigar, but you don't smoke looks—so, after all, the tobacco is just the same. The finest Havana Picadura, no cigar shorter than 4 1/2 inches, some even longer—hand-made, and money back if you aren't elated. This is one of our great values—to introduce our method of selling from factory direct to the smoker at factory prices.

None Sold After July 7th at This Price and Not More Than 100 to One Smoker

Send \$1.90 for 100. We reserve the right, however, to return your order and refund your money after a certain quantity of this brand is sold, as this price is made just to "get acquainted."

EDWIN CIGAR CO., Inc., 2328-2340 3d Ave., New York City

In ordering state whether you want Mild, Medium or Strong Cigars. For references as to our standing, look up Dun or Bradstreet, or ask any banker.

Three Hours Along the Hudson River

via the

IN traveling between the West and New York City via the New York Central Lines you ride for three hours—nearly 150 miles—along the Hudson River.

This is the great scenic route between the East and West.

All tickets are good for stop-over at Niagara Falls.

© Detroit Photo

former is reached by stage from Woodlake, the latter by stage from Exeter on the Southern Pacific.

ESTES PARK

Seventy miles from Denver, at the foot of Long's Peak at the continental divide of the Rockies, is Estes Park. In this park are to be seen panoramas of snow-capped peaks, glaciers, rivers, and streams. Excellent automobile roads penetrate this region.

The three chief gateways are Longmont on the Colorado and Southern and Burlington roads, Lyons on the latter line, and Loveland and Boulder on the Colorado and Southern. Motor-stages take tourists into the park from these stations.

RANIER NATIONAL PARK

Directly in the center of this vast reserve stands the snow-capped peak of Mount Ranier-Tacoma, 14,526 feet. On all sides of this great "mountain of the snow" radiate glaciers from which many rivers take their source.

Entrance to the Park is by rail to Ashford, thence over government-built roads by motor-stage line. Excellent train service is afforded by the Chicago, Milwaukee and St. Paul and the Tacoma-Eastern railways, two hours' ride from Tacoma.

CRATER LAKE NATIONAL PARK

More than 159,000 acres in the State of Oregon are embraced in the Crater Lake National Park, which lies in the heart of the Cascade Mountains. The lake after which the park was named is one of the most remarkable on the continent. The waters themselves, 2,000 feet in depth, are enclosed in a wall of rock 1,500 feet high without an external opening. The nearest station to the Park is Medford, on the Southern Pacific.

ALGONQUIN NATIONAL PARK

This great Canadian playground, consisting of 2,000,000 acres in the Highlands, of Ontario, dotted with 1,200 lakes, including several rivers, is the mecca of thousands who desire to spend their vacations close to nature. Fishing and canoeing are the favorite pastimes.

The southwestern corner of this reserve is traversed by the Ottawa division of the Grand Trunk, with excellent connections from Boston, Buffalo, and Chicago. Passenger boats are operated on numerous lakes and rivers in this region.

YELLOWSTONE NATIONAL PARK

This great reserve, containing 3,578 square miles in Wyoming, one of the first set aside by the Government, comprises a bewildering number of nature wonders, foremost among these being the many geysers, great and small. In this park at an altitude of nearly 8,000 feet is Yellowstone Lake, and the Grand Cañon of the Yellowstone River. It would be difficult to enumerate all the natural attractions to be found in this celebrated playground. All visitors to Yellowstone Park should take the famous stage trip which loops about the park, and a sail by boat over the water of the lake.

The chief gateways are at Gardner on the Northern Pacific and at Yellowstone, reached by through train service from Kansas City, Leavenworth, Council Bluffs, and Omaha by Union Pacific system, in conjunction with Oregon Short Line. A variety of attractive tours to the park are provided.

You Can Solve the Vacation Problem

ATLANTIC SEACOAST RESORTS

WITH vacationists to whom the tang of salt air is a strong inducement the Atlantic seaboard from the Maritime Provinces of Canada to the broad beaches of Florida is lined with attractive resorts.

MARITIME PROVINCES

Nova Scotia, the land of Evangeline, is much enjoyed by those who prefer quiet to fashionable surroundings. New Brunswick not only has its seashore scenery, but inland mountain lakes and rivers. Prince Edward Island has many miles of ocean beach. Newfoundland's coast is indented by floods which compare with those of Norway, while her waters provide real fishing.

NEW ENGLAND

Southward across the Maine border lie Boothbay Harbor, Bar Harbor, and Mt. Desert. Penobscot Bay resorts, and scores of other resting-places. Off the New Hampshire coast lie the Isles of Shoals, swept by cool breezes. On the north shore of Massachusetts are Swampscott, Nahant, Marblehead, Gloucester, etc.; on the south shore, Cape Cod, and the Isles, Martha's Vineyard and Nantucket. Newport, the seashore center of fashion, is the most famous of Rhode Island's attractive resorts. In or near Long Island Sound are Block Island, Watch Hill, Fisher's Island, and New London. Most of these coast resorts are reached either directly or with connections by coastwise lines described elsewhere. Among rail lines reaching these places are the Intercolonial and Canadian Pacific in New Brunswick; Dominion Atlantic and Great Northern in Nova Scotia; Reid Newfoundland in Newfoundland; Canadian Pacific, Grand Trunk and Maine Central in Maine; Boston and Maine and New Haven System in Massachusetts, Rhode Island, and Connecticut.

LONG ISLAND, NEW JERSEY, ETC.

Long Island, with more than 400 miles of salt-water shore line, is a seashore paradise. Deep-sea bathing, yachting, and fishing, with superb roads for motoring abound. Among the most favorite south shore resorts are Coney Island, Manhattan Beach, and the Rockaways. Long Beach, Great South Bay, the Hamptons, Amagansett, and Montauk Point. On the north shore are Little Neck, Sea Cliff, Oyster Bay, Huntington, Port Jefferson, Peconic, Greenport, and Orient Point. Long Island resorts are accessible by through trains from the Pennsylvania station, New York City, while by water, north shore points may be reached by the Montauk Steamboat Line, and Coney Island and Rockaway by summer excursion steamers. The forty beaches of New Jersey are world-famous. Most notable of these are Long Branch, Asbury Park, Barnegat, Atlantic City, and Cape May. These ocean resorts may be reached by the Central Railroad of New Jersey and the Pennsylvania System. In conjunction with the former road a steamer service is maintained between New York and Atlantic Highlands. Still farther down the coast is Virginia Beach, known as "the Atlantic City of Virginia," reached by electric railway from Norfolk.

PACIFIC SEASHORE RESORTS

ALONG the Pacific coast of California are many famous seashore resorts. The best-known of these are along the southern shore line, including Long Beach, Redondo, Coronado Beach, and Santa Monica. Along the middle and northern coasts are Santa Cruz, Sausalito, and other beaches. Off the south shore lies Santa Catalina Island, one of the most famous fishing resorts on the Pacific. This island is reached by a two-hour sail on steamers of the Wilmington Transportation Company from San Pedro, with connections to Los Angeles by Southern Pacific, Salt Lake, and Pacific Electric trains. Southern California seashore resorts are reached by Southern Pacific and Santa Fé lines with connections.

ACROSS THE CONTINENT

THE wonders of this country can not be realized by those who have not taken one or more of the attractive trips across it, preferably going by one route and returning by another. Joint agreements between the chief railway and steamship lines make it possible to make trans-

69 Years Young

Please remember this. The old-fashioned patience of 1844 is still a habit at our factory. Our trade mark goes on nothing that is the least bit of slap-dash in workmanship. That is the main reason why we are today called upon to produce the widest line of luggage in America.

During our career as the oldest wholesale baggage makers in America we have brought out many innovations. We were the pioneers in producing feather-weight luggage. We originated the leather-bound trunk with canvas-covered sides. Our designers are still setting the pace in luggage.

Buying luggage without first seeing our catalog is a good deal like spelling an unfamiliar word without first consulting the dictionary.

The new wrinkle in this "Likly" Wardrobe Trunk is no wrinkles. No matter how rudely it is jostled about, your clothes come out uncrumpled.

No fussy folderols. The "Likly" single strap follower keeps everything at your finger-tips. Which ever garment you want comes out in a jiffy.

Foundation box is basswood. Covering and interlining is heavy, water-proof Army duck. Rawhide binding. Bronze-steel corner caps and bottom protectors. Ball-bearing rollers. Carries 15 to 18 suits or gowns of average weight. Models for men. Models for women. Prices \$70.00 to \$75.00. (Add \$5 to these prices west of the Mississippi).

One hundred other wardrobe trunks are shown in our catalog. Send for a copy. Prices from \$25.00 up.

(No. 61. Wardrobe Trunk)

(No. 36. Steamer Trunk)

Basswood plus cold rolled bronze steel plus heavy Army duck make this "Likly" Steamer Trunk a stubborn traveler. The farther you take it, the more you'll think of it.

Long dress tray inside. Bottom has set-in tray and a section which makes room for a large hat. Price \$27.50. (Add \$2.50 to this price west of the Mississippi).

(No. 101. Suit Case)

Let the expressman heave this bag about to his heart's content. It is guaranteed for five years. Has extra-heavy leather corners. Light basswood inserts in each end keep the shapeliness for years. And look at the locks! Prices \$12.50 to \$13.50.

Many more suit cases are shown in our catalog. Send for it.

(No. 250. Tidy Travel Bag)

Here's the "Likly" Tidy Travel Bag. Goes its name one better by being very sturdy in the bargain. For women. A handsome affair. Silk lined. Look at the inside pockets. They care for toilet articles. Guaranteed for five years. Light, too. Comes in two leathers and two sizes. Prices \$20.00 to \$30.00.

(No. 63. Kit Bag)

Down the gangplank comes our swagget London cousin—the "Likly" Kit Bag. This type of bag was invented by a British Army Officer. Here you see its best development.

Empty, it flattens out into almost nothing. Filled, it—well you simply can't seem to fill it. Guaranteed for five years. Prices \$26.50 to \$31.00. Don't miss this and the other Kit Bags described in our catalog.

If you've any travel in mind, you ought to send for one of our 128-page catalogs. It describes in detail the most varied line of luggage made today. And we'll tell you where to see "Likly" Luggage in your town.

continental trips at much lower rates than the local one-way tariffs of each line, with the advantage of traveling over different routes and seeing different regions, all with liberal stop-over privileges. Rates to Pacific Coast points for a round trip from New York range from \$106.20 to \$110.70 (with slight extra amounts to California points via Portland). Altho there is at present only a single railway system crossing the continent from the Atlantic to the Pacific, it is customary to term those railways with Eastern connections (but extending from Duluth, Chicago, St. Louis, or New Orleans to the Pacific Coast) transcontinental lines.

The Canadian Pacific with its 16,000 miles of railway is the only single line on this continent reaching from shore to shore of the great oceans, but two other Canadian roads will soon similarly band the continent. The Grand Trunk Pacific will be complete to its Atlantic and Pacific termini in 1915, and the Canadian Northern, with more than a thousand miles already in operation, is pushing its rails out eastward and westward. For more than twelve years construction has proceeded at the rate of a mile a day. There remain but twenty-three miles of track to connect various sections of this system between Quebec, Montreal, Ottawa, and Toronto, and it is expected to join the rails between Quebec and the Pacific Ocean by the end of the present year. The Grand Trunk's termini will be Halifax and Prince Rupert; the Canadian Northern's, Pugwash, Nova Scotia, and Vancouver. The Canadian Northern operates the transatlantic Royal Line between Montreal and Bristol, England. Both roads upon completion will have trans-Pacific and transatlantic fleets. In detail, the completed transcontinental routes are:

The Canadian Pacific, which unites Halifax and Vancouver, having its own steamship fleets of sixty-seven ships on the two oceans and the Great Lakes, and owning sixteen hotels, offers a tour that leads through the wildest and most picturesque portions of the Canadian Rockies.

South of our northern border are seven transcontinental lines. The most northerly is the Great Northern, extending from Duluth and St. Paul to Vancouver, B. C., on the north and Portland on the south—the latter being the Glacier National Park Route. This system operates a fleet of trans-Pacific steamships which sail from Seattle. It also operates the Northern S.S. Co., on the Great Lakes.

Next southward is the Northern Pacific line, extending from Duluth and St. Paul to Portland and Tacoma, with Yellowstone National Park as its leading scenic attraction.

Both the Great Northern and Northern Pacific now operate their own lines into Winnipeg. Almost paralleling both roads is the Chicago, Milwaukee and St. Paul from Chicago and St. Paul to Tacoma and Seattle.

Midway between Canada and the Gulf extends the Union Pacific's overland route, from Omaha and Kansas City to San Francisco and Portland.

The newest of the transcontinental lines is the Denver and Rio Grande-Western Pacific, from Denver to Salt Lake, thence to San Francisco, via Feather River Cañon.

Still further southward runs the Santa Fé, the Grand Cañon route, between Chicago, Los Angeles, and San Francisco.

Most southerly of all the lines is the Sunset Route, of the Southern Pacific, running between New Orleans and San Francisco, and from the latter city extending northward by the Shasta Route to Portland, Tacoma, and Seattle. This road has its own steamship line between New York and New Orleans.

Radiating from Chicago are important systems having through train connections over these transcontinental roadbeds. The Chicago and Northwestern, running to Duluth, St. Paul, and Omaha, sends through trains to the Pacific coast via the Union Pacific and Southern Pacific. The Burlington route to St. Paul, Kansas City, Denver, and Billings operates a through service over the Great Northern, Northern Pacific, Southern Pacific, and Western Pacific lines. The "Soo" line from Chicago to St. Paul, Duluth, and Portland affords through service over the Canadian Pacific to Winnipeg and Pacific coast points via Spokane, or to Vancouver direct. The Rock Island system runs from Chicago to St. Paul, Denver, and Santa Rosa, N. M., and operates through trains

MOUNT DESERT

Off the Maine Coast

You never tire of Mount Desert. It is too wonderful, too varied, too beautiful, too gay.

Isle of Enchantment

You turn from the sea to the mountains, from the mountains to the deep woods—all on this marvelous island.

You live in an unending round of summer pleasures. Or you just rest and breathe that wonderful sea air.

You may choose Bar Harbor, with its fashionable and artistic life, or such perfect vacation spots as Southwest, Northeast and Seal Harbors.

You may sail, bathe, fish, play tennis and golf, drive, ride, climb mountains, enjoy the delightful social gaiety which is so large a part of the summer here.

Magnificent hotels, charming boarding houses at moderate rates.

TRIPS ABROAD

SUMMER trips abroad are offered in infinite variety. Norway, the "land of the midnight sun" and great fiords, is being visited by increasing numbers each summer. In Holland, a favorite country with American tourists, will be celebrated this summer the centenary of governmental reconstruction. At The Hague, in September, the Peace Palace will be opened and an international agricultural exhibition held. Here also during July and August will be an international exhibition of sports and travel. Visitors to Belgium this summer may attend a world's fair. Tourists in Germany may attend at Munich the musical performances given in celebration of the Wagner centennial.

Those who visit England by steamers landing at Plymouth, Fishguard, or Liverpool, or by Canadian Northern liners landing at Bristol, may avail themselves of attractive tours offered by the Great Western Railway, starting from all four of these ports, whereby the passenger who desires to see England may begin his tour immediately upon landing, instead of going directly to London and traversing the same ground again. The English Lakes

region is made accessible by tours over the Furness Railway and steamers.

A trip to Switzerland may be continued profitably through to Italy, and thence by steamer to Gibraltar, which is a convenient point of departure for a ramble through Spain.

The longest rail trip abroad is over the Trans-Siberian Railroad, bookings for which can be made in New York through the International Sleeping Car Company. From Paris radiate many European rail lines, among the longest of which is the system of the Paris-Lyon-Méditerranée with through service to Italy.

SWITZERLAND, THE IDEAL SUMMER HOLIDAY COUNTRY

SWITZERLAND is "the playground of Europe." The expression is a familiar one to all, but it never grows stale or old. Those who have once tasted the joys of a summer in the Alps can not resist the spell it casts upon them. With keen anticipation they often prepare their plans for a new visit and an enlarged acquaintance with innumerable haunts.

While the average visitor is first of all bent on sight-seeing, there are others who journey to the Alps for a complete rest; others again are mountaineering enthusiasts and lovers of outdoor games and sports. Switzerland can satisfy them all. Her scenic beauty and her historic associations and picturesque old-world corners delight the heart of the tourist; her invigorating climate and deliciously pure mountain air make strong and young again the weary. A glance only at the summer programs of some of the leading resorts indicates that diversions of the greatest and latest variety have been provided for those who are interested in tennis, golf, rowing, sailing, fishing, nautical sports, horse-racing, aeroplane flights, etc. Besides these recreation features this summer the Passion Play of Selzach will be presented during June, July, August, and September.

Into Switzerland radiate the chief rail lines of France, Germany, and Italy. Through her mountainous domain passes the rail highway between London, Flushing, Paris, Berlin, and Italy. From London to Bâle via Dieppe and Paris the distance is only 561 miles, or little more than between Chicago and Buffalo. From Paris to Bâle the distance is only 327 miles. Going northward from Rome to Lausanne via the Simplon it is only 587 miles. From Paris to Lucerne is a ride of only 10½ hours, from Rome to Lucerne 19 hours. The chief railway system of Switzerland is the Government-owned Swiss Federal Railroads.

Travel in Switzerland has been reduced to a science, and those who can devote a certain length of time to actual sightseeing will find it to their advantage if they purchase one of the "abonnement" tickets issued for periods of 15, 30, and 45 days, at the remarkably low rate of \$13.44, \$25.16, and \$26.88, respectively. These tickets, bearing the photograph of the holder on the inside cover as a means of identification, entitle him to an unlimited number of journeys on the principal railroad lines and lake steamers. Mountain railroads which are not included in this unlimited travel system grant in numerous instances a certain reduction on single and return fares.

A tourist can thus make one resort his headquarters and set out for a different excursion every day until he has explored that particular region. Then he can proceed to another section of the country, and without a continuous change of hotels, be able to do his sightseeing in a comfortable and economical manner, for it is well to remember that most of the Swiss hotels grant the so-called "pension rate" on a sojourn lasting at least 5 days.

Those who are unfamiliar with Switzerland and who desire to plan the most satisfactory tour may receive helpful advice by consulting the Swiss Information Bureau in New York.

NO Port like New Orleans for vivid, romantic atmosphere—

No ocean trip for fascinating enjoyments like the voyage there from New York, on luxurious 10,600-ton

Southern Pacific Steamships

traversing balmy seas with charms all of their own and the golden Gulf of Mexico.

One Way **\$40** Berth and Meals Included **\$70** Round Trip

Choice of rail lines either way, if desired. Suites of Parlor, Bedroom and Bath.

HOW TO PLAN A MOTOR-TRIP ABROAD

By LEE MERIWETHER

Author of "Seeing Europe by Automobile," etc.

IN planning a motor-trip in Europe the first thing to decide is whether to take your own automobile or to rent one abroad; and this question can hardly be decided without knowing in advance what countries you mean to tour, and how long your trip is to last. On a short tour through a country like France, one may well save the bother of boxing and shipping one's car from New York. For as a rule there is no difficulty in finding good motor-cars for rent in Paris at prices which, tho high, will nevertheless cost less on a short tour than it costs to bring an automobile from America. But for a long tour, or for a tour in countries where there is no certainty of finding a suitable car for hire, the wiser plan will be to take your own machine. In Paris a fairly good five-seated touring car may be rented for from one hundred to one hundred and fifty francs (\$20.00 to \$30.00) per day, plus a bonus for each mile in excess of a stipulated number—usually seventy-five or eighty a day.

Now, an easy-going traveler who wants to see the country may not often care to travel much more than eighty miles a day, but on the smooth roads of France many motorists may go much farther—and in that event the cost of your hired machine may double the fixed amount of the daily rental. On one day's run (from Grenoble to Nice) the writer made 215 miles, and during his four months' trip runs of 125 to 150 miles were not at all infrequent. Had the automobile been a rented one the cost on those long runs would have been as much as forty dollars a day; as it was, the only additional cost of making a long run was the comparatively trifling expense of extra gasoline, oil, and wear on tires. Boiling the whole thing down, it may be said that if one's trip is to extend beyond the beaten paths of France and Germany, or if it is to last longer than a few weeks, it will be more economical as well as more satisfactory to take your own machine. But for a trip of not more than a few weeks in countries like France and Germany, a decision should be made in favor of renting a foreign car.

There are companies, like the American Express Company, which relieve motorists of all trouble in the matter of shipping their automobiles abroad; you deliver your car to the office of the company in your home city, and for a stipulated fee it is delivered to you on the steamship pier of whatever foreign city you decide to go to. The fee for this service, inclusive of all expense for boxing, freight charges, etc., is usually in the neighborhood of two hundred dollars. If economy be an object, by taking a little trouble this expense may be considerably lessened. The writer got his 30 h.-p. Roadster boxed by a New York firm on Hudson Street for \$40.00; to haul the boxed car to the French Line pier cost \$6.00; the freight to Havre was \$67.60—thus from the moment the automobile left its garage in New York until it stood on the pier in Havre ready for travel the cost was \$113.60.

To the man who likes to drive his own car a chauffeur is not only unnecessary,

he is a nuisance. On a four months' trip covering 5,080 miles through France, Germany, Italy, and Switzerland the writer's automobile had no motor trouble of any kind; but even had a mechanic's assistance been needed there was seldom a time or a place where it could not have been promptly obtained. Consequently, being fond of sitting at the wheel—and not fond of having a hired man always close by to destroy his privacy, the writer never for a moment regretted being without a chauffeur. To the man, however, who does not like to drive, or who is fearful of motor troubles that he can not conquer, a chauffeur may be a necessity; and in that case a question to consider is whether to take your man from New York or get one abroad. The latter plan is the cheaper and, if care be taken, perhaps also the better. Good chauffeurs may be secured in Paris and Berlin for about two dollars a day, and for somewhat less if employed by the month. It is advisable to secure your foreign chauffeur before leaving New York; a letter to the American consul at Paris or Berlin, stating your wishes, will be submitted to some reliable garage where chauffeurs looking for work congregate, and in this way you will likely have several men waiting for you to choose from as soon as you land in Europe.

Where an automobile is rented, or where a foreign chauffeur is employed, the agreement should not only be in writing, it should be drawn by a competent person. This will cost a fee, but it will be money well spent, as without an explicit agreement disagreeable and costly disputes may arise.

If your trip is to cover more than one country you should hasten to become a member of the Touring Club de France. To join requires merely an application by letter, or in person, at the home of the club, No. 67 Avenue de la Grande Armée, Paris, accompanied by the fee of \$1.20. This membership entitles you to *triptyques* for whatever countries you purpose visiting, and the importance of a *triptyque* will be understood the first time you cross a frontier. The ordinary motorist is detained by the customs officer for several hours while he makes an inventory of his car and assesses the tariff, which must be paid in money of the country he is about to enter; if the motorist hasn't any money of that country so much the worse for him; he can not proceed until he gets that particular kind of money. But a member of the Touring Club de France shows his *triptyque* to the customs officer at the frontier; that official sees at a glance that the amount of tariff duty has been deposited with the Club Treasurer in Paris, and in a moment the motorist is on his way rejoicing. In visiting the 1870 German-French battlefields between Mars-la-Tour and Metz the writer crossed the German-French frontier half a dozen times within the course of half a day. Without the Touring Club's *triptyque* each crossing would have meant long delay—as it was, we passed back and forth without even stopping our motor.

Gasoline is to be had in all towns and villages and, in France, even on the roadside at peasants' homes; and in Germany and Switzerland the motorist is seldom far from gasoline. In many parts of Austria

and Italy, however, it is not always to be had, consequently in such regions extra tins of the indispensable fluid should be secured on the running board. In Paris gasoline costs sixty cents a gallon; elsewhere in France the prices range from thirty to forty cents. It is about the same in Germany and Switzerland, but in Italy the price is considerably higher—from forty to sixty cents per gallon. At this price, if one has a big six-cylinder car the expense for gasoline alone will run up to seven or eight cents a mile, or some \$17.00 for a run like that from Grenoble to Nice. On that same 215-mile run the writer's four-cylinder car consumed only fifteen gallons of gasoline at a cost of \$6.00. Unless the motorist's pocket-book is unusually large he may well hesitate before selecting too large a car for a foreign tour. Quite apart from the extra cost of large tires, where gasoline costs more than either wine or beer, it is worth while considering whether your automobile will run fifteen or twenty miles on a gallon of gasoline, or whether it will run only seven or eight, which is all some high-powered sixes are able to make.

It may interest the reader to know that the total expense incurred by the writer on account of his automobile on a four-months' tour through Europe was \$528.67. This covered boxing, ocean freight both ways, repairs, new tires, oil, gasoline—in a word, every expense connected with the automobile; and the distance covered was 5,080 miles. The machine was a 30 h.-p. four-cylinder roadster, which averaged thirteen miles to the gallon of gasoline; as this included trips over a number of mountains in Switzerland and Italy it may be considered a good mileage per gallon. Certainly a big six would have consumed fully twice as much gasoline, besides consuming twice as much money for tires. Our smaller car went as fast as we cared to go; it went anywhere that a larger car could go—and so, not possessing an unduly extended bank account, we think we were wise in selecting the smaller car. But whether one chooses a big or a little car, and whether one drives or hires a chauffeur, a motor-trip through Europe can hardly fail to be a delightful experience. Nearly everywhere the roads are excellent, and quite everywhere the motorist's eyes will rest upon scenes that are not only picturesquely beautiful, but that are full of interest because they are connected with great historical episodes.

EDITOR'S NOTE: Space does not permit of giving here itineraries of motor-trips abroad. In Great Britain and on the Continent many delightful trips may be arranged. Foreign road maps may be purchased from the Automobile Club of America, New York. The following are among books which have been written on touring abroad:

- Backland, L. H. Family Motor Tour Through Europe.
 Barzini, L. Peking to Paris.
 Dillon, J. M. Motor Days in England.
 Fisher, H. W. Woman's World Tour in a Motor.
 Hand, A. J. and F. H. . . . Abroad in a Runabout.
 Meriwether, L. Seeing Europe by Automobile.
 Murphy, T. D. British Highways and Byways from a Motor Car.
 Peixotto, E. C. Through the French Provinces.
 Presbrey, Frank. Motoring Abroad.
 Scarfoglio, A. Round the World in a Motor Car.
 Shoemaker, M. M. Winged Wheels in France.
 Stawell, Mrs. R. Motor Tours in Wales and the Border Counties.
 Trevor, R. En Route: a descriptive automobile tour through nine countries and over nineteen great passes of Europe.
 Vincent, J. E. Through East Anglia in a Motor Car.
 Wood, A. T. and B. R. . . . Ribbon Roads: a Motor Tour Abroad.

Our Party in COLORADO

And none of us ever had such a delightful surprise—you couldn't fancy without being here how there could be so much that is big and grand, and so much that is softly lovely in any one region of the world.

We slipped away on that de Luxe

Rocky Mountain Limited

—every morning from Chicago to Denver,
Colorado Springs and Pueblo—

the kind of train that first makes you glad you're going and then glad you went that way. Think of this magic transformation in a day! That's a rhyme, but the whole affair—dining car, music, observation car, books and beds—was as smooth and pleasant as a poem.

"The Colorado Flyer"

every morning from St. Louis, and other splendidly equipped, fast daily trains via Rock Island Lines from Chicago, St. Louis, Kansas City, St. Joseph, Omaha and Memphis for Colorado, Yellowstone Park and the Pacific Coast.

Low Fares Daily June 1st to September 30th

"Little Journeys in Colorado" and "Under the Turquoise Sky" are two books which make the way clear. Let us send them to you: E. M. Allen, Pass. Traff. Mgr., La Salle Station, Chicago, Ill.

MOTORCYCLE TRIPS

VACATION trips by motorcycle offer so many delightful possibilities that this method of touring is growing rapidly in popularity. It is no longer necessary to go alone if companionship is desired. The single-seated motorcycle of any standard make may be equipped with either a side-car, converting it into a tri-cycle, or a tandem seat may be added, in either case accommodating another rider.

In no other self-propelled vehicle is so much power compressed in so small a space. In its application to these vehicles, the gas-engine has made it possible to get a maximum of motive power into a minimum of space. The motorcycle has been perfected so highly that machines of standard makes are as dependable as first-class automobiles.

The cost of operation is lower than that of any other motor vehicle. Expenditures for gasoline, lubricating-oil, and tire upkeep, while touring, are almost absurdly low. For instance, a conservative average fuel consumption would be seventy miles for a single machine on one gallon of gasoline.

Motorcyclists experience a spirit of buoyancy, a thrill of freedom, somewhat akin to that felt by aviators. Over fair roads and in favorable weather, motorcycle tourists are able to average easily 100 miles a day without undue speeding or fatigue. Thus a 1,000-mile tour may be covered in less than two weeks.

In our own country, touring authorities are at present working on the best trans-continental motorcycle routes. A writer in *Motorcycle Illustrated* says: "Two years ago a 500-mile journey was regarded in the light of a notable achievement by motorcyclists; to-day the rider who contemplates anything more than a week-end outing is quite likely to turn his attention to a coast-to-coast trip." The possibilities of extensive and inexpensive trips abroad over superb roads in the United Kingdom and on the Continent were realized years ago by bicycle riders. These possibilities have been greatly increased by the advent of the motorcycle. Among useful hints to tourists in foreign lands are the following quoted from the same magazine.

"It is always best to get in touch with a good touring club, preferably in England or France, and borrow about maps covering the route you have in mind. The touring clubs in these countries keep in touch with touring conditions practically the world over, and it is therefore a simple matter for them to help you. Besides, the less the trouble, the better." The machine should be carried over in a reliable forwarding company such as the American Express Company to be crated and sent abroad. Having such matters to deal with readily, the touring companies know just what steps to take concerning the return of the motorcycle to this country, and they will save the rider much of trouble with the customs officers. Keep this fact up in mind. It may save you time, worry, and money. Have your machine crated in a ship by machine. The tourist should also consider the pass problem. If the motorcycle will visit England first he will be able to obtain an International Touring Pass without very much trouble, and at a cost of approximately \$7.50. These passes can also be had in Paris and Berlin, but it is much simpler to obtain them in England, provided the traveler is going to visit that country before doing any continental riding. I would suggest writing the Auto-Cycle Union, 59 Pall Mall, London, S. W., before he goes. The organization will be quite willing to take up the matter.

The motorcycle used for long-distance touring should be equipped with adequate water, extra inner tubes, speedometer, and searchlight.

PACKARD SERVICE

**The car best able to care for itself
is cared for by the best service**

Packard service means ability plus willingness to serve. Every Packard owner commands free of charge the services of a technical expert in inspecting his car and making minor adjustments. Packard dealers take the initiative in keeping cars running to the entire satisfaction of their owners.

Each dealer carries a carefully selected line of parts in stock and maintains a service department with all facilities for keeping Packard cars and trucks at their high point of efficiency.

For Packard owners who tour abroad, the Packard Motor Car Company of Paris maintains a complete service depot at No. 5 Rue Newton, Paris.

In all Packard establishments the same consideration is extended to every Packard owner regardless of his place of residence or where he purchased the car.

Packard service follows the car:—one of the reasons why a Packard "38" or a Packard "48" bought this year will have a higher relative cash value next year or five years hence than any other car purchased at the same time.

SYMBOLISM OF THE COVER DESIGN.—Our cover design represents Phiddippides, the Greek courier who ran from Athens to Sparta, about 150 miles, in two days, to ask Sparta's help against the Persians. He symbolizes the news-bringer. The painting is the work of Mr. Harold Nelson.

His father's Elgin

The most valued possession of many a man today is the Elgin Watch his father carried and passed on to him. There is no finer heirloom—no greater inspiration to punctuality, faithfulness and trustworthiness—for the Elgin typifies all these things to the highest degree. The watch here pictured is the latest Elgin model—a marvel of precision and beauty. It is the

Lord Elgin

Lord Elgin is the thinnest watch made in America with an enamel dial. It contains the very latest devices for perfect timekeeping, including Micrometric Regulator, Compensating Balance and Double Roller Escapement. Adjusted and cased at the Elgin factory. Solid gold or 25-year filled cases.

40,000 leading jewelers—Elginers, masters of watchcraft—in every town and city display, endorse and sell Lord Elgin. Examine it at your local Elginer's.

ELGIN NATIONAL WATCH CO.,
Elgin, Ill.

Learn the Truth

Ignorance of the laws of life has led to very serious misfortunes,—and the dissipation of this ignorance will result in truer modesty, less disease and a happier and purer society.

The Education of Sex

A Digest from the Writings of
DR. JOHN COWAN
and other Eminent Authorities
Contains 25 Chapters, Illustrations.
The subject matter of some chapters is:
The True and False Objects in Marrying.
Who Should and Who Should Not Marry.
How to Select a Husband or Wife.
How to Obtain Perfect Offspring.
Pregnancy and Labor.
Labor and Nursing.
Anatomy and Physiology.
How to Insure Marital Happiness and Other Important Chapters.

The Education of Sex has the endorsement of leading Universities, Colleges, Schools, Eminent Statesmen and Preachers and Professors throughout the country.

No-Rim-Cut Tires **10% Oversize**

Not a Petty Saving

Don't think that Goodyears won their place through any petty savings.

They were once in bottom place. Today they outsell, by long odds, all other tires in the world.

They have leaped to leadership. The

Goodyear demand has come like an avalanche.

Last year's sales by far exceeded our previous 12 years put together.

It took a vast, compelling reason to bring this change about.

Two Big Savings

The No-Rim-Cut tire—which we control—revolutionized conditions.

About one in four of all old-type tires were wrecked by rim-cut ruin. The No-Rim-Cut tire wiped out that loss completely.

Then the oversize we gave this tire added 10 per cent to the air capacity. And that, with the average car, adds 25 per cent to the tire mileage.

These two features alone vastly altered the cost of tire upkeep.

Other Savings

Then, year after year, we have spent fortunes on research and experiment.

That department now costs us \$100,000 yearly. And there scores of our experts work all the time, seeking ways to better tires.

They test the tires

by metered mileage—test every new idea. Night and day, four tires at a time are being worn out in our factory.

It was thus we learned, in the course of years, how to give you Goodyear mileage.

The Meters Tell

Bear in mind that meters are now used on countless cars. Men know which tire is best.

The time is past when users depend on makers' claims.

They measure mileage, watch their tire upkeep. And they tell their results to others.

Over two million Goodyear

tires have gone out to meet these tests. And Goodyear sales have doubled over and over as men proved out the tires.

Judge by This

Judge Goodyear tires by the final verdict of the legions of men who have used them.

You can see the No-Rim-Cut feature—the oversize feature. But the main fact lies in their records.

Motor car makers have contracted for 890,680 Goodyears to be used on new cars this year. And our demand from users is twice as large as last year.

The savings which did that are bound to win you when you make one test.

Write for the Goodyear Tire Book—14th-year edition. It tells all known ways to economize on tires.

Elmhurst Country School for Girls

An unusual, exclusive, high-grade school,—the most beautifully located and ideally equipped west of the Hudson,—offering preparatory, academic and advanced courses with diplomas. Full course in music. Special training for foreign travel. Enrollment limited so that each girl secures the advantages of personal supervision under quiet and intimate living influences.

Elmhurst celebrates being to it the influence and experiences of a scholarly work to Eastern and foreign schools. The faculty is composed of college women who aim to develop in each student a natural growth toward physical, mental and social attainments. Novel arrangement of courses and study keep the curriculum interesting and absorbing.

Elmhurst is the only school in America that uses the Menéndez physical culture,—an Established Scientific European method that exercises the muscles under the direct dictation of the mind. There are three hours for recreation each day, one of which must be spent out doors in tennis, skating, walking or horse-back riding.

Elmhurst Estate comprises one hundred and twenty acres of wooded hills and sunny fields in the White Water River Valley near Connersville, Indiana, midway between Indianapolis and Cincinnati. The building, colonial and spacious, offers a healthy educational home for girls. Tuition price one thousand dollars. Write for catalog and photographs.

NEW YORK, JUNE 14, 1913

WHOLE NUMBER 1208

TOPICS OF THE DAY

THE 'FRISCO FAILURE

THE FIRST important railway bankruptcy of the year, the largest mishap of that kind, as *Bradstreet's* points out, "since the Wabash Railway was placed in the hands of receivers," at once brings up two questions: Why did it happen? and What does it mean? Officials of the bankrupt St. Louis and San Francisco are not taking the public very fully into their confidence. They speak of the increased costs of operation coupled with the inability to raise freight rates, of flood losses, of hampering governmental restrictions. But why, ask editorial critics, aware that other roads are weathering similar conditions, was this great system unable to find credit to enable it to meet a few comparatively small notes? The *New York Times Annalist* bluntly answers that tho the roads have "many serious problems," everybody knows "that the bankruptcy of the St. Louis and San Francisco is owing to the fact that it has for many years been notoriously the worst financed big railroad in this country."

But this again sets the *Springfield Republican* to wondering whether the present stringency of credit, which is acknowledged to be a feature of the business situation, "may not uncover other weak spots in the finances of the American railroad systems." The *Kansas City Star* sees danger in the complicated finances of the roads,—"they have too many subsidiary corporations, and there is too much temporary financing." Yet *The Republican*, in common with most of those who have been watching and commenting on market conditions, finds it "encouraging that in the days following the 'Frisco affair, stock-market trading revealed no special danger-points in the list."

The daily and weekly papers which specialize in financial affairs do not seem for the most part to regard the 'Frisco failure as the cause of the subsequent slump in securities,

nor do they think it a portent of coming disaster. In France, where a 'Frisco bond issue was successfully floated in April, the news of the receivership has incensed security-holders, and several journals have made the incident a text for caustic remarks about American business morals. In New York, one writer connected with *The Journal of Commerce* does see in

the 'Frisco bankruptcy additional evidence "of the importance of two underlying factors in the market," which, in his opinion, are driving "the weaker class" of railroads to despair. First of these, he says, "is the scarcity of funds for investment; second, the inability of railroads to make sufficient money to adequately protect their credit unless they are permitted to charge profitable rates for the transportation of merchandise." That this great system, with 7,520 miles of road, extending from Kansas City, St. Louis, and Chicago, through Missouri, Arkansas, Oklahoma, Illinois, Kansas, Tennessee, Mississippi, Alabama, and Texas, should not be able to secure funds to meet maturing notes amounting to \$2,250,000 "is remarkable," we read further in *The Journal of Commerce*; and "that its bankers should express surprise is even more remarkable, for they certainly must have been importuned to furnish this small sum."

"The entire trouble, however, appears to resolve itself into the fact that the company was unable to obtain its necessary capital at all. It could not sell shares at any price because it could not pay dividends. Labor has been continuously adding to its burden, taxes have been increased, the cost of everything entering into the building, upkeep, repairing, and operating of its lines has ex-

panded. But when it attempted to improve its revenues the Government arbitrarily stepped in with 'thou shalt not.' . . .

"Whether the receivership for the St. Louis and San Francisco road will prove an object-lesson to the Government and be a blessing in disguise remains to be seen. At present the weaker class of our transportation lines are in despair. Their credit

BENJAMIN F. YOAKUM.

As chairman of the executive committee he managed the finances of the 'Frisco and its subsidiaries.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as Second-class Matter.

is gone, and bankers, where they are making loans at all, are taking full advantage of obvious necessities. A well-known financial authority, discussing this phase of the situation yesterday, declared that there must be a prompt turn about to the Government's attitude toward the railroads or, in his opinion, the country would see a series of railroad receiverships similar to that experienced in 1893. Some railroads can not get money at any price, one large system having, for instance, been refused accommodation on short-term notes at a rate, including the discount as well as interest, that was a startling revelation of its real condition. Unless the transportation lines are permitted to charge profitable rates they must go into bankruptcy. With New York Central selling below par and Pennsylvania down to 107, what chance, the authority in question asked, had weaker roads to put out new share capital or any securities at all that were not fixt obligations?"

With this, Mr. H. S. Priest, attorney for the 'Frisco receivers, is in complete accord. While the price of everything else has gone up, the railroads, he says, "have not been allowed to advance the price of transportation." And he continues, in a statement printed in the *New York Sun*:

"All business is in a halting attitude because all business seems to be more or less the subject of legislative control. This discourages enterprise and progress.

"Business needs emancipation from legislative influence. It has been pursued until it is a nervous wreck.

"Railroads must be managed by their owners. They must be owned either by the Government or by private persons. If owned by the former its ownership gives it the right to deal with them as it may please. If owned by private capital it must be allowed to manage them as it may please, subject only to the obligation to give adequate service at a price which is reasonable for the service rendered, without regard to the profit which the owners may make in rendering such service."

The lesson, "so plain that nobody ought to be able to shut his eyes to it," is thus emphatically stated by *The Commercial and Financial Chronicle* (New York):

"Unless it decays, this country must grow, and it will grow. But its growth will be retarded and made unduly costly unless its transportation implements grow with it; they ought even to grow a little in advance of it, as in the past they have done. If new lines can neither be constructed nor owned until they are in profitable development, that is like saying that one must not start until he has finished; on such a doctrine there is a halt in national progress until we discover that we are halting ourselves. If railway operation is to be kept squeezed down to such close margins as leave no room to wait for returns from extension of facilities, or even to take care of such incidental physical mishaps as floods and the like, the country will be up against a dead wall of its own making."

More guardedly, and in some cases with careful sprinkling of "ifs" and "howevers," such journals as the *Boston Advertiser*, *Birmingham Age-Herald*, *Philadelphia Inquirer and Bulletin*, *New York Sun*, *Syracuse Journal*, *Rochester Post-Express*, and *Chicago Inter Ocean and Tribune* also speak of the 'Frisco's troubles as furnishing the railroads with an additional argument in their demand for higher rates.

Yet while they admit the existence of these harassing conditions, most editors are nevertheless inclined to ascribe the 'Frisco's fall, in the words of the *Kansas City Star*, "primarily to a bad system of financing, and secondarily to injudicious expansion." Mr. B. F. Yoakum, Chairman of the 'Frisco's executive committee and the dictator of its fiscal policies, is credited with

faith in the great Southwest he was developing, but he is thought to have acted on this faith not wisely, but too widely. The 'Frisco, in *The Financial World's* opinion, "fell of its own dead weight," and *The Wall Street Journal* draws the lesson from its fall "that the control of a railroad can not go on indefinitely putting creditors between themselves and the property without

eventually losing it." *Bradstreet's* takes the same view of the affair. It explains first that the 'Frisco has "a stock capital of \$50,000,000 and an aggregate bonded debt of no less than \$184,000,000, guaranties of controlled and leased line stock bringing the funded obligations up to over \$222,000,000." Therefore:

"It will be seen that the outstanding bonds and notes of the system are disproportionately large as regards the share capital of the company, and to this fact its financial embarrassment seems to be largely due. In other words, the property was weighted down with fixt obligations until the strain upon its earning power and credit could be no longer supported. This fact has not been without recognition on the part of the financial community, as the comparatively low quotations for the road's general lien 5 per cent. bonds for some time past would indicate. The receivership was no doubt precipitated by the prevailing narrow state of the investment market and the consequent unwillingness of banking interests to make further advances to a railway corporation whose credit was none of the best. Still, it is to be considered that the incident is the result of conditions in reference to the company itself, which had for a number of years extended its system by leasing older properties like the Chicago and Eastern Illinois or by acquiring various new lines in the Southwest, financing this expansion through

sales of junior bonds or short-term note issues to an excessive extent. . . .

"It is easy to conclude that a complete reorganization of the company's finances will be necessary, but the task presents no unusual difficulties. In fact, with a substantial curtailment of the fixt charges, which need not be permanent, the property could probably be readily restored to solvency."

This optimistic conclusion is also reached by Mr. Priest, who remarks that "those who are interested in the property and who hold its stock do not feel deprest by the present situation, but regard it rather as a new birth of a more vigorous and valuable property." Similar confidence is also expressed by St. Louis and Kansas City editors, who know the country which the 'Frisco serves. The *Kansas City Star* rejoices in the appointment of Mr. Winchell, former president and operating head of the system, to a receivership. And *The Railway Age Gazette* adds its tribute:

"If hard and able work by an excellent organization could have kept these properties solvent they would have remained solvent. No railway president in the country has worked harder than Mr. Winchell has since he went to the 'Frisco lines, somewhat over three years ago. . . . It can not be too emphatically said at this time when there might develop some misunderstanding as to the facts that the organization and personnel of the operating and traffic departments of the Chicago and Eastern Illinois and the 'Frisco have been exceptionally good, and that their officers have done all that men can do to prevent the result which has now come."

The Chicago and Eastern Illinois, the 'Frisco's chief subsidiary, has been put into a separate receivership, and Western papers believe the reorganization will bring about a separation of the two roads.

BENJAMIN L. WINCHELL.

As president of the 'Frisco System he was its operating head. He will continue to run the road as receiver.

MUTTERINGS OF A "SILENT PANIC"

THE TIGHTNESS of money, the gradual decline in stocks on the New York Stock Exchange for the last nine months, and the difficulty lately experienced in floating bond issues, indicate a condition in our finance which the New York *World* calls a "silent panic." The underlying cause, according to a New York *Sun* writer, is simply that "at present there is not enough money in the world to supply the wants of the borrowers." That is, "available supplies of capital are insufficient to provide for all the financing that borrowing governments, municipalities, States, colonies, and corporations have undertaken." Wall Street, explain several editors, suffers most because of foreign influences. For it is impossible, declares the New York *World*, to attribute the "silent panic" to home affairs:

"The crop outlook has rarely ever been better than now. Speculative excesses have been absent. Surplus bank reserves are unusually large. Business long since accepted the popular decree that illegitimate monopoly must cease, and is acting accordingly. The number of people who have so misread history or so misapplied knowledge as to believe that panics and hard times are inseparable from acts of tariff reduction is now comparatively small.

"Wall Street has had its silent panics before, and under the highest of tariffs. But it has never had one before so clearly resulting from foreign influences and so little due to home conditions."

And *The Sun*, in a leading editorial, after dismissing a number of popular explanations of the stories of hard times tells us that "What is going on in Wall Street is primarily the reflection of Europe's need for money."

Similar conditions prevailing in London are explained by the editor of the London *Statist* as due to the fact that whereas investors in America, France, and Germany have of late years subscribed huge amounts for new enterprises, "since the war in the Balkans these countries appear to have lost their nerve."

"THE WORLD IS OVERLOADED AND OVERARMED."

—Cesare in the New York *Sun*.

That means that "borrowers have had to resort to the London market" to an almost unprecedented extent. But all the world, according to *The Economist*, "is overloaded and overarmed," and all the great financial centers are feeling the strain. Many recent loans have been undersubscribed and left largely on the hands

of the underwriters. London banking underwriters, *The Sun* hears, "have agreed to discourage further bond issues until the present surplus is absorbed and the congestion in the investment market relieved." Wars and rumors of wars, with expensive military programs, have had their influence, but after all, thinks *The Sun*, the trouble is that the bond market is oversupplied:

"Under the tremendous outpouring of bonds of all varieties, interest rates have been driven down, and investment capital

THERE'S A REASON.

—Kirby in the New York *World*.

commands a higher price and is worth more the world over. . . . The reactionary tendencies of investment markets everywhere are traceable to this influence. All alike are feeling the effects of a world-wide credit strain, of the state of saturation in the market for capital. In time no doubt the situation will change, but in banking circles it is believed that the change can be brought about only by enforced economy, for at present there is not enough money in the world to supply the wants of borrowers."

Despite the "fundamentally good" conditions in this country, which our papers and leading capitalists continue to emphasize, those who are in the best position to know now believe, according to Vice-President Talbert, of the National City Bank of New York, "that we have entered into a period of dear money, the duration of which is indefinite." To the question, What should we do? Mr. Talbert answers: "First, that while critically scrutinizing credits, we should continue to lend freely to legitimate manufacturers, dealers, importers, and exporters" and "secondly, that new financing on a large scale wherever possible should be postponed, and all forms of enterprises involving fixt investments of capital should be discouraged, if not entirely denied."

These conditions existing, *The Financial World* would "not be a bit surprised if the year 1913 proved to be the season when our financial doctors and surgeons threw discretion to the winds and operated upon a number of financial cripples among the big corporations." It adds:

"Even the considerable blood-letting may have to take place, in the end conditions will be better, for then the corporations which are top-heavy in capital and in bonded debt will have so pared off the superfluous flesh they are now carrying that they will be able to get along without experiencing periodical market chills. Then they will be on a basis where it is reasonable to expect they will be able to take care of their obligations in poor times as well as in good."

LENDING HUERTA MONEY

THE IMPORTANCE of the dollar in running a government as well as a household is strikingly instanced in the case of Mexico, which, while languishing for official recognition by the United States, is able, "largely through the exertions of American financiers," to secure a loan of about

Copyrighted by the Philadelphia "Inquirer" Company.

PROPPING IT UP.

—Morgan in the Philadelphia Inquirer.

\$100,000,000 that, according to the *New York Commercial*, "is regarded by Wall Street friends of Mexico as the final establishment of the power and stability of the Huerta Administration." The loan is made for administrative purposes and for the maintenance of the national railways of Mexico, which are controlled by the Mexican Government. For government needs \$75,000,000 is allotted and for the railways bonds are issued in the sum of \$26,730,000, which came "just in the nick of time," *The Commercial* says, to avert "the wholly unparalleled situation of a railway system owned by an important government being forced into receivership." For Mexico to be able to make such a loan is evidence to the *Philadelphia Record* that the bankers judge the Huerta Government "as likely to be permanent as any Mexican administration," for while their claims might be good "even if Huerta had to give way to some other patriot," nevertheless, on the principle that no man likes to buy into a lawsuit, they would not have put up the money "if they did not believe Huerta could maintain himself."

The importance of American bankers in the arrangements of the loan, the *New York Times* tells us, answers the reproach of indifference cast upon this country "by many Mexicans and American citizens interested in Mexican business," and the effect of the loan in Mexico is that—

"General Huerta will now be able to finance military operations, and if his assertion is true that the armed opposition to the Provisional Government is neither general nor formidable, a semblance of peace should soon be restored."

Elections will be held not later than next autumn. *The Times* informs us, to fill the offices of President and Vice-President, and, having canvassed the field of probable candidates, it goes on to state that what is needed most of all now in Mexico is peace and a normal life for the country which the people "have not had for a day since the overthrow of Porfirio Diaz." Yet there is little hope for protracted peace under present conditions, *The*

Times thinks, because the various revolutionists are as boastful and as dangerous as ever, and that is why "Huerta needs the services of a well-trained army" and "men of force and character are needed to fill the state offices."

Force of arms is Huerta's sole dependence, not the Monroe Doctrine or the national responsibility of the United States, says the *Indianapolis News* in comment on a plea for recognition written by the editor of the Mexican *Herald* and published in the *Washington Post*; while, in the language of the *Chicago Tribune*, "we might as well come to an agreement with a rattlesnake or sign a treaty with a copperhead." The *Atlanta Constitution*, however, wonders whether merely as a matter of expediency it would not be wise to recognize the Huerta Government and give it a trial, since it seems that in Mexico there is a choice of one of two evils—either Huerta's crowd or anarchy. The *El Paso Morning Times*, in a review of the last three years of strife, loss, and suffering, says that "so far as actual results are concerned, the Republic of Mexico is to-day in much worse shape than it was at the beginning of the Madero revolution."

DOUBTS ABOUT THE POSTAL SURPLUS

THE ONE THING evident in Postmaster-General Burleson's report denying the Hitchcock postal surplus and discrediting the efficiency of the Postal Department under the Taft régime, is, to the mind of the *Boston Advertiser* (Rep.), the fact that the post-office is still "in politics." So while it seems to the *New York Times* (Ind. Dem.) that "neither Mr. Hitchcock's defense of his surplus nor the denial of the existence of the surplus by his successor in the Department is convincing," Republican editors generally find the defense a complete answer to what Democrats consider a strong accusation. Mr. Hitchcock was "too much of a smart Aleck," is the *New York World's* comment on the report of Postmaster-General Burleson's Survey Committee, and it adds that

ALL SHE FOUND WAS A LEMON.

—Bowers in the Newark News.

"cripping the service to make a false show of efficiency and embarrass his successor . . . is a trick that does not win in the long run." And the *Charleston News and Courier* (Dem.), keeping in mind recent complaints of poor service, agrees with the *Atlanta Constitution* (Dem.) that

READY FOR BUSINESS.

THE PRESIDENT AND THE LOBBY.

"Obviously, present conditions are simply the inevitable legacy of Hitchcockism. The former Postmaster-General bent all his energies to build up a mythical surplus. He wanted to achieve a reputation for 'doing things' that would stand him in profitable stead when he returned to private life. The public service paid the penalty."

On the other hand, the attack on the Hitchcock régime seems "decidedly ungracious and pettifogging" to papers like the *New York Globe* (Ind.), *Tribune* (Rep.), and *Pittsburg Gazette-Times* (Rep.). Republicans in Congress also stand with the former Postmaster-General, and Senator Penrose, who has served on several committees concerned with postal affairs, declares that the transformation of a deficit into a surplus was "accomplished, not by curtailing the service, but by developing it along profitable lines."

As briefly set forth in a statement to the press the charges, made by the committee, consisting of the four assistant Postmasters-General and the chief clerk of the Department, are these:

"The Post-Office Department did not attain a condition of self-support during the administration of Postmaster-General Hitchcock, notwithstanding the widely advertised announcement to that effect, altho an apparent surplus was attained by unjustifiable methods of bookkeeping."

"The general morale and efficiency of the postal service were sacrificed to a ruthlessly enforced policy of false economy for the purpose of presenting a showing of self-maintenance; and, after the attainment of this end, just before the inauguration of the new Administration, the policy was reversed."

"Long-standing vacancies were filled and postponed promotions made."

"Commitments to fix charges for long terms were assumed in such a way as to saddle the new Administration with the greatly increased expense during months, if not years, to come."

"The all-absorbing program of the last Administration was the placing of the Post-Office Department on a paying basis. Policies pursued in this plan were overworked and resulted in defective administration and just criticism on the part of the public. The postal service affects so vitally the interests of the entire population of the country that economy which means a curtailment of postal facilities operates as a check to the social and industrial progress of the country. The people are entitled to the best facilities administered in the most efficient manner. That the facilities furnished during the last four years were not the best is clearly established by the facts."

Among the specific allegations contained in the report are figures showing that in 1911, instead of a surplus of \$219,000, there was really a deficit of more than \$750,000.

"Mr. Hitchcock's surplus clearly was fictitious," concludes the independent *Springfield Republican*, for

"It is impossible to controvert the statement made by the Burleson board of survey concerning the Hitchcock 'surplus.' The board included one Republican official holding over from the former régime and another official who was secretary of the Taft Board of Economy and Efficiency. These two men doubtless testify honestly to what they know. Yet it is a pity that the only real hard effort made by any Postmaster-General in our time to put the Department on a self-supporting basis should have such an ending."

But the *New York Evening Post*, after admitting much unjustifiable economy and many instances of poor service, feels "bound to add" that the report is not a fair or judicial appraisal of the Hitchcock administration of the Post-Office Department:

"Whatever fault may attach to his excesses in the way of retrenchment, and even to any manipulation of which he may have been guilty in making that retrenchment seem greater than it was, the question remains whether he did or did not effect large and praiseworthy economies. The report does not expressly deny that he did; but it evidently seeks either to produce the impression that he did not, or at least to obscure the fact that he did, if such was the fact."

And the like, continues *The Evening Post*, is true of the charges of improper bookkeeping,—

"Adding up the discrepancies alleged for each of the four years, we get a total of \$1,568,000, or an average of less than \$400,000 a year. Is it fair to let an uncritical public, looking at the general tenor of the report rather than its circumstantial details, get the impression that the wiping out of a \$17,000,000 deficit was largely a matter of bookkeeping, when only so insignificant a part of it can thus be accounted for?"

The same point, more emphatically worded, is insisted upon by ex-Postmaster-General Hitchcock in his sweeping denial of the accusations of his successor. He says in part:

"After reporting alleged discrepancies that are insignificant when compared with the great sums known to have been saved by their predecessors, this committee of novices proceeds in

SHE STARTED SOMETHING.

STRENUOUS

its published statement to enlighten the American people as to the character of the postal service they have been receiving.

"Their statement is as inaccurate as it is gratuitous, for the public well knows that never was the postal service conducted more efficiently or mail handled with greater precision and dispatch than in the closing years of the Taft Administration. . . .

"The question may very naturally present itself in the public mind as to why the present officers of the Department, instead of consuming all this time in an endeavor to discredit the good work of the men they succeeded, are not devoting themselves more attentively to the important branches of the service intrusted to their care, even if they are thus far unable in their inexperience to map out and execute a constructive postal program so as to broaden still further the usefulness of the post-office."

SHEARING PATENT PRIVILEGES

TEN TO FIFTEEN billions of capital are affected by the Supreme Court's decision of May 26 in the case of cut prices on patented articles, so Representative Oldfield, of Arkansas, is reported as saying in the *New York Sun*, which tells us also that in the opinion of officials of the Department of Justice the decision "eventually will affect every home in the country." Representative Oldfield is keenly interested because he heads the Patent Committee of the House, and in the past session framed a bill aimed to achieve the effect of the Supreme Court's decision, which he maintains is "the most important for the reduction of the cost of living that has been handed down in a generation." In view of the fact that the Supreme Court has decided the "cut-price case" along the line on which he has been arguing for years, Mr. Oldfield says he is not going to be slow about pushing his bill, but a writer in *The Sun* declares that the decision removes "the last pretext for changing the patent laws." This writer asserts also that the patent system can no longer be accused of lending artificial support to manufacturers or of "granting them special privileges denied to producers and dealers in unpatented foods," and observes that the practical question confronting manufacturers is whether the Sanatogen decision, which sanctions the cutting of prices and wide-open competition, is what the country wants, or whether it should be "nullified by legislation permitting fixt retail prices."

The Sanatogen case turns on the point of "the extent of

control which the patentee may exercise over a patented article." A chemical company manufactures a nerve tonic, called Sanatogen, which is patented. It is issued to druggists with a notice that they must not sell it at less than \$1 a package, *Bradstreet's* relates, or be guilty of an infringement of the patent and consequently "liable to injunction and damages." A Washington druggist repeatedly sold this commodity below the stipulated price, and the manufacturing company sought to secure an injunction in the Supreme Court of the District of Columbia. The petition was denied, and recourse was had to the Court of Appeals, which certified the case to the United States Supreme Court. At the same time, we read in the *Washington Post*, other companies, including the Gillette Company, the Victor Talking Machine Company, the Waltham Watch Company, and the Ingersoll Watch Company, were permitted to file briefs with the Supreme Court, "as they had cases pending in various courts throughout the country bearing on the rights of patentees

"NEXT!"
—Porter in the Boston Journal.

DAYS IN A

to restrict the resale price of their articles." These are the words of the Court's Sanatogen decision presenting the kernel of the question between patentee and retailer:

"The real question is whether in the exclusive right secured by statute to 'vend' a patented article there is included the right by notice to dictate the price at which subsequent sales of the article may be made. The patentee relies solely upon the notice quoted to control future prices in the resale by a purchaser of an article said to be of great utility and highly desirable for general use. The appellee and the jobbers from whom he purchased were neither the agents nor the licensees of the patentee. They had the title to, and the right to sell, the article purchased without accounting for the proceeds to the patentee and without making any further payment than had already been made in the purchase from the agent of the patentee. Upon such facts as are now presented we think the right to vend secured in the patent statute is not distinguishable from the right of vending given in the Copyright Act. In both instances it was the intention of Congress to secure an exclusive right to sell, and there is no grant of a privilege to keep up prices and prevent competition by notices restricting the price at which the article may be resold. The right to vend conferred by the Patent Law has been exercised, and the added restriction is beyond the protection and purpose of the act. This being so, the case is brought within that line of cases in which this court from the beginning has held that a patentee who has parted with a patented machine by passing title to a purchaser has placed the article beyond the limits of the monopoly secured by the Patent Act."

The effect of this decision, the *Indianapolis News* thinks, "will be greatly to strengthen the Government in its effort to enforce the Antitrust Law," because under the protection of the patent laws men not only sell an article at a monopoly price, but require also that every one else shall do the same. On this point the *Buffalo News* remarks:

"There is no doubt that our own people, to say nothing of people in other countries, have been compelled to pay many millions a year for the use of patented articles, just because the patentee was able to follow the article down through the trade and deprive a dealer of the goods themselves unless a standard price was maintained under all conditions."

Another price abuse that the Court's decision will remedy is thus stated by the *Philadelphia Record*:

"The retail prices of some patented articles have been pushed up to ten times the prices ruling in other markets. American patent rights have been employed to prohibit the reimportation and sale of patented products, which the patentees had sold abroad for a tithe of the money extorted from domestic dealers and users."

The *New York World* is careful to point out that for the encouragement of invention, "patent monopoly within strict bounds still remains," and in the same spirit the *Chicago Record-Herald* speaks of the inventor's worthiness of reward, but adds that it was never the intention of the law-making power that monopoly conferred by patent "should form a link in an endless chain of secondary, tertiary, and collateral monopolies," recalling that the decision in—

"the so-called mimeograph case, which sustained the right of the owner of a patent to monopolize the sale of all sorts of un-

two decisions are contradictory in spirit," altho "there is no direct inconsistency between them as a matter of law." It cites Justice Day's statement in reconciling the two decisions in which he demonstrates that in the mimeograph case the control claimed, and sanctioned by the court, referred to the right to "use" the article of the patentee, while the claim in the Sanatogen case must rest solely on his right to "vend" it. *The Post* remarks that both decisions have been made by a divided court, four to three in the mimeograph case, and five to four in the Sanatogen case, and adds:

"The four who constituted the majority in last year's decision are the same four judges that formed the minority in this year's: Chief Justice White and Justices Hughes and Lamar dissented from the broad-construction view in the mimeograph case; and now, in the Sanatogen case, they are reinforced in the narrow-construction view by Justice Day, who was then absent, and Justice Pitney, who had not yet taken his seat on the bench, so that there was one vacancy."

The conclusion of *The Post* is that "it does not require a great deal of boldness to conjecture that if the mimeograph case had been decided by the full court as at present constituted, the decision would have been the reverse of what it was," and it proceeds to urge "earnest consideration" on Congress of the changes in the law of patents demanded by public interest. On this question the *Charleston News and Courier* is of the same mind, pleads for "radical and comprehensive revision" of the patent laws, and declares that "next to the protective tariff, the patent laws have done more than any other one thing to create monopolies and destroy healthy competition."

MR. ROOSEVELT'S VINDICATION

THE ROOSEVELT VICTORY at Marquette was one of the Colonel's finest tactical exploits, thinks the *New York Sun*—"now we shall hear no more of Mr. Roosevelt's drinking habits." The dramatic vindication brings him congratulations from practically every newspaper editor in the land, including bitter political enemies in all parties. Some there be, indeed, who regret that the Colonel thought it necessary to bring the suit, and who would have preferred to have him pass over Mr. Newell's charges in silence. The *Philadelphia Public Ledger* has in mind persons who look upon the trial as

LASHT TO THE WAGON.

TEMPERATE

patented articles merely because they are used in connection with the patented one, was sharply condemned by the Chief Justice of the Federal Supreme Court. He described it as "alarming" in its implications. It meant, for example, that the inventor of a door-handle might monopolize the construction of sky-scrapers."

The so-called mimeograph case, the *New York Evening Post* notes, "was decided in favor of the unrestricted control of the patentee over the use of his product," while the Sanatogen case is "decided against the unrestricted control of the patentee over its price," which leads *The Post* to say it is evident "that these

LIFE.

simply a Rooseveltian "gallery play"—"an astute political maneuver to make him conspicuous again as a potential candidate for another presidential term." The Colonel's care to maintain his reputation before the people is looked upon elsewhere as "really a straw which shows what his plans are for 1916." Such ideas are likewise held by Socialist editors, who have expressed themselves in deeply sarcastic sentences. To newspaper paragraphers and other writers in lighter vein the testimony offered at this trial, "so full of human nature and serio-comic humor," has been a welcome fount of inspiration. More serious commentators find it most interesting "as a sign of the times—of the very great decline in drinking that has taken place the country over." To quote, for instance, a *New York Tribune* editorial:

"One does not have to go back to Daniel Webster to find an era when not only drink but drunkenness was considered a decent and respectable practise. . . . The damning, destroying effect of drinking to excess is now accepted as a commonplace. The drunkard is no longer a hero. He is an object of pity like every other weakling.

"Of course, hard drinking still exists and crops out now and then in one quarter or another. But, taking the country through, there can be no question that here, as in England, both teetotalism and temperance have made enormous gains. The present conspicuous ease of Colonel Roosevelt, whose precise degree of temperance is not very far removed from the teetotalism of Mr. Bryan, is both a mark of progress and a shining example."

But the great fact in the Marquette episode, in the opinion of the Colonel's friends, is, in the words of the *Washington Times*, that "Theodore Roosevelt will not henceforth be accused of being a drunkard." And they point to this emphatic statement in Judge Flannigan's charge to the jury:

"The plaintiff proceeded before this court to show that the charge was false in fact. And by his own, and the testimony of a long list of witnesses of high character and unimpeachable credibility, he has satisfied the defendant, the jury also, I fully believe, certainly he has convinced the court, not only that he never was drunk, but that he is now and always has been a temperate and abstemious man."

By which, suggests the *New York Sun*, "Mr. Roosevelt's faith

in the bench must have been strengthened." But perhaps even more satisfactory was the retraction read by Mr. Newett after the Roosevelt witnesses had all been examined and cross-examined. Its more significant sentences are here given:

"It is fair to the plaintiff to state that I have been unable to find in any section of the country any individual witness who is willing to state that he has personally seen Mr. Roosevelt drink to excess.

"I have been profoundly impressed during the progress of this trial by the nature and extent of the evidence produced by the plaintiff to the effect that he did not in fact use liquor to excess on any occasion.

"I therefore have been forced to believe that those who have given depositions or made the statement that in their opinion, on occasions to which they refer, Mr. Roosevelt was intoxicated, had insufficient means and opportunity of correctly observing him, and were mistaken.

"Up to the time of this trial I had believed that the statements made in the article which I published were entirely warranted. But in the face of unqualified testimony of so many distinguished men who have been in position for years to know the truth, I am forced to the conclusion that I was mistaken.

"I am unwilling to continue to assert that Mr. Roosevelt actually and in fact drank to excess. As a publisher of a newspaper, I have never knowingly done injustice to any man, and neither I nor any of my attorneys is willing now to make or continue the assertion of an unjust charge against the plaintiff in this case. We have reached the conclusion that to continue expressly or impliedly to assert that Mr. Roosevelt drank to excess or actually became intoxicated, as set forth in the article, would do him an injustice."

And this *cause célèbre* was practically ended when the Colonel jumped to his feet, "the pink of magnanimity," and thus addressed the court "in clear, resonant tones":

"In view of the statement of the defendant, I shall ask the court to instruct the jury that I desire only nominal damages. I did not go into this suit for money. I did not go into it with any vindictive purpose. I went into it, and, as the court has said, made my reputation an issue, because I wished, once for all, during my lifetime to deal with these slanders fully and comprehensively, so that never again will it be possible for any man, in good faith, to repeat them. I have achieved my purpose and I am content."

IF that White House mint bed is a permanent proposition, there will be more competition for the presidency than heretofore.—*Houston Post*.

IT is pretty hard to judge a man by the company he keeps when he goes with Jacob Riis and Bill Flinn at the same time.—*Columbus Ohio State Journal*.

WE think T. R. ought to return to the stand long enough to tell the country what he thinks of Mr. Bryan's grape-juice stunt.—*Columbus Dispatch*.

IT is the consensus of opinion that to pour stimulants into the dynamic form of Theodore Roosevelt would be but to gild the lily.—*New York Morning Telegraph*.

THE testimony at Marquette is a great relief to Dr. Lyman Abbott. It will be remembered that the Colonel once remarked that he drank about as much as the Doctor.—*Buffalo Enquirer*.

FOREIGN COMMENT

A NEW BALKAN STORM-CLOUD

PEACE has been arranged between Turkey and the Balkan Allies, but at the same time the alliance has practically gone to pieces. It was the decision of the delegates from the various European Governments assembled in London, according to the London press, that to the victors belonged the spoils. The Turks were informed that they must surrender all the territories lying to the west of a line drawn from Enos on the Mediterranean to Midia on the Black Sea, and could retain only Constantinople and the territory extending from that city to the line indicated. The disposition of Albania and the islands of the archipelago is to be left for the Powers to effect. The question of indemnity from Turkey to Greece, Serbia, Bulgaria, and Montenegro is also to be postponed for later discussion.

Without waiting, however, to conclude peace with Turkey, the Allies began to quarrel among themselves, and the press dispatches have reported actual armed conflicts. The tone of the press in all the Balkan capitals is defiant, and reports say the military preparations are more thorough than those preceding the war. Other dispatches represent the Balkan premiers as trying to smooth out the difficulties by a conference. Serbia and Montenegro both claim northern Albania, while Greece and Bulgaria have come to blows over the territory of Salonika, the most precious conquest of the war. The London, Paris, and Berlin correspondents at Sofia say the Greeks provoked the battle which took place to the north of Salonika in which 300 Bulgarians were slain. As to the cause of the conflict we read in the *Mir*, the official organ of the Government at Sofia:

"The persistent advance of the Greeks in the district of Pravista, already occupied by the Bulgarians and garrisoned by detachments of Bulgarian troops, has at last provoked a series of incidents which plainly show that it was the object of the Greeks to occupy certain strategic points such as Pravista and Eleutheria in Macedonia. The Bulgarians at first refrained from replying to the fire of the Greeks, but at last were compelled to do so. The Government gave instructions to its minister at Athens to put an end

to these hostilities and to demand indemnification and the punishment of the offenders."

But the Greeks give a different story, and in their official statement communicated by the Government at Athens to the various newspapers of the European capitals we read

"The Greek Government, in view of the infringement of its territorial rights on the Salonika Peninsula, has announced to the Bulgarians its intention of taking defensive measures. The Government at Sofia replied that the Bulgarian troops had halted their advance. As soon, however, as they saw the Greek troops reinforced, they opened upon them with artillery fire. The result was a serious engagement, for which the Bulgarians alone were responsible."

Bulgarian troops are not only massing in the neighborhood of Novibazar, reports the correspondent

of the *Manchester Guardian*, but are also surrounding Kossovo, which the Servians claim as part of old Serbia. The *Guardian* thinks that these circumstances give strong indications of the breaking out of another war, and to complicate matters, the Sofia correspondent of the *London Times* writes:

"I learn from a well-informed source that a definite territorial agreement exists between Serbia and Greece excluding Bulgaria from all the region west of the rivers Vardar and Bregalnitz. The Greek territory would extend to Lake Prespa, and Greece would obtain Salonika, Florina, Vodena, Kukusk, Seres, Drama, and Kavala, Serbia obtaining Struga, Ochrida, Monastir, and Perlepe."

Prompt action by the Powers is strongly urged by *The Times*:

"The psychological moment seems not far off when the Powers, if they wish to avert the catastrophe of another Balkan war, must display some energy in the assertion of their authority and give evidence of their determination to maintain peace at all costs. The prestige of the European Concert, which had fallen low of recent years, has largely been revived owing to the success with which latterly it has dealt with critical

problems, but that ponderous machine, which Lord Salisbury likened to a steam-roller, must occasionally quicken its pace in order to avoid being overtaken by events. The aspect of affairs in the Balkans is daily becoming more somber, and is

THE BALKAN BANQUET.

The appetite comes with eating—that is, if the dish, like that of Nikita, is not left empty. Even he has hopes of getting his teeth into some crumb or other.

THE REGION IN DISPUTE.

Showing the principal centers of conflicting claims and the new Turkish frontier. Turkey loses 60,000 square miles and has only about 5,000 square miles left in Europe.

already such as to justify serious misgivings. The most dangerous feature of the situation is the Serbo-Bulgarian dispute. Whatever concessions Bulgaria may be induced to make in other directions, it is certain that she will never abandon her claims to the districts in western Macedonia already assigned to her by her treaty with Serbia. On this

PEACE COMES TO TOWN.

SIR GREY—"Prithce, fair damsel, see to it that thou sit close, for I mind me that the last time we twain faced this way together thou didst have the mischance to slip off." —*Punch* (London).

point the whole nation is absolutely unanimous, from the King to the humblest peasant. The districts in question are the most thoroughly Bulgarian portion of Macedonia, and were recognized as such by the Turks in the creation of the Bulgarian Archbishoprics of Monastir, Ochrida, and Dibra. They were the scene of the Bulgarian insurrection of 1903, and have sent thousands of volunteers to the Bulgarian Army in the present war. It is felt that no Bulgarian Government could hand over these regions to another nation without dishonor, and should Serbia persist in occupying them, an armed conflict will become inevitable."

The same paper remarks elsewhere:

"The dangerous dispute between Bulgaria and Rumania was settled by the mediation of the Powers. The other controversies should also prove capable of adjustment if only dealt with in the right spirit. Serbia and Bulgaria have a definite treaty defining their future boundaries, any dispute as to the interpretation of which is to be referred to the arbitration of Russia. At present, however, they seem to be engaged in an attempt to solve their difficulties by independent negotiation. Bulgaria has also decided to send a special envoy to Athens to try to settle the questions arising out of the collision of Greek and Bulgarian troops. Should a direct settlement prove impossible of attainment, we hope that both parties will invoke the good offices of one or more friendly Powers."

A somewhat new face is put on the matter by a writer in the *London Standard*, who says:

"A deputation of Bulgarians is now on its way to London in order to lay before the Ambassadors' Conference a proposal that Macedonia shall be declared autonomous, as the only method of averting a calamitous conflict. A Greek deputation is also understood to be coming with the same object in view. The

proposal deserves consideration, tho it is a singular commentary on the fraternal disposition which was supposed to animate these Christian peoples in their contest with the Moslem Power. It reminds us that, with all their modern organization for war, the Southern Slavs have not so very long emerged from a condition of medieval disorder. Internecine tribal and racial combat has been the tradition of the Balkan lands for centuries, and perceptible remnants of primitive savagery still cling about these interesting nationalities."

Vienna is perhaps smiling at this Slav quarrel, and waiting an opportunity to step in and take part of the spoils. So St. Petersburg suspects. In all these complications Austria is regarded as the *tertius gaudens*, ready to pounce down, we are told, on any of them as she did on Scutari. Then comes in, says the *Novoye Vremya* (St. Petersburg), the old question of the Teuton and the Slav. Russia desires the unification of the Slavs as against Teuton Austria and Germany and will never interfere between Serb and Bulgar. To quote this Slav view of it:

"We think that Russian public opinion can not be either Bulgarophile or Serbophile. It must be Slavophile. And from the Slavophile point of view the first and fundamental problem which must be faced now consists in the preservation of the Serbo-Bulgarian alliance. To this fundamental political ideal all other considerations must be subordinated. . . .

"If Serbia engages in a quarrel with Bulgaria, she will perish, notwithstanding all her victories at Kumanovo. But the Bulgars will not fare any better. Serbia constitutes the last stronghold to resist the pressure of the Teutons. On the day Belgrade perishes it will be necessary to raise the mourning flag over the other capital of the Slavs—over Sofia. . . .

"All this—and a great deal more—Russian diplomacy can and must say at Sofia and Belgrade. Russian diplomacy has constantly been reproached for its exaggerated desire for peace. This tendency, in our opinion, was wrong in the dealings with Austria. But it is right and desirable in the Serbo-Bulgarian dispute. You wanted and still want to be promoters of peace; here is a great and responsible task before you. Here every word that is conducive to the strengthening of amicable relations will be needful, useful, necessary. . . .

"Carrying out this mission, Russian diplomacy will be in harmony not only with its peaceful tendencies, but also with its formal right. The Serbo-Bulgarian treaty states categorically that all disputes which may arise must be submitted to Russia for arbitration. This stipulation must not be in vain. The

A THORNY GIFT.

NIKITA TO EUROPE—"I restore Scutari to your charge—but on condition that peace shall be kept in the future Kingdom of Albania." —*Fischietto* (Turin).

reference to great and powerful Russia must give real results. For no occupation of Scutari by the Austrians will compare, in its political consequences, with a Serbo-Bulgarian conflict. This conflict must be prevented by all means."—*Translation made for THE LITERARY DIGEST.*

BULGARIA'S WASTE OF LIFE

A STANDING EXAMPLE of "how not to make war" is afforded by Bulgaria, says a military critic, who signs himself "Chasseur," in *Blackwood's Edinburgh Magazine*. He is referring to the loss of life revealed in the official returns recently issued at Sofia, showing that 330 officers and 29,711 men were killed; 950 officers and 52,550 men were wounded; 3,193 officers and men are missing. Of Bulgaria's population of 2,200,000, one male in every twenty-five must thus be dead, wounded, or missing. The same percentage of males in the United Kingdom would be about 920,000; in the United States it would mount to 2,000,000. Speaking of Bulgaria's reckless valor and incautious exposure of her battalions, he cites the fate of two Sofia infantry regiments:

"These two units had comprised, during the original mobilization, almost the entire *litterati* of the capital. The very architect responsible for the most modern of the buildings had marched away with a rifle on his shoulder. Judges, magistrates, lawyers, actors, shopkeepers, seized in the great tentacles of universal conscription, had been spirited away to the field of battle. What had been their fortune? There is a cruel fate in war, which may spare one unit and proscribe another. The Sofia regiments found the latter fate. Extermination was their rôle in their country's victories. In the early battles of the war they marched with the 'valor of ignorance' upon the enemy, and paid the price. They were recruited again to service strength. The boys from the lyceum and the apprentices from the works were hastened, a year before their time, into the barrack-square, and after three months' training were drafted to the front. Again a cruel fate lay in store for them. The lions from behind Tehataldja crept out under cover of the night-mists, and for a second time the *litterati* of Sofia were practically annihilated."

An editorial in *The Evening Standard* (London) contains the startling statement that waste of life in the Bulgar lines made the mortality of this war, considering its duration, unprecedented in the world's annals, and we read:

"It is not surprising to learn that the Bulgarians have lost 30,000 men killed in the war. It was obvious from the first that their reckless gallantry would result in heavy losses. The Turks 'fought like lions' before Adrianople, and, shockingly led as they were at Kirk-Kilisseh, on October 24, and a week later at Lule Burgas, they still managed to inflict heavy losses on their dauntless foes, who advanced in serried ranks against the fire of shrapnel. The attacking side always suffers most severely, as the Japanese found to their cost, and to the 16,000 men put *hors de combat* in the final assault on Adrianople must be added the terrible struggle for the possession of that Spion Kop in the Tehataldja lines on March 28 and 29, when the Bulgarians were finally driven off through the rain and mist, leaving 1,000 dead behind them. Our own losses in the Boer War were nothing like so heavy as those of King Ferdinand's troops in this campaign, and the total will indeed be appalling when to these figures are added the terrible mortality among the Montenegrins in the attacks on Mt. Tarabosh, and the Servian losses, which in the taking of Pristina alone were officially declared to be 'extraordinarily large.' The Russians in the whole of the Manchurian campaign scarcely lost more men killed."

TURKEY'S SALVATION IN AMERICA

IT IS A BLUNDER for Turkey to import "experts" from European nations to reorganize her Army, Navy, Treasury or any other branch of the Government. That is the upshot of a frank talk that occurred recently at Lausanne, Switzerland, between the proprietor of the *Ikdam* (Constantinople) and an official of the Government of Chile. The Euro-

pean nations are interested mainly in plundering Turkey, and to put the Government into the hands of European advisers is like putting the sheep-fold in charge of the wolves. After listening to these troubles of Turkey as related by the proprietor of the *Ikdam*, the Chilean official strongly urged the acquisition of advisers from the United States as the best solution, and the following dialog ensued, as reported in the Turkish daily:

CHILEAN: "Our military officers are educated in the Military Academy of North America, the best in the world. The United States is the only first-class Power against which we should be unable to defend ourselves if attacked by sea or land. We are all zealous patriots; proud of our Spanish blood."

TURK: "What degree of liberty have you?"

CHILEAN: "I assure you we are the freest people in the world. In religion we are Cath-

olics. Of religious controversy there is none. Liberty of worship is secured to all. Any infringement of this right is punished. You may come and build mosques if you like. Our commercial liberty is absolute, and we are growing richer thereby. I hear that Turkey also is a rich country."

TURK: "Turkey is rich, but we have not what you have. That is, commercial liberty. In this respect we are the slaves of Europe. For between the European states and ourselves there are treaties called capitulations which have made us slaves even in our own dominions. Without the consent of Europe we can not increase custom-house dues. This renders impossible the development of our own industries. Our most important export is rugs, and on those they impose heavy duties in their own countries. We demand 11 per cent. duty, but lose a third of that by all sorts of fraudulent dealing. The Balkan States are free to impose what duty they please. On the one hand, Europe demands of us reforms, yet on the other hand takes away our freedom of action. Especially in this matter of international trade, some states stir up sedition among our peoples and then force us to disburse the money loaned us in quelling sedition. The policy they follow with us is such as no people can live under, and then they complain of our backwardness in keeping the pace they set us."

CHILEAN: "Why is this?"

TURK: "It is a bitter truth, but as I understand it, Europe is absolutely unwilling to see Mussulman peoples make progress. They are troubled when they see Mussulman civilization gaining strength. The late war has proved this beyond the possibility of denial. 'You are strangers to our civilization,' they say, 'and we can't help you.' There are some Europeans more friendly, but missionaries and the press do all they can to make Europe loathe Mohammedans."

CHILEAN: "Why, then, do you not call upon Americans to help you? In your slavery under European tyranny and aversion the strong men of America are the men you need to help you accomplish the required reforms and renew your national life. Europe is old compared with North America, and trembles before

THE FUTILE SACRIFICES OF MONTENEGRO.

After the evacuation of Scutari: A Montenegrin widow and her son at the grave of the husband and father, who fell in the assault on the formidable fortifications around the city. A typical scene that must be multiplied by many thousands to approximate the actuality.

her. The English, the French, the Germans flatter North Americans, and there is South America, too, leaning on the North for moral support. In a few months the Panama Canal will be opened, and America will grow stronger. As the Chinese and Japanese become nearer to America, the importance of Europe will diminish. I tell you sincerely and earnestly that if you will appeal to America for men and for financial aid, your slavery to Europe will end. This is your sole resource. In the progress of civilized peoples you must share or perish. You are like a people that when a prophet appears, remains ignorant of his preaching and commands and spiritual guidance—that is, you remain strangers to the impelling stimulus of the civilization of the present age. You need men to guide you into and along the paths which this civilization has opened. Find these guides in America, and attain a new life. Then you may find friends in Europe, too. It is for the interest of both England and France to befriend you. Don't spend time in weeping over what you have lost. Find the reasons for the losses and let these stimulate you worthily to face the task and do the work in the immediate future to which your country and its peoples are calling you."—*Translation made for THE LITERARY DIGEST.*

JAPAN'S VIEW OF THE "WHITE PERIL"

WHILE THE ANGER and indignation of Japan against the United States on the question of citizenship and freehold possession of land seem to be held in check pending the efforts of diplomacy to reach a satisfactory solution, some of the leaders of thought in the Empire are not so calm about it and are uttering denunciation and imprecation against the white peoples who have proved so long a peril to the peace and prosperity of the rest of humanity. This white peril, says Professor Ryutaro Nagai, has long been the bane of the world, and in an elaborate article in the Government official publication, *The Japan Magazine* (Tokyo), he asks that Japanese immigrants be admitted to American citizenship. The white races are told "to put away their race prejudice and meet Japanese on equal terms in brotherly cooperation." He accuses the white people, and especially the Americans, of "the shallowest hypocrisy" in talking peace, while provoking war by their injustice, altogether forgetting that Japan is building some of the largest dreadnoughts in the world. Comparing the Japanese with other naturalized foreigners in the United States, the professor remarks:

"In morals, Japanese compare favorably with those nations to whose aggression and greed we have with reluctance been obliged to allude in the past.

"If our immigrants be honestly compared with those of other nations, we have nothing to fear. The average yellow immigrant entering the United States is found to possess a larger amount of capital than those from other countries. As nations the yellow people have never waged war of any kind on the white races, nor in any manner provoked them to jealousy or resentment. When we fight it is always in self-defense.

"The white races preach to us 'Peace! Peace!' and the futility and waste of armament expansion, while all the time they are expending vast sums on armies and navies and enforcing discriminations against us. Now, if the white races truly love peace and wish to deserve the name of Christian nations, they will practise what they preach and will soon restore to us the rights so long withheld. They will rise to the generosity of welcoming our citizens among them as heartily as we do theirs among us."

He points to the "unedifying" experience of "the war between America and Spain and the seizure of the South African Republics by the British." Moreover:

"In addition to this, most of the nations of Europe have been carrying on a system of appropriating the lands of the more uncivilized races too weak for self-defense. The extent of territory taken by the white races in this way during the nineteenth century totals nearly 10,000,000 square miles, embracing a population of about 135,000,000. And it will be seen that even within the comparatively short space of time since 1860, the white races have taken nearly 10,000,000 square miles of land and enforced their rule over many millions of the darker-skinned races. At the present moment we are treated to the exhibition of another civilized white group of races making war on Turkey, demanding the cession of some 400,000 square miles of territory, with millions of population.

"In the face of all this we have been treated by the white races in recent years to tracts, treaties, and newspaper articles galore, on what they call 'The Yellow Peril.' Surely, in comparison with the white races, there is no indication of any peril of yellow aggression at least."

This writer declares that settlers in Manchuria and Korea are better treated, whatever their color or nationality may be. The "arrogant and unfair" attitude of the white races finds no parallel among the Asiatic peoples. He predicts that this attitude, if not modified in the near future, will lead to danger:

"Viewing the matter seriously, for it is a very serious matter indeed, it ought to be said that every defiance of justice must in the long run provoke revolt. Just as in the labor world, if the capitalist is unfair in his division of profits and the laborers are ground down, they will not forever submit; so in the international world, unless justice obtains between race and race, there will be trouble.

"In the case under review, then, who will be responsible for the trouble? If one race assumes the right to appropriate all the wealth, why should not all the other races feel ill used and protest? If the yellow races are oppressed by the white races, and have to revolt to avoid congestion and maintain existence, whose fault is it but that of the aggressors?"

It is just such utterances as these with which Japanese journals are overflowing that provoke comments in the European press, of which the following quotation

from the *London Saturday Review* is a specimen:

"Just as the tension between Russia and Japan on the eve of the ensuing war was minimized in this country, so is the tension between the United States and Japan at the present moment. In the first place, it is assumed that the dispute between them can easily be settled by diplomacy; in the second place, that, should it prove otherwise, the omens are favorable to America. It is hard to find the grounds on which either of these assumptions is based. Japan, whose aim is to rank with the great Powers without any reservation, must insist on satisfaction or suffer in prestige, which she can not afford to do. To say that the issue is one which, should it involve her in war, would not entitle her to general sympathy, will not do. In standing up to the United States for the observance of the spirit of a treaty she is championing everybody's cause.

"But the source of the trouble lies deeper, and there is the danger. Both countries are obeying the primal instinct of man, and neither could, in the circumstances, act in any other way. The prize is supremacy in the Pacific. . . . The inevitable explosion between them will come the moment either thinks she is ready, and suddenly after the manner of all modern war."

SEEN' THINGS.

The "Japanese Peril," as it looks to California and British Columbia.

—*Saturday Night* (Toronto).

SCIENCE AND INVENTION

A WORLD WITHOUT END

IF IT IS A COMFORT to anybody to feel that life will exist forever on our planet, instead of lasting only a few million years after he is gone, he should by all means read the address of a German scientist who holds out this hope to the race. The eternity of matter has always been proclaimed by science, but she has denied the indefinite existence of the particular groups and systems of matter that we find in our own universe. Flammarion, in his "End of the World," enumerates many causes, any one of which, acting by itself, would bring the present world to its termination. It would seem to be only a question of which should achieve its end soonest. Now, however, comes Prof. Gustave Jaumann, of the Brünn Polytechnic School, Germany, and announces, in an inaugural address on "Modern Views of the End of the World," quite a different doctrine. The modern view, he asserts, is that the universe is stable. Disturbing forces act only to call into being other opposing forces which will restore the balance of things. Loss of heat is balanced by the inflow of gravitational energy. These views, he tells us, are the consequences of new theories of gravitation which take into account the fact that the gravitational impulse requires time to travel through space. Newton's law, on this view, holds exactly only for bodies at rest, whereas our system is in motion. We read, in a translation of Professor Jaumann's address into French, published in the *Revue Scientifique* (Paris, May 10):

"The anomalies of the field of gravitation are compensated, in cosmic space, according to a law analogous to that which governs the irregularities of distribution of temperatures in the mass of a conductor of heat. It is only for bodies at rest that Newton's law of effects at a distance follows exactly from the differential law of gravitation. The motions of the planets involve disturbances—a kind of accumulation, so to speak, of the field of gravitation in front of these bodies, giving rise to new gravitational forces which are added to the Newtonian forces.

"Altho very small indeed, these forces may be calculated with great precision; the most important of them is in the direction of the planet's motion and thus aids that motion. It increases with the planet's velocity and varies in inverse ratio to the distance from the sun. These new gravitational forces introduce into the movements of the planets disturbances that may be calculated without difficulty, and that determine the departures from Newton's law that have been noted above, such as abnormal rotations of the perihelion, abnormal accelerations, abnormal oscillations of the vertical, etc. Thus are explained all the peculiarities of gravitation, which Newton's law of action at a distance could not do. These new forces of gravitation, moreover, give to the planetary system a physical stability of practically unlimited extent. They preserve the present forms of planetary orbits, not only in spite of the considerable resistances due to friction with the cosmic ether, but despite huge accidental disturbances. If a perturbation of this nature, due, for instance, to the passage, near the solar system, of a fixt star at high speed, should completely change the form of the planets' orbits, the new gravitational forces would introduce into the elements of the orbits such variations that the orbits would return exactly to their present stable forms. Far from being fatal to us, the frictional resistance of the cosmic ether would appear only as a factor destined to give stability to the planetary orbits. The greater this resistance is, the more considerable are the new gravitational forces and the more obstinately will the orbits preserve their shapes, despite all disturbances. There can be no further question of the planets' falling into the sun. Instead of being unstable, instead of tending toward a more or less distant destruction, the planetary system thus finds itself established for a period which, estimated by notions of time that we are able to conceive, may be regarded as eternal."

These who hold this view of gravitation, Professor Jaumann

goes on to tell us, say that the reason why the sun has never cooled down is that it can not cool down, because the thermic energy which it is incontestably losing is restored by gravitational energy which it is continually absorbing from space in exactly equal measure. Waste of solar energy, he asserts, is not among the necessities of nature. The sun will not cool, he says; the human race will not perish. Its intellectual and physical evolution may continue indefinitely and will doubtless surpass anything that we are at present able to conceive. Truly, as Professor Jaumann claims, "a new philosophical conception." Will it make its way into universal scientific acceptance?—*Translation made for THE LITERARY DIGEST.*

OTHER WORLDS THAN OURS

UNANSWERABLE QUESTIONS are the most fascinating. And just because they have no answers, they can be discussed as long as we like. Proctor's lectures on astronomy, which were the first books that some of us read on the subject, contained an essay with the title that heads this article. Walter Maunder, an English astronomer, and the Abbé Moreux, a French one, have just published books about it. And any one of us is ready, at a moment's notice, to discuss, at home or club, the probability that we might send signals to Mars or Mars to us. The following is what Mr. C. de Kirwan, a French writer, has to say on the subject in a review of the Abbé Moreux's book, contributed to the *Revue des Questions Scientifiques* (Louvain, Belgium, April 20), entitled "Worlds: Present, Past, or Future." Says this writer:

"What we call the sun is really, as we know, but a modest unit among the millions and millions of other suns which we call 'stars' because of their immeasurable distance. Now, if each of these is attended, as ours is, by eight or nine planets, as is the case with the former suns Jupiter and Saturn, the field of possible life is immense, one might almost say infinite. Even if we admit only a single planet to each star as the seat of possible life, this field would still be almost unlimited, since the total number of stars is estimated at several hundred millions. It can scarcely be asserted that, among such a prodigious number of suns, our own is the only one privileged to gather life about it. . . .

"However, before founding conjectures on assumptions or analogies, we should look for light to the facts. Now, it has been shown by recent discoveries, extended in unexpected degrees by spectroscopy and photography, that the stellar systems are generally very different from that of which our planet forms a part; so much so that it is rather the exception than the rule for a sun to keep within its sphere of action several small, dark bodies, revolving in almost circular orbits.

"A very large number of stars which, to the naked eye or even with the aid of powerful telescopes, appear simple have been discovered to be double . . . by spectroscopic observation. In these binary systems the two members of the couple revolve, according to Newton's law, around their common center of gravity, but it is a remarkable circumstance that the satellite star always describes about its principal not a nearly circular orbit, but a very elongated ellipse, like that of our comets. And orbits of this kind are traversed not in one year, like that of our earth, but in a century, or sometimes in several centuries.

"It would appear more and more probable that the far greater part of the stars that we have hitherto thought to be simple are really double, which seems to exclude the possibility of retinues of burned-out stars circulating around these couples. Supposing the satellite star to become dark in course of time, the great eccentricity of its orbit and the extreme length of its revolution are still obstacles to the development of life on its chilled and solidified surface.

"We must thus recognize that the more astronomical science progresses—the greater its acquired knowledge of what is taking

place in heaven's immensity—the smaller become the chances of seeing physiologic life extended therein.

"Is this to say that we must absolutely refuse to admit the possibility of other habitable globes than ours in the universe? Assuredly not. 'If,' as the late Hervé Taye says, in his fine book on 'The Origin of the World,' 'it would be puerile to pretend that there could be only one inhabited globe in the universe, it would be just as untenable to assert that all these worlds are or should be inhabited.'

"Science, however, is powerless to tell us anything in this connection. To reason about it, we must leave its proper domain and enter that of philosophy, and of that part of philosophy named by Leibnitz 'theodicy,' which is nothing else but natural theology. Thus the great astronomer Father Secchi said:

"It seems to me absurd to look upon the vast celestial regions as uninhabited deserts; they must be peopled by intelligent and reasonable beings, capable of knowing, honoring, and loving their Creator; and perhaps these dwellers in the stars are more faithful than we to the duties imposed on them by their gratitude toward him who has brought them up from nothingness."

"The illustrious Roman astronomer doubtless generalized his fine thought a little too far. But so immense are the sidereal plains, so innumerable the suns that fill them, that there is enough to justify the noble aspirations that the learned astronomer has suggested to the heart of the pious. God moves in the immensity of space as in that of time; or rather, the immensity of time is as nothing in his eternity, as the powder of suns that fills space is but a trifle for his omnipotence."

"What we see of most of these ethereal worlds, thanks to the luminous courier that travels 180,000 miles a second, corresponds to a past already far distant; the present escapes us and the future is unknown."—*Translation made for THE LITERARY DIGEST.*

SCIENTIFIC DEMOCRACY

THIS IS WHAT our system of government time-signals by wireless telegraphy is called by an editorial writer in *Cosmos* (Paris, April 24). Fine wireless installations are scientific, but not necessarily democratic. When to a powerful plant we add governmental arrangements for the people at large to make use of it, then there results what this Frenchman aptly terms "scientific democracy." The particular object of his admiration is our liberal legislation, which permits any one having the necessary apparatus to receive wireless signals, tho it does not accord the same free permission to send them out. By the end of the current year, this writer thinks, more than 10,000 American clocks will be receiving time-signals from the government wireless station at Arlington, Va. Says this appreciative French scientist:

"The hour signal at noon has been sent by radiotelegraphy, especially for the use of ships finding themselves in American waters, since January, 1905, and we believe that the Washington observatory anticipated all other observatories of the world by at least two years in the regular transmission of the time by this method."

"When the powerful naval radiotelegraphic station at Arlington is ready, the American wireless time-signals may be received by ships through the greater part of the North Atlantic, the Caribbean Sea, and the Gulf of Mexico."

"Owing to the extremely liberal legislation now obtaining in the United States on the subject of wireless telegraphy, which permits every citizen to receive radiotelegraphic signals, it is expected that between now and the end of 1913 more than 10,000 American clocks will be equipped to utilize the

time-signals from Arlington, with the aid of very simple devices."

"Thus, to quote the report of the Washington Observatory, 'the public service organized by the Navy will find new and unexpected means of reaching the people.'

"Here, surely, we have good scientific democracy!"—*Translation made for THE LITERARY DIGEST.*

A GAGE TO FIND POISON IN THE AIR

A GAGE that will show the presence of poisonous gas in the atmosphere by as much as the proportion of one to ten thousand has been invented by a Frenchman named Guaseo, who has named it the "toximeter." It is described in *La Nature* (Paris, May 10) by G. Chalmarès, who notes that it is intended particularly to give warning of the presence of

carbonous oxid gas, otherwise called carbon monoxid—the gas that burns with a blue flame in a freshly made fire of anthracite. The greatest care, Mr. Chalmarès remarks, must be taken, in the installation of a heating or lighting plant, to avoid the production of this substance. He writes:

"Other gases, such as carbureted hydrogen and acetylene, happily betray their presence by their odor long before a fatal dose is reached."

"It is not so with carbon monoxid, which has no odor and is very poisonous, even in very slight quantities. For this reason many attempts have been made to discover means to make its presence known in air intended for respiration, before fatal consequences have been reached. Chemical reactions have generally been employed—a delicate process, sometimes too sensitive, necessitating manipulations which, altho simple enough, can not always be performed."

"Mr. Guaseo has conceived the idea of utilizing the property posessed by platinum sponge of becoming rapidly heated in the presence of carbon monoxid, which it absorbs in large quantities. This property has been practically utilized for several years for lighting gas-jets and for a long time past in the hydrogen briquet."

"He has thus invented a device necessitating no manipulation. It is formed of a Leslie's differential thermometer, which, as is well known, is a U tube ending in two bulbs full of air; a mercury column or a section of colored liquid is displaced in the tube at the slightest difference of temperature between the two bulbs. Mr. Guaseo fastens to one of the bulbs ten pastilles of platinum sponge; the corresponding side of the tube is covered and the other branch is graduated. When the apparatus is in a medium containing carbon monoxid, there is a difference of temperature, revealed almost instantly by a movement of the column, which is greater and more rapid the more of the poisonous gas there is in the atmosphere. Evidently other gases, illuminating gas, for instance, will have the same action, but they will also betray themselves by their odor. It is thus for carbon monoxid that the indications of the toximeter will be valuable. The [French] Inspector-General of Mines has presented the device to the Academy of Sciences, after having experimented successfully."

"On his part, Mr. Guaseo has made numerous experiments from which he finds that the movement of the gage in the U tube is about half an inch for the proportion of $\frac{1}{10,000}$ of carbon monoxid, which makes it possible to use graduations that will show $\frac{1}{10,000}$ of the toxic gas."

"In a special model, the inventor has used mercury for the indicating column and has placed a platinum contact-point in the tube. This closes an electric circuit and operates either a bell or an incandescent lamp, thus giving notice, even at a distance, by sonorous or luminous signal, that there is danger from the abnormal presence of poisonous gas."—*Translation made for THE LITERARY DIGEST.*

GUASEO'S POISON-GAGE.

WASTEFUL ELECTRIC FANS

THE POSSIBILITY of running an electric fan too fast is pointed out by Prof. H. B. Brooks, in an article contributed to *The Electrical World* (New York, May 17). Beyond a certain speed the fan, instead of driving the air forward, simply stirs it up, using its power wastefully. We are reminded that the principal purpose of an electric fan is to increase the flow of air in contact with the body so as to promote evaporation of the perspiration. The result is a cooling of the body and a sense of comfort on a hot summer day. But, it appears on investigation:

"When the power consumed by an ordinary small fan-motor is measured as the speed is increased, it is found that, deducting the losses in the motor, the power increases substantially as the cube of the speed until a certain critical speed is reached, depending on the dimensions and design of the fan, when the power increases only slightly with the speed. This means that up to the critical speed the fan, of ordinary good design, moves the air forward, screw-fashion, in direct proportion to the speed of rotation, but with a power necessarily proportional to the speed cube, but when the critical speed is reached, the air column, passing through the fan, 'breaks' and churning commences. At higher rotary speeds the fan simply churns harder, but adds little to the critical speed of the emitted air.

"But the mere net efficiency, or ratio of air-power delivered to electric power consumed, is not all of the story. The net efficiency of a fan may be high, and yet the machine may be relatively unsatisfactory for particular cases of service. Some fans are so designed that they can throw a small jet or column of air with considerable velocity to a great distance. Others are so designed that they can throw a large jet or column of air to a lesser distance. The first type may be compared to a rifle and the latter to a shot-gun, both using the same powder charge. Each type has its own advantage in particular cases. The question whether the fan has its axis fixed or moving in space has an obvious bearing on the relative advantage of the two types. The case is like that of an incandescent lamp supplied with different types of reflectors. With a condensing reflector the

A SUBMARINE SLED

THE NOVEL SENSATION of riding in an automobile, or rather in a sleigh, on the floor of the ocean, or of moving in three dimensions, as in an aeroplane, but in water instead of air, is provided by a newly devised apparatus known as the *Unterseeschlitten*, or submarine sled, which we find described in the *Technische Monatshefte* (Stuttgart). This

DIVER EMERGING ON SUBMARINE SLED.

apparatus, which is driven by compressed air or oxygen, is intended for divers. It does away with the use of the tube which ordinarily connects the diver with the outer air, and it also permits perfect freedom of motion, so that he is able to examine, in a given time, a far larger area of the sea bottom than was formerly the case. The submarine sled is taken out by a boat to the desired locality and then descends by means of its vertical rudder or by alteration of the air-pressure in its tanks. There is telephonic connection between the diver on the sled and an observer, or signal-man, in the boat, who is thus able to direct the former's movements advantageously. It is confidently expected that the device will render great service in future naval wars, in addition to its obvious uses in time of peace. As we read:

"The object of the submarine sled, in the first instance, is quick change of base on the part of the diver, as is necessary in the search for and recovery of lost torpedoes, in the location of submarine mines, and in the service of torpedo-batteries.

"Of like importance is this sled for the location of sunken wrecks. With the newest apparatus the diver is in a position to investigate a large area of the ocean-bed in depths extending even to 120 feet. . . . The diver can mount the sled on board the boat if he chooses and be lowered to the water by means of an inclined plane or railway or a ship's crane.

"Upon two long sledge-runners, which are curved in front and unite in an elliptical bow, are placed the diver's seat and a shell-shaped 'guard.' On each side is a tank for compressed air, which is stored in 'built-in' steel cylinders.

"The vertical rudder is placed inside the bow, the horizontal rudder at the stern. Steering is done from the driver's seat by means of levers. The inflow and outflow of the air in the tank are regulated by the use of the free exit-valve.

"So long as the tanks are filled with compressed air, the sled (with the diver on board) swims in the upper portion of the water. In this position it can move forward with perfect ease. To descend to the bottom, it is necessary either to let out some of the air in the tanks or to depress the rudder. The sled will instantly descend and reach the bottom without a jolt. Upon renewing the compressed air in the tanks, or raising the rudder, the craft rises to the surface.

"During a state of rest at the surface or on the ocean-bed, maneuvering is done by filling the air-tanks or letting the air escape. Hence compressed air is not required during the trip unless great depths are to be penetrated or left. The duration

SIDE VIEW OF THE SUBMARINE SLED

lamp is enabled to throw a powerful illumination over a small area at a considerable distance. With a diffusing reflector it is able to scatter a weaker illumination over a larger area. Each has its own proper applications."

of the trip depends on the fact that the capacity of the potash cartouche used for absorbing the carbon dioxide exhaled by the diver is exhausted in about three hours. The diver must then ascend to have a fresh cartouche inserted. . . .

"Disturbance of the diver's comfort by variations of pressure is not to be feared even when the sled is being rapidly towed. A shell-shaped guard behind the diver's seat has the effect of keeping the seat in calm water, while the spiral upward-rising brake runs out behind the wall of the guard.

"For night work there are submarine lamps or search-lights fed by a cable from above."

Jolts or bumps against stones or roughnesses of the bottom are prevented by the inertia of the water, and the machine

ten-minute exposure. The result is that a heavy smudge appears before the words 'twenty-four,' clearly showing that something has been erased and something else written in. The explanation is that in removing part of what has been written a stain was left, invisible to ordinary light, but shown clearly by means of the ultra-violet rays.

"Dr. Wood's discovery will be of especial advantage in discovering changes made in documents, such as wills, where it is desired that the knowledge that anything is suspected and that an investigation is being made be avoided. It is now possible to discover if a certain sort of chemical has been used by making tests with other chemicals, but the result of these tests is to change the document. Dr. Wood's method makes absolutely no change in the document itself, but the change, if any has been made, shows plainly on the photograph taken by his method."

GREEK AS A SCIENTIFIC STUDY

THAT the earliest training in modern scientific method and spirit ever offered in Yale University was given in the freshman Greek class room was asserted by President Arthur T. Hadley, of Yale, in an address before the National Academy of Sciences, printed in *Science* (New York, May 23). The professor of Greek at Yale at this time was President Hadley's father, Prof. James Hadley. President Hadley's statement was made in illustration of an assertion in his address that it is the method

rather than the subject that makes a course valuable—that Greek may furnish training in science under a proper teacher, while chemistry or physics may fail to do so. He said:

"You have been good enough, Mr. President, to refer to my father's connection with the [National] Academy, and I for my part am glad to take the opportunity to say that he regarded his election to membership in this body as the greatest honor he ever received. I feel sure, therefore, that I shall be pardoned if I illustrate the point I have just made by reference to my father's teaching.

"Fifty years ago the one course in the academic department of Yale College where modern science was really taught was the course in freshman Greek. For my father, tho he had the highest enjoyment of classical literature, was by training and temperament a philologist; and he taught the freshmen who came under him to take Greek verbs to pieces and compare and observe their parts and put them together again, and see what principles were involved in the analysis and synthesis, exactly as the botanist might have done with his plants or the chemist with his elements.

"In those days chemistry and physics were taught in Yale College, as distinct from the Sheffield Scientific School, solely by text-books and lectures. Philology was taught by the laboratory method; and for that reason the freshman Greek course was a course in modern science and meant that to the pupils. The courses in chemistry and physics widened the boys' knowledge of facts and doubtless encouraged many of them to get scientific training for themselves afterward; but the course in freshman Greek was a course in science, because the boys learned to do the things, both easy and hard, which are the heritage of the man of science. Science is not a department of life which may be partitioned off from other parts; it is not the knowledge of certain kinds of facts and the observation of certain kinds of interest, as distinct from other facts and other interests; it is a way of looking at life and dealing with life; a way of finding out facts of every kind and dealing with interests as varied as the world itself,

Where each for the joy of the working, and each in his separate star,
Shall draw the thing as he sees it, for the God of things as they are."

moves as lightly and answers its rudder as readily in its element as the aeroplane does in the air. It is even suggested that submarine sledding may become a popular sport!—*Translation made for THE LITERARY DIGEST.*

AN ULTRA-VIOLET DETECTIVE

A WAY TO DETECT the "raising" of checks by photography with ultra-violet rays has been discovered by Prof. R. W. Wood, of Johns Hopkins University, whose success in using the extreme upper and lower rays of the spectrum for photographic purposes has already been noted in these columns. *The Scientific American* (New York, May 24) believes that Dr. Wood has put the forgers out of business. Skilful check-raisers use a chemical ink-eraser to remove portions of the written matter upon a check and then insert what they want in a handwriting that closely imitates the original. The chemical eraser leaves no trace of what has been written and makes no change in the texture of the paper. This, of course, refers to what may be seen with the human eye, with or without optical aid:

"However, Dr. Wood has found that the change may be detected by photographing the suspected check by means of ultra-violet rays. He has a piece of paper on which the words 'Twenty-four hundred dollars' appear. The words were originally 'Twenty-four dollars.' The change was made by an expert who had erased the word 'dollars' and the line after the 'twenty-four' with a chemical ink-eraser and had written the words 'hundred dollars' in a manner so perfect that it was impossible to discover any change in the line, even with the aid of a high-power magnifying-glass. Dr. Wood took the slip of paper and put it under his ultra-violet rays and photographed it, giving it a

WINTER VIEW OF THE DEHORNED TREES.

Their glory has departed, never to return, and in a short time the Yard will be shadeless.

DOOM OF HARVARD'S ELMS

THE GLORY of "The Elms of Dear Old Yale" is mostly a thing of the past, except in song and story. Some were cut down to make room for new buildings, others have fallen victims to moth and worm. And now, apparently, it is Fair Harvard's turn. Her elms, tho not, perhaps, as famed as New Haven's, were still glorious, but she has been unable to save them. Frederick E. Olmsted tells, in *Country Life in America* (June), how the elms on Boston Common have been saved, and hints that a famous university might have commanded the necessary interest, skill, and cash to do as much for her own dooryard. Apparently, however, it is now too late. He says:

"Half a dozen years ago the elms in the Harvard Yard were remarkably beautiful trees. To-day, with a few straggling exceptions, they stand crippled, withered, and dying, lingering for the ax. The Yard has lost its glory.

"The story of their downfall is typical of the struggle for existence which many shade-trees in the vicinity of Boston have made in recent years. The fight has been not against a single enemy, but against many. The gipsy and brown-tail moths, the elm-leaf beetle, the elm-bark borer, and the leopard-moth followed one another in quick succession as if leagued in a well-planned campaign of destruction, striking repeated blows without allowing intervals for recovery.

"It is probable that if the elms had been able to draw from the soil the nutriment needed to restore their weakened vitality, many of them might have survived. Unfortunately, however, the Harvard Yard is little better than a gravel-pit covered with a few feet of dry, closely packed sand, an impoverished soil through which the rains escape as through a sieve. While the insect attacks were at their worst the rainfall was exceptionally low for several consecutive seasons, making a combination of unfavorable conditions which was remarkable.

"In spite of all this, and in the light of present knowledge, is it not possible that a large number of the old trees might have been saved? Did the University fully realize the seriousness of the situation? Did it apply remedies promptly, systematically, and vigorously? When one remedy failed, did it experiment with others in a way that was worth while? Did it spend money ungrudgingly and in a manner proportionate to the great esthetic values at stake?

"When the gipsies, brown-tails, and elm-leaf beetles descended for their more recent academic feast, successful protective measures against their ravages had been in practical use for some time. The eggs of the gipsy and nests of the brown-tail are visible to the eye and accessible to treatment for destruction. The caterpillars, moreover, feed upon the leaves and may be prevented from doing serious damage by thorough and repeated spraying. The trees in the Yard were successfully protected against the gipsy and brown-tail, but work against the elm-

leaf beetle was tardy, insufficient, and at times entirely omitted. The possible damage even from this insect alone was not fully realized. A feeling was evident that the elms had always been there and always would be there in spite of various setbacks, and perhaps this feeling was responsible for the failure to supply adequate treatment with the most improved equipment, even if such a course proved expensive. Not only in this instance, but also later on in the fight, the University seemed reluctant to spend the money needed for thoroughgoing work."

But then came the leopard-moth, a much more dangerous invader than the gipsy and brown-tail, for it does not work in the open. It was fought by amputating infected branches, but this was carried so far as not only to mutilate the trees, but to sap their vitality. On Boston Common, meanwhile, conditions were very similar. Here powerful sprays checked the leaf-eating swarms before much damage had been done, and study of the leopard-moth's habits showed that 98 per cent. of the borers could be killed by clipping off little twigs, with no wholesale amputation. Soil renovation was also carried on to a large degree. Altogether Boston has spent, so far, nearly \$8,000 on the preservation of the elms on her Common alone. To quote Mr. Olmsted again:

"Is it worth while? . . . Is it unreasonable to add \$7,650 to the capital expense in order materially to increase the value of the land for the purpose desired? What would be the recreative value of a Boston Common strip of trees? What would the alumni of Harvard University give at the present time if they could be reasonably sure of restoring the elms of the Yard to their former glory? Would they quibble over the amount? As conditions are to-day, we may hope again to see trees of size about the college grounds, in from fifty to one hundred years. . . .

"Is it not rather odd that an American municipality, a body not scientifically governed, should bid fair to find the practical solution of a technical problem which Harvard University, with the best of experts available, gave up? At Cambridge was it lack of far-sighted policy, poor organization, drifting responsibility, or too many cooks? Perhaps a little of each.

"It seems fair to assume that something is wrong, for a university ought to be able to plant and grow trees successfully, if nothing more. In the spring of 1912 numerous young red oaks were set out about the grounds to take the place, in time, of the departing elms. It might be questioned whether their roots were in proper shape upon arrival. However that may be, it is beyond doubt that the trees were left to shift for themselves the following summer, that they suffered severely from drought, were damaged slightly by our old friend the leopard-moth, and that now by far the greater number of them are dead and gone. Is there not some room for improvement in the tree business at Harvard University?

"In conclusion, it is hardly necessary to point the moral. There is a practical lesson here for all who own shade-trees, whether individuals or communities."

LETTERS AND ART

A PEACE BOOK SUPPRESSED BY THE KAISER

SO VIVIDLY are the horrors of modern warfare depicted in "The Human Slaughterhouse," by Wilhelm Lamszus, that the Kaiser, fearful lest Germany's spirit of militarism should be undermined, has prohibited the sale of the book within the Empire, and the Crown Prince himself has written and published an antidote in the form of a handsome volume, setting forth in eloquent phrases and glowing pictures the charms of a soldier's life. Altho Mr. Lamszus's book was suppressed within three months of its date of publication, it had already circulated to the extent of a hundred thousand copies, and is still continuing its career beyond the German boundaries. The author was further reproved by removal from his post as a master in one of the great German public schools, but he has since been reinstated. Modern conditions, argues Mr. Lamszus, have reduced war to an inhuman conflict between man and machinery,

blood leapt hot from its neck, I could see nothing but the big eye, how it enlarged in its head to a fearsome stare, until at last it turned to a dull glaze.

"All the bodies lying about here, as if bleating up to heaven, have got these glazed eyes; they are lying as if they were outstretched in the abattoir. Well, to be hit and to fall down dead—there's nothing to make a fuss about that! But to be shot through the chest, to be shot through the belly, to burn for hours in the fever of your wounds, to cool your mangled body in the wet grass, and to stare up into the pitiless blue heavens because your accursed eyes go on refusing to glaze over yet—

"I turn away from them. I force myself to look past these mocking, grotesque *poses plastiques* of Death."

The narrator's baptism of fire comes when his regiment is ordered to charge a wood defended by machine-guns. We read:

"But as we rise to our feet the machine-guns in the woods begin to buzz and to rain lead into our ranks, until right and left of me men yelp and drop twisted and tumbled to the ground.

"Down! Rapid fire!"

"The line is prone, and again we are blazing desperately into the wood, and can catch no glimpse of our enemy. Never a single arm raised against us, never the eye of a single man to challenge us. The wood, the green wood, is murdering us from afar, before a single human face comes in view.

"And while to the right and left of me the rifle fire chatters incessantly, the grim mockery of it maddens my blood, and makes me see red before my eyes. I see scale-armor and visors . . . high in their stirrups the knights burst blazing out of the wood, and I, a reckless horseman of the past, I leap into the saddle—my broad sword flashes clear and kisses the morning breeze—and now up and at them like a thunderbolt. Then eyes are flashing into mine and hands are raised for the *mêlée*—and stroke for stroke, breast to breast, the pride of youthful, virile strength

. . . Ha-ha-ha-ha! What has happened? Where have horse and rider vanished? Where is my sword? We are not even charging men. Machines are trained on us. Why, we are only charging machines. And the machine triumphs deep into our very flesh. And the machine is draining the life-blood from our veins, and lapping it up in bucketfuls. Those who have been hit are already lying mown down in swathes behind us and are writhing on their wounds. And yet they are racing up behind us in their hundreds—young, healthy human flesh for the machines to butcher.

"Up! Get on! At the double!"

"The gallant young subaltern dashes on . . . he is waving his sword above his head recklessly . . . a picture for a painter. I am rushing after him . . . his cheer in my ears . . . then the gallant vision begins to sway . . . the sword flies from his grasp—the subaltern stumbles and falls face forward in the short, stiff stubble . . . then I race past him. . . I can hear nothing except the uncanny buzz coming out of the wood. . . I literally feel how the lead is splashing into our ranks, how men are breaking down to the right and left of me. . . 'Down! Rapid fire!' . . . I throw myself on my face, my rifle at the ready. . . Why does the order fail to reach us? No shout comes from the subaltern, none

MAKING WAR ATTRACTIVE.

Full-page illustration from the book written by the German Crown Prince to stimulate the war-spirit in Germany and counteract the peace ideas of such works as the one the Kaiser suppresses.

thereby stripping it of its glory and terribly increasing its horror. As a foreword to the English edition puts it, "the romance and glamour of warfare in the past are grinning lies when transferred to latter-day warfare, where long-drawn fronts of flesh and blood are opposed to machines of precision and the triumphs of the chemical laboratory." The book takes a soldier through a campaign. His regiment reaches the front on the heels of a battle, and his first impression of the battlefield with its unburied corpses is thus recorded:

"They have grown rigid in death in grotesque postures, as if Death had been trying to pose figures here. There are certain schemes of Death that are always recurring. Hands outstretched—fingers clawing the grass—fallen forward on to the face—that fellow over there lying on his back is holding his hand prest tight against his abdomen as if he were trying to stanch the wound.

"In the country I was once watching them killing sheep. There a beast lay, and was waiting for the butcher, and as the short knife cut through its windpipe and jugular vein, and the

from the non-coms. . . . the nearest man a good twenty paces away . . . and then one other . . . only we three. . . .

"The first line is lying shot down in the stubble . . . what's the next thing? The ground becomes alive behind us . . . and clattering, panting, and shouting . . . and again the wood rumbles sullenly . . . there they are, lying flat, breathing hard . . . never a word . . . rifle to the ready . . . and shot after shot . . . those are the sixth and seventh companies . . . they have filled up our gaps.

"Up, up! At the double!"

"The head is plunging on, the body after it, into the zone of bullets, and dashing forward with eyes fixed greedily on the ground to spy out the nearest molehill when we fling ourselves down. And when the excited 'Down!' o'erleaps itself, we, too, tumble down as if we had been swept away. And look, it is advancing to meet us, that murderous wood . . . 'Up! At the double!' . . . who can tell whether he has been hit or not? . . . behind there, out of the undergrowth—that's where it came from . . . that's where the streak of bullets flashed . . . there between the white larch trunks the beam of lead leaped out to meet us . . . over there, behind that green wall, that's where Murder is sitting, and shooting our arms and legs away from our trunks."

This charge, however, ends in victory. Later comes a ghastly picture of a rout, and then the description of a night attack over ground that has been mined. The signal for the assault has sounded, and the soldiers, in closed ranks, "are rolling with a roar over the field," when the explosion comes—

"The earth has opened her mouth . . . lightnings, crashes, and thunderings, and the heaven splits in twain and falls down in flame!—the earth whirls upward in shreds . . . men and the earth blaze and hurtle through the air like catharine wheels . . . and then . . . a crash, a maddening uproar, strikes us full in the chest, so that we reel backward to the ground, and half-consciously struggle for breath in the sand . . . and now . . . the storm is over . . . the pressure of the atmosphere relaxes off our chest . . . we breathe deep . . . only scattered, dancing flames now and squibs . . . fireworks . . .

"There rises a noise of screams and yells, an uproar so unnaturally wild and unrestrained that we cringe up closer to one another . . . and, trembling, we see that our faces, our uniforms, have red, wet stains, and distinctly recognize shreds of flesh on the cloth. And among our feet something is lying that was not lying there before—it gleams white from the dark sand and uncurls . . . a strange dismembered hand . . . and there . . . and there . . . fragments of flesh with the uniform still adhering to them—then we realize it, and horror overwhelms us.

"Outside there are lying arms, legs, heads, trunks . . . they are howling into the night; the whole regiment is lying mangled on the ground there, a lump of humanity crying to heaven."

More poignantly terrible are his descriptions of individual instances of mutilation and agony which emerge from the general background of horror—so much so, in fact, that we refrain from quoting them. Yet according to a writer in the *New York Times* (from which we take these extracts), the story does not owe any of its effect to exaggeration. Indeed, we are assured by Alfred Noyes, who supplies a preface to the American edition, that "it is appallingly reticent, and for every touch of horror in its pages the actual records of recent warfare could supply an obscure and blood-stained mass of detail which, if it were once laid before the public, would put an end to militarism in a year."

WHAT IS NEEDED FOR NOVEL-WRITING

SOMETHING OF AMATEURISHNESS and much of autobiography, according to Mr. Arnold Bennett, are among the attributes which separate the work of the really great novelists from the output of those of lesser rank. Supremacy in the art of novel-writing has almost never gone hand in hand with a supreme mastery of technic. Indeed, "with the single exception of Turgenev, the great novelists of the world, according to my own standards, have either ignored technic or have failed to understand it." And since a writer can invent plots and select characters from life, but "can not

THE "POMP AND CIRCUMSTANCE" OF IT.

Another military scene from the Crown Prince's work, which was treated in our issue for May 24, page 1169.

invent psychology," when it comes to the vital tissue of his creations "he must dig it out of himself"—a process which is possible because in the personality of a born novelist "there is something of everybody."

This age has temporarily set the novel higher than any other art form, says Mr. Bennett, and "notoriously the novelist (including the playwright, who is a subnovelist) has been taking the bread out of the mouths of other artists." In short, "there is not any aspect of the interestingness of life which is not now rendered in prose fiction—from landscape-painting to sociology—and none which might not be." Wherever the novel ought to be ranked among the great traditional forms of art, he says, "it has, actually, no rival at the present day as a means for transmitting the impassioned vision of life." It is the form to which the artist with the most inclusive vision instinctively turns, because "it is the most inclusive form, and the most adaptable."

Mr. Bennett defines the novelist as "he who, having seen life, and being so excited by it that he absolutely must transmit the vision to others, chooses narrative fiction as the liveliest vehicle for the relief of his feelings." Therefore in considering his equipment "two attributes may always be taken for granted"—namely, "the sense of beauty" and "a passionate intensity of vision." Without these he would not be moved to write. But these are not enough. The attribute "whose absence renders futile all other attributes" is "fineness" or nobility of mind. On this point Mr. Bennett—writing in *The Metropolitan* (New York) for June—goes on to say:

"A great novelist must have great qualities of mind. His mind must be sympathetic, quickly responsive, courageous, honest, humorous, tender, just, merciful. He must be able to conceive the ideal without losing sight of the fact that it is a human world we live in. Above all, his mind must be permeated and controlled by common sense. His mind, in a word, must have the quality of being noble. Unless his mind is all this, he will never, at the ultimate bar, be reckoned supreme. That which counts, on every page, and all the time, is the very texture of his mind—the glass through which he sees things. Every other attribute is secondary, and is dispensable. Fielding lives unequalled among English novelists because the broad nobility of his mind is unequalled. He is read with unreserved enthusiasm because the reader feels himself at each paragraph to be in close contact with a glorious personality. And no advance in technic among later novelists can possibly imperil his position. He will take second place when a more noble mind, a more superb common sense, happens to wield the narrative pen, and not before. What undermines the renown of Dickens is the growing conviction that the texture of his mind was common, that he fell short in courageous facing of the truth, and in certain delicacies of perception. As much may be said of Thackeray, whose mind was somewhat incomplete for so grandiose a figure, and not free from defects which are inimical to immortality."

Turning to the subject of technic, Mr. Bennett makes the remarkable suggestion that "great writers of fiction are by the mysterious nature of their art ordained to be 'amateurs':"

"With the single exception of Turgenev, the great novelists of the world, according to my own standards, have either ignored technic or have failed to understand it. What an error to suppose that the finest foreign novels show a better sense of form than the finest English novels! Balzac was a prodigious blunderer. He could not even manage a sentence, not to speak of the general form of a book. And as for a greater than Balzac—Stendhal—his scorn of technic was notorious. . . . And as for a greater than either Balzac or Stendhal—Dostoevsky—what a hasty, amorphous lump of gold is the sublime, the unapproachable 'Brothers Karamazov!' Any tutor in a college for teaching the whole art of fiction by post in twelve lessons could show where Dostoevsky was clumsy and careless. What would have been Flaubert's detailed criticism of that book? And what would it matter? And, to take a minor example, witness the comically amateurish technic of the late Mark Rutherford—nevertheless a novelist whom one can deeply admire."

"And when we come to consider the great technicians, Guy de Maupassant and Flaubert, can we say that their technic will save them, or atone in the slightest degree for the defects of their minds? Exceptional artists both, they are both now inevitably falling in esteem to the level of the second-rate. . . ."

"I begin to think that great writers of fiction are by the mysterious nature of their art ordained to be 'amateurs.' There may be something of the amateur in all great artists. I do not know why it should be so, unless because in the exuberance of their sense of power, they are impatient of the exactitudes of systematic study and the mere bother of repeated attempts to arrive at a minor perfection. Assuredly no great artist was ever a profound scholar. The great artist has other ends to achieve. And every artist, major and minor, is aware in his conscience that art is full of artifice, and that the desire to proceed rapidly with the affair of creation, and an excusable dislike of recreating anything twice, three, or ten times over—unnatural task!—are responsible for much of that artifice. We can all point in excuse to Shakespeare, who was a very rough-and-ready person, and whose methods would shock Flaubert."

Another interesting point is raised by Mr. Bennett, when he uncompromisingly declares that "first-class fiction is and must be in the final resort autobiographical." As he says:

"The novelist may take notes of phenomena likely to be of use to him. And he may acquire the skill to invent very apposite illustrative incident. But he can not invent psychology. Upon occasion some human being may intrust him with confidence extremely precious for his craft. But such windfalls are so rare as to be negligible. From outward symptoms he can guess something of the psychology of others. He can use a real person as the unrecognizable but helpful basis for each of his characters. . . . And all that is nothing. And all special research is nothing. When the real intimate work of creation has to be done, and it has to be done on every page, the novelist can only look within

for effective aid. Almost solely by arranging and modifying what he has felt and seen, and scarcely at all by inventing, can he accomplish his end."

"An inquiry into the career of any first-class novelist invariably reveals that his novels are full of autobiography. But as a fact, every good novel contains far more autobiography than any inquiry could reveal. Episodes, moods, characters of autobiography can be detected and traced to their origin by critical acumen, but the intimate autobiography that runs through each page, vitalizing it, may not be detected. In dealing with each character in each episode the novelist must for a thousand convincing details interrogate that part of his own individuality which corresponds to the particular character. The foundation of his equipment is universal sympathy. And the result of this (or the cause—I don't know which) is that in his own individuality there is something of everybody. If he is a born novelist he is safe in asking himself when in doubt as to the behavior of a given personage at a given point: 'Now what should I have done?' And incorporating the answer! And this in practice is what he does. Good fiction is autobiography dressed in the colors of all mankind."

THE POET LAUREATE

SINCE THE NEWS of Alfred Austin's death is accompanied by word that King George regards the office of Poet Laureate as useless and out of date, newspaper surmises as to the identity of Mr. Austin's successor are generally prefaced with the suggestion that he may not have one. Thus the laureateship, which had not made any very imperative claims upon the public's attention during the seventeen years of Mr. Austin's incumbency, now gains a new interest from the rumors that it is to be abolished. A very prevalent misconception of the real meaning—or meaninglessness—of the office, is corrected by a writer in the *New York Evening Post*, who points out that because "great poets have also been poet laureates"—Dryden, Wordsworth, and Tennyson are on the list—the idea is still more or less common that the laureateship is "a certificate of poetic pre-eminence," whereas, in reality, "it is a gift of the Crown which does not necessarily denote anything more than the expected loyalty of the recipient." Even when first instituted, says the *New York Tribune*, the office was something of an anomaly, and in modern times it had become also an anachronism, an official singer at the royal court being "as much out of place in the nineteenth century as an official jester would have been."

In the death of Alfred Austin, *The Tribune* goes on to say—

"England has lost one of her most zealous and devoted patriots, journalism has lost a competent and indefatigable craftsman, and society has lost an agreeable and estimable member. The world of letters has lost an industrious and often interesting writer, of whose pen it may confidently be said that if it was not always guided by the loftiest genius, it was never made the tool of baseness or of an unworthy cause."

"It is probable that he would himself have been most ready to confess that his demise would not be an irreparable loss to poetry. His many volumes of verse contained some pleasing compositions, but none of the first rank. Of the seventeen consecutive poets laureate, and of the perhaps twice as many who were at times thus known since Henry III.'s first *Versificator Regis*, he was neither the most eminent nor the most obscure. Yet it may be that his appointment to the place was the most fitting that could have been made."

It was Mr. Austin's misfortune, remarks the *New York World*, "to lose in public esteem by the assumption of a public honor which made him too conspicuous." It was his further misfortune to succeed Alfred Tennyson, and in spite of the four years which were allowed to elapse between Tennyson's death and Austin's appointment, he could not escape comparison with his illustrious predecessor. Altogether, "something of injustice has been done him," thinks the *New York Sun*. In the *New York Globe* we read:

"It can not be said that the late Poet Laureate disappointed

popular expectations. He got the laurel by no natural selection, but rather as a reward for his persistent defense of things as they were and might be under conservative administration. The aspirations of his day, save as they reflected the narrow provincial pride of some of his countrymen, touched no responsive chord in his heart. Of pomp and rank he sang in fittingly stilted phrase. For the deep emotions of the people he had neither sympathy nor power of utterance. His lines on the death of Edward VII. were no less uninspired than his unfortunate attempt to glorify the Jameson raid.

"Yet Alfred Austin was not without distinction. Many of his critical essays were trenchant in style if unsound in substance, and his prose idylls, notably 'In Veronica's Garden,' breathe the breath of nature. The same is true of some of his earlier verse."

His career up to the time of his appointment to the laureateship is thus sketched in the *New York Times*:

"He was born at Headingley, near Leeds, May 30, 1835. His father was a merchant and magistrate of the Borough of Leeds, and his mother was the sister of Joseph Locke, a member of Parliament, and distinguished as a civil engineer. The family was Catholic, so Alfred was sent to Stonyhurst College, later to St. Mary's College, Oscott, and took his degree at the University of London in 1853. Throughout his youth he had scribbled somewhat, and at eighteen had progressed sufficiently to put forth a poem entitled 'Randolph.' But his parents wanted him to become a lawyer. He said of himself as a student:

"Once I studied law for a year at the Temple, the most miserable year of my life. I fear that I knew less law when I gave it up than when I began."

"He made the death of his father in 1861 an occasion for forsaking Blackstone and went to Italy. In the same year appeared his first acknowledged volume of verse, 'The Seasons: A Satire.' The following year 'The Human Tragedy' appeared, and thereafter volumes of verse, tragedy, and lyrics came forth at regular intervals.

"Austin also became a regular contributor to the *London Standard* and *The Quarterly Review* and qualified as a journalist. He was special correspondent for *The Standard* during the sittings in Rome of the Ecumenical Council. During the Franco-Prussian War he was assigned to the headquarters of King William. These and other experiences supplied him with material out of which he wrote, 'Russia Before Europe,' 1876; 'Tory Horrors,' 1876, which was a reply to Mr. Gladstone's 'Bulgarian Horrors.' In 1877 in the form of a letter to the Earl of Beaconsfield, his 'England's Policy and Peril' appeared. He founded the *National Review* in 1883 in conjunction with W. J. Courthope, and edited the publication until 1893.

"During the four years' campaign in search of a candidate for the exalted position made vacant by the death of Lord Tennyson, Austin was spoken of as a journalist, a novelist, a poet, and a critic, and in that order. Several men were credited popularly with outranking him as a poet, notably Sir Edwin Arnold, Swinburne, William Watson, Kipling, and Lewis Morris. But Queen Victoria considered Arnold less scholarly, Swinburne and Morris too radical, Watson and Kipling brilliant but unproved. Nevertheless, Austin's appointment provoked much surprise both in England and this country."

Of his literary output we read further:

"Austin published three novels, 'Five Years of It,' 1858; 'An Artist's Proof,' 1864, and 'Won by a Head,' 1866. Other of his productions are: 'Interludes,' 1872; 'Rome or Death,' 1873;

'Madonna's Child,' 1873; 'The Tower of Babel,' a drama, 1874; 'Leszko, the Bastard—A Tale of Polish Grief,' 1877; 'Savonarola,' a tragedy, 1881; 'Soliloquies in Song,' 'At the Gate of the Convent,' 'Love's Widowhood, and Other Poems,' and 'Prince Lucifer.'"

As an example of his unofficial verse at its best, we quote the following, composed on his return to England from Italy:

"How stern! How sweet! Tho fresh
from lands
Where soft seas lave on slumbering
strands,
And zephyrs moistened by the
South
Seem kisses from an infant's
mouth.
My Northern blood exults to face
The rapture of this rough embrace,
Glowing in every vein to feel
The cordial caress of steel
From spear-blue air and sword-blue
sea,
The armor of your liberty.
Braced by the manly air, I reach
My soul out to the approaching
beach,
And own, the instant I arrive,
The dignity of being alive."

Among those mentioned by the American press as likely to succeed Mr. Austin, if he has a successor, Alfred Noyes seems to be generally considered the most eligible. Thus in the *New York Times* we read:

"The ministry of Mr. Asquith now has the opportunity to honor a third Alfred, of larger stature and still growing. Alfred Noyes is assuredly a poet of whom all Englishmen should be proud. There are wholesome vigor and imperishable charm in many of the stanzas of 'Drake,' most of which is of the true epic quality. . .

"Love of country inspired 'Sherwood' and 'Tales of the Mermaid Tavern.' Alfred Noyes is still a young poet, he has never shocked royalty or offended those English folks who are sticklers for the conventions. Granted that Kipling is still to be deprived of the empty but coveted honor which so many of his countrymen would be glad to see him receive, and there is no reason now for Kipling's appointment which did not exist in the nineties, it is clear that the Government can do no better than to make Mr. Noyes the Poet Laureate, unless it is felt that the time has come to abolish the ancient office.

"If William Watson was not acceptable seventeen years ago, his deficiencies must be doubly apparent to the present Prime Minister. The 'Woman with the Serpent's Tongue' is not forgotten. Moreover, Mr. Watson's patriotism is tinged with pessimism. The star of Stephen Phillips sank some years ago; his friends predict that it will rise and shine more brilliantly than ever in his forthcoming 'Panama,' but that is of the future.

"Austin Dobson is only five years younger than Mr. Austin was, and in spite of his lyrical gifts he is the last man in the world to undertake to rise poetically to the occasion of royal weddings, births, and funerals. Perhaps, in this hour, John Masefield is England's most talked-of poet, but his style and his dominating moods do not suggest a laureate. . . .

"Mr. Noyes possesses all the requirements, if he is willing to accept the ancient laurel crown and perform the not very exacting duties associated with it."

A suggestion advanced by the *New York Evening Post* is that the requirements of the laureateship be made less cramping by changing its nature entirely. "Instead of being an office, whether party or national, the post might be made an honor conferred for artistic merit, carrying no obligations with it."

IS HE THE LAST OF THE LAUREATES?

Alfred Austin's death is thought likely to end the line that omitted as many brilliant names as it included.

RELIGION AND SOCIAL SERVICE

THE PROBLEM OF BILLY SUNDAY

BILLY SUNDAY, EVANGELIST, is no longer a novelty, nor a curiosity, in the judgment of various writers for the religious press, who consider him plainly a problem, and argue with spirit and vigor for or against the man and his methods. Indeed, such is the "divergence of opinion among men equally interested in the building up of the kingdom of God" that *The Congregationalist* (Boston) has seen fit to publish sundry articles on either side of the question whether Billy Sunday, as "one of the outstanding figures in religious life to-day," is doing harm to the dignity of the Christian religion, or whether he is in truth "a powerful instrument for righteousness" raised up for the American people in their day of need. "A sort of 'scourge of God'" he is called by Bruce Barton in this paper, employed by good men to stir stagnant consciences, and Mr. Barton asks: "Does the end justify the means?" For answer he gives the record of Billy Sunday's campaign in Decatur, Ill., where in a town of 31,000 and more inhabitants he made, in six weeks, 6,209 converts and collected free-will offerings to the amount of \$11,379.56. This was three years ago, and Decatur has grown rapidly in the interim, Mr. Barton reminds us.

Altho now the city is "wet" and the theaters are open on Sundays, yet the testimony of men of prominence living there is that "the civic life of Decatur is still on a plane appreciably higher than that of most of its sisters; and there is still visible—even tho in meager measure—a potential civic righteousness that gained materially in the Sunday meetings." Such is Mr. Barton's summing up of results three years after a Billy Sunday revival, and in comparing him with other professional evangelists on the score of results, he states that Mr. Sunday is supreme. A later and greater triumph—the city of Columbus, Ohio,—is also cited by this writer, in which campaign, as previously recorded in these pages, Sunday's conversions totaled 18,149, while \$18,590.98 was raised for expenses and more than \$21,000 for the evangelist himself. As for the criticisms, Mr. Barton observes:

"No criticisms are made of his results which are not equally pertinent to the work of all the other professional evangelists; the problem of Mr. Sunday, therefore, is really the broader problem of whether professional evangelism is a real service to the modern church."

That criticism is easier than explanation of the man is the opinion of Rev. Ernest Bowmer Allen, D.D., who contributes an article to *The Congregationalist* on "Toledo Two Years After" a Billy Sunday campaign. Altho "one can not agree with all

his theology," Rev. Dr. Allen does not believe that Sunday's views upset those of any church members, especially as, in his observation, they had very few views to be upset, and were, moreover, all engrossed in "the new enthusiasm and righteousness." Of the ultimate results he says:

"The millennium has not arrived in Toledo as the result of the meetings, but the air was cleared as by a storm. The fierceness of Billy Sunday's attack on sin, the hatred his preaching inspires among sinners in the upper as well as the lower classes, his intense passion for personal and public righteousness, the vivid illustration in his own life of a man redeemed from sin—all these unite to make his work vital and as permanent as that of other evangelists."

Not of the fruits of a revival months or years back, but of immediate achievement only is Rev. P. H. Brooks, D. D., able to speak in *The Presbyterian Examiner* (Chicago), recounting facts and figures of the Wyoming Valley, Pa., revival which lasted seven weeks, ending April 13, 1913. "The greatest religious revival that persons residing in this community ever saw," Dr. Brooks calls it, referring to Wilkes-

BILLY SUNDAY IN ACTION.

"God demands an unconditional surrender."

barre, Pa., the city that served as a nucleus for eighteen outlying towns. Only time can fully reveal the spiritual benefits resulting, Dr. Brooks tells us, yet we may examine certain features of the revival that class it ahead even of Billy Sunday's record at Columbus, Ohio. For example, 12,000 marched in the Sabbath-school parade at Wilkesbarre, and the witnesses and participants that filled a theater and a church afterward for service numbered 30,000. The free-will offering to Mr. Sunday amounted to \$23,188.90, which is \$2,259.32 more than the offering at Columbus, Ohio. Dr. Brooks is impressed also with the systematic methods of Sunday and his "harmonious and very earnest staff of ten expert coworkers," in illustration of which he furnishes this account of the advance movement of the Billy Sunday forces on a town:

"Several weeks before the arrival of the evangelist the Wyoming Valley Evangelistic Society was organized, and a number of stockholders subscribed sums of money amounting to \$15,000 for the building of a tabernacle and the necessary expenses of the campaign, and two weeks before the meetings closed this amount had been collected in the ordinary collections, and in addition to this, offerings have been given to several local charitable institutions. The tabernacle was quickly and economically built, with considerable voluntary work and growing enthusiasm."

At this tabernacle the total attendance was 668,300, or "an average a little over 7,300 for each of the 94 services," we are informed in *The Christian Advocate* (Meth., New York), by Rev. Charles E. Guthrie, who shows furthermore how broad is

Billy Sunday's appeal from the church preferences signed on cards by his converts. Only the churches of Wilkesbarre are used in this classification, we are advised:

"Baptist, 521; Disciples, 214; Congregational, 366; Evangelical, 547; Methodist, 2,919; Presbyterian, 1,862; Reformed, 281; Catholic, 104; Hebrew, 4; Lutheran, 240; Salvation Army, 39; Grace Mission, 9; Universalist, 1; Protestant Episcopal, 183; undecided, 65."

Admiration and praise incline thus toward Billy Sunday from writers of various denominations at the same time that strictures precise and spirited are laid upon him by others equally various. At this juncture it is of especial interest to have the opinion of an outsider, Rev. Donald MacLean, a prominent Australian Baptist, who is quoted in *The Baptist World* (Louisville) as saying of the evangelist:

"America seems not to have made up her mind yet in regard to him, but that he is a tremendous force for righteousness there can not be the shadow of a doubt. I heard him preach twice, and never heard anything like it. I believe there is on the side of the intellectuals a tendency to look down upon him and to speak of his preaching as so much claptrap, but no one could possibly take that view after having heard him."

After which Rev. Mr. MacLean remarks that here in the United States the "leaders are very diverse," a statement easily demonstrable if what has gone before be compared with Rev. Dr. Washington Gladden's calm but acute analysis. In *The Congregationalist* (Boston), Dr. Gladden charges Billy Sunday with intolerance and violence, first of all, and maintains that "every man whose opinions differ from those of Mr. Sunday is a liar." Dr. Gladden continues:

"Every day he mounts the judgment-seat of the universe and sends men by scores to the right hand and to the left—mostly to the left. Statistics—of a sort—were kept of the number of 'conversions'; but of the number of those sent to hell, by name, no record, I believe, was made. It is a great omission; for that is a large part of the business."

"All evolutionists are consigned to hell. Mr. Sunday names, one by one, those whom he supposes to be evolutionists, and with a dramatic gesture flings each of them into perdition. 'There goes old Darwin! He's in hell, sure!' And the enraptured audience yells its applause, as one evolutionist after another is dropt into the fiery pit. A staid Methodist preacher, who watched this performance, said afterward, 'I would never have believed, if I had not seen it, that an audience of civilized Americans could show such a spirit as that.' The scene at a Spanish bull-fight is really, when you think of it, less horrible."

And as a particular instance of Mr. Sunday's intolerance, Dr. Gladden recites as follows:

"One of Mr. Sunday's ministerial supporters in Toledo, Rev. Dr. Wallace, after listening to this sermon about the evolutionists, ventured to remonstrate with him privately. The next day on the platform Mr. Sunday turned to the protesting minister, shook his fist in his face and yelled: 'Stand up there, you bastard evolutionist! Stand up with the atheists and the infidels and the whoremongers and the adulterers and go to hell!' I have these words from Dr. Wallace himself, who adds, 'It is impossible to describe the venom with which these last words were uttered.'"

Next in the indictment of this sort of evangelism, Dr. Gladden finds its "commercial feature" a matter for concern, remarking that "it is notorious that he is making himself rich in this business of evangelism," and, adds Dr. Gladden:

"Mr. Sunday takes out of every considerable city which he visits, for an eight weeks' service, money enough to pay the average Congregational minister's salary for twenty years; and his year's accumulation would support one hundred foreign missionaries. He is not reticent about this; he preaches about it frequently and defiantly; he insists that it is nobody's business how much money he makes or what he does with it."

On the lack of real religion in Sunday's revivals, there is

testimony in the remark of an earnest church-worker quoted by Rev. Henry Arthur Kernen in *The Congregationalist*:

"I saw no one by word or act showing any excess of religious feeling. Good music, a splendid organization, a bowling mountebank to call in the crowd, an usher to every six seats, a personal worker to every three make it easier to go forward than to go out into the open air. I do not think that any discerning intelligence can justify giving this man the sanction of the approval of any religious organization."

Of similar mind is a writer of Columbus, Ohio, who holds, in *The Lutheran* (Philadelphia), that true followers of Christ "can not encourage Mr. Sunday's evangelism."

THE "HERESY" OF UNION SEMINARY

THE FLASHES of controversial lightning evoked in the recent Presbyterian General Assembly by the report on "closer relations" with Union Theological Seminary failed to clear the surcharged atmosphere enveloping the subject, and consequently that institution is expected to remain a theological storm-center for another year at least. By a certain element in the Presbyterian ministry, it seems, Union Seminary is regarded as a very hotbed of heresy, and the New York Presbytery, largely recruited from its graduating classes, does not escape the same suspicion. Thus when the New York Presbytery recently accepted for ordination four Union graduates whose views on certain doctrinal matters lacked the uncompromising definiteness and finality demanded by the orthodox, the Presbyterian press began to echo with warnings against the ominous peril threatening the Church, and more than one demand was made that the young men be tried for heresy. "If a large proportion of our Presbyterian Church endorses the action of the New York Presbytery," wrote one perturbed minister, "it is time for the Church to be divided in half." And this division of the sheep from the goats, he went on to say, "should also be made in other denominations, where similar heretical conditions prevail, and a new Church organized, . . . or truth will perish from the earth."

One view of the situation, together with certain facts involved, is thus set forth by a writer in the *New York Sun*:

"Union Theological Seminary of New York has captured the New York Presbytery, and in effect puts up the question to the General Assembly of Presbyterians, so all agree, whether it and New York shall rule or whether the supreme body of the whole Church shall rule. This is the surface battle. The real conflict is doctrinal. The controversy includes such questions as 'Did Christ have virgin birth? Did he rise from the dead in bodily form? Did Lazarus rise? What part of the Bible is to be believed and what not?'"

"Union Seminary was organized on a liberal basis. It went into the General Assembly and then went out again. Now it is out, altho there exists a committee to see how it may be got in again, a committee named at the instance of the New York Presbytery and its members. In a controversy growing out of the views of Prof. Charles A. Briggs, a member of its faculty, the whole Presbyterian Church was for years upset. Then followed the McGiffert heresy cases, also coming from the Union, and later the disturbances over the acceptance by the New York Presbytery of Union graduates who were in doubt as to the virgin birth of Christ and other things declared vital by the Confession and the Assembly."

Among the four graduates accepted by the New York Presbytery in spite of their admission to the examiners that they desired more evidence before they could form definite opinions concerning the virgin birth of Christ, the authenticity of the Pentateuch, the canonical standing of the Gospel according to St. John, and the Resurrection, was Tertius Van Dyke, son of the Rev. Dr. Henry Van Dyke. In a sermon preached at his son's ordination, Dr. Van Dyke, referring with deep feeling to the protests registered against these candidates, demanded that if the

THE REV. TERTIUS VAN DYKE.

UNION THEOLOGICAL SEMINARY.

THE REV. DR. FRANCIS BROWN.

Union Theological Seminary, New York, has been called "the greatest theological storm-center in America." Dr. Brown, himself a graduate of the Seminary, has been its president for the past five years. Mr. Van Dyke, who follows in the steps of his father and grandfather in entering the Presbyterian ministry, is one of the latest graduates to be challenged on the subject of his orthodoxy.

Assembly wanted a heresy trial they should "try it on a grown man," and not on "eager-hearted, sensitive boys." Taking as his text, "For the letter killeth, but the spirit giveth life," he said in part:

"You know that a new attempt has been made lately in the Presbyterian Church to exalt the letter above the spirit in judging of the fitness of men for the Christian pulpit. Four true-hearted and devoted young men, among whom is my dear son, who is to be ordained to-night, have offered their lives to the service of Christ in the ministry. They have confessed their faith in God the Father as the almighty ruler of the universe, in the Holy Spirit speaking in the Bible as the supreme authority in matters of religion, and in Jesus Christ as the Divine Redeemer. But a protest has been made against their acceptance because they can not give a literal affirmation to certain test questions proposed by a theological inquisitor.

"The Presbytery of New York has warmly welcomed the young men and disregarded the protest. But it is being pushed in public and private, and the effort is made to produce a judgment that these young men are heretics and that the Church ought not to receive them as preachers of Christ.

"Well, whatever comes of the protest, I wish to take my stand with these young men. They are my brothers in the faith. If they are unfit for the ministry, I am unfit. . . .

"Heresy trials are the delight of the ungodly and the despair of religion. But if such a thing must come, let it be fair and brave and open. Do not try it on eager-hearted, sensitive boys. Try it on a grown man who stands with them in the liberty wherewith Christ has made us free."

The general impression seems to be that Dr. Van Dyke's challenge will not be accepted, but that the conflict between Presbyterian conservatism and Presbyterian liberalism will continue to center around the Union Theological Seminary rather than around any one of its graduates. While the conservatives, for the time being, seem to be withholding their fire, the liberal view of the situation is thus presented in the press by a New York Presbyterian minister whose name is not published:

"Throughout the East this opposition of the conservatives amounts to practically nothing, but in the West it is, may I say, more strongly developed, altho in both the East and the West it is rapidly dying out. Just as soon as any honest and intelligent man becomes acquainted with the facts he ceases his opposition. These facts are that Union Theological Seminary and what it stands for are not the unholy terrors that have been imagined. . . .

"There are in New York many good and worthy Presbyterians, both clerics and laymen, who, figuratively speaking, can not see further than their noses. . . . They are steeped in their own religious conceit; they are surfeited with the conviction that theirs is the only way; they are bound up by narrowness, in-

tolerance, and an irreligious selfishness which do not accord with the character of true Christians.

"And yet these men refuse to listen to reason, to argument, or to what those who may look at things in a different light may have to say. Obstinaey is one of their chief characteristics."

When the General Assembly met in Atlanta last month, it was found that the committee on closer relations between the Church and Union Seminary had failed to agree on a unanimous report, and the lack of unanimity in the Assembly being even more marked, a new committee was appointed and the matter carried over to 1914. This postponement of the issue was not accomplished, however, until after some hot shots had been exchanged. Thus the Rev. Dr. W. S. Plumer Bryan, of the Church of the Covenant, Chicago, said that the relationship of the Presbyterian Church to Union Seminary had been one of "pain, embarrassment, and shame for the last twenty years," and he demanded that the "intolerable situation be terminated so as to preserve the property rights of the Presbyterian Church and to safeguard the young men who are entering her ministry." The venerable Dr. Francis C. Montfort, editor of the Cincinnati *Herald and Presbyter*, and a member of the committee on "closer relations," denounced "the Baal of Hindu philosophy" as enthroned in Union, and called on the Church to choose between that philosophy and the gospel of Jesus Christ. Dr. Montfort, who is practically the only one we can find to quote on this side, said in part:

"The time has come for the Church to draw the line. The issue lies between true faith and Hindu philosophy masquerading in the guise of Christianity. Here is a Hindu philosophy in a modern theological school—shall we allow this to continue?"

In reply, Dr. Francis Brown, President of Union Seminary, denied the charges of Hinduism and rationalism, and said that the seminary was conforming strictly to Christian and evangelical beliefs in its teaching. He also reminded the Assembly that Union was not a Presbyterian institution. "About one-third of our students are Presbyterian, one-fourth Methodist, and the others belong to different denominations." He said in part:

"In deference to the members of our board and faculty who are Congregationalists and Methodists, we can not and we will not adopt a statement of faith which will be strictly Presbyterian, but we are an energetic institution and Christian in our teaching. We are concerned first of all in the life of God, in the souls of men, and the training of men whose hearts have been changed by the spirit of God in Jesus Christ, without which the world can not be saved."

MOTOR CARS

THE POSSIBLE CYCLE-CAR INVASION

DIVERSITY of opinion prevails as to just how much success awaits the coming to America from Europe of the cycle-car. Its success over there has been much exploited, but experts in America question if it will be liked here, because of its narrow tread and the many dirt roads that exist in America, these conditions making ease of propulsion and riding difficult. *Motor Age* notes that this type of car is "expected to be very soon on the roads and in the hands of thousands of American drivers." *Motor World*, on the other hand, insists on the fact that a cycle-car "can be used with comfort only where paved roads prevail; elsewhere it must prove a sorry failure." This writer's conclusion is that this vehicle "may be viewed as a will-o'-the-wisp." While a campaign of publicity "may cause a sizable demand for it, the demand will not endure."

Just what a cycle-car is few Americans outside the motor-car trade clearly understand. It has been described by one writer as "a four-wheeled car built on motor-cycle lines." The first one was built in France. It was called the Bedelia, and had the same motor as a motor-cycle has. It was chain-driven to countershaft, and had a belt drive to rear wheels without differential. Its tread was only 36 inches. Such a car could probably be produced in America for a selling price of not more than \$300, while one seating a single person could be produced to sell for about \$250.

Motor Age believes that in this type of car "lies the future hope of the masses for a fast, safe vehicle to carry them to and fro with cleanness and comfort at a cost within reach of the average person." It adds that this car is "perfectly applicable to American conditions" when it has been properly adapted to meet these conditions. Criticism of it "has been largely based on ignorance of the real significance of the movement." Many things possible now to high-priced cars can be done by the cycle-car "at a greatly lowered first cost and upkeep." This is accomplished, not by sacrificing fine material or first-class workmanship, but by simplicity in construction and the elimination of many unnecessary parts.

The first cycle-car ever built, the Bedelia, a French invention, has a track record of fifty-five miles an hour. In a road-race it has averaged thirty-eight miles an hour. Details in its construction are given by *Motor Age* as follows, the references being to the cut in the center at the bottom of this page:

"The body part forms also the frame of the car and has no side doors; the car being so low, one can step in as easily as into a rowboat. The tread is narrow—but 36 inches—and the front axle pivots at the center on the spring tube B, which gives easy suspension. Steel cable running from the axle on either side runs back through pulleys and up to a drum on the steering-post, so that the turning of the wheel pulls the cable on either side and steers the car. Car owners who have driven this type of steering-gear say it is as sweet a control as any fitted to big cars—while it is cheap to make."

"The motor is fitted in the frame just

fitted to be moved fore and aft by the lever L, thus, by tightening and loosening the belts, furnishing a smooth clutch action—and cheaply.

"Note the advantages of this transmission. Here two speeds are obtained by pulleys of two diameters on the counter-

MOTORED UNDER DIFFICULTIES IN MEXICO.

From "Motor Age."

Diagram showing the mechanism of the real cycle-car, taking the simplest and cheapest means of accomplishing a result. 1 is the gasoline tank situated over the motor (2) motor-cycle fashion. From the motor-shaft sprocket a chain runs back to a countershaft sprocket at 5, on the ends of which are pulleys (7) of two sizes, furnishing two speeds. Motor-cycle V belts, which have proved more ideal for the work of these light cars than on motor-cycles even, connect these pulleys with the rear wheels. The rear axle fastens to the side springs (6), which connect with a lever (11) pivoted at 9, which moves the rear axle backward and forward to tighten and loosen the belts, thus giving a clutch effect. In French types the frame runs under the axle at the rear.

back of the front axle, set fore and aft without clutch, a chain A running from the engine-shaft sprocket to the sprocket S on the countershaft. On the ends of the countershaft are V motor-cycle belt pulleys C, and from these run belts D to the rear wheels, around pulleys fastened directly to the wheels. The rear is supported on Lanchester-type springs, and the rear axle is

shaft at C; there are clutch-action without the expense of a clutch, differential action without the cost of a differential, there are efficiency of drive and sweet action which are easy on machine and rider. The steering is done by inexpensive means, yet is as fine in action as expensive constructions. The gasoline tank T is directly over the motor as on a motor-cycle, so there always is feed even on the steepest hills.

"The French car was the result of road conditions, and temperament; of the necessity of traveling over side roads full of ruts, coupled with the French temperament demanding speed. The British development followed English road and temperament conditions, coupled with trade requirements. England was producing no small cars like our Ford or Hupmobile, and was waked up to the fact that there was a field for small cars by the sight of this Bedelia. Thus the Bedelia started in England not so much a cycle-car movement as a small-car movement, as 75 per cent. of the so-called cycle-cars produced in England to date—and there are over 100 makes—are small cars and not cycle-cars at all. Many machines in England with four-cylinder water-cooled motors, three speed-and-reverse gear boxes, shaft and worm drive, with differential and side-by-side seating are called cycle-cars. Even the tyro, however, can see that they are only small cars and just as expensive to build. They sell for as high as \$1,000."

Motor World, in its article declaring the cycle-car to be "a will-o'-the-wisp," says

From "Motor."

AN ENGLISH CAR SEATING TWO SIDE BY SIDE,

But more like a motor-car than a cycle-car. In England are over 100 makes of small cars which have come in as results of the influence of French cycle-cars.

THE ORIGINAL CYCLE-CAR, OF FRENCH MAKE, AND CALLED THE BEDELIA.

TYPES OF FOREIGN CYCLE-CARS.

A SINGLE-SEAT CYCLE-CAR, CALLED THE PONTY.

Of which it is predicted that it will take the place of the motor-cycle in this country.

further of the unlikelihood that cycle-cars will ever become generally popular in America:

"It requires more than mere enthusiasm to share the belief that any light, toy-like, narrow-gage vehicle ever will prove practicable for use on American highways; it matters not if it costs four hundred cents or four hundred dollars, nor if it can be run into the owner's back yard and covered with a tarpaulin at night. Any vehicle that needs must run with one wheel in a rut and the other in a horse track will not be used very long by any very considerable number of people in any very considerable number of places. As the rut or wheel track usually is lower than the horse track, it means that no cycle-car, or other narrow-gage vehicle, can run on an even keel. Consequently it must run 'lopsided,' and riding 'lopsided' for any great length of time is calculated to induce curvature of the spine, spinal meningitis, or something of that sort, in those who occupy such vehicles."

"The cycle-car is neither a cycle nor a car; it has all of the disadvantages of both and none of the advantages of either, and it will prove just about as popular as its prototype, the narrow-gage railway."

Motor Age, however, recognizing the differences in conditions between this country and Europe, discusses at length the point made by *Motor World* and some others. It sees that not only are road conditions different here, but that we already produce small motor-cars cheaply, and our temperament dictates some things different from the things that satisfy Europeans. In order to make cycle-cars successful, the following problems must be met and solved:

"The American cycle-car must be able to go on rutty roads used by 56-inch-tread wagons and cars, chopped up by horses and leveled in spots by motor-car tires. This demands special tread and a standard, and possibly a new kind of spring suspension. The roughness also demands a lower center of gravity than in most foreign cars, and a long wheelbase. Bad roads and steep hills demand more gear-change range than on foreign cars. Good

engineering and common sense in combination can produce a car that can meet these conditions at 25 miles an hour at least with a motor-cycle motory."

"The cheap cars now made here certainly would hinder the production in America of any of the English-type cycle-cars with

INDIAN SPEEDING A TRUCK IN THE FOOT-HILLS OF THE ROCKIES.

gear-boxes, shaft drive, and the like, for Ford or other concerns can produce a big car more cheaply. The small car of standard tread will not go in America. It must be a new vehicle. It must be sold for at least \$100 less than any cheap runabout of the car type, and have less than half the upkeep cost. The advantage of the real cycle-car as against the small-car type is that the owner himself can fix anything that may get wrong with the machine unless some engine part gives out, which is a rare thing in these days.

"The temperament of the American will have its effect on the sales end of the cycle-car for our use. The average American will want better looks in his car than the Bedelia gives, and will not want a machine that looks like a toy motor-car. He wants a machine that proclaims itself a new vehicle, and while a narrow tread will not bother him, he will appreciate a long, low, rakish craft such as the tandem machine is. A body, say 24 inches wide, formed stream-line, and set on a 100-inch wheelbase, will appeal to the American."

"There is no doubt but that a small car weighing in the neighborhood of 400 pounds can be built and sold for a very low price and, being capable of performing the feats of a big car, will command a large sale. Since it is a new type of car, there will be no interference in sales with the bigger motor-cars. The motor-cyclist who now takes his sweetheart on the back seat of his motor-cycle will find her next year too proud to mount the two-wheeler, and will buy a cycle-car if he can get one for a price."

"A dozen cycle-car firms have been organized and are to produce their new cars for the American trade. The movement is here. The cycle-car is an accomplished fact."

Motor World learns that serious efforts have been made to arouse the motor-cycle industry in this country to the advantage and possibilities of the cycle-car. While some makers have condemned the cycle-car, others, including one large maker and several small ones, already have in contemplation its production. Others not already identified with the motor trade "see millions in it." *Motor World* believes that the agitation for this car has already become "a doubtful means of serving the interest of the automobile industry." One of the present needs of the trade "is not more cars, but fewer of them."

Some of the advantages of the cycle-car other than first cost are set forth by *Motor Age*. While its parent, the motor-cycle, is

a dirty vehicle as well as a fast one, and hence not a vehicle on which one may ride to business, a cycle-car can be made to "house the driver comfortably behind the windshield and cover him with a top when it rains." Unlike the motor-cycle, it can

be used all the year round instead of six months. It need not involve any garage charges, since it can be run through an ordinary door, kept in a shed or even a cellar, not to mention in the back yard under a tarpaulin. An entire set of tires can be bought for the cost of one automobile tire. A single gallon of gasoline will propel a cycle-car from forty to fifty miles, and has been known to propel one 59.6 miles. *Motor Age* hears that four companies in Detroit have already been incorporated for making cycle-cars, and several others have been incorporated in Chicago and elsewhere. These are "the practical beginnings of an infant industry, destined with proper fostering, to grow to enormous proportions in a few years."

LOWER-PRICED CARS

Coincident with promises of an invasion by the cycle-car is discussion as to the production next year of substantial runabout automobile cars at prices as low as \$300. A daily contributor to *The Wall Street Journal*, who uses the name "Holland," and who is respected as an observer of conditions in business, dwelt recently at length on this as a probable innovation in the trade. His letter is discust in *The Financial World*, which remarks that such

From "Motor." MOTORING ON A PHILIPPINE BOULEVARD.

a development would not be at all a startling feature of the industry, but rather a natural evolution. The writer says further:

"The automobile is fast losing the novelty it once enjoyed. No longer is it classed as a toy of pleasure for which people are willing to pay from \$2,000 to \$6,000 to possess and be the envy of neighbors. In its day the bicycle enjoyed popularity similar to the automobile, and wheel enthusiasts willingly paid, from \$125 to

THE LATEST DESIGN IN WOMEN'S MOTOR-COATS.

You Can Go *Everywhere* in a Detroit Electric

HERE are a few of the places you can go in a Detroit Electric, quickly, comfortably, silently, surely:—

To the office
To the shops and stores
To school with the children
To the parks
To make calls
To the ball game

To the farm
To your down town club
To the country club
To the theatre
To church
To a picnic in the country

In fact there is no place within a radius of 30 to 50 miles where you can't go with a Detroit Electric. (And that means 60 to 100 miles round trip without recharging).

Observe that by no means are all the places listed above on city boulevards. Detroit Electric automobiles are for much more than city driving.

These are the days that call you out into the open, away from asphalt pavements and level drive-ways. In a Detroit electric you can answer the call and go out where the violets bloom—confident that you

have ample power, free from worry over punctures or mechanical troubles.

For city use nothing approaches a Detroit Electric for convenience, luxury and privacy. It is the Ideal Town Car.

Detroit Electrics offer many exclusive and desirable features, such as Clear Vision body with curved glass rear panels, silent, direct shaft drive "Chainless," aluminum body panels, special Detroit Electric motors, our own Detroit Electric lead battery and other points of superiority.

Let our dealer demonstrate to you Detroit Electric merit

MOTOR-CARS

(Continued from page 1340)

\$175 for a wheel that is now made and sold for about \$25 and at a profit.

"When the statement is made that a good automobile can not be manufactured for less than \$3,000 for a seven-passenger touring-car and stand heavy wear and tear, the exponent of that theory is outside the facts, and the declaration represents more the disinclination of the makers to recognize the inevitable and squarely face it than real conditions. Were that statement the truth then there would not be any necessity for owners of high-price cars to sell them at a figure representing from 30 to 50 per cent. less than the cars originally cost. Such bargains are of every-day offering and the facts are incontrovertible, for the writer has had offered to him during the last half year any number of high-cost cars at sacrifice figures.

"Holland's" statement is significant. Still it reflects what *The Financial World* has contended for a year past, that a price readjustment from a fancy to a reasonable basis in cost of automobiles was inevitable. The readjustment in the industry, however, will not be brought about easily. Only long-headed automobile makers, such as Henry Ford, of Detroit, foresaw the inevitable change and prepared themselves, for now he is profiting immensely through his wise and correct judgment in marketing a car at a figure within reach of the average man of means while the majority of his competitors were asleep."

QUOTED PRICES FOR AUTOMOBILE STOCKS

On the New York Stock Exchange are quoted the market prices of stocks of several corporations or companies which manufacture motor-cars or accessories. Among them are the American Locomotive Company, the General Motors Company, the Goodrich Company, and the United States Motor Company. A firm of stock brokers in Cleveland has compiled a list of automobile securities in which are included, besides those sold on the New York Stock Exchange, many others, the bid and asked price being given. Following is the list:

MOTOR SPIRITS AND OTHER CHEAP FUELS

An interesting feature of a recent trial of a suit in Chicago against one of the Standard Oil subsidiaries was some testimony given by the general superintendent of the refineries of that company as to the rapid increase in the use of motor spirits, the new and cheaper product obtained from petroleum as a substitute for gasoline, its use being especially recommended for motor-trucks. This superintendent informed a correspondent of *The Wall Street Journal* that, since last February, when the company first began to make motor spirit on a commercial scale, the sales of it have reached 1,000,000 gallons in one month, this month being April. Orders had come in from all over the United States. In Northwestern Canada a single landowner had ordered two railroad tank loads.

Motor spirits sells for three cents less than gasoline. The wholesale price in Chicago is 12 cents per gallon. It is claimed for it that, in actual efficiency, it is better than gasoline by about 20 per cent. A car may be started more easily when run by it, especially in cold weather. It produces more power than gasoline, and there is a saving in the price of about 25 per cent. Objections have, however, been found to the odor. P. C. Crenshaw, who is connected with a large producing firm as general manager of its sales department, has written an interesting statement as to the process used in producing motor spirits, which is printed in *The Automobile*:

"Motor spirit is made from what was formerly known as fuel oil. It is extracted by the process of pressure distillation. Under this process it is possible to secure about as many gallons of motor spirit from a given amount of crude run as now are obtained of gasoline. Thus the total production of fuel suitable for gasoline engines can be practically doubled. Of course, this takes time. The process requires an extremely expensive plant installation—several times as expensive as is necessary in the ordinary refining process.

"Motor spirit could be refined further, deodorized, and a product could be obtained therefrom that would be identical in every way with gasoline; but to do this would bring up the cost of the product to the present price of gasoline. This would accomplish no good purpose. The odor, while pungent, is not necessarily disagreeable; it is simply a distinctive odor that is noticeable only when handling the liquid. The exhaust from an engine is not as offensive as is the exhaust from gasoline. You can ride in an automobile using motor spirit and not detect it. The color is of but little moment. We have learned to expect gasoline to be water white. The fact that the new fuel is slightly yellow has no bearing on its efficiency for power purposes, any more than if it were green or blue. There are other disadvantages in further refining this product.

"There are certain inherent properties in motor spirit that are desirable for power purposes that would be taken out in refining, principally the low boiling points, which make the starting of the car easy, for it is a fact that in cold weather a car can be started more easily with this fuel than with gasoline. There is also more power in it than there is in gasoline, and further refining would destroy this advantage, so that there is everything to be lost and nothing gained in seeking a product that

(Continued on page 1344)

Good For Both

Parents frequently deny children the table beverage they drink themselves, because "coffee and tea aren't good for the little folks."

It's different with

INSTANT POSTUM

This new food-drink, made entirely from wheat and the juice of sugar-cane, is genuine nourishment, and has fine color and aroma.

It tastes much like high-grade Javas, but is absolutely free from caffeine (the drug in coffee and tea) or any other harmful ingredient.

Instant Postum is regular Postum so processed that a level teaspoonful in an ordinary cup of hot water dissolves instantly and makes it right for most persons.

A big cup requires more and some people who like strong things put in a heaping spoonful and temper it with a large quantity of cream.

Experiment until you know the amount that pleases your palate and have it served that way in the future.

For a summer "cooler" add cracked ice, sugar and a little lemon juice.

Instant Postum is sold by grocers. 45 to 50 cup tins, 30c. Larger tins (90 to 100 cups), 50c.

Regular Postum (must be boiled 15 to 20 minutes) large package—about 50 cups—25c.

"There's a Reason"

for

instructions in Phys-
iological Exercise.

heart, lungs and all internal organs and thus promotes
ideal health?

The Swoboda System with the Least Expenditure of Time, Energy and Money and with no inconvenience
Builds vigorous brains, superb, energetic bodies, develops great reserve
force, strong muscles, creates a perfect circulation, by vitalizing and developing the body, brain, and nerves
to their highest power.

When I say that I give something different, something new, more scientific, more rational, effective, and immeasurably superior to anything ever before devised for the uplifting of the human body to a higher plane of efficiency and action, I am only repeating what thousands of prominent men and women of every country on the face of the earth, who have profited by my system, are saying for me voluntarily.

WHAT OTHERS HAVE TO SAY

"Can't describe the satisfaction I feel."
"Worth more than a thousand dollars to me in increased mental and physical capacity."
"I have been enabled by your system to do work of mental character previously impossible for me."
"I was very skeptical, now am pleased with results; have gained 17 pounds."
"The very first lessons began to work magic. In my gratitude I am telling my croaking and complaining friends, 'Try Swoboda.'
"Words can not explain the new life it imparts both to body and brain."
"It reduced my weight 20 pounds, increased my chest expansion 5 inches, reduced my waist 6 inches."
"I can not recommend your system too highly, and without flattery believe that its propagation has been of great benefit to the health of the country."
"My reserve force makes me feel that nothing is impossible, my capacity both physically and mentally is increasing daily."
"Your system develops the will, as much as the muscle."
"I have heard your system highly recommended for years, but I did not realize the effectiveness of it until I tried it. I am glad indeed that I am now taking it."
"Your system developed me most wonderfully."

The Swoboda System is the result of a discovery I made in the human body which has absolutely revolutionized the possibilities and effect of exercise. The results are startling in their extent, and are noticeable from the first day. You never will know what it is to be really well and vigorous, or to comprehend what the **SWOBODA-KIND** of health and energy of body and mind actually is until you give the **SWOBODA SYSTEM** a trial.

Join the Army of the Vigorous, Strong and Happy

You can be physically just what you wish to be. You can have reserve vitality for every emergency. I guarantee it. I offer my system on a basis which makes it impossible for you to lose a single penny. My guarantee is startling, specific and positive.

My new book "EXERCISE REVOLUTIONIZED," is free. It tells of the dangers of exercise and conscious deep breathing and explains how the "SWOBODA SYSTEM" is making vigorous and strong men and women out of weak and poorly developed individuals. The evidence it offers is most convincing. My free book will be a revelation and an education to you. Write for it and my complete guarantee today, before it slips your mind. ADDRESS

ALOIS P. SWOBODA, 229 Victor Building
Washington, D. C.

Are you as healthy, strong, well developed, vigorous, cheerful, hopeful, pleasant and as happy as you can be? Are you satisfied with yourself? Have you reason to be, or are you satisfied because you do not realize your deficiencies and fail to comprehend how much better life actually can be for you?

Remember Nature never helps the man who is satisfied with himself, even though he be the most inferior of beings.

You represent two beings: one is what you are mentally and physically, and the other what you may be. The Swoboda System can make you better than you are at present, as it has helped thousands of others to become better, mentally and physically.

If you will write for my free book, I know that I can easily and quickly prove to you that you are only half as alive as you must be to realize the joys of living in full, and that you are only half as well as you should be, half as vigorous as you can be, half as ambitious as you may be and half as well developed as you ought to be. The fact is, that no matter who you are, I can prove to you positively, by demonstration, that you are leading an inferior life, and I want to show you the only way in which you may speedily and easily, without inconvenience or loss of time, come into possession of real health, vigor, energy, development and a higher realization of life and success.

Why lead an inferior life when
the Swoboda System quickly
and positively strengthens the

The Swoboda System is no Experiment. I am giving it successfully to pupils all over the world. I have among my pupils hundreds of doctors, judges, senators, congressmen, members of cabinet, ambassadors, governors, thousands of business men, farmers, mechanics and laborers and almost an equal number of women.

"I believe it will do all you claim for it; it has certainly made me feel ten years younger."
"I consider your system the finest thing a man can take, and would not take anything for the benefit I have received."
"Ten minutes of your exercise is equal in value to three hours of horseback riding."
"Effect was almost beyond belief."
"Chest measurement increases 5 1/2 inches in 60 days."
"All your promises have been fulfilled."
"Swoboda system an immense pleasure."
"Muscles developed to a remarkable degree."
"Gained 20 pounds in weight."
"Did not expect such wonderful results."
"Best system I ever tried."
"Thought it impossible to get such results."
"Increased 16 pounds in 60 days."
"Gained 17 pounds, sleep better, muscles larger."
"Your system is a recreation."
"Can not speak too highly of your system."
"Considers it a great discovery."
"Ten minutes of your system better than hours of any other."
"Very first lesson worked magically."
"Although I have only been performing the exercises four days my muscles are much firmer already."

Why is the **SWOBODA SYSTEM** so successful—because it does not stop with mere primary physiological effect, but it proceeds beyond the effect of ordinary exercise, into the realm of organic evolution, through the secondary and tertiary effects. It energizes, develops, recreates and causes the body internally and externally to adapt itself, for greater success in promoting the realization of perfect health and physical organization.

Most physiologists know only of the primary effect of exercise. If any system were limited to the primary effect alone it would be no different from ordinary exercise, but the **SWOBODA SYSTEM** is based upon a fundamental evolutionary principle. It creates, by its secondary and tertiary reactions, results which are impossible for other exercises—results, too, which seem impossible to those who do not understand.

I not only want you to know what the **SWOBODA SYSTEM** can do for you but I also want you to know of the high standard of my business methods. Read

MY UNCONDITIONAL GUARANTEE In Every Sense a Government Guarantee

When you read the testimonials you may have come to the conclusion that while no doubt the **SWOBODA SYSTEM** has been of benefit to others still it may not necessarily benefit you. If you have reasoned thus, I can quite agree with you that your conclusion is logical and reasonable because very often it is true that what is of benefit to one is not always of benefit to everybody.

In order that you absolutely avoid even the possibility of risking a single penny and yet have the opportunity of demonstrating to your own satisfaction that MY SYSTEM will benefit you, and you alone, I want to say to you that I agree here and now to refund every penny which you pay me, if after ninety days' trial you do not feel that MY SYSTEM is all I claim it to be and that you are not benefited accordingly as I promised. All I ask of you is that you comply with my terms, absolute honesty and thorough cooperation, such as you expect of me, also full opportunity to do my best for you. After ninety days' trial if you are not completely satisfied I want you to say so, that you honestly believe MY SYSTEM is not what I claim, and I will refund to you your money.

Nothing could be more fair than for me to send you my instruction—let you use it—experiment with it upon yourself—demonstrate its adaptability to yourself—obtain the results and be satisfied, or find that you cannot obtain benefit, and that MY SYSTEM is not as represented without risking or losing a penny. All that you have to do, if you are dissatisfied, is to write me and say: "Mr. Swoboda: I have given your system an honest trial—have been faithful to your instructions—have taken your treatment as you prescribed and I find it is not as represented by you. It is a failure in my case, therefore, I return your instructions, and you please return the money I sent you." Is not this fair?

You have a guarantee of the United States Government that I will do as I promise, for if I did not I would be obtaining money from you under false pretenses, in other words, using the mails for unlawful purposes, and I would be, therefore, subject to imprisonment if I in any way violated my contract with you.

I GUARANTEE, first, that my instructions to you will be personal and that I shall answer any question you may ask during the progress of the course.

I GUARANTEE that there is no other expense beyond the charge which I make for the instructions, to make a better human being of you than you could ever hope to be without my system.

I GUARANTEE to give you great reserve energy, and put new vigor into your system, to give you greater recuperative powers and more vitality.

I GUARANTEE to make you much better, no matter how well and strong, or developed you are.

I GUARANTEE better, quicker and more permanent results than can be had from drugs, tonics, food combinations, dieting, faith cures, electricity, patent devices, breathing systems, or appliances, athletics, gymnastics, heavy weights, etc.

I GUARANTEE that my system does not in any way overtax the heart, or nervous system, on the contrary I guarantee that it strengthens both quickly.

I GUARANTEE that my testimonials are all genuine. Etc., etc., etc.

The above is a part of my full UNCONDITIONAL GUARANTEE.

Equalized

MOTOR-CARS

(Continued from page 1342)

would look a little prettier and smell a little sweeter. As is the case with gasoline, it is desirable to use a chamois filter for filling to avoid the presence of moisture."

Motor periodicals continue to discuss various phases of the cheaper fuel question. That motor spirits alone will not meet present conditions, with gasoline selling so high, and with further advances in prospect, seems to be regarded as beyond question. The use of kerosene is still under much discussion. Some experimenters have become convinced, according to *Automobile Topics*, that kerosene is "almost, if not quite, impracticable under the limitations of present designs in carbureters." At the same time, men are found who declare that they have been running cars on mixtures of gasoline and kerosene, while using only standard types of carbureters. New designs of carbureters especially adapted to kerosene are frequently heard from, but thus far "almost without exception such devices are not on the market." While some of these may soon be put out in commercial form, many designs are known to have been failures; "the trail is strewn with remnants of kerosene handling appliances that have come to naught."

HOW FRANCE WILL IMPROVE HER NATIONAL ROADS

Motorists who have toured in France, where the roads are so fine, will scarcely be prepared to learn that the Government has just undertaken to provide for still larger expenditures for the maintenance of the national highways. A credit of \$6,800,000 has been allowed this year for the upkeep of 38,337 kilometers of roads. This is an increase of \$400,000 over the sum set apart a year ago, and means an allowance of \$243 per mile each year for maintenance alone. Moreover, it is proposed that for next year the sum set apart for maintenance be increased by another \$400,000. These expenditures will be made exclusively for the maintenance of such highways as are under the direct control of the central Government. There are in France three other classes of roads, more or less controlled and maintained locally, the mileage of which is nearly ten times greater than that of the national highways. A Paris correspondent of *Motor Age* says further of these matters:

"Recent events have shown that the credit for the upkeep of French national highways is insufficient, not having kept pace with the increase of traffic, and particularly motor traffic. Even the progressive increases made since 1910 are hardly sufficient to cover the increasing wear and tear. A proposal is now before parliament to make a special allowance of \$1,600,000 for the reconstruction of roads in most urgent need of repair. With a grant of this proportion and the projected increase for maintenance expenses, the roads can be got back to their original perfect condition."

"To meet the additional demands made on the highroads, the authorities are in favor of granite paving on a cement foundation. Granite blocks are small, have a smooth surface, and are set very close, the result being a perfectly smooth highway on which motor-cars can travel at the highest speeds without vibration. These

MOTOR-CARS

(Continued from page 1344)

roads are practically indestructible when used by rubber-shod vehicles, and offer a fairly good hold for horses. Their only disadvantages are that they are noisy when used by horses, and their cost of construction is \$12,400 per mile.

"A considerable quantity of this kind of road has been laid in the neighborhood of Paris, where fast traffic is so intense that all other road-dressings perish. Owing to cost it is not intended to apply this system except in special cases. A considerable use also is being made in the metropolitan district of tar macadam roads, the road material being prepared in special mixers and laid hot without the use of water as a binder. This is a system employed to a certain extent in America and very common in England. Obviously it differs radically from the tar-painted road.

"The cost being higher than for an ordinary macadam road, it is proposed to include this system in the reconstruction scheme and obtain special grants for it. Under this plan France obtains three distinct types of road-dressing: granite blocks on cement foundation for intense traffic on national highways in the neighborhood of towns; tar macadam for heavy and fast traffic, and ordinary macadam for the main roads."

The French Government meanwhile has undertaken to give to every highway in the country a distinctive name and number and to place names and numbers on all kilometer stones and direction posts. Of the importance of this reform to motorists the same correspondent in another letter says:

"It appears but a slight reform, but in reality it is one of immense importance to motorists. All the roads in France are divided into classes: national highways, departmental highways, chemins de grande communication, etc., and each road bears a number. This classification is made use of by the authorities, who never speak of a highway as the road between Dieppe and Rouen, but as 'National Highway No. —'. To indicate the position more accurately, they have only got to add 'Kilometer stone No. —' or 'Hundred-meter stone No. —' to make it possible for any person to find a desired spot as easily as he would pick out a numbered house in a numbered street.

"This system of numbering is to be given full amplification. Every kilometer post in France and every direction post under Government control will have the name and the number of the road on which it stands painted in big letters and figures. This work has already been begun and will be completed before the present touring season is in full swing.

"As all the Government and most private maps now bear the name and number of each road, it will be possible for a motorist to plan out a tour by merely writing down the names of the roads he has to follow, and there will be practically no need for a map when on the road. This system has been applied to a limited extent for a number of years, and has been made use of by experienced travelers. It was not, however, sufficiently extensive to give all the help of which it is capable.

"Under the new system, a motorist wishing to make a straight run from Havre to Nice, crossing France in its greatest length, would have need of no other instructions than 'R. N. 14, Paris, R. N. 7, Nice.' He will keep on R. N. 14 (Route Nationale 14) until it brings him to Paris; on leaving the capital he would pick up R. N. 7, and would follow it until it brought him to Nice, thus accomplishing a journey of 900 miles without any need for a map and without any necessity for asking a ques-

tion. As the name of the road on which he is traveling is brought before him every five-eighths of a mile, it would be practically impossible to make a mistake. Should he take a wrong turn in a village, his mistake would be revealed to him, at the most, five-eighths mile farther on. Under this system a stranger totally ignorant of the language could make a run from one end of France to the other just as easily as a foreigner could follow Broadway from Bowling Green to Yonkers."

GROWTH OF THE TRUCK INDUSTRY

It is estimated that in the present year there will be produced in this country 51,586 motor-trucks, representing the output of 170 makers. The figures are based on reports made to the National Association of Automobile Manufacturers. Last year the total output of trucks by the same number of companies was 21,939. In the previous year the output of eighty-five companies was 10,655. Reports have been received for the first three months of this year only, but they are believed to be fairly indicative of the results that will come for the entire year. *The Horseless Age*, commenting on the figures, says:

"This is a rate of growth of approximately 200 per cent. annually. Reports from the 170 companies are classified as follows: Gasoline vehicle makers, 140; electric, 20; mixed systems, 3; gasoline fire apparatus, 7; tractors, 3; tractors, 2; steam, 1. The gas-electric vehicles and the tractors are made by the electric- and gas-vehicle makers.

"There has been a notable tendency to change models, particularly among the gasoline-vehicle makers. Taking account only of companies making full reports for both years, 1912 and 1913, it is found that 35 models have been dropped by the gas-car makers and 44 new models added, while the electric-vehicle makers have dropped 12 models and added 5. The changes are most pronounced in the 2,500, 3,000, 5,000, 7,000, 8,000, and 12,000-pound sizes in gasoline vehicles, and in the 1,500, 2,000, 3,000, and 7,000-pound capacities in electrics.

"The mean average price of all the commercial vehicles produced in 1912 was \$1,957.37; that of the gasoline cars, \$1,868.95, and of the electric vehicles \$2,465.18. In 1911 the average value of all gas trucks sold appeared from the records to be \$2,079.16, and for all preceding years combined was \$1,955.70, while in 1911 the average price of all electrics reported was \$2,759.66, and for all preceding years was \$3,369.72.

INCREASING EXPORTS OF CARS

The Government report on international trade in automobiles shows for March a gain of 37 per cent. in cars exported. The most notable gain came from Great Britain, where in value it was 47 per cent. There were losses in three countries only, and these were of a minor nature. The greatest gain was made in Mexico, where the increase was 200 per cent., but this means an increase in the number of cars of only twelve. In England the increase in the number of cars was 264. Meanwhile, the decrease in imports of cars continued. As compared with March, 1912, the decline in imports in March of this year was 29 per cent. France and Great Britain lost heavily—the former 62 per cent., the latter 55 per cent. Italy and Germany, however, sold us more cars than in former years.

United States Tires

are good tires

How did you pick your car?

When you bought your car you didn't choose it because you happened to like the carburetor or because of its thick upholstery or even because of its famous motor.

You got right down to the bottom of the question. You compared various cars point by point until you finally found the car that came the closest to combining all the good points you wanted to find in your car.

Why not buy your tires in the same way?

Why not size up the various brands point by point and pick the tire that combines all those strong features that a good tire ought to have.

You want high mileage

You will get from 25 to 50 per cent. more mileage from United States Tires than any tire ever yielded up to the time the United States Tire Company was organized.

You want to avoid rim cutting

United States Dunlop Tires are the only tires ever guaranteed against it.

Air capacity and diameter are important

No tire ever made has a larger average air capacity or larger diameter measurements than the United States Dunlop. Get a few cross sections and prove it with your own eyes.

You want an easily manipulated tire

The round toe makes the United States Dunlop the most easily manipulated tire on the market.

But the prime essential is fabric strength

Strong fabric means not only high mileage but protection against blow-outs. By a process which we have perfected and control exclusively we have practically doubled the strength of United States Tires and reduced blow-outs proportionately.

These are the good points you want to find in your tires. They govern the size of your tire bills. Four factory cooperative methods (used EXCLUSIVELY in the making of United States Tires) have enabled us to combine ALL of them in this ONE tire.

Cost no more than you are asked to pay for other kinds

United States Tire Company, New York

Complete Water Tower Outfit

CURRENT POETRY

SOME months ago we quoted from *The Masses* a poem called "At the Aquarium." We see it again in Mr. Max Eastman's "Child of the Amazons, and Other Poems" (Mitchell Kennerley). The title poem is too long for quotation in full and extracts from it would give little idea of its sustained power, so we content ourselves with quoting two brief lyrics. Mr. Eastman's book is interesting in itself, and as an illustration of a tendency evident in much modern verse, the tendency toward what may be called the social interpretation of nature. For generations poets have taken the message of the sky, and trees, and the ocean as directed personally to them; they have seen their own moods and emotions reflected in the sunshine and the rain. Now some of them are so full of social consciousness that they can not see nature without a thought of its relation to all mankind. They are consistently democratic, having little of that egotism which was once characteristic of the lyric poet. So in the two poems which we quote Mr. Eastman socializes his theme, ending both of them with addresses to mankind. His verse has a splendid pictorial quality and he writes with vigor and sincerity:

One Day in the Year

BY MAX EASTMAN

How suddenly the day is warm when Winter yields.

And Spring blows her first breath over the lonely fields!

The drifts are sinking.

The soaked earth is drinking

Their coolness in.

And all farm sounds begin:

All fowls and cattle their strange praise renew,
And a more quiet worship wakes in you.

Have you cried unto memories fleeing so fast?

This day they will answer you out of the past!

Coming Spring

BY MAX EASTMAN

Ice is marching down the river,

Gaily out to sea!

Sunbeams o'er the snow-hills quiver,

Setting torrents free!

Yellow are the water-willows,

Yellow clouds are they.

Rising where the laden billows

Swell along their way!

Arrows of the sun are flying!

Winter flees the light,

And his chilly horn is sighing

All the misty night!

Lovers of the balmy weather,

Lovers of the sun!

Drifts and duty melt together—

Get your labors done!

Ice is marching down the river,

Gaily out to sea!

Sing the healthy-hearted ever,

Spring is liberty!

It is many years since Mr. Charles G. D. Roberts gave us any verse, and to those who remember the strength and beauty of the poems he wrote in his youth this has been the cause of genuine regret. So it is pleasant to find, in a recent issue of *The Pall Mall Magazine* the thoughtful and courageous lines which we reprint below. The years have not daunted this poet's

Why Bonds?

You no doubt have asked yourself many times, "How shall I invest my surplus money?" There are various forms of investment that can be recommended, but did you ever wonder why it is that well-to-do men, insurance companies and banks are large holders of bonds? Why not you?

We will be glad to have you confer with us about investments; and will submit our list of recommended bonds on request.

—away with suspenders and belts

Adopt the only
practical and hygienic way
of holding your trousers up.

Suspenders are uncomfortable—suspens-
ion—they drag—they make you stoop
—they make them round shoulders—
they tear off buttons.

Belts are stiff—binding—unhealthy.

**WEAR
Stanford "HIP-FIT"**

The "Invisible" trousers supporter entirely eliminates sus-
pender and belts—gives perfect comfort—perfect neatness
—perfect bodily freedom at all times, under all circum-
stances. Can't slip. Can't bind. Can't work out of ad-
justment. Takes all weight and pressure off the shoulders.
Has elastic over hips and back—yields to every movement—
pressure gentle and evenly distributed; acts as an abdomi-
nal support. Sanitary—cool—serviceable.
Thousands in use, all giving perfect satisfaction—no boy
or man will wear suspenders or belts after wearing a "Hip-
Fit." If your tailor or dealer cannot supply you, send
us your name and address, and we will promptly fill your order.

**Satisfaction Guaranteed
or Money Refunded**

For men with large protruding
abdomens wearing short, tight
trousers support, we make a
constricting trousers and shorts
and supporter. Price \$1.50.

heart, it seems, nor have they lessened the cunning of his hand. Particularly in the second half of this poem the phrasing is memorable for novelty and felicity.

On the Road

By CHARLES G. D. ROBERTS

Ever just over the top of the next brown rise
I expect some wonderful thing to flatter my eyes.
"What's yonder?" I ask of the first wayfarer I
meet.

"Nothing!" he answers, and looks at my travel-
worn feet.

"Only more hills and more hills, like the many
you've passed,
With rough country between, and a poor enough
inn at the last!"

But already I am a-move, for I see he is blind,
And I hate that old grumble I've listened to time
out of mind.

I've wandered too long not to know there is truth
in it still.

That lure of the turn of the road, of the crest of
the hill.

So I breast me the rise with full hope, well assured
I shall see

Some new prospect of joy, some brave venture
a-tiptoe for me.

For I have come far, and confronted the calm and
the strife.

I have fared wide, and hit deep in the apple of
life.

It is sweet at the rind, but, oh! sweeter still at the
core.

And whatever be gained, yet the reach of the
morrow is more.

At the crest of the hill I shall halt the new sum-
mits to climb.

The demand of my vision shall beggar the largess
of Time.

For I know that the higher I press, the wider I
view.

The more's to be ventured and visioned, in worlds
that are new.

So when my feet, falling, shall stumble in ultimate
dark.

And faint eyes no more the high lift of the path-
way shall mark.

There under the dew I'll lie down with my dreams,
for I know

What bright hill-tops the morning will show me,
all red in the glow.

Realistic poetry is not necessarily vulgar and harsh. Some writers are able to express homely thoughts in homely language, and thus produce things of beauty. Robert Burns did this, and so, in his humbler way, did the late Will Carleton. The *London Spectator* prints this good example of the sort of verse we have in mind, verse that is colloquial and simple, but yet has its poetic dignity.

Angels Unawares

By W. M. LETTS

She minds the childer all the day,
A baby tucked inside her shawl;
Faulting the young ones when they stray
Along the street beyond her call.

Her mother has not time to spare
For sittin' under chick or child,
So Katey has the lot to care,
The lads to keep from running wild.

The sense comes soon to thim that's poor—
Herself could scarcely walk when she
Made room for younger ones galore,
And rocked the baby on her knee.

Barefooted, with her share of dirt,
But steadfast for her years is Kate;

This is the factory that produces

The Noiseless North East Electric Starting and Lighting System

For four years we have been building electric starting and lighting systems—not so much, however, with the idea of producing in large quantities at the start, but more with the aim of turning out the highest possible quality.

We have been concentrating our efforts and our energies upon the development of our plant and of our organization, and upon the improvement of our machine.

As a result, we have today the finest and best equipped plant in the world, devoted exclusively to the manufacture of electric starting and lighting systems, producing a motor-generator, of our own creation and construction throughout, that is the simplest, lightest, most compact, most flexible, most powerful and most economical electric system ever put together.

And this policy of placing quality before quantity has inevitably led to a constantly increasing demand for the North East System which is now standard equipment on many of the best cars.

Ask your dealer to show you the positive, noiseless action of
The North East Electric System
and specify its installation on your new car.

The Welch Grape Juice Company
Westfield, N. Y.

The likes of her don't come to hurt,
Tho sure she's only rising eight.

You'll meet her strutting through the rain,
The baby sleeping on her breast,
Or by some big shop-window pane
Lookin' how quality is drest.

Happy as little kings they stand,
Staring at cakes or sweets or toys:
She has a sister by the hand,
Her skirts are clutched by two small boys

Their faces press against the glass,
They do be lettin' on to choose
The best of everything they pass—
Toy soldiers, dolls, or scarlet shoes.

Then through the chapel door they stroll,
When Katey bids to say a prayer;
Hand clasped in hand the young ones kneel
To beg God have them in his care.

There's other girls in this same street
As careless as the breeze of June;
They do be dancing on their feet
The time the organ plays a tune.

A skipping-rope is their delight,
The lamp-post serves them for a swing.
You'll say that Katey has a right
To jump with them and dance and sing.

You think her life is hard maybe?
You'd have her playing bat and ball?
But sure the best of games, says she,
Is playing mother to them all.

There is something suggestive of Browning in the wording of the following poem (from *Harper's Magazine*), but the thought of it is more like that of Mrs. Browning.

"Sweet When Life Is Done"

BY ANNE BUNNER

Sweet, when life is done, what of love?
You might leave me first—by what sign
Shall I know you then, there above?
Tho my heart should storm heaven's door,
Would the angels teach, evermore
Teach you to forget you were mine?

Tho my heaven turned hell, I would keep
Memories of earth, nor forget—
Tho the angels plead—how to weep,
Watch the tearless dead, dear, until
One shall pass with eyes quick to fill—
Mine will be the eyes that are wet,
Eyes no heaven could teach to forget.

Miss Mackellar has put a tragic intensity into this poem and she has expressed a general truth in the symbol of a personal experience. We take it from *The Spectator*.

Sorrow

BY DOROTHEA MACKELLAR

My sorrow, O my sorrow, when first you came to rest,
Crouched huddling on my hearthstone, I held you to my breast
And cuddled and caressed you, and rocked you o'er and o'er,
My sorrow, like a baby that creeps upon the floor!
I showed you to my neighbors, I made you rimes to sing,
For I was proud to have you, the delicate small thing;
And so I nursed you always, till you are come to-day,
My sorrow, like a tiger tense-crouching for his prey.

For silently and swiftly, my sorrow, you have grown
Till you are waxed so dreadful I dare not be alone,
Alone I dare not face you, lest I be slain outright—
I pray you, monster sorrow, to sheathe your claws to night!

PERSONAL GLIMPSES

KENTUCKY'S PIONEER APPLE-GROWER

THE Bluegrass State is becoming famous for more desirable things than mountain feuds, "moonshining," horse-racing, and oratory of the "silver-tongued" variety. Like many of the other older commonwealths, Kentucky is rapidly developing its natural resources, and one of the men leading the work for the general betterment of the State is Edwin McCollom. Mr. McCollom has proved to the people of his section that the soil there is splendidly adapted for apple-growing—proved it by making money out of the industry himself—and, with no thought of gaining any notoriety, he has become even more than a State celebrity. The story of what he has done is told in *The Woman's Home Companion*:

Mr. McCollom, who is now sixty-nine years old, was pastor of a Presbyterian church in Henderson, one of the principal towns of the Pennyroyal district of Kentucky, when his physician convinced him that he must give up his sedentary life and the obligations of the ministry; so he went into the country and bought an eighty-seven-acre farm. It happened that the farm contained two acres of old apple orchard, and that for some obscure reason—apple-growing for profit being at the time unknown in the district—the former owner had also set out thirty-two acres of young trees, now two years old. Evidently the other farmers had convinced him that his judgment was bad, for he sold the property to Mr. McCollom for five thousand dollars, its value without the trees.

Mr. McCollom knew as much about farming as an Eskimo. His neighbors assured him that nobody had ever made money growing apples in Kentucky, and that he had better cut down his orchards and plant field crops. He compromised by cutting down ten acres of the trees, and managed to make a living by raising corn, wheat, and tobacco on his sixty-three acres of cleared ground. However, being a man of intelligence, he read up on apples and concluded that he might be able to make his despised orchards worth something. The trees had not been selected, and some proved worthless, but others were of good quality. Gradually he learned how to tend them to the best advantage, and when the young trees were eight or nine years old he was selling apples by the carload and his orchard was paying dividends. Nine years ago he replanted nine of the ten acres that he had cut down. Then the people of his immediate vicinity and of three or four neighboring counties sat up and took notice. Thousands of acres of trees were planted the same year in that section of the State, and in each succeeding year the apple acreage has been increasing to an extent that has taxed the facilities of the tree nurseries of the Middle West. So Mr. McCollom, a "tenderfoot" with no practical knowledge of farming, has taught hundreds of hard-headed, experienced farmers a most profitable lesson. His own replanted nine-acre orchard is regarded as one of the finest in the South, and he could sell his property for ten times

Waltham Automobile Timepieces

Details

Timepieces of chronometer construction similar to jeweler's chronometer and to the marine chronometer purchased from us by the navy.

Adjusted for temperature, neither heat nor cold will affect its running quality.

8-day movement with an indicator on the dial which shows a red warning signal three days before the timepiece runs down.

Can be had either alone or in combination with standard speedometers.

Choice is offered of a raised dial or dial flush with the dash.

Most desirable model costs \$25.

For the first time you can get an automobile timepiece designed especially for automobiles. This instrument is a summary of Waltham mechanical resources and skill, and in spite of hard road work it will render orthodox Waltham accuracy. In fact it will run so accurately that you can regulate your pocket watch and house clocks from it.

Now that you can get a timepiece which in accuracy and beauty of appearance corresponds with the other fittings of your car, we believe that you will be quick to do so.

If you have any difficulty obtaining this Waltham Timepiece please let us know.

Waltham Watch Company
Waltham, Mass.

Clean your auto with MOBO

—that's how to keep your car looking new. Mobo takes off the heaviest travel stain.

Gives new life to paint and varnish, will not blister or streak the glossiest surface. Preserves the lustre.

Try it

Mobo is a re-velatory lime-and-oil soap—the only soap to use on an auto. Good for cleaning furniture, parquetry, painted walls and the like.

If you can't buy it of your dealer, send us his name and 25 cents, and we'll send you large 1½ pound trial can. Free booklet.

what he paid for it. In short, he is one of those who can appreciate the old benediction that was pronounced upon a king of the Anglo-Saxons when he was crowned among his free-born people, "May he be blessed with the blessing of grapes and apples!"

ABOUT HAYWOOD

IF pieced together, the newspaper editorials denouncing William D. Haywood would probably reach from Lawrence, Mass., to Paterson, N. J. The popular impression of the I. W. W. leader, given by the hostile papers, is that he is the roughest kind of a "rough-neck," and that he is given to making melodramatic appeals to the prejudices of what is more or less vaguely described as "the mob." So, in view of this fact, it is somewhat interesting to have a picture of Haywood from the pen of a friendly writer. André Tridon, a Socialist, describes the champion of the Industrial Workers of the World in *The New Review*, a New York Socialist monthly, and as we must take the extreme views on one side with a grain of sugar, perhaps we should take this with a few drips of lemon-juice:

Haywood is simple. His speech and manner are simple. So are his clothes and his get-up. Some of the youngsters in the labor movement cultivate flowing manes and affect flowing ties, anathematize stiff collars and all but clerical, black clothes. They are burdened by their prophetic mission. Haywood's huge stature and his one damaged eye are the only things that make him conspicuous in a crowd. A Western soft hat, the collar, the tie, the suit, the overcoat that a million working-men wear; neither foppish nor slatternly.

Almost seven foot tall and with ample girth, he lets his appearance proclaim his strength; he does not stamp or pound, he does not act the bully; he does not use invective, he never damns or swears. Having been jailed perhaps a hundred times, he does not harp on his martyrdom. He does not whine. He does not boast. He is not a hero, nor an apostle. Just a big, strapping fellow, who came from far away to do some work that had to be done, and who is going to do it regardless of what may befall him. If the police interfere with his plans he will neither be cowed nor will he provoke them to acts of violence. He will, once more, go to jail without uttering the empty words which text-books record as historical sayings.

His many encounters with the representatives of organized capital have not embittered him; he is too healthy to be bitter. Familiarity with the woes of struggling mankind has not hardened him.

Haywood is not mysterious, nor mystical; he is not distant with strangers nor unduly familiar with close associates. In a word, a poor subject for the dramatist. "Clever, shrewd, a Machiavelli," thus speak those who watched him once or twice adapting himself to the mood, the temper, the level of a thousand miners, ten young children, a group of artists, a cultured woman. Watch him some more and you will find something more humanely inter-

esting than Machiavellian shrewdness or cleverness: the faculty of sympathetic response. Uncover the strings of a piano and every sound in the room will call forth a sympathetic vibration of the sounding-board. Haywood vibrates sympathetically.

Haywood adapts himself to the audience, but that adaptation is the result of a reflex action, not of a conscious effort. The other day I watched him conducting a risky movement. He asked a crowd made up of perhaps twenty-five nationalities to select as many delegates, whom he sat on the stage in a row, calling upon them in turn to say a few words. The crowd had been on strike several weeks; which means that for several weeks those men, women, and children had slept their fill, rested their limbs, listened for hours to argumentation, read pamphlets; their bodies and their minds were undergoing a crucial change; races were commingling, united by the same hopes; bold, energetic men with a halo of romance had come from the ends of the continent to lead their fight. Bellies were empty perhaps, but hunger is not so fierce in idleness as in times of factory speeding. A carnival spirit pervaded the hall; and the twenty-five were lined up on the platform, self-conscious, with the weak jaw of the scared or the swagger of the panicky.

Some of them rushed to the front when called upon and repeated stock phrases; these Haywood encouraged, in order to give heart to the others. Some launched upon a lecture. Some stuttered in a choked whisper; Haywood repeated their words, editing them a little, for the benefit of the last row in the audience. Some were ridiculous and called forth a storm of mock applause and giggling; Haywood reminded the audience of the fact that the hardest workers are not the best talkers. When a sweet-faced, childlike girl, the Italian delegate, almost ran off the stage in a fit of fright, Haywood, with the attitude of a father to his young daughter or of a courtier to a princess, came to her, took her hand and with a bow presented her to the audience. And the girl, feeling safe under the protection of the tall Cyclops, found something to say and the voice to say it. But for the strong restraining hand of Haywood the audience would have jeered the poor inarticulate delegates, shouted the little girl off the stage, and then delegates and crowd, the former humiliated, the latter ashamed, would have all borne a grudge against the organizer of the performance.

As it was, the representatives of twenty-five nations gathered on the platform and, affirming the solidarity of their races in the present strike, felt thankful to Haywood and impelled thereafter to justify by deeds the trust placed in them. The crowd felt that from twenty-four men and the girl thus singled out a new activity would radiate.

Lunching once in a little restaurant patronized by Orientals, Haywood turned around and, looking into the men's faces, began to speak. The dark-eyed men laid down their cards or their forks, listened, asked questions in broken English. Haywood answered the questions slowly, in a simplified English which his Armenian or Greek audience could understand. Children drifted in. They were not boisterous, not intrusive, nor familiar. They, too,

"What's the 'Holeproof' Secret, John?"

"How can they guarantee six months' wear in these fine, mercerized socks?" "That's easy, Dad! You'll find the answer and the truth in any Holeproof advertisement."

We pay an average of 74 cents per pound for our cotton yarn, for one thing. Cotton yarn can be had for 32 cents.

We do our own mercerizing. Our process adds 22% to the yarn's original strength.

For everyday wear, travel or exercise—tennis, golf, or dancing; for businessmen who walk a great

deal; for strenuous children; for women who want style with more than a day's wear—Holeproof is the logical hosiery. 1,000,000 men, women, children and infants wear Holeproof today because of its wonderful quality.

You can get the sheerest weights if you want them—six pairs in any weight guaranteed six months. If any

wear out—if a single thread breaks—you are given new pairs free. This guarantee covers every stitch, not merely heels and toes.

The genuine Holeproof is sold in your town. Write for the dealers' names. We ship direct where no dealer is near, charges prepaid on receipt of remittance. Ask for the new Mercerized Holeproof Socks

for men at \$1.50 for six pairs—the 25c grade with the silky lustre and 22% added strength.

METAL SHELTER CO.
400 Portage Ave., Winnipeg, Can.

there was a remarkable and a powerful personality which it ought to capture. London is always on the look-out for captures, especially of the rich, the powerful, and the brilliant—tho its love for brilliancy, especially literary brilliancy, is less ardent and wide-spread than its adoration of wealth and power. Modest, unambitious, except in the development of his business, shy, Sir Thomas for a long time resisted all these blandishments, and continued to come every morning to his office at eight and to leave it at eight in the evening; and neither the theater nor society knew him or saw him. But at last he was approached on what is his soft side; and that is his love of the poor—those poor with whose wants his own early experiences gave him all the sympathy that comes from common experiences. And charity came in a very beautiful and irresistible embodiment in the person of Queen Alexandra—that fascinating figure which has held the whole-hearted admiration of England for two generations, and is as fresh to-day after half a century as on that first day just fifty years ago when her divine beauty of youth first captured every London heart. There were all kinds of festivities—especially for the children of the poor—to celebrate the jubilee of Queen Victoria; and Sir Thomas took a magnificent hand in them by a princely gift of £100,000 to one of the charities which Queen Alexandra was particularly interested in establishing.

Sir Thomas had at last taken the plunge into the tempestuous seas of London social life; and he was not allowed to turn back. It was one of the advantages, in contrast with the disadvantages, of the length of time he had to traverse before he reached the throne, that King Edward learned to know every section of society in his kingdom; that he was thus trained in affability, in social knowledge, in experience of life; and that he was able to recognize a real man in all classes. His predecessors had been brought up in the narrowness of the eighteenth century, in its limitation of acquaintance, in its strait-jacket of antique etiquette; he was a modern man born into a democratic epoch; and he had the nimble intelligence to realize his epoch and to move with it. And thus there were around him and close to him the great trader as well as the great nobleman; and Sir Thomas Lipton entered the charmed circle.

There was some curiosity—there was even some anxiety, at first—as to how this simple business man, who had spent his life in such retirement, who was the child of poor Irish peasants, would bear himself in this giddy and novel atmosphere of high society and courtly circles. Sir Thomas then first revealed that extraordinary social tact which is one of his most marked gifts. Modest and unpretentious, but quietly self-confident and quietly proud, he exhibited an ease and a perfect composure in these new circles, and won respect and won hearts in an ordeal so trying.

When, finally, Sir Thomas resolved to unburden himself of a little of the cares of a great and gigantic business, and when he went to the public for additions to his business, there was one of

Errors in Filing Are Unnecessary and Costly

The "Y and E" Direct Name System prevents mistakes because it checks names alphabetically as well as numerically. It saves the wasted time and impaired efficiency that result from the costly and wholly unnecessary errors of filing under a system that is not self-checking.

Y and E Direct Name System of Vertical Filing

is self-checking because letters are filed numerically, while they are also located under the name of the concern or individual.

You know the NAME of the concern whose letter you want. Hence it is natural and logical to look for it that way. In re-filing it is easier, safer and quicker for the eye to follow the consecutive NUMBERS on the tabs and your letter than to pick out alphabetical divisions. You will instantly note a number out of order.

The "Y and E" System combines the simplicity and efficiency of the alphabetical and numerical methods of filing and omits their faults.

It saves money in every way. The guides are celluloided pressboard with a life fifty times that of manila.

Whether or not you transfer at this season, now is the time to start a filing system which will make transferring at any time easy and simple and just as easy to refer back to old letters. The tabs of the folders act as guides in the transfer file while the guides in the regular file remain to be used year after year.

Does Walking Tire You?

"Soft Spots"

Pneumatic Heel Cushions

give a spring to your step, take up the jar when walking, and make it a healthful pleasure. The rubber globules are hermetically sealed air chambers. You tread on air. Instantly adjusted and fit any shoe. At Shoe Dealers, Department Stores, or direct upon receipt of 25c. and dealer's name. Also state size of shoe.

"Soft Spots" Combined Heel and Arch Cushions take the place of the old steelarches—weigh but half—comfortable from the start. Only \$1.00

Essex Rubber Company
New York Office, 258 Broadway, N. Y. C.

the most curious booms that have ever been seen. People of every class tumbled over one another in their eagerness to get an allotment. Sir Thomas forgot none of his old friends in the allotments; and they got their share in the rush for the valued shares; and many of them were able to sell the shares at 100 per cent. profit, and to add welcome thousands to their fortunes. It was thus a boom which pleased everybody—the stockbroker, the jobber, the general public; and it did not leave—for the money was a good investment, too—as many booms do, any bad taste behind.

After relieving himself of some of his responsibilities, Lipton became a great yachtsman. Every summer, his boats were seen at the regattas in Germany and France as well as at home. He also became a globe-trotter, and here is a story which Mr. O'Connor got from him:

If you want some strange and curious stories of all parts of the world—and especially of the mysterious East—you have only to spend an hour or two with Lipton in his office in the City Road—stories made the spicier by the keen sense of humor which Lipton has inherited from his Celtic blood. I laughed heartily as he told, for instance, the story of the Buddhist monk he met, let us say, in the center of China, who glared at him so fixedly that Lipton began to apprehend the rush and the knife of some fanatical enemy of the Christian and the foreigner, and then, a little later, when the monk could separate himself from his fellows with their shaven heads and their habits and their beads, Lipton's surprise when he heard in excellent English, with a slight brogue, the astounding inquiry, "What the d—l has brought you here, Lipton?" and soon found that the shaven and habited Buddhist monk was as much an Irishman as himself!

Rude Interruption.—On a certain Southern golf course the sand pits are famous for their difficulty. A New York man played into one of the pits, and then cursed, none the less malevolently, if silently, while he took six ineffectual strokes, raising only clouds of sand and fairly burying the ball. Presently he was aware of an interested and incredulous darky watching him.

"Whar you see dat snake you's tryin' to kill, man?" he demanded.—*New York Evening Post.*

Tricking Her.—The editor of a great magazine sent for a certain author who had submitted an unsolicited manuscript.

"I am glad to make your acquaintance, sir," said the editor, enthusiastically. "The story you sent us is perfectly splendid. But why use a nom de plume? Let us publish it over your own name and it will make you famous."

"I'm not after fame," objected the author. "It's money I want."

"But you'll get just as much money in either case."

"No, I won't. If I publish it over my own name, my wife will get the money."—*Cleveland Plain Dealer.*

One Rub

Turns Brass to Silver

Talk about your nickel plated lamps! In a few minutes you can silver plate every piece of bothersome brass or copper on your car. All you need is a piece of cheese-cloth and a bottle of

Silver-Quick

Trade One Rub Mark

Turns Brass to Silver

Get away from that cheap brassy look. Make your car look up-to-date. Use Silver-Quick and say good-bye to polishing forever. When long exposure has made the first coat dull, just use Silver-Quick again. It's easier than polishing. Silver-Quick is not mercury or quick-silver. It gives a genuine silver plate. \$1 bottle will silver plate all brass work on any car—lamps and all. Re-silver reflectors. Renews nickel plate. Make a note now to ask your dealer for a bottle of Silver-Quick. Or send us \$1 now. You run no risk. We absolutely guarantee Silver-Quick to be and do everything we claim for it. We will give you your money back if you are not satisfied.

THE SPICE OF LIFE

A Chance.—The society for the prevention of useless noises might make a start by reducing the number of cheers from three to one.—*Atchison Globe.*

Or Behind the Barn.—PARSON—"Do you know where little boys go to when they smoke?"

Boy—"Yes; up the alley."—*Cleveland Leader.*

The Cheerful Thinker.

I'd love to pay the income tax,
I'd pay it with delight;
I'd pile the stuff in precious stacks—
I'd sit up half the night.
I'd try to be the first to pay—
I'd be it if I could;
And then I'd go my cheerful way—
At least, I think I would.

Of course, I'd want an income big,
So I could pay the more;
The deeper down I had to dig
The richer stream I'd pour.
If I had coupons piled in racks,
With millions to the good,
How joyously I'd pay the tax—
At least, I think I would.

—*Cleveland Plain Dealer.*

Altruistic.—ROSE—"He said he would kiss me or die in the attempt."

MARIE—"Well?"

ROSE—"He has no life-insurance, and I pitied his poor old mother."—*Ohio State Sun-Dial.*

Tillie's Nightmare.—Tillie Clinger says she dreamed last night that she died and went to heaven in a Balkan blouse, and when she woke up she found she had been sleeping with her left hip on her hair brush.—*Dallas News.*

Tabooed Subject.—"Speaking of those campaign funds—"

"Let us not do so," replied the man who had subscribed. "There is no use of looking last year's band wagon in the taximeter."—*Washington Star.*

Getting Even.—"We are somewhat musical, and now the family next door is having the daughter take singing lessons."

"Emulation, eh?"

"Looks more like revenge."—*Washington Herald.*

No Relief.—The cynical person was standing in front of a part of an exhibition of local art talent labeled "Art Objects."

"Well, I suppose Art does object, and I can't blame her, but there doesn't seem to be any help for it," he finally said.—*Chicago Inter Ocean.*

One of Many.—FELLOW GUEST (who has just told humorous artist an appalling chestnut)—"Aw—thought you might illustrate it, you know. It happened to my father!"

ARTIST—"Many thanks; but what makes it even more interesting is that I must have met twenty or thirty of your brothers."—*Punch.*

BUY the Summer model you prefer—*in the new and better way.* These are the styles that best dressed men wear nowadays. They are the latest LION productions with the famous LION features—patented "Lock-that-Locks," strong "Slip-Over" buttonholes, or "Easy-Tie-Slide" space.

WHEN you choose your collars buy them in the better way. Secure them absolutely fresh, sanitary, and unhandled in the

His Thought.—SHE (after the quarrel)—
"Leave my presence!"
HE (confused)—"Why—er—you've got them all!"—*Judge.*

It's Human.—Tell a man that there are 270,169,325,481 stars and he will believe you. But if a sign says Fresh Paint, he has to make a personal investigation.—*Charlottesville Enquirer.*

C. O. D.—"I feel that I have an important message for the world," declared the young man.

"Send it collect," advised the practical friend.—*Buffalo Express.*

East-Side Version.—If you invent a really good joke, it stands a fair chance of coming true. One of the best Du Maurier ever did, that of the small boy, the porter, and the grandfather's clock, had itself almost repeated on Stuyvesant Square the other day.

In Du Maurier's joke, the porter is staggering along under the weight of a huge grandfather's clock which he had been employed to deliver. A small gutter-snipe hails him.

"I say, mister," he asks, "wouldn't you find it more convenient to carry a watch?"

So Punch had it. The scene is now in Stuyvesant Square. A janitor is making small headway under the burden of a chiffonier, which he is carrying on his back. A boy on roller-skates goes by.

"Say, bonehead," he yells, "hire a room and then youse won't have to park your clo'es aroun' wid' youse!"—*New York Evening Post.*

CURRENT EVENTS

Foreign

May 30.—The peace treaty between the Balkan Allies and Turkey is signed.

The Spanish Cabinet, headed by Premier Romanones, resigns, following an attack by former Premier Maura.

June 1.—Count de Romanones resumes the premiership at the request of King Alfonso.

The Pope celebrates his seventy-eighth birthday.

June 2.—Japan announces that it favors the Bryan peace plan, which is already endorsed by ten nations.

Alfred Austin, Poet Laureate of England, dies.

June 4.—Following the announcement that he and his cabinet had resigned, Premier von Lukacs is wounded by a sabre in a riot in the Hungarian Parliament.

Japan again asks that the California Alien Land Ownership Law be not enforced.

Domestic

WASHINGTON

May 29.—Superintendent Sylvester and the Washington police are absolved by the Senate of blame for disorders during the suffrage parade on March 3.

Reports show that American exports increased \$217,165,302 in the past ten months.

May 31.—In compliance with a request of President Wilson, the Senate decides to make a sweeping investigation of the alleged lobby in Washington.

Secretary of State Bryan and Ambassador Spring-Rice sign a renewal of the five-year general arbitration treaty between the United States and Great Britain.

The President, in a letter to Senator Tillman, of South Carolina, urges early action on the proposed currency legislation.

June 3.—Richard L. Metcalfe, editor of *The Commoner*, is appointed Civil Governor of the Panama Canal Zone.

Attorney-General McReynolds says the dissolution decree in the Tobacco Trust case has proved to be a failure, and recommends a special graduated tax as a remedy for monopoly evils.

GENERAL

May 29.—The New York City Board of Health issues an order which prohibits the use of the Friedmann tuberculous serum without special permits.

Governor Fielder, of New Jersey, signs a compromise jury-reform bill.

May 31.—The Roosevelt libel suit at Marquette is ended with a nominal verdict for the plaintiff after George A. Newett, the defendant, apologizes and retracts.

Negotiations for a foreign loan of \$100,000,000 to Mexico are concluded in New York.

June 2.—The Curran Aldermanic Committee, which recently investigated vice conditions in New York City, recommends the dismissal of Police Commissioner Rhinelander Waldo, on the ground of inefficiency.

Ex-United States Senator Thomas W. Palmer, of Michigan, dies at Detroit.

June 3.—Ex-Congressman Victor Berger, Eugene V. Debs, and Adolph Germer, representing the Socialist party, exonerate Governor Hatfield of blame for conditions resulting from the strike in the West Virginia coal fields, and criticize ex-Governor Glasscock.

Police Commissioner Waldo, of New York, denies the charges made by the Curran Committee.

Didn't Find It.—"My husband doesn't care for sightseeing."

"Then nothing interested him on your trip?"

"Only the spot where Washington threw a dollar across the Potomac. He spent several hours looking for the dollar and was quite happy for a while, but even that ended in disappointment at last."—*Washington Herald.*

1914 Locomobile

Announcing the Locomobile for 1914

Right Drive Models and Left Drive Models with Gear Lever operated by the Right Hand

ESTABLISHED as the easiest riding and best built car, with individual beauty of line and finish, the Locomobile is presented for 1914 in Right Drive and Left Drive models. On both, control of the change gear lever is by the right hand, the safest and most natural arrangement.

Compare the Locomobile with other cars for comfort, beauty, mechanical excellence and firmness at high speeds. In a competitive test over the same course, the Locomobile will outpoint any other in all features contributing to the greatest satisfaction of the owner.

A new, distinctive body type for 1914 is the six passenger Torpedo on the Big Six chassis; an original presentation. Closed cars include the Locomobile Berline and standard Limousine, models of distinctive atmosphere and elegance. Landaulets are furnished in both Berline and Limousine types. A three passenger Coupe follows the general Berline type in design.

New Features for 1914

New Carburetor—built to meet demand of owners of high grade cars for maximum fuel efficiency and economy; makes Locomobile the most economical high grade six.

New Tire Brackets—at rear, hold tires in place by metal band. Locking device prevents theft of tires.

Crank Case Oil Drain—oil in engine base lowered without getting under car.

Starting Crank Removed—and placed in tool kit—improves beauty of car.

Nickel Trimmings—rich in appearance, easy to keep clean.

Easiest Riding—rear springs free to move at both ends absorb all road shocks; Ten-Inch

Upholstery; seat cushions fit under upholstery on back; perfect balance of weight.

New Wrinkle-Proof Top—special bow construction supports top at six points, making it wrinkle-proof when raised.

New Fenders—concealed rivets and rounded surfaces; harmonize with clean lines of car.

New Storage Compartment—at back of front seat, for side curtains, canes and umbrellas. Reached without disturbing occupants.

Air Adjustment on steering post provides regulation of mixture from seat. Gives smoothest running motor under all driving conditions.

New Lamps—of octagonal design harmonizing with general decorative scheme of car.

Advanced Equipment—70-mile speedometer, electric horn, Locomobile air compressor for inflating tires, rain vision wind shield, robe rail, foot rest, quick detachable tires and demountable rims; new wrinkle-proof top.

Electric Motor Starter—an unfailing success since it was first adopted, continued as regular equipment on all Locomobiles for 1914.

New Priming Device—a special priming device injects gasoline directly into the intake manifold and insures easy starting, even in the coldest weather.

Electric Lighting—brightest lights and a system that never gives trouble.

SIX CYLINDER MODELS

"38" Left Drive Models and Right Drive Models

"48" Left Drive Models and Right Drive Models

Special folder now ready giving additional information regarding Locomobile cars for 1914, together with complete specifications of all models. Further printed matter showing cars in colors and giving more complete details mailed on request.

The Psychological Origin of MENTAL DISORDERS

By DOCTOR PAUL DUBOIS

In this book Dr. Dubois shows how mental derangement may be caused by the exaggeration of ideas and emotions, impressionability in the face of the vicissitudes of existence, disappointed ambition, worrying temperament, tendencies to fear or indolence, unrestrained anger, vengeance, amorosity, etc. He contends that insanity is more a Psychical unbalancement than a Physical disease. He would prevent or cure the great bulk of mental disorders by developing the patient's reason, and inducing him to control his feelings and correct his follies.

JUST PUBLISHED

The Walled City

By EDWARD H. WILLIAMS, M.D.

A book unlike any other for general reading.

The author says in his introduction: "So far as I am aware no true story of the life of the insane criminal has ever been written for the general public. It has been told in a technical manner, of course, for the benefit of those interested in the scientific and sociological aspect of the subject, but such writings have little popular interest, and do not convey a correct picture to the mind of the average reader." This book is

A Story of The Criminal Insane

which describes and pictures the everyday life of those within the Walled City—any Hospital for the sick-minded of criminal tendencies.

Brimms with humor and anecdote; shows the varied methods of amusement; recites many stirring efforts to escape; tells of types, of social position, of the law's outreach, the shortcomings of rulers, injustice, etc., etc.

Price \$1.00 net; by mail, \$1.11

"Tenement Tommy" Asks for A Square Deal

HE lives in New York's stuffy tenement district, the most congested spot in America.

In his sultry three-room home there is scarcely space to eat and sleep. His playground is the blistering pavement of the ill-smelling streets, hemmed in by scorching brick walls.

No trees, no grass, not even a whiff of fresh air,—in the only world Tommy knows. Ash cans are his background, and the rattle and roar of traffic his environment.

Tommy's widowed mother is broken with worry; his sisters and brothers are as pallid and frail as he. The winter struggle has sapped their vitality. They are starving for air.

No medicine will help Tommy. What he, his mother and the other children need are: a chance to breathe something pure and fresh,—a taste of sunshine and outdoor freedom,—an outing in the country or at the seashore. But between Tommy and his needs stands poverty, the result of misfortune. He must suffer just as if it were all his fault.

And that is why Tommy appeals for a square deal. Nor does he wish you to forget his mother, or his "pals" and their mothers,—all in the same plight.

This Association every summer sends thousands of "Tenement Tommies", mothers and babies to the country and to Sea Breeze, its fresh air home at Coney Island. A dollar bill, a five dollar check, or any amount you care to contribute, will help us to answer Tommy's appeal.

Send contributions to Robert Shaw Minturn, Treasurer, Room 204, 105 East 22nd Street, New York City.

R. FULTON CUTTING, President

SUGGESTIONS

A lawn sociable by your class, Sunday School or Club.

A card party at your summer hotel or camp.

A subscription among your friends.

UNITED STATES TIRES ARE GOOD TIRES

They cut down tire bills

It will pay you to use United States Tires exclusively, and this advertise- ment tells you why

No matter what make of tires you have been using—

No matter how satisfactory the service they have been rendering (for almost any standard make today will give you reasonably good service)—

The fact remains that if you have not been using United States Tires you have not been getting all that our exclusive four-factory cooperative methods of tire building would give you.

Take the tires you are familiar with and compare them with United States Tires. You will find that United States Tires match them at every point and in addition have several decided advantages possessed by no other tire.

United States Tires today yield from 25 to 50 per cent. more mileage than tires ever gave previous to the time the United States Tire Company was organized.

United States Dunlop Tires are the only tires guaranteed against rim cutting.

They are the most easily manipulated of all tires, due to the round toe—an exclusive feature.

No tire has ever been made with a larger average air capacity or larger diameter measurements. Use your own eyes to prove this.

By a process which we have perfected and control exclusively, we have practically doubled the fabric strength of United States Tires and reduced blow-outs to a minimum.

If you knew of a car that at the same price possessed every good feature of your present car plus a number of exclusive advantages of its own, most assuredly you would switch to that car the next time you purchased.

Why not use the same reasoning in buying your tires?

Cost no more than you are asked to pay for other kinds

Tire-buy satisfied

NEW YORK, JUNE 21, 1913

WHOLE NUMBER 1209

TOPICS OF THE DAY

THE MINNESOTA RATE DECISION

THE RAY OF LIGHT shot through the "twilight zone" between State and national jurisdiction by the Minnesota rate decision fails to bring all our editorial watchers into agreement as to what they see there. For more than a year, State and national officials, the railroads, and Wall Street have awaited the Supreme Court's decision in this case, which was to illuminate finally that dim and shadowy borderland in the regulation of commerce. Now that the Court, in the unanimous opinion read by Mr. Justice Hughes on June 9, apparently "declines to admit that there is a twilight zone," editors and public men are somewhat at variance in deciding who is the winner. The decision reverses the lower court and upholds most of Minnesota's specific contentions, declaring valid her two-cent passenger rate and freight schedules, even the interstate traffic may be indirectly affected. But the Court emphatically declares this regulation to be valid only because Congress has not seen fit to enact legislation covering this point, but which Congress has the power to do whenever it pleases. Hence, since the Court in practice leaves the State's right of regulation intact, we find papers like the *Washington Post* and *Chicago Post* agreeing with the *New York Commercial*, which believes that "the United States Supreme Court has handed the railroads of this country over to the tender mercies of the various States of the Union, which can now go as far as they please, so long as what they do to the railroads does not amount to confiscation." That Congress may exert its latent powers seems "much like a pleasant dream," for "a Congress that is committed to the principle of State rights is not likely to do much for the railroads." This view is supported by many Democratic Senators and Representatives, who approve the decision and see no need for further legislation.

But a careful reading of the opinion, say the *Boston Transcript*, *Springfield Republican*, and *New York Press, Tribune*, and *Evening Mail*, will find that it contains, to quote *The Tribune*, "a pretty complete assertion of the Government's paramount right to go into a State and upset local regulations inimical to the conduct of interstate commerce on a just and fair basis." Sooner or later, says *The Republican*, Congress must enact laws asserting its jurisdiction. Thus the Supreme Court's decision is declared by *The Press* to be for the railroads—

"a signal of hope for the future, when Congress shall assume

the paramountcy of the national authority, and the bewildered owners of the more than \$16,000,000,000 invested in American railroad properties—to say nothing of other corporate investments—may look for justice and fair dealing to one authority rather than to forty-eight."

We are reminded by several newspapers that the history of the Minnesota rate cases began when in 1907 Minnesota, through its Railroad and Warehouse Commission, and subsequently through its legislature, ordered certain reductions of freight and passenger charges within the State. Stockholders of railroads directly affected brought suit to enjoin the rates as an unconstitutional exercise of power, as interference with interstate commerce, and as confiscatory. In April, 1911, Judge Sanborn, in the Federal Circuit Court, upheld all three of these contentions; in similar Missouri cases, the Circuit Court sustained the argument as to confiscatory rates, but not the argument of interference with interstate commerce. Now the Supreme Court reverses the Sanborn decision, to the great joy of the Governor of Minnesota and other State officials interested in the case.

It is a victory for Minnesota, says Attorney-General Smith, but a victory whose results "are of unmeasurable value to every State in the Union." Taking the same broad view, the *Minneapolis Journal* thinks the ground is now cleared "for a complete readjustment of the relations between the railroads and the public on a national basis." It continues:

"There were two branches of the case—first, the question of State control over rates wholly within the State; second, the question whether the rates prescribed by the State were confiscatory, as complained by the stockholders of the railroads. This second branch of the case naturally involves the principles on which railroad property is to be valued in determining the reasonableness of rates.

"Reduced to its simplest terms, the decision as to the first branch of the case is that the State does at present control intrastate rates, but that Congress at any time may in its discretion take away that power. There is, in short, no 'twilight zone' where neither State nor nation controls rates."

And the *New York World*, *Baltimore News*, and *Chicago Tribune* agree that the "twilight zone" now disappears, or, at least, "can be made to disappear whenever Congress decides to act."

The basis for their belief is found in these passages in the memorandum read by Justice Hughes:

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. RECEIPT of payment is shown in about two weeks by date on address label; subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to result before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnall Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

"The authority of Congress extends to every part of interstate commerce and to every instrumentality or agency by which it is carried on; and the full control by Congress over the subjects committed to its regulation is not to be denied or thwarted by the commingling of interstate and intrastate operations. . . .

"Where matters falling within the State power, as above described, are also by reason of their relation to interstate commerce within the reach of the Federal power, Congress must be the judge of the necessity of Federal action, and until Congress acts the States may act. The paramount authority of Congress enables it to intervene at its discretion for the complete and effective government of that which has been committed to its care, and for this purpose and to this extent, in response to a conviction of national need, to displace local laws by substituting laws of its own.

"State regulation of railroad rates began with railroad transportation. The authority of the State to prescribe what shall be reasonable charges for intrastate transportation is State-wide, unless it be limited by the exertion of the constitutional powers of Congress with respect to interstate commerce and its instruments. As a power appropriate to the territorial jurisdiction of the State it is not confined to a part of the State, but extends throughout the State, to its cities adjacent to its boundaries, as well as to those in the interior of the State. If this authority of the State be restricted it must be by virtue of the actual exercise of Federal control, and not by reason merely of a dormant Federal power—that is, one which has not been exerted.

"Congress, in an act to regulate commerce, expressly provided that the provisions of the act should not extend to transportation 'wholly within one State.' Having regard to the terms of the Federal statute, the familiar range of State action at the time it was enacted, the continued exercise of State authority in the same manner and to the same extent after its enactment, and the decisions of this Court recognizing and upholding this authority, the Court finds no foundation for the proposition that the act to regulate commerce contemplated interference with the authority of the State to prescribe reasonable rates for the exclusively internal traffic throughout the extent of its territory. . . .

"Under the established principles governing State action, Minnesota did not transcend the limits of its authority in prescribing the rates here involved, assuming them to be reasonable intrastate rates. It exercised an authority appropriate to its territorial jurisdiction and not opposed to any action thus far taken by Congress."

Then follows a paragraph which several editors look upon as a "hint to Congress":

"The interblending of operations in the conduct of interstate and local business by interstate carriers, and the exigencies that are said to arise with respect to the maintenance of interstate rates by reason of their relation to intrastate rates, are considerations for the practical judgment of Congress. If the situation has become such that adequate regulation of interstate rates can not be maintained without imposing requirements with respect to such intrastate rates of interstate carriers as substantially affect interstate rates, it is for Congress to determine, within the limits of its constitutional authority over inter-

state commerce and its instruments, the measure of the regulation it should supply."

Ex-President Taft, who, as lawyer, judge, and President, has had much to do with rate cases, thus gives, in a statement prepared for the *New York Sun*, his view of the effects of the decision:

"The railroads that deem themselves prejudicially affected by the State regulation of State business can find no remedy for their complaint in the Interstate Commerce Act or in any judicial proceeding based upon that act. To this extent the issue is decided against the railroads.

"But the judgment of the Court is a broad declaration in favor of the plenary power of Congress to vest the Interstate Commerce Commission and the Federal courts, or some other appropriate instrumentality, with the authority to regulate and restrict such improper or prejudicial interference with interstate commerce as the fixing by a State railroad commission of merely State rates may involve. . . .

"The result of the main issue is a great victory in principle for the national control of interstate commerce and the possession by Congress of the right to use every appropriate means to render that control effective and uniform, even where the means may include an investigation and restriction under Congressional authority of State-fixt rates on State business.

"The only recourse of the interstate railroads which have complaints of this kind, therefore, is to Congress for new legislation adopting some proper

means to permit the railroads to secure consideration of their complaints by Federal authority and the restraint of such State action as may interfere with the uniform and proper regulation of their interstate commerce."

Railroad officials and railroad lawyers receive the decision with disappointment, which, however, is in some cases moderated and even overcome by the hope that Congress will make use of the broad powers it is declared to possess. Presidents Mudge of the Rock Island, and Delano of the Wabash, are reported as saying that it is the general opinion among railway men that the decision is bad for the railroads. Others are more optimistic, thinking that Congress is now aware of the hard lot of the roads, and is likely to take action giving the Interstate Commerce Commission complete charge of the railways of the country. Sentiment in Wall Street, according to the *New York Times*, is now drifting strongly in favor of such centralization, and it is taken for granted that the railroads will, as advised by ex-President Taft and many others, memorialize Congress to pass the necessary legislation. And this task is urged upon the Washington lawmakers as their bounden duty by such papers as the *Springfield Republican*, *New York Tribune*, *Minneapolis Journal*, and *Chicago Tribune*. "The national function of transportation" must be "regulated by the national Government, fully and consistently," declares the *Chicago daily*. Naturally, comments the *New York Evening Mail*, "this means all

EXTRA HORRORS OF AN EXTRA SESSION.

railroads, and it is not difficult to see that it may also mean ultimately all industrial corporations."

Judging from Washington correspondence, this question may become a political issue at the next session of Congress. Representative Willis (Rep.), of Ohio, is said to be at work upon a bill to bridge the gap between Federal and State control of railway rates. On the other hand, no Democrat has been found who favors such action. Representative Adamson, Chairman of the House Committee on Interstate and Foreign Commerce, remarks for instance:

"Believing in good government, I accept the Supreme Court's decision without additional legislation on this particular phase of the interstate commerce question."

It is the portion of the Minnesota rate decision dealing with the charges of confiscatory rates and the allied problem of valuation that is deemed of most immediate importance from the railroad standpoint by the *New York Journal of Commerce* and *The Wall Street Journal*. In the case of three roads, the Great Northern, the Northern Pacific, and the Minneapolis and St. Louis, the lower court had adjudged the Minnesota rates confiscatory. The Supreme Court reverses this decision in the case of the two first-named roads, but upholds it in the case of the Minneapolis and St. Louis. This part of the opinion dealing with the question of valuation is exceedingly technical, and can not here be quoted at length. The *New York Sun* explains that:

"In asserting that the rates were confiscatory, two sets of valuations of railroad property were offered to the lower court, which rejected the State valuation and accepted those of the railroads. The railroad valuations were in excess of their capitalization, and Judge Sanborn's doctrine that capital invested in railroad property was entitled to a return of 7 per cent., on the value of the property, was translated marketwise to mean minimum passenger and freight rates which would guarantee a wide margin of return above 7 per cent. on the par value of the common stocks of railroads similarly undercapitalized or overvalued. It was this translation which more than anything else raised the exaggerated hopes that went to smash in Wall Street yesterday."

"In arriving at his findings about railroad values, Judge Sanborn sustained the argument of the railroads that they were entitled to the present value of property *valued for railroad purposes* as distinct from the value of land adjacent to terminals or right of way."

The Supreme Court "refused to sustain either the values or the methods adopted," notes *The Sun*, but it also declined to

offer any substitute method, being content with laying down a few general principles. To quote the opinion again:

"It is not admissible to attribute to the property owned by the carriers a speculative increment of value over the amount invested in it and beyond the value of similar property owned by others by reason of the fact of public service. . . . Assuming that the company is entitled to a reasonable share in the general prosperity of the communities it serves, and thus to attribute to its property an increase in value, still, the increase so allowed, apart from any improvements it may make, can not properly extend beyond the fair average of the normal market value of the land in the vicinity having a similar character. Otherwise we enter the realm of mere conjecture."

Apparently, then, says *The Wall Street Journal*, "the actual real estate of the railroads must be estimated at the local value of farm land in parts of the system, and at the improved real-estate value where the surrounding real estate is also improved." Herein this financial daily, and likewise the *New York Globe* and *Journal of Commerce*, *Sun*, and *Springfield Republican* see a distinct gain in the solution of the difficult valuation problem.

President Erb, of the Minneapolis & St. Louis, is pleased with the decision, partly perhaps because the Minnesota rates were deemed confiscatory in the case of his road. Yet he bases his satisfaction on general grounds, saying:

"The United States Supreme Court now holds that the State can not make a rate that is confiscatory or that fails to yield a reasonable return on the value of the property. . . ."

"The decision will, in my opinion, go far to establish confidence the world over in American railroad investments and should be helpful in the present condition in restoring confidence and general prosperity."

The effect of last week's decision on the Shreveport rate cases, which have been held over till October, is a subject of some interesting newspaper speculation, but Assistant Attorney-General Dennison, who represents the Department of Justice in the Commerce Court, and who drew the petition of the Federal Government intervening in the State rate cases because of their effect on the Shreveport case, is quoted in the *New York Tribune* as saying that the Supreme Court decision leaves the issue open:

"The Minnesota cases relate to an indirect effect upon interstate commerce, while the Shreveport case involves a direct and intentional interference with interstate commerce by the State of Texas."

HOPES AND FEARS IN TARIFF REVISION.

"PUBLICITY" FOR PUBLISHERS

OBJECTIONS to publicity about their affairs continue to come from our organs which exist by making public the affairs of others. Not that they have anything to conceal, they hasten to explain, but they fear that this piece of governmental coercion may lead to others, till finally the "freedom of the press" will be in danger. The Supreme Court, however, appears to have no such apprehension, and by its unanimous decision the "Newspaper Publicity Law," enacted as part of the Postal Appropriation Act of 1912, is affirmed as constitutional and described in the opinion, press reports say, as a measure "for the public good" and "not an abridgment of the freedom of the press." The particular section of the law whose validity was contested in the suit brought by the *New York Journal of Commerce* in conjunction with the American Newspaper Publishers' Association, requires that every newspaper and periodical having mailing privileges of the second class shall file with the postal authorities semiannual sworn statements, giving the names of the editors, owners, stockholders, bondholders, mortgagees, and other security-holders, and the average circulation in the case of daily papers, which statement must also be published in the newspaper or periodical. Also, it is forbidden under penalty of a fine to publish paid-for articles without marking them "advertisement." This law applies to 52,000 publications, some reports estimate, and exempts only "religious, fraternal, and scientific publications." About 88 per cent. of the newspapers already have complied with the law, "many under protest," because they believe it seeks to "regulate journalism" and to enforce "censorship of the press."

On this point the Court's decision, announced by Chief Justice White, maintains—

"that in considering this subject we are concerned not with any general regulation of what should be published in newspapers, not with any condition excluding from the right to resort to the mails, but we are concerned solely and exclusively with the right on behalf of the publishers to continue to enjoy great privileges and advantages at the public expense, a right given to them by Congress upon condition of compliance with regulations deemed by that body incidental and necessary to the complete execution of the public policy lying at the foundation of the privileges accorded."

If the methods of this law, which "many competent authorities" deem "excessively inquisitorial," says *The Journal of Commerce*, were applied to other than second-class matter, "it is difficult to see to what extremes this form of government espionage might not go," and this paper argues:

"The law was inspired partly as a matter of spite by legislators who wished to punish the newspapers for their hostile criticisms. There was no public demand for such a measure. It escaped discussion because that was rendered impossible through the haste in which it was rushed through Congress as a rider upon the Post-Office Appropriation Bill. Some of its provisions are ridiculous, and the law should be amended or repealed to bring it within the limits of reason. Of course *The Journal of Commerce* will very cheerfully comply with the mandate of the Supreme Court as soon as the requirements of the law are clearly understood. As for the policies and actions of *The Journal of Commerce*, they require neither explanation nor defense, being absolutely open and independent in all respects."

Nor has the *New York Times* anything to conceal in its affairs or its circulation, but it does consider the law "odious" and "of no benefit whatever to the public." As for the requirement that all paid-for matter shall be marked "advertisement," says *The Times*, as it does not do a "reading-notice" business, the provision can have no personal application, yet—

"We have denounced the law because it is base in origin and detestable in principle. It is a bad and harmful law, and as soon as the people show sufficient interest in the affairs of the nation to elect a Senate and House of a higher intellectual level than that recently attained, it will be repealed."

The harm of the publicity law, in the view of the *New York Evening Post*, lies in "the possibility of using the postal laws in a punitive way and not only against the newspapers," because the Court's decision "rests the whole question on the right of Congress to specify the conditions under which newspapers and periodicals shall be admitted to the privileges of second-class matter."

But the fears of the *New York* dailies are not shared by the *Springfield Republican*, which remarks that the law "is to most papers an academic matter," and "there seems no reason for fearing that there is to be any serious abridgment of the freedom of the press along this line."

TARIFF INFANTS.

INDICTING A "LABOR TRUST"

THE INDICTMENT of nineteen officials of the United Mine Workers of America for violation of the Sherman Law in connection with the West Virginia strike puzzles the Washington correspondents, coming at the time it does. Why start such a suit, they wonder, on the very eve of the United State Senate's investigation of charges much the same, in a general way, as those carried in the indictment? Furthermore, as the *Washington Times* points out, "President Wilson's difficulties deciding whether to sign or veto the Sundry Civil Appropriation Bill," with its proviso forbidding the use of its appropriation, for prosecuting labor unions and agricultural associations under the Antitrust Law, "will not be lessened by the action of the West Virginia Federal Court." The President's plan, according to the well-informed *Washington Post*, is "to accompany his signature of the Sundry Civil Bill with a statement deprecating the proviso, and explaining that the Department of Justice had other funds available for punishing violators of the law regardless of their affiliations." But it was hardly expected, continues *The Post*, "that any active move against labor men would be used as a practical illustration of that statement." Any political significance in the indictment, however, declare several editors and correspondents, is obscured for the present by the fact that it came about solely on the initiative of the local district attorney, without even the knowledge of the Attorney-General and the other officials of the Department of Justice in Washington. But later, says *The Post*,

"If the prosecution is pushed forward, it will be understood that the President approves the indictment. If the case is dropped, the inference will be drawn that the President's interest in the proviso in the Sundry Civil Bill goes deeper into its merits than has been surmised heretofore."

Nor is it in Washington alone that this action has caused surprise and started questionings. Labor leaders gathered informally in Indianapolis let it be understood, according to a press dispatch, that in their opinion "the conviction of the defendants would put a stop to organizing across State lines and would practically destroy labor organizations unless they confined themselves within State lines and thus escaped the inhibi-

tions of the Sherman Antitrust Law." And it was to escape just such conditions, they explain, "that they urged the passage of an act exempting them from prosecution under the Antitrust Law."

The indictment charges that the nineteen persons named, as agents and members of "an unincorporated, voluntary organization of individuals as a labor union known as the United Mine Workers of America, having many thousands of members, unlawfully combined and conspired together with the object and intent of unionizing and making members of said organization the laborers employed in and around the coal mines of the State of West Virginia," with the intent that the organization, "by regulating the wages to be paid to those laborers, could and would fix and control prices at which the coal mined in West Virginia could compete with the coal mined in the western part of Pennsylvania and in the States of Ohio, Indiana, and Illinois." Or, as the press generally understand it, tho the mine owners are not named, the officials of the Mine Workers are indicted "for conspiring with coal operators in other States who are friendly to union labor to unionize the miners of West Virginia and introduce into that State the higher union scale of wages." This, declares President John P. White, one of the nineteen indicted Mine Workers, "is absurd and ridiculous."

"We will be amply able to make clear that no such collusion existed, or was even thought of. If we conspired with the operators, as the dispatch says, why did they not indict the operators? There are operators in the four States mentioned—Pennsylvania, Ohio, Indiana, and Illinois—who own mines in West Virginia. They would hardly be conspiring against themselves."

"The whole story is a pure fabrication of the wildest imagination."

It may be that the full strength of the case against these Mine Workers has not appeared in the dispatches, suggest the *Washington Post* and the *Springfield Republican*, but, says the latter, if all they have done "is to bring about, or to seek to bring about, the raising of wages, then it is impossible to offer any defense whatever of the use of the Antitrust Law in prosecuting them," and "the sooner that law is amended, the better." Yet after all, *The Republican* feels confident that if such is the case, the highest Federal courts are not likely to sustain the charges

brought in West Virginia. Likewise it appears to the Washington *Times* that "to decide the West Virginia case against the union would seemingly be to decide against all unions whose program might affect the price of anything entering into interstate commerce." And it concludes emphatically: "It is impossible and unthinkable that the labor organizations shall now be adjudicated out of existence under a law that was never meant to apply to them."

To the New York *Times*, however, which looks at the situation from a slightly different viewpoint, a conspiracy of the kind charged "is about as obnoxious a conspiracy in restraint of trade as could well be imagined," and is a "perfectly apparent" violation of the Antitrust Law. If that statute, it continues, "is applicable in any case, it is applicable to this one." Finally,

"The West Virginia indictment supplies a very good test of the attitude of the Executive Department of the Government toward the remarkable theory adopted by Congress that crime is not punishable when committed by labor unions and farmers."

The New York *Globe*, speaking as a friend of organized labor, welcomes the prosecution "because sooner or later some court must squarely pass on the question of whether or not labor unions are obnoxious under the Sherman Law." And the New York *Commercial*, noting that another set of indictments handed down by the same grand jury charges a coal-mining company with peonage, deems it well that the prosecution of the two cases will enable the various interests concerned "to join issues upon which the Supreme Court may pass judgment in the end."

The indictments came "as a complete surprise to me," says Governor Hatfield, of West Virginia, who, as the Senatorial investigation begins, declares that "in the Paint and Cabin Creek coal fields, the civil authorities have absolute control and have had for some time." In view of the wide-spread criticism of the Governor in connection with the use of martial law in West Virginia, it is but fair to say that the report of the Socialist committee of inquiry practically exonerates him. To quote from this document, as appears in the Milwaukee *Leader* (Soc.)—

"He had inherited martial law from Governor Glascock, his predecessor, and the reason he permitted it to remain effective was because he was requested to do so by the union miners themselves to prevent them and their organizers from being assaulted and beaten up by the Baldwin-Felts thugs in the employ of the mine owners. . . ."

"We have no desire to exculpate Governor Hatfield for any act he is justly responsible for, but it is undoubtedly true that he has been accused of wrongs which were committed under the administration of Governor Glascock, his predecessor, to whose official spinelessness and subserviency to the mine owners are mainly due the outrages which so long disgraced West Virginia in the eyes of the nation."

"It was under the administration of Glascock and not Hatfield that martial law was declared; that the military commission was created; that Mother Jones, John Brown, C. H. Boswell, and numerous others were court-martialed and convicted."

The Socialist Committee state in this document that the Governor had "unconditionally released" these persons from prison, and quote him as saying "that not in a single instance had he affirmed a conviction of the military commission, that the suppressed Socialist papers were at liberty to resume publication, and that he believed in the rights of free organization, free speech, and free assemblage."

NEW JERSEY'S JOURNALISTIC PERILS

AN UNEXPECTED DEVELOPMENT in the Paterson strike—the conviction of a Socialist editor for daring to impugn the Paterson police in his *Weekly Issue*—has resulted in a change of the popular temper toward the strike-ridden Jersey city and bids fair to bring up the question of free speech as a national topic. Alexander Scott is the name of the convicted editor whose sentence is indeterminate at from one to fifteen years at hard labor, with a fine of \$250. The New

York Socialist *Call* announces the formation of a "Scott Defense Fund" by the Passaic County Socialists, to carry the case to the highest courts. The contest will be fought out on a proper legal basis, says *The Call*, and there will be "no anarchy, even if the anarchists are the police," for Scott is not to be railroaded and his fight "will persist when the strike in the silk-mills is ended." The statements on which Scott was indicted were directed against the chief of police and his men, and some of them are quoted by the Kansas City *Star*, which says that "every interest, big or little, that fears publicity" is always ready with the cry: "Send the editor to jail; teach him a lesson so he won't interfere with our game." Once Scott wrote, *The Star* tells us: "Helpless men, women, and children are brutally clubbed, cuffed, and manhandled right on the streets." And again: "The police anarchists not only believe in lawlessness, but they practise it. They don't waste words on the workmen—they simply crack their heads." It is of remarks like these that the New York *Tribune* says the Curran Report makes "quite as serious charges against the police of New York" and counsels the higher courts of New Jersey to show disapproval of "the perversion of justice now being practised in Paterson," for—

"If they do not check the infringement on the rights of the press and of free speech now going on there, Congress will properly step in and inquire whether citizens and residents of New Jersey are enjoying the full protection of the guarantees of the federal Constitution."

Just what rights of citizenship have been violated in Paterson are touched upon by the New York *Globe* in a résumé of the progress of the strike in which it holds that the whole trouble has been that "Haywoodism on one side has been met by Haywoodism on the other," and it adds that "anarchism is not prevented, but stimulated, when public officers, losing their heads and forgetting their oaths, become anarchistic." Also *The Globe* points out that it has been the game of Haywood and his associates to tease "a stupid chief of police" into making "illegal arrests," thus giving support to "the Haywood theory that the present government is all wrong." Then follow instances, such as the conviction of Haywood in April "by a foolish magistrate"—a judgment reversed in a higher court; then the conviction of Patrick Quinlan "for an offense which it is seemingly conceded he did not commit," and finally, the conviction and sentencing, as above stated, of the Socialist editor of *The Weekly Issue*, who, as *The Globe* says, was found guilty of criminal "hostility to government" by a jury consisting of "two county officers, two farmers, and eight business men." Continuing, *The Globe* tells us that altho "nine-tenths of the voting citizens of Paterson are employees," not one of them was on the jury, and it sums up the Scott verdict in these words:

Copyrighted by Brown Brothers, New York.

ALEXANDER SCOTT.

The editor whose imprisonment for printing unkind words about the Paterson police raises the "free-speech" issue in New Jersey.

"Free speech was first suppressed in Paterson. Then free assemblage. Now freedom of the press is attacked. It is to be hoped there is enough virtue left in the press and among the friends of free government to protect this Jersey editor in his constitutional rights. A poor man, he should not be asked to bear the sole expense of his defense. He should be furnished with competent counsel and a prompt appeal taken. In the meantime it is proper to repeat one of the statements for which this Jersey editor has been convicted as a criminal—namely, that the anarchism of the worst kind is the anarchism of public officers who flagrantly violate the law by disregarding constitutional rights."

The statute by whose provisions Scott was convicted, the *Springfield Republican* informs us, was passed soon after the assassination of President McKinley "in sympathy with the popular excitement of the hour over the criticism of governments and public officials by the press," and observes:

"That it is a statute which might be used outrageously by the authorities is evident enough. Whether it has been in the case referred to we do not undertake to say without having seen the text of the articles in the *Passaic* paper on the Paterson police. But it is a law which, having now been enforced in a special instance, should be made to stand the test of the judgment of the highest tribunals to which the individual may appeal for the safeguarding of his liberties."

But the *New York World*, which disclaims any sympathy for the I. W. W., says it has read carefully Editor Scott's criticism of the Paterson police and concludes that—

"If New York had such a law and it was interpreted as the New Jersey law has been interpreted, most of the inhabitants of this city would be in jail. Indeed, except for Mayor Gaynor and Commissioner Waldo and the police force, the town would be practically depopulated."

"Not an ornament to Jersey justice," remarks the *Boston Transcript* on what it calls a "gag law," and believes the Socialists will be duly grateful to the court for having provided them with an asset so valuable as "a fully fledged martyr." *The Trans-*

the city and State of New York had been compelled to keep silence, that situation would have continued to fester and expand under the immunities of enforced secrecy. It was the publicity that followed that gave justice its opportunity and helped the

THE PATTERSON ATTEMPT.

—Robinson in the *New York Tribune*.

authorities to discover and punish at least a few of the guilty parties. The delight of men high up in the police department at finding themselves protected by a law of the State against criticism and the detection to which it led, for their parts in an infamous conspiracy, can well be imagined.

"It is fortunate that the case is to be considered by a higher or probably the highest court in the State. If there has been an inadequate or too technical interpretation of the law, the court will doubtless find it out. If the terms of the law compel the verdict that has been given, then it is so much the worse for the law. When a public servant, from the highest to the lowest, is protected against criticism, we may look for bad and oppressive service. Publicity is the safety-valve. Public sentiment is a better regulator of public service than any other influence that can be invoked, but it is impossible to know what public sentiment is if it is deprived of the right of free expression."

Similarly the *Cleveland Press* holds that "free government is impossible without free discussion," and that "the right of free speech in a democracy is basic," but, because of certain recent infringements of this right in various parts of the country, *The Press* is moved to ask:

"What is meant by free speech as the term is used in the constitutional guaranty? Does it mean that one may at any time and in any condition say whatever comes into his mind to say? Does it mean that he may say only what the police or military authorities say he may say? Or does it mean intermediate shadings difficult to define, not clearly understood and therefore so uncertain as to make clashes inevitable? There is needed, now more than ever before, in view of the prevalence of social unrest, a clear and compelling statement of just what this guaranty covers. Since the subject in controversy goes to the very base of free government, the intelligence brought to its consideration should be the best that the nation can summon."

"Let the President, therefore, when he deems the time fitting, take action on the free-speech petition, not with a view to conditions in Paterson merely, or any other area of passing controversy, but broadly, fundamentally. Let us have a standard definition of what free speech is. Let us know where we stand."

The *New York Sun* is astonished at the "loose and hasty" talk over an "agitator" who happens also to be an editor, while the *Providence Journal* reminds Scott that there are sufficient court decisions on "the freedom of the press" to ensure him every opportunity.

UNITED THEY STAND.

—Kirby in the *New York World*.

script does not believe Scott guilty from the evidence of his editorials, and defends criticism of public officials with this argument:

"A great deal has happened within the year so close to New Jersey that the courts of that State should have seen that the literal application of the law under which they were working was hardly in accord with the public welfare. Suppose that when Rosenthal was shot down the newspapers and people of

THE "TEN-PER-CENT." IMMIGRATION BILL

TO BAR OUT undesirables on a percentage basis is the adroit plan of Senator Dillingham in his Immigration Bill, as the press interpret it. A simple application of arithmetic is to limit the influx from southern and eastern Europe. Mr. Dillingham is remembered as chairman of the late Immigration Commission and author of an immigration bill, vetoed by President Taft, in which the feature most opposed was the literacy test. There is no such test in the present Dillingham Bill, the press accounts tell us, but in place of it is a provision that the number of aliens of any nationality, exclusive of temporary visitors, who may be admitted into the country during a year must not exceed 10 per cent. of the number of persons of that nationality "resident in the United States at the time of the United States census next preceding," while the minimum number of any nationality admissible in any fiscal year shall not be less than 5,000. The probabilities are said to be against the bill's coming up for consideration during this session, altho, as *The Journal of Commerce* notes, it is the third in the cause of restricted immigration that has been introduced in this Congress, and its provisions are more severe than those of the other bills, except for the omission of the literacy test.

It is provided in the Dillingham Bill that when the maximum number of any nationality has been admitted, all other aliens of that nationality who apply for admission during the fiscal year shall be excluded. However, "aliens returning from a temporary visit abroad, and aliens coming to join near relatives, as well as members of professional and business classes," may be admitted regardless of the maximum number. A further provision empowers the Secretary of Labor to admit aliens in excess of the maximum number when, "in his opinion, such action is justifiable as a measure of humanity." According to information compiled by Senator Dillingham, based on immigration experience of the last ten years, the *New York Sun* reports, the Dillingham Bill, if it became a law, would reduce the immigration from southern and eastern Europe by about 130,000 annually, and "the number of aliens coming from northern and western Europe might be increased two-thirds." Apparently this is a consummation that is widely wished, as the *Indianapolis News* says:

"Frankly, immigrants from northern and western Europe are more to be desired than those from any other part of the world. Most of what is recognized as true American stock to-day traces its ancestry to peoples of Great Britain, Germany, and other states of the same grade. Immigration laws should be just not

only to the home-seeker, but to those whose homes are to be shared by the newcomers. The need for stricter regulation is recognized. Perhaps the Dillingham proposals will open the way for a solution."

The absolute need of legislation to reduce the present flow of immigration to a minimum is insisted on by the *Labor Clarion*, San Francisco, which argues in this fashion against the alien laborer who pauperizes the American workman:

"The great bulk of the immigration we are now receiving consists of Lithuanians, Magyars, Polish, Portuguese, Rumanians, Russians, Servians, Slovaks, Slavonians, Syrians, Turkish, and South Italian males. They are unlike the old immigration which came in family groups looking for a home and a chance to educate their children and advance their general conditions. Everywhere this cheap labor has been coming in and crowding out the American workman."

On the other hand, many newspapers can see no virtue in such restrictions of immigration as Senator Dillingham proposes, as, for example, the *Philadelphia Record*, which thinks "there is much less excuse for excitement about immigration now than there was sixty years ago," because in proportion to the population our immigrants form hardly as large a percentage as they did then.

"The persons of foreign birth in this country in 1860 were 13.2 per cent. of the total. In 1900 they were 13.7. The largest percentage in any intermediate census year was 14.8 in 1890."

The *New York Evening Post* attributes the falling off of immigration from northern and western Europe to the fact that countries in that section have become more attractive to the people born there, owing to improvement in social and political conditions, and it consequently foresees a decrease in immigration from southern and eastern Europe when such conditions have ameliorated there. As for Mr. Dillingham's bill, *The Post* calls it "a device which smacks somewhat of the governmental methods found by *Gulliver* on the island of Laputa." Nor has the *Philadelphia Public Ledger* any admiration for the proposal, which is illogical, might prove absolutely harmful to the West, and "might even lead to unfortunate diplomatic entanglements," and *The Ledger* concludes:

"The immigration problem must be settled, but let it be done reasonably and fairly. Exclusion by percentages would not only be contradictory of the historic policy and principle of the nation, but it would be woefully futile in accomplishing its purpose. The ninth man might be the very one who ought to be kept out and the eleventh the very one who ought to be welcomed."

FOREIGN COMMENT

WHY JAPAN CAN NOT DECLARE WAR

JAPAN WILL NOT FIGHT about the invidious treatment of a few fruit-farmers in California. "Of that we may be sure," declares Mr. Lovat Fraser in the *London Daily Mail*. Mr. Fraser is one of the first Orientalists in the world and knows all that can be learned about the past and present politics, statecraft, and military resources of the Near and Far East. His "India under Curzon" is considered by critics a masterpiece of brilliant writing, judicial fairness, and accurate information. He is perfectly well qualified to give reasons why Japan must hesitate when once a real *casus belli* has developed. Japan is too weak, too poor, indeed, to enter the lists with America, he says. If she did, she would cause the white races throughout the world to stand shoulder to shoulder in a solid phalanx against her. Even if she conquered Hawaii and the Philippines, the United States, after experiencing a defeat which could be merely temporary, would revive from such a Bull Run discomfiture stronger than ever and with more ships and more men, and a deepened tempest of anger would ultimately drive the yellow man "hootless home and weather-beaten back." To quote Mr. Fraser:

"A conflict between Japan and the United States at this juncture would mean the ruin of Japan. The late Homer Lea's fantastic visions have little relation to reality. Japan could not run the risk of an invasion of the Pacific slope, because she would soon be ejected. She might take Hawaii and the Philippines, but how long could she keep them? The United States would press forward the completion of the Panama Canal, spend her vast resources in building an invincible armada of dreadnoughts, and devote all her incomparable energies to winning back her lost possessions. The ultimate outcome of the struggle would never be in doubt, so far as the near future is concerned, for Japan could get no more ships and no more money."

Japan had the bitterest possible experience in her Manchurian campaign when she spent her last bullet and almost her last man in winning over Russia a victory which brought no indemnification. Had the struggle continued much longer, says Mr. Fraser, history would have had a different tale to tell about the bloody vicissitudes which were ended by the Treaty of Portsmouth. One victory by land or sea over the Yankees would mean nothing, declares this writer, for, he proceeds:

"A temporary success would be of no avail in such a mighty conflict. Japan fought herself to a standstill in the war with Russia. Had fighting continued a few months longer the verdict might have been reversed. She knows full well that the United States would never accept transient defeat. She is equally well aware that the Western world will not give her more ships and money to prosecute a war based upon such an issue as the Californian Land Bill. It would be a war deliberately fought to challenge the world-supremacy of the white races, and in such a cause the white races would instantly unite. They would not all fight, but they would not help Japan. The welfare of America means more to the white races than the welfare of Asia."

"We may take it for granted, then, that the present differences between Japan and the United States will in some way or other be composed."

Mr. Fraser thinks that the United States has a high mission to perform both by sea and land in supporting the supremacy of the white races, and maintaining their right to rule the earth. Hence he tells us that while the quarrel between the United States and Japan "is comparatively trivial, the issue that lies behind it is not trivial, and is probably destined to become one of the greatest problems of the twentieth century." He thus describes what the yellow races want:

"Equality of treatment, in the form in which the claim is being advanced by the more progressive peoples of Asia, connotes something more than relief from disabilities under the special laws of the white races. It means that the tacit assumption of the white races that it is their privilege to inherit the earth is directly contested. The yellow races are beginning to insist upon their right to spread outward. The overspill of the population of Europe pours into the American continent. Japan and China do not see why they should not move outward also, especially as they breed faster and much of their soil is already over-peopled."

"The little colonies of Japanese and Chinese scattered about over the American continent represent only the vanguard of this great movement. Japan does not find in Korea all the opportunities for expansion which she had expected. She knows that by mere weight of numbers the Chinese will eventually fill up the vacant space of Manchuria."

In this point lies the incalculable good America is doing by setting up a bulwark along the Pacific slope to keep off the locustlike hordes that would soon desolate her territory. In fact:

"California is the new boundary-wall of the white races. The day of Asiatic invasions of Europe is over. We have just seen the Turks driven from their last European possessions. The peoples of Asia have turned their faces eastward again, and they look across the Pacific toward the light of the morning sun. America, with her millions of negroes and her masses of half-civilized immigrants from Eastern Europe, rejects them. She does so with good reason."

What Mr. Fraser styles "a trivial quarrel" between the United States and "the eager people of Japan, triumphant, sensitive, clamorous for recognition, but still more avid of room to expand," is certain to be adjusted. The Japanese will not retaliate. They will not hit back, but "they will follow the line of least resistance," turning to the British Pacific possessions lying at their feet which only the fleet of the United States can deliver from their clutches. This is how Mr. Fraser puts it:

"The rich coastal belt of Northern Australia, with its deep rivers, fine harbors, and unfailing rainfall, could maintain thirty millions of people. Its present inhabitants number less than a thousand white folk. We have painted it red and left it vacant."

"At the present rate of progress, Australia will not a century hence have population enough to stem the flood of a yellow invasion. The course which the outward movement of the yellow races must eventually follow seems automatic and irresistible. Fleets in the North Sea can not stop it. The only chance for Australia's salvation will be if the mastery of the Pacific passes into the hands of the United States; and that is an issue which may have to be fought out first."

JAPAN—"Call off your dog, Mr. Wilson!"
—Puck (Tokyo).

WHISPERINGS OF MONARCHY IN CHINA

A THRILL of joy, or something very much like it, ran through the Flowery Land when the greatest Republic of the New World recognized the latest Republic of the Old. All over China meetings have been held to celebrate the event. Four thousand students marched in line to the American legation at Peking, carrying American flags and making

YUAN SHI-KAI, THE GROWING BAMBOO SPROUT.
—Puck (Tokyo).

the air ring with their acclamations. The Chinese-American Society also arranged a meeting in the capital, with a parade of the citizens, and all express their gratitude to "the greatest Republic in the world" for its gracious reception of its younger sister into the circle. There is a deep meaning in this burst of exultation. Young republicans of China have been for some time looking with suspicion on the bearing of Yuan Shi-kai. They think that, like Caesar, "he is ambitious," and there is a whispered threat that he may yet meet with Caesar's fate. He is supposed to loathe republicanism and would fain revive the monarchy. The condition of things is stated by the *China Republican* (Shanghai), which qualifies its expression of gratitude with regrets that the recognition did not come earlier, for then Russia might not have had so free a hand in Mongolia, and a more advantageous national loan would have been settled. To quote the words of this organ:

"The long-deferred recognition by America of the Chinese Republic, which to-day, after months of tardy postponement, has at last been accorded to the new régime, will be received with mixed feelings. In the first place, the long delay of this act of courtesy has robbed it of much of its spontaneity. Altho we fully appreciate the spirit in which recognition has been accorded to China, we can not help feeling that it has come at a most inopportune time. The hasty conclusion of the loan without Parliament's sanction, which is a violation of the Constitution, has created an acute crisis which has by no means passed. Yet, in a way, recognition is most timely. Taking a broad, instead of a merely superficial, view of the matter, it is clear that the simple act of recognition of the Chinese Republic by the United States has not a little value. It is amply patent that America has recognized the *change* in the form of government and not merely the personnel of the Government itself. Had another Government been in power, recognition would have come just the same. Were another Government to assume office to-morrow, the act of recognition would still hold good."

Especially valuable is the recognition because it will give

sanction and strength to the republicans, and help them to withstand the machinations of monarchists, says this paper significantly, and it goes on to say more pointedly:

"For some time past, the air has been thick with rumors that Yuan Shi-kai is aiming at a monarchy. If this is really true, then it will be less easy for him to put his monarchical theory into actual practise now that the Republic has been recognized. The act of recognition is bound to lend great moral weight to the principle of republicanism, and Yuan Shi-kai's chances of subverting and demolishing the republican fabric are correspondingly lessened. The fact that among the first to recognize the young Chinese Republic is the greatest Republic in the world makes the act all the more welcome. Once again, America has proved herself a true friend to China in word as well as in deed. First, her attitude relative to the opium question, and the generous return of the Boxer indemnity; then her befriending of China in the matter of the loan, and now recognition. Verily, it is a record of which any great civilized nation has a right to feel justly proud. Would that there were more like her in the world."

In another editorial the *China Republican* expresses its appreciation of President Wilson's wisdom and moderation, and observes:

"The real import of the recognition appears in the actual words of President Wilson and Chargé d'Affaires Williams, rather than in any meaning which others may try to read into these words or into the action. There is not one word implying even the existence of Yuan Shi-kai or approval of the man. Therein the American President shows his wisdom. He is keeping free of political complications or political collisions. Who in China is right or who wrong, the President of the American Republic does not propose even to consider. He leaves these differences of opinion to the Chinese to settle among themselves. First, by withdrawing from the loan group, and then by the wording of the declaration of recognition, he withdraws from unholy alliances or annoying complications."

"The American President shows sympathy to China's attempt at self-government, with no reference to Yuan Shi-kai's attempt at autoeracy. He welcomes the assembling of the representatives in the National Assembly, tho as yet unable to welcome a chosen President. He wishes well for every purpose of China in 'perfecting the republican form of government,' but not so much as hints that it is his desire that Yuan may succeed in overriding such a Government and make himself a one-man power, whether called President or called Emperor. President Wilson hopes that 'all the established obligations of China, which passed to the Provisional Government, will in turn pass to and be observed by the Government established by the Assembly,' and does not desire that this Assembly shall be overruled by the dictum of connivance of the provisional President."

DIVIDED WE FALL.
RUSSIA TO JAPAN—"How much of the ruins do you propose to take?"
—National Review (Shanghai).

What the American President actually does is to recognize the new Republic of China as embodied in the National Assembly, until such time as the Assembly shall effect the perfection of democracy by drawing up a permanent constitution and electing a permanent President."

SOCIALISM IN THE FRENCH ARMY

THE STUPEFACTION that would paralyze Charlemagne, Charles Martel, Joan of Arc, Louis the Magnificent, and the "Little Corporal" if they could come back and see France permeated with pacifism would make a new page in French history. France, the France of "Dunois, the young, the brave"—whose ballad tune is almost the national anthem of

President," said the head of the Republic. It is not recorded what Mr. Clemenceau replied, but since that interview the Barthou Ministry have taken vigorous steps to check the spread of Socialism, Syndicalism, and Anarchism. They are raiding certain printing and publishing houses and suppressing the further issue of the Socialist tract, *Manuel du Soldat*, from which we quote the following passage:

"Every infamy, every cruelty, every scandal, and every lying program has had *La Patrie* for its device. It is for this word that we are shut up for three years of military service; that we are made slaves, perhaps murderers, or the victims of the brutality of the epaulet, for our officers are brutes, and the best officers the worst brutes. The whole Army is a school of crime, vice, laziness, hypocrisy, and cowardice. Better for the soldier to desert than to put up with the insults and punishments which await him while he wears the livery of slavery and crime."

Whatever counsel Mr. Clemenceau gave to the President of the Republic, he has himself come out in his paper, the *Homme Libre* (Paris), with a strong attack on antimilitarism and a passionate appeal to the conscript not to betray his country. His eloquent words run as follows:

"Eternal shame on you who deliver to irreparable devastation the last refuge of all greatness and of all beauty! You believe, unhappy man, that you can think. You are naught but weakness, a weakness that has lost all purpose. You yourself, your France, your Paris, your village, your lane, your brook, all that manifold mass of history from which you come—since it is the work of your forefathers—is it all nothing to you, and are you going utterly unmoved to deliver the soil of your soul to the stranger? Yes! Say that this is your wish! You pause; you did not understand; you did not know. A heavier sacrifice than you expected has been asked of you, as of many others who would have thought themselves unworthy of France if they had murmured."

But Mr. Jaurès dwells with glee on the spectacle of the anti-

the French Army—is now being struck with a severe attack of antimilitarism. Mr. Jaurès, the great apostle of this creed, is openly jubilant as he witnesses the mutinies and demonstrations which greet the Government's Three-Years' Service Bill at Toul, Nancy, Belfort, and other garrison towns. The most serious disturbances have taken place at the great military centers, even including Paris. The drill grounds have been scenes of riot in which rifles have been broken up, uniforms trampled under foot, and officers mobbed amid cries of "Damnation on the Three-Years' Service Bill." Hundreds of soldiers have marched through the streets of the capital singing the "International," the great hymn of the Socialist Labor Party. At Toul alone 300 conscripts have been put under arrest and condemned to condign punishment. The 153d Regiment, stationed at this garrison, have a particularly rebellious reputation, and an intercepted letter, addressed to a Socialist leader by one of these men, contained the following words, according to the *Soleil* (Paris):

"I have received your remittance, also the printed matter. You may count on me. If we go to war our bullets shall be aimed at our officers, and as soon as we are face to face with the enemy, we will reverse arms with upturned rifle butts."

A great sensation has been caused by President Poincaré's action in summoning Mr. Clemenceau, the brilliant Senator and ex-Minister, to a private conference. The witty retort of the President, when Clemenceau remarked that he was not President of the Council, has been repeated by every European paper. "No, you are not President of the Council, but you must become counsel to the

patriotic, antimilitaristic action of the mutinous soldiers, and after repeating his internationalistic doctrine and his cry for pacifism, points to Toul and Nancy and declares: "This is only the beginning; the end is not far off."

The *Intransigent* (Paris) rejoices that the recalcitrant regiments are to be sent out of France on penal service in Africa:

"We are sorry that such a disgrace has befallen these misguided men, but the punishment is necessary, for the Government's action is needed as a precaution against another attack of this mutinous fever which would drag the country into fatal lethargy and destruction."

Bobel's brilliant organ, the *Vorwärts* (Berlin), thinks that the Army in France is at length becoming saturated with the doctrines of antimilitarism and internationalism such as were embodied in a resolution passed in 1907 at Amiens by the Congress of the General Confederation of Labor, an association largely consisting of Socialists and Anarchists. This resolution ran:

"The Congress declares that the propaganda of antimilitarism and antipatriotism should be pushed with ever-increasing earnestness and audacity."

The last Congress, held in 1908, was not less explicit, says *Vorwärts*. Its views were embodied in the following resolution:

"The Congress indorses the formula of the International. Workers have no country; consequently all war is an attack on the working classes. It is a bloody and terrible means of distracting attention from our claims. The Congress declares that in case of war among the Powers, workingmen ought to retort by declaring a general strike."

Speaking of the lengthened term of service in the French Government's program, the great German Socialist organ very temperately discusses the question as to its effect on the small farmer and the peasant. The great landowners benefit by it, but the poor are made poorer still. To quote from this paper:

"Before all things we must take into consideration the difference between the interests of the great landowners and those of the peasant or petty farmer. The great landowner, if he belongs to the nobility, is from the outset a strong supporter of increased army service. Not only because the sons of the landed nobility are placed in the highest rank as officers, but

because the landowner himself profits by supplying to the Army grain and foodstuff, horses and fodder. The small farmer misses all the advantages which the large estate-holder reaps from war. But his heaviest burden lies in the fact that when his sons are called to service under the colors he has to hire help from other sources, and at a dearer rate. Many families under these circumstances feel the load heavy to bear, and indeed their very existence as farmers is plainly threatened."

This is the main reason why "the Social Democrats of Germany, as well as of France, oppose both the increase of the Army in numbers and lengthening of the term of service."

Such papers as the *Frankfurter Zeitung* and the *Vossische Zeitung* (Berlin) tell the story of Toul and Nancy, but without editorial comment. The English papers are more outspoken,

and the tone of their remarks generally runs in complete harmony with the following utterance of the *London Daily Chronicle*:

"The sensational mutinies and demonstrations in the French Army against the proposed three years' service are a portent which can not be overlooked either in France or in Europe. Nothing like them has occurred in any west European army in modern times."

"It appears now that the earlier accounts rather understated than exaggerated the incidents, which have occurred not merely in the great garrisons on the Eastern frontier at Belfort, Toul, and Nancy, but at centers so different and so widely dispersed as Paris, Maacon, Montauban, and Montpellier. A relatively large number of soldiers from these places have been deported to the 'punishment' battalions in Africa; a number more have been sent to be tried by court martial."

A strange story in the *Gil Blas* (Paris) makes out that Russia imposed the three-years plan on France. "For some time," says that paper, "we were threatened with a rupture of the Franco-Russian Alliance, because we were not sufficiently strong, or at least because we did not appear so." Then the *London Nation* speaks of France as "a Russian satrapy," and adds:

"Whatever the fate of the Three-Years Bill may be, the Russian Alliance will have entered on a new phase of criticism and skepticism. Pacifists have disliked it because it perpetuated the antagonism to Germany, the Chauvinists because it never seemed to bring nearer the dream of recovering the lost provinces. It is now revealed as a menace to national independence."—*Translation made for THE LITERARY DIGEST.*

IN GERMANY.

THE CHANCELLOR (to Socialist Liebknecht)—"Now, don't blame me for the army increase; what could I do?"—*Kladderadatsch* (Berlin).

SCIENCE AND INVENTION

THE MULATTO TO SAVE THE NEGRO

A KEY to the negro problem has been discovered by Prof. H. E. Jordan, of the University of Virginia, in the last place where one would look to see it found, especially by a Southerner. This key Professor Jordan asserts to be the mulatto. There are now about two million mulattoes in the United States, and there will be more, if statistics are worth anything. Half-breeds, and the mulatto especially, have been generally held to be inferior to the race of either parent. Professor Jordan believes that the facts are quite otherwise. He thinks that the half-breed is usually a better and more useful citizen than the man of pure race, and that the mulatto's inferiority has nothing to do with the fact that he is a cross. The solution of the negro problem is facilitated, he believes, rather than complicated, by the mulatto's existence. The breed has been proved most effective in some other lands, notably in the English island colony of Jamaica. Says Professor Jordan, writing in *The Popular Science Monthly* (New York, June):

"It may help the subsequent discussion to note at this point the fact that Jamaica does not have a 'negro problem' as we know it in the United States. And on the face of things it would appear that it might well be present there in even more aggravated form. For in Jamaica there are only about 15,000 whites among a colored population of about 700,000, including about 50,000 mulattoes. It should be noted that in this 'Queen of the Greater Antilles' the mulattoes, as a class, are more nearly at the level of the whites than at that of the pure negroes. The mulattoes contribute the artisans, the teachers, the business and professional men. They are the very backbone of wonderful Jamaica. To be sure, Jamaica has had thirty years more than the United States during which to 'solve' her 'negro problem.' But perhaps the perfect adjustment between the races in Jamaica and the elimination of any 'problem' of this kind finds its explanation in a more rational and more consistent political treatment made possible by the absence of any constitutional prescription."

Of the physical and mental results of cross-breeding, the writer says:

"I admit the general inferiority of black-white offspring. Defective half-breeds are too prevalent and obtruding to permit denying the apparently predetermined result of such crosses. But I emphatically deny that the result is inherent in the simple fact of cross-breeding. There are not a few very striking exceptions among my own acquaintances. Absolutely the best mulatto family I have ever known traces its ancestry back on both the maternal and paternal side to high-grade white grandfathers and pure-type negro grandmothers. The reason for the frequently inferior product of such crosses is that the better elements of both races under ordinary conditions of easy mating with their own type feel an instinctive repugnance to inter-marriage. Under these usual circumstances a white man who stoops to mating with a colored woman, or a colored woman who will accept a white man, are already of quite inferior type. One would not expect superior offspring from such parents if it concerned horses or dogs. Why should we expect the biologically impossible in the case of man? If the parents are of good type, so will be the offspring. And even with the handicap of

frequently degraded white ancestry, the mulatto of our country, as in Jamaica, forms the most intelligent and potentially useful element of our colored population.

"The fact, then, is established, beyond all possibility of disproof, it seems to me, that a negro-white cross does not inherently mean degeneracy; and that the mulatto, measured by present-day standards of Caucasian civilization, from economic and civic standpoints, is an advance upon a pure negro. In further support of the potency of even a relatively remote white ancestry may be cited the almost unique instance of the Moses of the colored race, Booker T. Washington. As one mingles day by day with colored people of all grades and shades, one is impressed with the significance of even small admixtures of Caucasian blood. What elements of hope or menace lie hidden in these mulatto millions? How can they help to solve or confuse the 'problem'?"

The following assertions are made by the writer in this connection, and evidence is adduced in behalf of their truth: "First, the negro can not undergo mental development beyond a certain maximum. Second, it is possible to approximate a 'pure' mulatto race combining the best elements of black and white." This could be done ideally by a denigod experimenter; we can approach it, he holds, by education and the fostering of negro racial pride. He goes on:

"The point seems clear that in the presence of 2,000,000 mulattoes, steadily increasing in number, of relatively superior worth to the pure negro, we have a key to the solution of our problem. The mulatto is the leaven with which to lift the negro race. He serves as our best lever for negro elevation.

The mulatto does not feel the instinctive mental nausea to negro mating. He might even be made to feel a sacred mission in this respect. The negro aspires to be mulatto, the mulatto to be white. These aspirations are worthy, and should be encouraged. Possibility of marriage with mulatto would be a very real incentive to serious efforts for development on the part of the negro. The logical conclusion may follow in the course of the ages. At any rate, from present indications our hope lies in the mulatto. A wise statesmanship and rational patriotism will make every effort to conserve him, and imbue him with his mission in the interests of the brotherhood of a better man. The problem seems possible of solution only as the mulatto will undertake it, with the earnest help of the white."

"THE MULATTO IS THE LEAVEN."
Prof. H. E. Jordan, of the University of Virginia, advances the striking suggestion that the mulatto "is the leaven with which to lift the negro race."

SHOOTING AT THE "MOVIES"—The use of moving pictures of animals as "living targets" is related in *The Outdoor World* (New York, June), which quotes this description:

"Every time you fire the picture stops for a second or so and the passage of the bullet through it is shown by a hole of light; then the picture starts to move again. The report of the rifle is caught by microphones suspended above the target and the sound is conveyed to the cabin in which the picture-operator works, actuating a relay instrument, which is connected with the picture-machine and momentarily checks the passage of the film. The disappearance of the shot-holes in the screen is caused by a kind of triple screen. . . . The shot goes through all three screens, but when the two moving ones alter position they, of course, cover up any hole made, as no two holes synchronize on the series of three screens. Your particular sport depends on the film. You can shoot sea-gulls, wild tigers, otters, kangaroos—in fact, anything which the film can 'catch.'"

Illustration by the author of "The American Machinist," New York.

NATURAL MOVEMENT OF THE HAND IN PICKING UP PHOTOGRAPHS.

THE SHORTER PATH AFTER THE OPERATOR BECOMES TRAINED.

WHICH WAY DO YOU DO IT?

EFFICIENCY'S LATEST WRINKLE

THE VERY LATEST thing in the analysis of the motions made by a worker during his task is to use the stereoscopic camera in connection with small incandescent lamps, to study the path his hands travel. When time is to be taken into account, the lamps are flashed at given intervals. A close study of the photographic results by an expert often enables him to readjust the elements of an operation, or to relocate vital parts of machinery, in such a way as to save time and energy, and consequently money, to both employer and employed. From a description of this method contributed to *The American Machinist* (New York, June 5), by Fred H. Colvin, we quote the following:

"Back of all the various methods of securing increased output by reducing unnecessary waste of time, and utterly regardless of the special name by which the method may be called, is a study of the different details which go to make up the operations and the time required for each. There seems to be little doubt that Frank B. Gilbreth must be recognized as the pioneer in the study of motion, or 'motion study,' as it has come to be called.

"So far as we can learn, all previous effort in this direction was confined to a study of the elemental time required to perform certain operations without much regard to the motions made during that time. Motion study, on the other hand, seeks to reduce the motions to the lowest possible number and to the shortest distances, with the intention of reducing the total time required by a proportionate amount. Beginning with the laying of brick, and coming up to the comparatively recent use of the moving-picture camera as a means of recording motion, or making 'motion studies,' Mr. Gilbreth has now developed a later and simpler method, and one which is less expensive to operate than the motion-picture camera with its yards and yards of films. . . .

"This representation is obtained by attaching a small electric bulb such as is used in the pocket flash lamp, to each hand of the operator, the attachment being easily made by a sort of insulated ring which fits over the operator's forefinger. These lamps receive current from a small battery, and, while they can be lighted continuously, it has been found more satisfactory to put a small motor-driven interrupter in the circuit so as to have the lamps flash at regular intervals during the cycle.

"This also affords the opportunity of studying the time of various motions by having the lamps make a predetermined number of flashes per minute. As they are photographed as a series of electric dots or dashes, the frequency of these light spots on the picture allows the time to be easily counted if we know the exact number of flashes per minute.

"A stereoscopic camera is used because, as is well known to those who are interested in photography, the use of two lenses brings a certain roundness to any object photographed, showing

a motion toward the camera, as well as across its range of vision. This, in fact, is almost necessary in photographing motions in this way, as without the stereoscopic effect we are in exactly the position of the man who has been so unfortunate as to lose the sight of one eye; everything appears flat, and we do not get the full value of the different movements.

"Having the operator's hands equipped with the electric light, and the stereoscopic camera focused on him, it is an easy matter to secure one of these cy-mo-graphs, if we may use the new word, without the aid of any other lighting whatever. In fact, best results are secured in comparatively dark corners of the shop, as the dots and dashes of light show to better advantage against the dark background."

One of the most useful results of this method of motion study, Mr. Colvin thinks, is to enable designers so to place the various handles on a machine as to be readily reached by the operator. Long before motion study was ever dreamed of, many shop men adjusted their machines or added to them in such a way as to make it easier for themselves in operating. The new method acts in the same direction by pointing out in a very forcible manner every unnecessary movement during the whole cycle of operations, which is probably not possible in any motion study made without the aid of the camera. To quote further:

"The old saying of the 'longest way around is the shortest way home' may possibly have more to it than its antiquity, and we are not at all sure that it would be either wise or economical to attempt to force all men to follow exactly the same set of motions. For, while it is quite true that we applaud soldiers and cadets for the precision with which each man moves in unison with every other, life is not all dress parade, and we have yet to be convinced that it is desirable in any way to make automations of any kind of workmen.

"On the other hand, we have no hesitation in commending this latest development of Mr. Gilbreth's as being a highly desirable method of making motion studies, and we believe it can be used to advantage in many cases. He is to be commended for the originality shown and the results secured, which are sure to be found useful in many ways.

"Another field in which this method should prove extremely useful is the study of motion in machine parts. A lamp attached to the center of a connecting rod, for example, would show at once the exact path traveled by that point. And how much easier this is than laying it out on the drawing-board.

"Then too, a lamp attached to any point of any automatic machine would give a record of every motion of that point so that it could be carefully studied. Such a study might easily show a defect and allow it to be remedied. Lamps attached to different points at the same time and having different rates of flashing would enable interferences to be studied and remedied, the different spacing of the dots and dashes distinguishing the various points as in a drawing or diagram. Other useful applications will no doubt suggest themselves."

COLD LIGHT

THE DEVICE of Prof. C. F. Dussaud to produce what he calls "cold light" has already been alluded to in these pages. The term is somewhat misleading, for Professor Dussaud by no means produces the "light without heat" for which scientific men have been searching for years among the phenomena of phosphorescence. His light-sources are those with which we are all familiar, and their product is nothing new. His invention is merely a clever scheme to prevent overheating, and he does it by rapid alternation of one lamp with others, each being extinguished before it has had time to give off much useless heat. The results of his simple device are said to be most interesting. We quote from an article in *The Scientific American* (New York, May 31), by Jacques Boyer, who says in substance:

"The Dussaud system consists essentially of a series of tungsten-filament lamps mounted near the periphery of a wheel or disk. As the disk is rotated by the motor, all the lamps are successively and intermittently lighted. As soon as one lamp moves away and is extinguished, another immediately takes its place and is illuminated, the retinal persistence of the intermittent flashes giving the effect of a steady light. Each lamp is supplied with current for such a very brief interval that the slight amount of heat to which it is subjected is very quickly dissipated. The cooling interval is about double that of the light interval.

"Dussaud has found that with this apparatus it is possible to 'over-volt' his lamps; that is, he can impress upon them a voltage from two to four times above their normal. Hence the efficiency of the lamps is greatly increased and a very much more intense light is obtained from a given filament. The effect of overvolting is remarkable. It

A "COLD LIGHT" MOVING-PICTURE PROJECTOR, in which the film may be stopt without danger of ignition.

is stated that with 50 to 100 watts applied to 16 lamps of 25 to 80 candles, Dussaud has respectively obtained 250 to 800 candles of cold light for several hours.

"Dussaud's new light is particularly adaptable for use in situations where great luminosity must be obtained with a feeble current. These conditions, for example, are those which manufacturers of moving-picture projectors have long tried to realize. Dussaud has shown that it is possible to project moving pictures on a sheet five yards square with an electro-generating apparatus of 150 watts, in other words, an apparatus so small

DUSSAUD'S 16-LAMP "COLD LIGHT" APPARATUS. Each lamp is lit for only a moment, in turn, so that none of them has time to develop any appreciable heat.

that it can be carried very easily in the hand. The absence, or rather the quick dissipation, of heat enables the operator to run the film off as slowly as he pleases, and even to stop it entirely in order to study one particular picture on the screen.

"Because of this rapid dissipation of heat, it is possible to employ celluloid instead of glass plates for ordinary lantern slides. There is no danger of setting the celluloid on fire or of causing it to shrivel up. Dussaud confidently prophesies that with his cold light it will be possible to use celluloid films $\frac{3}{4}$ of an inch by 1 inch in size instead of glass plates $3\frac{1}{4}$ by 4 inches. The celluloid can be cut into long strips, perforated along the edges so that it can be printed mechanically, as in making moving-picture positives. Indeed, Dussaud claims that a single operator can make twenty-five thousand celluloid prints a day. These tiny photographs can be made by any amateur at a cost of not more than a cent, and can be projected on the screen by means of small, cheap projectors.

"Opaque bodies, postal cards, illustrations in books, and other objects can be directly thrown upon the screen in enlarged form by reflecting lanterns. The image, which appears in all its colors, relief, etc., on the canvas, is $3\frac{1}{2}$ yards square. Two lanterns can be employed for dissolving views, in which case it is not necessary to employ the usual shutters, but simply to rely wholly on the commutators of the apparatus.

"By means of cold light autochrome plates can be projected, which otherwise suffer when exposed to the electric arc. Powerful lights can be concentrated upon parts of the human body without danger of scorching them, with the result that foreign bodies can be located very readily in the muscles. The hand, when held close to a powerful cold light, appears translucently pink.

"The cold light can be employed in photographing interiors.

Illustrations by courtesy of "The Scientific American," New York.

A HOME LANTERN FOR PROJECTING DISSOLVING VIEWS WITHOUT SHUTTERS.

The inconveniences attending the use of ordinary magnesium flash powder are well known. Powerful cold lights render it possible to make very brief exposures without polluting the atmosphere of the small room with smoke.

"With a small electric battery and a simple lens, a beacon light of long range can be cheaply produced. Such an apparatus will be found serviceable on small sailing boats as well as by soldiers. It is easy enough with such a device to telegraph optically for great distances."

PIANO-PLAYERS, HUMAN AND MECHANICAL

IS IT POSSIBLE for a mechanical piano-player to reproduce exactly the effects of a skilled pianist's touch, or is there wanting some elusive element that only the human finger can supply? If so, what is this element? asks Prof. G. H. Bryan, the eminent English physicist, writing in *Nature* (London, May 8). This question, he says, "lands us in a very difficult problem of dynamical acoustics," which has not had much attention from students and investigators. At first sight, it would seem as if exact mechanical reproduction would be easy. As Professor Bryan says:

"A piano-player can be played as softly or as loudly as is desired, it allows full use of the pedals, and a slight jerk of the time lever enables the performer to 'linger on a note' as well as an ordinary pianist. But still, we are told, the 'touch' is not the same, and if a few notes are played from the music roll and then played with fingers, a certain difference in the quality of the tone often appears noticeable.

"Now the quality of a note, apart from its actual loudness, depends on the relative intensity of the fundamental tone and its several harmonics, and we are thus led to inquire into the question how far the harmonics of a pianoforte note are capable of being intensified or reduced independently of the fundamental tone.

"It is obvious that great differences in quality are produced by the use of the loud pedal, and the old-fashioned soft pedal which shifted the hammer off one of the strings and caused a softer part of the hammer to strike the others had an equal effect; moreover, the singing qualities and delicate harmonics are quite destroyed by shutting up a piano and covering it with ornaments. But even when other conditions are kept constant, differences are noticeable according to whether the same note is struck with a sharp blow or a heavy pressure."

The question reduces itself, Professor Bryan thinks, to this: Is the quality of a note on the piano dependent only on the striking velocity of the hammer, or also upon the way in which the pressure is varied during the almost infinitesimal time while hammer and wire are in contact? Opinions differ, he says; in England experts favor the former or "single-variable" theory, while the latter seems in favor in Germany. Professor Bryan has recently been making some experiments of his own:

"For some time past I have obtained results with a piano-player which exhibit conspicuous discrepancies from what one would expect on the single-variable theory, and a good deal of care has been exercised in ascertaining that these effects are not due to mere imagination. My experiments have been so far directed toward the question as to how far differences of dynamical touch can be made to produce effects that can be noticed by an ear not specially trained to observe them."

Such differences Professor Bryan has been able to produce by arrangements of weights and levers that he describes in detail, and even the untrained could plainly hear them. The human finger, of course, must be able to produce far more delicate gradations of pressure—something that has had too little attention:

"In this country little attention is paid to pianoforte touch, owing, probably, to the use of boxed-up pianos covered with jangling ornaments, when sufficient volume of sound has to be obtained by violently hammering the keys and bobbing down the pedals through harmonics and discords. Moreover, the average pianoforte pupil has too much to do with learning execution to

trouble about 'touch,' and very few professionals produce variations in the quality of their notes at all approaching the possible maximum. It is not surprising, therefore, to find widespread belief in the single-variable theory. At the same time, I do not consider it possible to overlook the numerous results of independent observation which are inconsistent with that theory.

"It is much to be hoped that the increasing popularity of the player-piano will lead to increased interest in the more scientific aspects of piano-playing.

"The explanation of the acoustical effects produced by the modern pianoforte is probably a dynamical problem of considerable complexity, depending on a number of causes, many of which have hitherto been neglected. It is important that not only should attention be directed to any investigations bearing on the matter which have commonly been overlooked, but that further experiments should be carried on with the object of better localizing the apparent discrepancy which exists between theory and observation."

Professor Bryan's experiments would seem to indicate, first, that improvements in mechanical piano-players will enable them to approximate human touch even more closely than at present; and secondly, that the touch of a skilled pianist will never be precisely imitated by mechanical means.

STARVE THE SCAVENGERS

WITHIN THE MEMORY of most of us, the house-fly was commended as a domestic scavenger. He is now in bad odor, and not only the fly, but other so-called scavengers are coming under the ban of science, one by one, as bearers of disease. The latest is the cockroach, which is believed by some physicians to be a cancer-carrier. Now that we have decided not to encourage these "scavengers" any longer, it will be quite easy to rid ourselves of them, says an editorial writer in *American Medicine* (New York, May), simply by ceasing to feed them, so that they will starve to death. The kitchen or cellar that contains food for cockroaches will be infested with them. The remedy is not to poison the insects, but to starve them out. We read:

"Cockroaches as carriers of cancer are receiving considerable attention in Europe. According to *The Lancet* of February 8, 1913, two investigators conceived the idea independently, and tho the facts presented are not conclusive, they are sufficient to warrant an investigation of these dirty little scavengers. Indeed, we are now so accustomed to the idea of disease being carried by the animals which feed on the garbage and dirt we collect, or on the tissues of unclean persons, that there is nothing startling in the view that cockroaches are also biologic as well as mechanical carriers. Dr. W. Melvill-Davison, of England, has asserted that the cause of cancer is an alga, which is also found in the bowels of cockroaches of several varieties. Tho the evidence is declared inconclusive, it is at least remarkable that Smith and Townsend, of our Department of Agriculture, have isolated a vegetable parasite which they believe to be the cause of plant cancer. The ease with which insects may carry the disease from plant to plant may also explain some of the facts. Now comes Professor Fibiger, of Copenhagen, who, by press reports, has found a worm in the domestic rat, the larval stage being passed in the intestines of the cockroach, and that the worm causes a cancerous tumor in the rat. He merely suggests a similar origin for human cancer. These speculations are of course based on the unproved hypothesis that cancer is a germ disease, tho it may turn out to be dietetic or at least a metabolic toxemia. We mention them merely as a text for a short sermon on the possible dangers of all our 'vermin' or scavengers. All these animals are semidomesticated through the survival of those wild ones fittest to live on the crumbs which fall from our table. As they are house animals, their evolution has occurred in the short period since man has had houses, but in this short period they have developed the treasonable habit of carrying enemies to us, and the sentence of extermination is inevitable. The house-rat has long been under the ban, so have the house-fly, house-mosquito, house-mouse, the louse, and flea. Perhaps the English sparrow, another messmate, will soon be detected in some unhygienic

deviltry. The ~~sermon~~ is this, the evidence is overwhelming that we must live in such a clean way that we have no need for self-appointed animal scavengers like Oriental dogs, buzzards, rats, and cockroaches. There is no necessity for a crusade to kill these animals off. They will starve to death if we stop feeding them. The man who has a dirty back yard or cellar is a public enemy. That is, the sphere of public sanitary authority must be extended to our homes. A house can not be considered a castle safe from intrusion if it harbors public enemies and outlaws. The era of cleanliness is here, and woe betide him who still lives in Oriental filth and medieval carelessness."

AN ILLUSION ABOUT ANTS

THE COMMON SIGHT of several ants tugging at the same object is generally taken to be a united effort to get it to their nest. The assertions of a French entomologist, Mr. Cornetz, that far from helping one another in such a case, the ants are really hindering one another, is therefore of great interest, especially as he supports it with good evidence. His proof rests on an observation of his own that before setting out to drag an object an ant always turns it around, somewhat, apparently, as a dog turns around before he lies down. When an ant grasps an object that a fellow ant is carrying, it thus tries to effect the preliminary rotation, which it must do before exerting a straight pull; and hence there is opposition, not mutual aid. We read in *Cosmos* (Paris, May 15):

"It is generally asserted, on the testimony of observers of the customs of ants, and by a common tendency toward reasoning by analogy, that when two or three ants are at work on an object, such as a seed, they associate their efforts, and aid each other, some pushing the object and others pulling it, as intelligent and interested workmen would do. This is one of the most striking arguments in favor of the high degree of evolution of the 'social instinct' among ants. Now, according to Mr. Cornetz . . . there is no mutual aid among ants; it is an illusion. Here is an ant dragging a long stem; a companion from the same nest has hold of the other end. The transportation is not effected well at all. The object is drawn hither and thither, and it is only when the axes of the bodies of the two ants are placed in the direction of the nest that the object makes good progress. There is thus no manifestation of mutual aid, for the movement of the object toward the nest takes place better and more rapidly when the first ant works all alone. It may here be objected that in the case where two ants meet, they do not help each other, but rather strive for the possession of the object; but that the case is very different when several ants are working together. Then they understand or know instinctively that it is more useful to associate than to fight. Mr. Cornetz shows, however, that even in this case there is no mutual aid. The way in which the ants behave is very curious; but to understand it, we must recall a fact previously noted by Cornetz about the orientation of ants.

"An exploring ant, leaving the nest in a certain direction, having found food, turns on itself like a compass-needle, in such a way as to replace the axis of its body in the direction of its nest, and then only does it begin to draw the object along, turning it around and walking backward. When the ant is gently carried on a support to another point, it acts as if nothing had been done, and turns and moves away in a direction that would have been the proper one if it had not been moved, but which now takes it away from the nest.

"An ant thus does not move toward its goal, but in a certain direction in space. When it finds an object, before dragging it, the ant begins by turning around. An experiment of Mr. Cornetz is very significant in this regard. He offers to an ant a bit of dry cheese sharpened to a point; the ant grasps the point, turns the object around, and drags it easily and swiftly toward the nest. This occurs in occupied territory where numerous ants are looking about, here and there. These come by chance in contact with the object, and finally there are three ants attached to the right side of the morsel three to the left, and one hauling at the point. The object continues to move toward the nest, but much more slowly. It is easy to see that there is no united effort, and that each of the ants is working on its own account, seeking to turn the object around. The blade of a penknife is allowed to fall suddenly on the right-hand ants, which let go at once; the object immediately turns in the direction of the

hands of a watch. The left-hand ants are removed; the object rapidly turns in the opposite direction. If all the lateral ants are forced to let go, the object is quickly drawn along by the ant at the point, as it was before the arrival of his alleged helpers. But the most curious thing happens when all the ants on both sides are left and the one at the point lets go; the movement of the object stops altogether! Consequently, this ant alone must have been doing useful work, for it exerted a tractive force; the others only hindered by their efforts to turn the object around, which defeated one another. . . .

"It is thus proved that in the transportation of objects by ants there is no mutual aid, but only here and there fortuitous coincidences of purely individual acts."—*Translation made for THE LITERARY DIGEST.*

WHAT BECOMES OF THE OLD RUBBER?

A SATIRICAL EXPERT defines rubber-manufacture as the art of making an elastic gum with the least possible amount of genuine caoutchouc. Hence the division of rubber articles into classes, of which the best is bad. And hence, according to William K. Main, who writes on the subject in the *Revue Scientifique* (Paris, May 3), the fact that old rubber fetches all sorts of prices, depending on the percentage of real gum that it contains. There is an active market for old rubber articles, Mr. Main tells us; and he who sells in it may learn for the first time some interesting facts. For instance, the pneumatic tires that came so high because they were "pure Para" may turn out to contain only 20 per cent. of that article, and so fetch little in the second-hand market. The balance, Mr. Main says, is likely to contain about 40 per cent. of textile fabric, 20 of talc, magnesia, and baryta, and 17 of sulfur. This may be nearly all removed by proper treatment, mechanical and chemical. Says Mr. Main:

"The caoutchouc thus obtained is not completely regenerated, to tell the truth. It may, by taking the precaution to use no cast-off rubber but that of good quality, be rolled into sheets by adding some oil to soften it. It may be used in cheap mixt rubbers to make laboratory corks or washers for the joints of pipes. But rubber of good quality can never be recovered in this way. There remains, in fact, in the partially purified gum, not only a notable quantity of mineral matter, which would be only a small inconvenience, but, what is much more serious, a large quantity of combined sulfur, which prevents the rubber from sticking to itself. . . . Thus it is absolutely indispensable, to really recover the old gum, to remove the sulfur, which is an extremely difficult operation."

Altho hundreds of patents for thus "devulcanizing" caoutchouc have been taken out, none of them has perfectly solved the problem. Mr. Main says that no one yet knows exactly in what vulcanization consists; nay, more—no one knows precisely what india-rubber itself is; at least, what is its "degree of polymerization"—a chemical term that Mr. Main translates by the word "nerve." This nerve may be lost by simply dissolving the rubber—a process that alters its chemical composition in no respect. No wonder that the substance is hardly itself again after so much maltreatment, physical and chemical. Some inventors try to act on the sulfur with alkalies or with pulverized metals: others dissolve it with hydrocarbons of various kinds. In our own country, where the "regeneration" of old rubber is carried on widely, various processes are used, most of them secret:

"In the United States, the birthplace of the new industry, there are several factories where 'regenerated rubber' is made in large quantities. The manufacturers of that country buy over old rubber and sell it back to us made over. At present there exist in Europe only three or four factories of any importance, and the numerous attempts to install processes more or less protected by patents generally end in bankruptcy. Naturally, we do not know precisely how the Americans devulcanize their waste rubber; so far, the methods are mostly kept secret. In general, it seems that textile fibers and sulfur are eliminated with alkalies, which injure the gum less than acids."—*Translation made for THE LITERARY DIGEST.*

LETTERS AND ART

COLOR MUSIC

A NEW ART, having "the same kind of emotional and stimulative power that music possesses, tho appealing to another sense," makes its bow under the name of color music, or the art of mobile color. It deals "solely with color for its own sake, as music deals with sound," thereby opening up "a new world of beauty and interest as yet, to a great extent, unexplored." Its inventor, Mr. A. Wallace Rimington, professor of fine arts at Queen's College, London, has not only written a book—"Color Music" (Stokes)—expounding the theories underlying this art, but has given demonstrations with a curious instrument which he calls a color organ, and on which he composes symphonies and sonatas in colored lights. Other students of music in the past, impressed by certain analogies between sound and color, have foreseen and predicted some such development; but it remained for Mr. Rimington, apparently, to do the first actual pioneer work. After years of experiment he has constructed his color organ and other allied instruments, all of which he regards as merely in the experimental stage. In the preface to his book he expresses the hope that others will "improve the forms and powers of these, and build upon the foundations I have laid." There is no reason, he argues, why a great color art analogous to the art of music should not be developed. The fact that color has hitherto played a secondary part in the arts into which it enters he explains by saying that while a reed or a conch-shell is "easily converted into a means for producing music, it is a far more difficult matter to devise an instrument suitable for the production of color, and for placing it under the control of an executant."

True, some artists, like Whistler, have called their paintings "harmonies," and "symphonies," but the colors have been subservient to the subjects of the picture, and the "harmony" or "symphony" has been fixed and unaltered. "At most it is a chord or two of color, or a single color-phrase."

Color music, on the other hand, "gives us what the finest impressionist or expressionist—even Turner and the greatest artists—can never give." The new art, moreover, "has the power of appealing to the emotions to an extent which it is difficult for those to realize who have never seen it." More than this, color music, argues its inventor, will correct the tendency of modern civilization toward a loss of the color sense, thereby reacting on the other arts. For example:

"If the painter had a more sensitive eye for color, his pictures

would be better; the architect, with his color faculty increased, would deal with color to more artistic purpose in his buildings; the craftsman would produce better color patterns in his fabrics, his wall-papers, his combinations of decorative tints, his enamels, or his glass. If there were better and more harmonious color in all the arts, the world would at least have gained something. Here, then, apart from its possible artistic and emotional value, *per se*, is a practical side to a pure color art and an object for its existence."

Few realize the similarity between sound and color. Both are vibratory in origin, but while in Mr. Rimington's color organ

the color octave of the spectrum is made to correspond with the octave in our musical scale, he is careful to explain that the question of how far the analogy holds good "is relatively not of very much importance." And as there are discords in music, so there are discords in color, as we are often painfully reminded in every-day observation.

Now for the organ. When you enter Mr. Rimington's English studio you see at one end of it a curious instrument with a keyboard and stops, while at the other end is a white screen, hung in folds to give greater depth and life to the colors playing upon it. What happens when the instrument is played is thus described by Mr. Rimington:

"Imagine a darkened concert room. At one end there is a large screen of white drapery in folds, surrounded with black and framed by two bands of pure white light. Upon this we will suppose, as an example of a simple color composition, [that there appears the faintest possible flush of rose color, which very gradually fades away while we are enjoying its purity and subtlety of tint, and we return to darkness. Then,

with an interval, it is repeated in three successive phases, the last of which is stronger and more prolonged.

"While it is still lingering upon the screen, a rapid series of touches of pale lavender notes of color begin to flit across it, gradually strengthening into deep violet. This again becomes shot with amethyst, and afterward, changing gradually into a broken tint of ruby, gives a return to the warmer tones of the opening passage.

"A delicate primrose now appears, and with little runs and flushes of pulsation leads through several passages of indescribable cinnamon color to deep topaz. Then suddenly interweavings of strange green and peacock blue, with now and then a touch of pure white, make us seem to feel the tremulousness of the Mediterranean on a breezy day, and as the color deepens there are harmonies of violet and blue green which recall its waves under a *Tramontana* sky. More and more powerful they grow, and the eye revels in the depth and magnificence of the color as the executant strikes chord after chord among the bass notes of the instrument.

"Then suddenly the screen is again dark and there is only a

THE FIRST "COLOR ORGAN."

In this instrument invented by Mr. Rimington the spectrum-band is divided to correspond with the musical octave. "Whenever a note is depressed its corresponding color appears upon the screen, and if a chord is struck, combined colors also make their appearance." The pedals regulate color intensity.

rhythmic and echoing beat of the dying color upon it. At last this disappears also, and there is another silent pause, then one hesitating tint of faded rose as at the opening of the composition.

"Upon this follows a stronger return of the color, and as the screen once more begins to glow with note after note of red and scarlet, we are prepared for the rapid crescendo which finally leads up to a series of staccato and forte chords of pure crimson which almost startle us with the force of their color before they die away into blackness."

This, says Mr. Rimington, is an extremely simple example, "but it may suffice to show the kind of effect produced by an unadorned form of mobile color not accompanied by music." In some cases, he goes on to say, a musical accompaniment was found to add greatly to the interest of a color composition. The nearest approach to color music in nature, he says, is to be found in certain sunsets. Of the emotional and esthetic effect of color music on various beholders we read:

"The amount of pleasure and interest derived from color compositions varies immensely with individuals. An interesting instance of this was the case of a well-known London doctor, who told the author, after first seeing a recital of color-music, that he was absolutely unappreciative of any form of 'sound-music,' that it was, in fact, a pain to him, and that he had always detested it; 'but,' he said, 'from the moment that I first saw a display of mobile color, I realized what I had missed all my life through my inability to appreciate music. It opened up a new world of sensations to me and gave me the greatest mental pleasure I have ever experienced.' This clearly shows that to some persons mobile color would, or does, fill the place which music can not occupy in their lives.

"On the other hand, there can be little doubt that to some, tho they would hardly own it, color of any kind is more or less unpleasant, and they would prefer to live in a monotonous world. One must therefore be prepared for a great variety of opinions with regard to any such art as that of mobile color. The majority of people will probably derive a moderate but increasing pleasure from it.

"There are many to whom it at once provides a surpassingly interesting source of enjoyment and education, and some to whom, like my medical friend, it will open up an entirely new world of sensations; and there are others, again, to whom it will be supremely distasteful. It is well to recognize this to avoid disappointment, and be prepared for very divergent expressions of opinion about it.

"Speaking broadly, it appeals most to those who have had an artistic training into which color has entered, and it is less attractive to those whose interests center in music. This is not what the author personally expected. He imagined that the connection with music being so close on some points, those who would take the greatest interest in mobile color would be musicians; but, with some striking exceptions among distinguished musicians, the musical world, as far as it has yet come into contact with color-music, has been at first inclined to see points of divergence rather than those of analogy and to look upon the art as a possible rival. A similar attitude is often adopted toward any new departure in science or art, and there is no reason for resenting it; it merely makes the cooperation of those among musicians who are able to take a sympathetic view and welcome the endeavor to open up new fields of investigation all the more valuable."

OLD PLAYS FOR NEW

YEARS FROM NOW, remarks Charles Darnton in the *New York Evening World*, New York theatergoers will probably speak of the season just closed as "the year of theatrical revivals"; and he runs over the list of the season's productions, pausing at the familiar names of such old favorites as "Liberty Hall," "Rosedale," "Arizona," "The Amazons," "Divorçons," and those comic-opera classics revived by the

Gilbert and Sullivan Comic-Opera Company. Altogether, says the *New York Review*, the city this season witnessed "a dozen special revivals of former successes, not including the engagements of Sothorn and Marlowe and Annie Russell in Shakespearian and Old English repertoire." And while the *New York Tribune* thinks that "no conclusion can be drawn" from this epidemic of revivals, the *San Francisco Argonaut* and one of New York's leading managers are at one in attributing it to a dearth of available new plays. Thus in *The Argonaut* we read:

"A little while ago it was asserted both humorously and seriously that everybody was writing a play. There was probably some evidence for the charge, but it could not be found in the present condition of theatricals in

New York. It stands to reason that some good suggestions would be found in, say, a hundred thousand efforts, even if the readers for theater managers are as dense and unappreciative as they are said to be. Nevertheless, there are no new plays to be had. If there were, why would the managers be taking long chances reviving moth-eaten, hopelessly out-of-fashion dramas? It costs just as much to put on an old play as a new one. Should it be successful it would mean a run of but a month or so at the most. A new play that makes a hit has not merely probabilities, but certainties. New plays are not to be had. There is no other explanation."

Turning to the managerial view of the situation, we find Mr. William A. Brady discoursing in the following vein to the *New York Evening World's* dramatic critic:

"Without doubt the revival of old plays is being very much overdone this year. The result is that the public has lost its taste for the play of ancient flavor. But let me say this before I forget it: If the present style of playwriting continues for a year or two longer, the only hope of the theater will be in the revival. . . . Authors are responsible for revivals. When a manager can get nothing but rot from the modern author, why shouldn't he turn to the old dramatist? Here's another thing. Managers started making revivals too soon this year. They should have waited till the season at the Metropolitan Opera-house had closed. Seventy-five per cent. of the audiences that patronize Broadway revivals come from the opera-house. . . .

"After all, the revival is a poor proposition for a manager, because New York is the only city in the country that will accept it. Take it to Schenectady, for example, and the public will merely say, 'Hub; I've seen that play!' It doesn't matter who is in the cast. But at the same time I think the revival is a good thing for the theater, for it serves at least to teach the public that the drama is steadily moving forward."

A point specially brought home to old theatergoers by the

A COLOR-MUSIC "AUDITORIUM."

"If the white drapery is hung in folds instead of being tightly stretched, the effects of color upon it are more interesting because they have more 'quality' in them; and substances with a certain amount of texture, like white velvet, are better than absolutely smooth ones. The screen may also be modified by layers of white cords at a little distance from it, hung vertically, and this gives a remarkable resolution of the compound tints."

revival of such a play as Lester Wallack's "Rosedale," which was first produced fifty years ago, is the change that has taken place in theatrical conventions. As *The Argonaut* remarks, "There are many theatergoers of to-day—now in the sere and yellow stage—who remember the thrills of its romance, the picturesqueness of its gipsy camp and its red-coated guards, and the suspense of its climax." But where the earlier audiences thrilled or wept, the modern audiences smiled. Mr. Colgate Baker, writing in the *New York Review*, imagines the shade of Lester Wallack, re-

AN ENGLISH CARICATURE OF WAGNER, BY FAUSTIN, IN "FIGARO," LONDON, 1876.

turned to witness this revival, utterly bewildered by its reception. "Has the whole world gone topsyturvy?" asks the perplexed ghost. "Are the human emotions reversed? Do people now laugh when they used to cry, and cry when they used to laugh? Doesn't heroism thrill any more, doesn't villainy arouse indignation—what has the human race come to since I passed away?" And Mr. Baker explains to him that human nature is just what it always was, but that the formulae for evoking its emotions on the stage have changed. Among other things, "the aside and the soliloquy have passed away, and it really seems funny to us that they ever existed." To which the shade replies understandingly:

"Ah, I understand why they laughed when they should have cried, and why they cried when they should have laughed; styles of drama have changed—like clothes; it is a matter of form."

SLIGHTED POETS—A protest is registered by *Musical America* (New York) against the prevailing custom of printing only the names of the composers on song programs and omitting those of the poets. When we consider to what an extent the race of song composers is dependent upon the race of poets, says this paper, the custom "seems a little unjust." And it continues:

"No producer of opera would think of omitting the name of the librettist from the printed operative program. A song is a drama in brief, and there is just as much reason why the poet's name should be given on a program on which the song appears as why the composer's should appear. One occasionally finds

poets' names on programs, but instances of it are rare. It would be a simple matter to make a custom of printing it in parentheses directly after the name of the song and retaining the composer's name in the usual place.

"The present omission of the poet's name is presumably due to the fact that songs are regarded as an affair of the musical and not of the literary world. While in a sense this is true, it is slight justification for omitting the name of the composer's co-artist in the making of the song. Not only would a change of the present custom do justice to the poet, but it would also serve to give information which is often desired by persons in the audience.

"This is something worth while for singers to consider in sending copy of their programs to the printer."

DOES CARICATURE BLAZE THE PATH TO FAME?

IT IS OFTEN remarked that a statesman can not be considered famous until the caricaturist has chosen him as a shining mark. But is the converse of the proposition true? Does the caricaturist help to make fame, even when his shafts are barbed with envy, malice, and all uncharitableness? That is the interesting paradox suggested by Eduard Fuchs in a paper on Wagner contributed to the *Illustrirte Zeitung* (Berlin, May 15) under the title "Caricature as a Path-breaker."

Did the ax of caricature blaze the path for the artistic mission of Richard Wagner? Mr. Fuchs admits that such a view would have been considered rank blasphemy by the devoted army of disciples and colleagues who labored in the vineyard with the master himself. His apostles saw in the caricaturists who followed on his trail only dogs of malice, yelping and barking even at that which was most sublime and beautiful. Even to-day,

AN AUSTRIAN CARICATURE OF WAGNER, BY KARL KLIC, 1876.

"By the din and glitter of his campaign in Baireuth he distracts the attention of Europe even from the Turks and Servians."

he says, there are numerous Wagner enthusiasts who would at best bestow a pitying smile on those who hold the view that the Wagner caricatures largely paved the way for the acceptance of his mission.

That the cartoons helped, however, he holds entirely true, altho it is easy to demonstrate that most of them appearing during Wagner's life were inspired by cheap ridicule, and sadly few by regard or admiration for this new-born giant:

"The popularizing and path-breaking effect of caricature is inherent in its specific means of expression. This effect is inevitable, even when the contrary is desired, so long as the person or thing caricatured possesses intrinsic value. And the greater this value, the greater the effect.

"That is why caricature has worked in the same way as regards all great persons and great movements. 'Tis said, and truly said, 'Ridicule kills.' But does it kill ever and always? No! Half things and sham things, yes; whole things and true things, no.

"Lord Shaftesbury said once: 'Ridicule can make nothing contemptible unless it is really contemptible! What is beautiful is like gold, which takes on new sheen and shimmer beneath the hammer.' This is the indispensable corollary of the words 'Ridicule kills.' And for this reason even the Wagner caricatures, instinct with hostile spirit, have done no little to build for Wagner his road into the future.

"Nothing popularizes a person or a cause so greatly and so speedily as caricature. It has an effect upon the beholder because it undersees and hence emphasizes that which is different and therefore essential in things. This is its essence and its secret."

In this way, according to Mr. Fuchs, the distinctive and characteristic features of a thing are made to grave themselves deep in the consciousness and imagination of humanity. And the more a thing possesses of what is thus distinctive, the more it naturally tempts the art of caricature. And the more strong its contrast is to the orthodox, the more rich and manifold will be the forms taken by caricature. This law Mr. Fuchs finds especially operative in Wagner because of his artistic universality, a quality which in his case "made everything in him peculiarly individual, as he was instinctively opposed to the traditional." Pursuing the same idea further:

"Certainly he was also, like all geniuses, only a fulfiller of the necessities of historic evolution. A thousand roads led to him. His coming and his mission were a historic *must*. No phenomenon stands isolated in the frame of time and circumstance, and neither does Richard Wagner.

"But just because the trend and tendency of the time was fulfilled in him, as it was in other ways in other times in a Luther, a Dürer, a Rembrandt, a Beethoven, a Goethe, or a Schiller, there was concentrated in him also that which was different and distinctive in contrast to that which should be conquered and superseded by his work. And it was just this different and distinctive element which caricature caused to be recognized."

This is because by the very laws inherent in caricature it is

these unusual elements which it seizes and illuminates, and this process must be constantly repeated, since the opposition roused by his propaganda was naturally enormous. Mr. Fuchs continues:

"It may be said with perfect truth that in this way the entire

intellectual physiognomy of Richard Wagner, every side of his artistic program of reform, became illuminated by the sharpest light of the widest publicity.

"There was at that time no comic paper in the world which did not concern itself more or less with Wagner. Besides these, countless caricatures of him and his music appeared as loose sheets, parodies, satirical commentaries, etc.

"This, to be sure, was done in a very distorted manner. But it is just this distortion, as we have said, which made his peculiar quality jump at the eyes of all the world."

Mr. Fuchs illustrates this specifically by the accompanying clever cartoon of the gifted artist André Gill, which appeared as the title-page of the French periodical *L'Eclipse*, on April 18, 1869.

"The entrance of the human ear (or the ear of humanity) is too small to receive the vast circumference of the Wagnerian music. This entrance, therefore, must be enlarged, and André Gill, that man of genius, portrays Richard Wagner

working with fanatic energy at the task of chiseling the human ear anew, so that it may be able to take in the whole fulness of his new music.

"This is a rare and precious example of the humor of the grotesque and an exceedingly clever intellectual conception. Moreover, it is a characterization of the Wagnerian music as simple as it is convincing. Hence it must be perceived by even the narrowest of minds.

"It must not be overlooked, also, that such a picture, as is true of caricatures in general, is 'enjoyed' by vastly wider circles than are reached by the majority of articles written for or against the composer. And this spells popularization."

Moreover, as Mr. Fuchs observes, Wagner turned to the people with his ideas of reform. He wished to serve the people in its entirety, and not merely to provide new pleasures for a few exclusive circles. Therefore it was of prime importance to him to be made known to the masses. And this service was unconditionally performed by caricature.

"Caricature had a similar popularizing effect even in the distorted views of Wagner's most intimate private life which were exposed to the glare of day—as when his relations with women were mocked, or when the public made merry over his love of personal adornment upon the malicious publication of his letters to his Vienna 'beautifier' [*Putzmacherin*]."

Mr. Fuchs closes his article with the pregnant thought that it is the human element in great men which knits us to them with mystic bonds, since it proves our own kinship with them.

A FRENCH CARICATURE OF WAGNER, BY ANDRÉ GILL, IN "L'ECLIPSE," 1869.

RELIGION AND SOCIAL SERVICE

THINGS THE SALVATION ARMY IS DOING

THE FITTING MEMORIALS to General William Booth, in the shape of a million-dollar training-school for officers in New York and a chain of hotels for workmen across the country, attract the attention of editorial observers not only to the rapid growth of the Salvation Army, but to its development along the lines of social service. In the view of *The Province* (Vancouver, B. C.), "no religious movement of modern times ever swept around the globe with such phenomenal strides as has the Salvation Army within the last half century." *The Province* calls attention to the fact that "in the recent census statistics it stood second in the list of those religious bodies whose growth numerically has been greatest," and reminds us that there is hardly a corner of the known world where the Army's flag is not unfurled and where its drum-beat does not "arouse the martial spirit of its soldiery." For all that, the Army, in company with the older religious denominations, has felt the effect of modern conditions and "has found it difficult to keep up the old-time strenuosity and success along the line of the personal salvation of men," so that, altho

"the same program is carried out in this direction as of yore, the stormy days when the battle was severe and the triumphs of grace correspondingly glorious have waned perceptibly. Not that the Army does not still see souls saved at its altars—many are still born into the Kingdom through its efforts. But the changed conditions have altered somewhat the current of the Army's endeavors. Now, instead of merely seeking the personal salvation of men, as was the case in the earlier days of its history, a wonderfully diversified ministry for the varied needs of humanity has sprung up by a natural course of development."

A feature of this diversified ministry "has just come to light," in the words of the *New York World*, which finds, "after all the antivice crusades in Chicago, that the rescue and maternity home of the Salvation Army in that city has been receiving about 1,000 unfortunate girls every year and making no noise about it, having neither a brass band, a legislative inquiry, nor a board of society patrons." Such methods of work, says *The Enterprise* (Beaumont, Texas), show "the difference between salvation and society, saving and sensation-seeking, saving and slumming," while the members of the legislative committee investigating the

Salvation Army Maternity Home in Chicago, we read in the *Chicago Tribune*, "express satisfaction with the showing, declaring the Salvation Army methods were almost ideal." The institution accepts no girl or woman unless she promises to keep and care for her child, *The Tribune* says, and it explains the conduct of the home in this statement of Miss Anna L. Hustin, the matron:

"The great majority of the mothers are unmarried, but they love their babies as well as those women who have no stigma attached to them. Some of our patients are of the red-light districts, and their mother-love and the responsibility of nourishing the tiny life often make better women of them. When a girl is strong enough to work we find her employment. We keep track of her as much as possible. If she loses her position we try to find her another."

"There are 1,000 girls a year at our homes, and it is hard to keep track of all of them. Some, who are of foreign birth, return to Europe. Some become wives and others drift again into wayward lives. We require no money, the girls do not have to work hard, and they are not allowed to do anything, except possibly light sewing, for three weeks before the child is born. There is a nominal fee of \$25, however, and some of the patients pay it. Those who can not pay are just as well treated as the others."

Another form of enterprise for social regeneration, supported by the Salvation Army, is the fresh-air camp for adults and children and the farm home for waifs. There are about one hundred boys and girls on a dairy farm at Spring Valley, N. Y., we are informed by the *New York Evening World*, which records an interview with Adjutant Underwood, in charge, who says the whole purpose of the country home is "to give the boys and girls a chance and to prepare them for agricultural pursuits. The more people the Army can send to the farms the more it is doing for the public good." That the public appreciates the work of the Army is evidenced in the report of Colonel Gifford on the fresh-air camp at Canton, Mass., which appears in the Army's official organ, *The War Cry*. The township committee at first refused to vote an appropriation extending the water-supply to the camp. This was before they "had come to know our work," Colonel Gifford relates, "but this year the appropriation

AT WORK: NEW YORK WAIFS HOEING POTATOES ON THE SALVATION ARMY'S SPRING VALLEY FARM.

AT PLAY: SLUM CHILDREN FINDING A CHANGE FROM CITY PAVEMENTS ON SPRING VALLEY FARM.

to give us water was voted without a dissenting voice. We wish you could have heard those speeches," the Colonel continues, "Catholic and Protestant, professional man and farmer, each adding his tribute to the work we are doing."

THE TURKS NOT "FANATICS"

THE CHARGE frequently made that the Turks are fanatics and that their religion hinders them from accepting European civilization is challenged and denied emphatically by Ahmed Jevdet Effendi in the *Ikdam*, a Constantinople newspaper of which he is the editor. "Europeans are particularly fond of making this charge," he says, and assures us that neither are the Turks fanatics nor is their backwardness due to fanaticism. Furthermore, he adds, "our enemies," meaning the Europeans, "declare that the Christian peoples in the Ottoman Empire are crushed under Moslem fanaticism." But this is not true, he maintains, and the religious plaint is all a subterfuge of statecraft, because—

"Our enemies, knowing the strength of religious feeling in Europe, especially in England, and wishing to partition our country, throw into the arena the Christian vs. Mohammedan problem in order to cool the regard of those states that are inclined to favor us. The religious motive is a pretense. When asked about the atrocities against the property, the life, the honor of Moslems in the late war, they say: 'We don't know.' But the European world, official and unofficial, does know perfectly well the truth about those acts. 'But the Turks are Moslems—in fact, it is their punishment,' they say. The reason of the charge against us is found simply in the fact that as a people we are strangers, outsiders to the European world of science and culture. Our lacks have cost us dear. For the last twenty or thirty years we have reaped no moral advantage from Europe. Before that, after the Crimean War, it was different. Then all doors in Europe were open to us. It was not the religious fanaticism of the Turks that kept them from profiting from this. It is claimed that European civilization is a result of Christianity, therefore the door of this civilization is closed to Moslems, who are held by their religion on a lower plane."

Thus fanaticism would seem rather the reproach of the European, according to this writer, who describes the European view as "ever unfriendly to Moslems," and believes the Moslems "have the right to recoil from a civilization of such a temper." This, then, is the actual hindrance to the Turks' welcome of existing European civilization, for, he avers:

"Our religion is not a hindrance to our attaining a high plane of civilization in science, in art, in philosophy, as history clearly

proves. Regrettable events have taken place among us in the name of religion. What does European history not reveal of war and massacre and rapine in the name of religion! Yet we do not blame the religion of the Christ for all this. Jesus, 'the Exalted,' never hurt a hair of any man's head, and his religion never permitted such barbarities."

But this Turkish editor would not have us think that he is wholly excusing the Moslems for "lagging behind in the race of civilization, the benefits of which are before their eyes," altho he reminds us that there was a time when they "were keeping pace with Europe or setting a better pace," but—

"Now their ignorance handicaps them in the contest, and Europe is, in my opinion, largely to blame. By what right do Christian governments deny to their Mussulman subjects an equal share in what they proudly claim as the fruits of Christian civilization? Why do they wish them to remain in ignorance?"

Nevertheless, he does not sit repining over the possible answer to his question, but in the next breath proclaims:

"A truce to all complaining. We shall try to gird ourselves in manly fashion to face our future with courage, and prove ourselves worthy of our better past, and of the place left us in the world."—*Translation made for THE LITERARY DIGEST.*

AWAKENING OF THE BRAHMINS

THE BRAHMINS OF INDIA, whose conservatism is as proverbial as the leopard's inability to change its spots, have suddenly resolved to renounce their opposition to progress. This surprising and momentous decision was recently reached by a convention of 1,000 delegates representing the Brahmin priesthood, which assembled in solemn conclave at Amritsar—the second largest city of the Punjab—to ponder over the present condition of the keepers of the Hindu conscience and to devise means to improve that condition. This conference passed unanimously a number of remarkable resolutions, some of which laid violent hands on venerable Brahmin customs and superstitions accepted by some 217,600,000 human beings. We quote the most progressive of these resolutions as printed in the *Lahore Tribune*:

"In the opinion of this Conference . . . the Brahmins should earn their livelihood as far as possible by independent means (and not depend upon charity).

"... This Conference enjoins on all Brahmins that they should consider it their first duty to obtain education.

"... This Conference is of the opinion that the present-day subcastes among Brahmins are not found in the *Shastras* (Hindu

Scriptures); therefore leaving aside such distinction of sub-castes, all Brahmins should intermarry among themselves . . . (paying) due regard to *gotras* and *parvas* (consanguinity).

"In the opinion of this Conference much money is wasted on marriage and funeral ceremonies, which should be prevented. It is therefore urged upon all Brahmins to put an end to such unnecessary wasteful expenses.

"This Conference enjoins on all Brahmins to help and protect the helpless Brahmin widows and make suitable arrangements for the maintenance and education of poor Brahmin boys, and to open *ashrams* (dormitories) for Brahmin *vidyarthi* (students).

"This Conference resolves that ancient Sanskrit books should be collected and preserved and that biographies of our *rishis* (sages) and saints should be written and collected.

"This Conference requests our benign Government that Brahmins may be freely admitted in His Majesty's military service."

The President, in his concluding speech, urged that each Brahmin should maintain at least one cow in his house, and that arrangements should be made for opening dairies which would serve the double purpose of maintenance of cows and the supply of good, pure milk, and *ghee* (clarified butter). He also urged that education and purity of heart were and should be the chief traits of Brahmins, and that tho they may earn their livelihood by agriculture, service, and trade, still they must strive to maintain their high moral character and purity of mind while performing their Shastric (religious) duties, and be truthful and honest in all their dealings.

WHY THE RURAL CHURCH DECAYS

HOW TO RESUSCITATE the decadent country church is a problem which persistently demands solution from the religious leaders of the country. The decay of rural life in America is acknowledged by the St. Louis *Christian-Evangelist* (Christian) to impose serious responsibilities upon the Church in general as well as on our statesmen, and the religious press are facing this condition of things with words of warning and counsel. How terrible the situation is may be judged from the statement that "fully sixty per cent. of the churches in small towns, villages, and the open country are dead or dying." As these places of worship, districts, or parishes are not endowed as they would be in Germany and England, the minister looks for his support to the people, and if the people are poor and can scarcely support themselves and their families, how can they support a minister and his family? In agricultural districts the prevailing poverty is put down to bad farming, and some authorities tell the preacher that he must preach the principles of scientific agriculture, just as in the eighteenth century the ministers preached "On the Advantages of Stallfeeding," taking occasion from the gospel of the day's mention of a manger. In this connection Rev. D. F. Steffens, writing in *The Christian Herald* (undenominational, New York), treats of the theory that a minister should as a preparation take a two years' course in an agricultural college, for "some rural pastors would double their efficiency" by so doing, "the field for the country church being coextensive with that of the new agriculture and country life." Mr. Steffens pointedly asks:

"Is the study of agriculture, horticulture, and animal husbandry to replace the study of Greek, Latin, and history as a preparation for the study of theology? Is a knowledge of bacteriology to be considered of greater importance for the country minister than a knowledge of New Testament Greek? Shall he learn to fight insect-pests and plant-diseases rather than to fight sin and the forces of moral evil? Shall the country minister concern himself with the answer to the question, 'What shall we eat, what shall we drink, wherewithal shall we be clothed?' rather than with the answer to that other question: 'What shall I do to be saved?' Of course, nobody would seriously entertain or defend such a proposition. But in the face of this present discussion on the part to be played by the Church

and its ministry in this country-life movement, which seems to include everything from killing potato-bugs to the science of eugenics, a former country parson may be pardoned for asking himself how it is all to be accomplished and what the result is likely to be."

Besides, he says, these generalizers who talk about the decadence of the country church forget that the city church is just as badly off. "With regard to religion, the social organization of the city," he declares, "stands as much in need of transformation as in the open country." A Quaker paper, *The American Friend* (Richmond, Indiana), puts the blame for the degeneration of social and religious life in the country entirely on the church, and we read of this decadence and its remedy:

"It is evident that the country church is not the effective agency in the community that it might be and ought to be. It has not kept pace with the general development. The appeal of the city has been so strong and has offered so many advantages over the country life that it has been and is the ambition of young men and women to seek their fortune in the city. This migration has weakened the country, and made it in the minds of most people an undesirable place in which to live and make a success in life."

With a somewhat more definite view of the question Herman N. Morse, writing in *The Continent* (Presbyterian, Chicago), on "How Rural Poverty Hurts the Church," gives the following interesting details:

"In the final analysis the prosperity of the church depends upon the prosperity of the community in which it is located. In all the State of Ohio there was hardly found a strong, flourishing church in a poor and permanently impoverished community. Where agriculture has suffered most the churches also have suffered most, and throughout the State the health of the country church varied uniformly according to the degree of agricultural prosperity.

"Through certain whole areas of poor farming land the churches have almost died out. That is to say, those churches which require a high standard of living have died out. Such churches do not take root in thin soil. Here are to be found certain poor men's denominations, newer sects with a gospel surcharged with emotion. Such sects often flourish where the land is sterile. Yet as with most shallow-soil growths, there is no assurance of permanence here, and these denominations have the same difficulty that the older denominations experienced in building and maintaining permanent churches."

He cites the testimony of a pastor of Vinton County, Ohio, who had worked there as teacher and preacher for a number of years and tells us:

"Recently, when Vinton county possessed the unenviable record of being the only county in the State without a mile of hard road, a strip of pike had been built and topped with limestone. In the summer the traffic crushed this limestone to a fine dust and the wind blew it out over the barren clay by the side of the road. Shortly after the road was lined with a good stand of sweet clover. Where sweet clover will grow alfalfa will grow, and the country which can grow alfalfa need not be poor."

This had its effect on the preacher's mind, as we see in the following paragraph:

"After describing the effects of lime upon that soil where sheep sorrel in the fields showed that the land was sour, this pastor summed up his position by saying that in the future he would preach both the gospel of Jesus Christ and the gospel of limestone—not the one less, but the other more. For he was assured that unless the farmers accepted his gospel of limestone, which meant for them prosperity, his gospel of Jesus Christ would fail of its full effect among them and their churches would continue to languish."

Nevertheless Mr. Morse is quite optimistic about the church in the country, and the country through the Church, wherever "religion, wholesome neighborliness, education, better agriculture, and all the necessary social improvements have been made parts of one program and of one task."

REVIEWS OF NEW BOOKS

JAMES II.'S DAUGHTER QUEEN MARY

Sanders, Mary F. *Life of Mary, Princess and Queen of England*. 8vo, pp. 386. New York: Duffield & Co. \$4 net.

Mary II. was the daughter of the Duke of York, afterward James II. of England. He had secretly married Anne Hyde, daughter of the Earl of Clarendon, and the gossip caused by the palpable effects of that marriage before Mary was born caused many tongues to wag, says Pepys in his Diary. That she was actually married was surmised by Sir Anthony Ashley Cooper, who said that her mother's treatment of her proved it. "A concealed respect (however suppress) showed itself so plainly in the looks, voice, and manner wherewith her mother carved to her, and offered her of every dish, showed that it must be so." And so it was.

We find in the diary of the princess in her sixteenth year the entry: "I was born the 12th day of March, in the year of our Lord 1637, at Cranbourne Lodge, near Windsor, in Berkshire, and lived in my own country until I was twelve years old, having in that time seen the ruin both of Church and State and the murdering of my king." The date thus given in Old Style for Pepys in his Diary dated April 30, 1662, notes that "The Duchess of York was brought to bed of a girl, at which I find nobody pleased." The fact of it was Clarendon was a lawyer and people thought him no match for a scion of the royal house.

Mary grew up to exhibit a winning, altho somewhat sentimental nature, but she was not beautiful. The delightful retailer of social tittle-tattle, the inimitable Pepys, declares, "She was a plain woman and like her mother, my lady Chancellor." In character she possessed all the Stuart charm, but united with a strictness of principle very alien to the spirit of her race. She gave up her favorite diversion of dancing because she found herself growing too fond of it, and yet Bishop Burnet says of her, "She carried that air of life and joy about with her that animated all who saw her." It was natural therefore that she was not transported on being presented to her cousin, William of Orange, "a short, serious, sickly looking man," and when her father broke the news of the marriage with him planned for her, she was in the depths of despair and wept all that night and the following day.

On the deposition and flight of James II. the question of the royal succession came up. William of Orange declared himself unwilling to become "usher in waiting to his wife," and eventually it was arranged that Protestant William should take the precedence in the royal title and Mary be Queen of England as he was King. "At their coronation," writes Mary in her diary, "Lady Cavendish, Lady Russell's daughter, who was an onlooker, remarks on the wonderful acclamations of joy." Thinking possibly of similar rejoicings which had greeted public events strangely opposed to each other, in the course of the preceding fifty years, the Queen goes on naively to say that "tho the acclamations were very pleasing to me,

yet they frightened me, too; for I could not but think what a dreadful thing it is to fall into the hands of the rabble—they are such a strange sort of people." We quote Miss Sanders' account of the ceremonial:

"The Queen's scepter was carried by the Duke of Bedford, the King's by the Duke of Rutland; the Queen's crown by the Duke of Somerset, the King's by the Duke of Devonshire. The Bishop of Rochester held the chalice, the Bishop of St. Asaph the gold patine, and the Bishop of London the Bible.

"The tall Queen and the tiny King followed; walking side by side under a canopy held over them by the Barons of the Cinque Ports. Both were robed in crimson velvet edged with ermine; their wax effigies in Westminster Abbey are still clothed in the garments, and hold models of the orb and scepter. The King wore a red velvet cap, while the Queen's hair was surmounted by a gold circle. Difference in height was not the only contrast between them, for the onlookers, who crowded the balconies and thronged the stands erected on the route, said that 'it would be impossible to see an uglier King or a more beautiful Queen.' 'Hook-nose' was their nickname for the unfortunate William, whose health was at this time in a very precarious state, and whose sickness and apathy seem to have struck all those who came into contact with him."

The Jacobite poets were indignant when Mary consented to share the crown with her husband, and as dynastic successor of a Stuart father to usurp his throne and wear a crown herself. One of their poems is quoted by the author of this interesting biography:

"Yet worse than cruel scornful General thou;
She took but what her monarch did allow,
But thou, more impious, robbest thy father's brow."

While King William was abroad fighting the armies of Louis XIV. under the Duke of Luxembourg, by whom he had been thrice defeated, Queen Mary was left to administer the kingdom. In the eyes of some historians she was greater as a queen and ruler than as a woman, yet in her letters and diary she complains of her husband's dissatisfaction as follows: "Thus I entered into administration which was altogether unfortunate in naval matters, and whereas other years the king had almost ever approved all that was done, this year he disapproved almost everything."

The cares of state seem to have sapped her strength, and on December 20, 1694, she was taken sick. Three days afterward symptoms of smallpox appeared. In Burnet's diary we read of the King, that he called Burnet into his closet and "gave free vent to a most tender passion; he burst into tears, and cried out that there was no hope of the Queen, and that from being the happiest, he was now going to be the miserablest creature upon earth." The King never afterward saw Elizabeth Villiers, his infatuation for whom had been a cause of long-borne sorrow to Mary. Before Mary's death, which took place December 28, 1694, "this sorrow

ceased, for she detached herself completely from all earthly things."

While her death was the signal for immoderate grief among those who knew her and loved her, a Jacobite preacher took for his text in a sermon on this subject, "Go now see this eurst woman, and bury her, for she is a king's daughter."

While Miss Strickland in her "Lives of the Queens of England," has devoted a volume to Mary II., her work has been made obsolete by improved historical methods. New material, of which Miss Sanders has had the advantage in producing a memoir, makes a notable book which is certain to be much read.

THE YOUNG HENRY VIII.

Mumby, Frank Arthur. *The Youth of Henry VIII. A Narrative in Contemporaneous Letters*. 8vo, pp. 362. Boston and New York: Houghton Mifflin Co. \$3.

This volume consists of a series of letters, all in English and with modernized spelling. Such a collection relating to the early years of Henry VIII. has never been published before and will be found of singular interest both to the student and the general reader. Epistolary correspondence contains perhaps the most unreserved and authentic revelations of the great figures of history which literary monuments can yield. Cicero's letters illustrate the stormy days which preceded the establishment of the Empire at Rome as no Sallust has done; Jerome's work as the founder of Western monarchism is best learned from the letters he wrote to his friends and converts; and how Eastern monasticism came into being is best learned from the exquisite letters of Gregory and Basil. The letters of Cowper are the finest in the English language as illustrating the sweetness, delicacy, and taste of a life spent congenially in tranquil intercourse with friends who loved the poet. In fact, the words of Swift are not to be charged with exaggeration when he says: "Nothing is more capable of giving a good account of history as letters are, which describe actions while they are alive and breathing, while all other relations are of actions past and dead." A hundred examples of the truth contained in these words might be cited from the writing of Frenchmen and Frenchwomen.

Henry VIII. is generally remembered by the ordinary reader as history describes him in his manhood—a selfish and sensual polygamist, who had sunk into that attitude toward a Spanish princess which wrung from Shakespeare's Katherine of Aragon, dying of cancer of the breast, the pathetic words:

"Shipwrecked upon a kingdom where no pity,
No friends, no hope, no kindred weep for me,
Almost no grave allowed me. Like the lily,
That once was mistress of the field and flourish'd,
I'll hang my head and perish."

This book merely gives authentic details of Henry's career from his birth in 1491 up to 1515, before he had set out on "the primrose path of dalliance." We have many letters relating to his engage-

ment with Katherine of Aragon, in which we see the Tudor money-meanness of his father contending with the craft of Ferdinand, who was holding back the promised dowry of his daughter. Then Katherine chimes in with a complaint of poverty to her father, and a request for money to pay her debts at the English court. The rise of Wolsey is also sketched, and the romance of Henry's sister Mary and the Duke of Norfolk is also referred to in letters. It is very interesting to learn from a letter of Henry VIII. to the Emperor Maximilian how much the English monarch was to change before he became the most powerful reformer in Europe. Before entering on the war with France he declared in this letter that "the dignity and estate of the Roman Church must be defended . . . we beg and entreat your majesty to undertake the defense of the holy Roman church." But this was before the days of Anne Boleyn. His marriage to Katherine is thus announced to Margaret of Savoy by the king himself in a letter dated June 27, 1509:

"On the 11th of this present month of June, the nuptials were performed, and on St. John Baptist's day we were crowned in our Abbey of Westminster near the City of London, the place in which it has been usual to crown our ancestors the Kings of England, there being present all the great princes, lords, and nobles of our kingdom."

At this time Henry was a brilliant and dashing figure among the sovereigns of Europe and was vain of his personal gifts. An instance is given in a letter of Pasqualigo's, the French ambassador, who says:

"The king came into our arbor and, addressing me in French, said: 'Talk with me a while. The King of France, is he as tall as I am?' I told him there was little difference. He continued, 'Is he as stout?' I said he was not, and he then enjoined, 'What sort of legs has he?' I replied, 'Spare.' Whereupon he opened the front of his doublet and placing his hand on his thigh, said, 'Look here, and I have also a good calf to my leg.'"

Of Henry's private character at this time Mr. Mumby writes that he was above blame and indeed, "His standard of morality bears comparison with that of most of the ruling princes of his time. It was infinitely higher than that of his young rival of France." He was "spoiled a little, perhaps, by flattery, but, even when due allowance is made for exaggeration, a splendid figure of a man immensely popular."

Katherine is described in one of these letters as "not handsome but having a very beautiful complexion, religious and as virtuous as words can express."

BALKAN HISTORY IN THE MAKING

Ashmead-Bartlett, Ellis. *With the Turks in Thrace*. Illustrated. Cloth. 335 pp. New York: George H. Doran Co. \$3 net.

James, Lionel. *With the Conquered Turk*. Illustrated. Cloth. 315 pp. Boston: Small, Maynard Co. \$2 net.

Wagner, Lieut. Hermenegild. *With the Victorious Bulgarians*. Illustrated. Cloth. 273 pp. \$3 net.

In the eagerness of professional newspaper correspondents to be not only first in war, but also first in the hearts of their countrymen, several histories of the Balkan conflict were hurried through the press long before the last gun was fired at Adrianople or Scutari had yielded to the intrepid Montenegrins. That these hastily

published records in *medias res* are not the final account of the stirring events which they describe does not detract from their present interest, and one of them, at least, that of Lieutenant Wagner, the one correspondent who succeeded in some measure in keeping in touch with Balkan events, possesses permanent value. The extraordinary difficulties which Bulgarian censorship and Turkish evasion put in the way of the representatives of the press during the war may account in part for the various discrepancies in their brilliant descriptions of the battles. Lieutenant Wagner, of the Vienna *Reichspost* and the London *Daily Mail*, had been from boyhood familiar with the Balkans and the character and history of their peoples had been his favorite study.

Through influential acquaintance with high officials whose confidence he had long possessed, he was informed of the stirring events of the war—at least from the Bulgarian point of view—and proved to his own satisfaction that the point of vantage for the correspondent in modern warfare is not the battle line but the official headquarters. Evidently in the apparent "emptiness of the modern battlefield" the heroic or romantic epoch of war correspondence has been succeeded by a period of diplomacy in securing and disseminating official bulletins. Lieutenant Wagner combines with the vivid descriptions of the conflicts at Kirk-Kilisseh, Lule-Burgas, and Chatalja a discussion of the history and politics of the Bulgarians, of the life-story of their statesmen, and of the events leading to the war, which is almost encyclopedic in its fulness and authoritativeness. His book is prefaced by a significant statement from the pen of the Premier of Bulgaria, in 1877 a political prisoner of the Turks under sentence of death, in 1912 declaring war against them in behalf of his people, a war which has avenged years of evil and driven the Turk from Europe.

No better comment could be made upon the methods of Mr. Ashmead-Bartlett and Mr. Lionel James than Lieutenant Wagner himself gives in his chapter upon the "Experiences of a War Correspondent." Their books are perforce largely records of personal experiences in a very limited area of war, eminently readable, occasionally brilliant in vivid descriptions of the horrors and hardships of battles, but they cannot present a composite picture of the war. Mr. Ashmead-Bartlett, of the London *Daily Telegraph*, was an eye-witness of the heaviest fighting at Lule-Burgas, and his impressionistic account of the conflict and retreat will be remembered by the reader when the wearisome detail of his own difficulties with bad roads, unreliable automobiles, and dragomans, is willingly forgotten. The reader is as eager as the author to reach the center of interest, and has perhaps less patience in being compelled to force his way through masses of unimportant detail than had the author with muddy roads and recalcitrant autos. However, Mr. Ashmead-Bartlett's "story of the retreat of the Turk from the map of Europe" is ably told and will be profitably read. That which was a defect in his book "assumes the dimensions of a vice" in that of Mr. Lionel James, of the London *Times*. A flippant note "when men are dying" offends the earnest reader; the puerile device of nicknames for him-

self and his colleagues is sophomoric and not even clever. His book claims to be merely a narrative of personal adventure in the great campaign in Thrace and has its value on that basis.

Excellent maps and abundant illustrations increase the useful and attractive qualities of these three interesting books. One can but note in the pictures the contrast between the fine bearing and apparent military efficiency of the Balkan soldiers and the shambling, ragged look of the Turks. It was a sad as well as a heroic war—costing almost the very life-blood of a brave people, who have purchased victory at a heavy price, and sending a nation which seemed about to redeem its past back into ignominious retreat. Whatever is honestly written concerning it is of deep human interest.

AMERICANISMS

Thornton, Richard H. *An American Glossary. Being an Attempt to Illustrate Certain Americanisms upon Historical Principles*. 2 vols., 8vo. London: Francis & Co. 1912. Price, 30s.

The author of this work is a member of the Philadelphia bar, and was for twenty years Professor of Law in the University of Oregon. He makes it clear that he has fixed definite limits to the material which he considers. For one thing, "over 80 per cent. of the illustrative quotations are half a century old. No attempt has been made to register the voluminous outpourings of modern slang."

One must recognize that any collection of modern slang approaching completeness would have swamped other material. It is to be regretted that accurate contemporary record is not kept of slang, because slang is language in the making, and an appreciable portion of it becomes for a shorter or longer period standard speech. Its origin and development, then, are of interest and importance; but any measure of certainty about them is attainable only when slang is captured, as it were, on the wing. Aside from that part of it which succeeds in making a place for itself as "good English," slang enters largely into current literature, especially fiction, and into the minor periodicals, as newspapers. It is worth while, therefore, to have a complete record of slang made while it is still current; then from this record can be culled in a future period that portion which is useful in interpreting the literature or the language-phenomena of its time.

Another element, bulking largely in the daily speech of any average community, especially in sections removed from educational and literary influences, is composed of provincialisms and vulgarisms. These terms are not mutually exclusive. By provincialism is meant a form or construction characteristic of a given region; the provincialism may or may not be a vulgarism. By vulgarism is meant a form or construction violating the grammar (or accepted principles) of the language—a kind of error that marks the speech of the illiterate; a vulgarism may or may not be provincial. The speech of the masses in any given region is always marked by provincialisms and vulgarisms; from the former, indeed, no speaker is wholly free.

But the collection of speech-peculiarities of any one important region and generation is work enough for one man. A comprehensive collection for a whole nation,

\$2750

Completely Equipped

AS far as we can trace, the new Garford is the most widely discussed and most highly appreciated Six in America. This is due, not alone to its many novel innovations and practical improvements, but to its price—which is just about one-half that usually asked for a car of this character, elegance, comfort, speed, design and mechanical simplicity and efficiency.

The brief specifications below give the facts and value in detail. Look up the Garford dealer in your town. See this new Six without further delay.

Catalogue on request.

SPECIFICATIONS

Electric Starter, which never fails to start instantly—winter or summer.

All lights are electric.

Demountable Rims.
Center Control.

Big, single electric parabolic headlight, sunk flush with the radiator.

Electric horn.

Left Hand Drive.
Three Speed Transmission.

One piece, all steel body, steel Pullman car construction—no joints, no rivets, no wood.

Warner Auto-Meter driven from the transmission.

Full Floating Rear Axle.
Bosch Magneto.

60 horsepower, long-stroke motor—3½ in. by 6 in.

Wheelbase, 128 inches.

Tires, 36 x 4½

Equipment—everything complete from tools to top.

The Garford Company, Elyria, Ohio

An Example of Metal Lath Construction at Los Angeles, California

The Advantage of EXPANDED METAL CONSTRUCTION

should be known to all prospective builders because it offers them a rare combination of permanency, economy and lifelong satisfaction.

Our booklet 705, "Metal Lath for House Construction," tells how you can most readily secure these qualities by using KNO-BURN Metal Lath for interior walls and ceilings, and KNO-FUR Metal Lath for exterior work. Send for a copy today.

KNO-BURN METAL LATH

for inside use, is a flat sheet of expanded metal with a web-like mesh. The plaster works in, through and around the mesh. The result is a reinforced concrete-like wall—the plaster simply can't work loose or fall off.

Fireproof KNO-BURN Metal Lath covered with good plaster forms an effective barrier to fire because it completely protects all wood studding and joists.

Durability KNO-BURN Metal Lath, because of its rigidity, produces smooth walls and ceilings that will never warp, buckle or crack. The plaster can't come off. It is coated with a special carbon paint that withstands rust. It never disintegrates.

KNO-FUR METAL-LATH

for outside use, is a metal fabric similar to KNO-BURN, with parallel ribs that become reinforced concrete beams after the plaster is applied. This greatly increases the strength of the completed wall. It has the same plaster gripping mesh that makes KNO-BURN so effective.

Economy The ribs in KNO-FUR provide a substitute for forming and entirely eliminate the need of sheathing, building paper and weather boards. Therefore, the cost of a concrete KNO-FUR Metal Lath wall is less than that of a wood wall and in addition provides great economy in upkeep expense.

Lasting KNO-FUR is made of a specially prepared metal that effectively resists acid and rust. It is extremely rigid and practically imperishable.

This Booklet "Metal Lath for House Construction" tells of the many advantages of KNO-BURN and KNO-FUR Metal Lath. Send for a copy today.

REVIEWS OF NEW BOOKS

(Continued from page 1386)

through two centuries, must be the work of many acting in harmony. The result of their labors would be two collections: (1) The current slang, voluminous, much of it transitory, but all suggestive and illuminative. A good part of such a collection would have only temporary value. (2) That part of slang and of provincial speech which has found a place in the more or less temporary local literature of the region or time, and in the more or less permanent fiction which attempts to portray the region or the time. Such collections will be of value to future generations in the interpretation of the life of the people who produced the literature in question.

The present work is of the latter class. Certain limitations mark the work which must mark any such work that is the product of one man's spare time. Adequate review of the field would require the whole of a long life, because the material must be gathered from so immense a mass. Mr. Thornton's "Index of Authorities," at the end of Volume II, contains the names of about eighty periodicals (for the most part newspapers), widely distributed in place and time, and the titles of about two hundred and thirty books. The books are chiefly novels and books of travel and description. These of course are excellent sources. We notice frequent citation from *The Congressional Globe*, 1833-63, which ought to be a rich source, because it records the speech of men from all parts of the country who, during those years, assembled in Washington and engaged in rather voluminous discussions. Their speeches ought to furnish fairly true samples of English, as men of average intelligence and training used it in each of the distinctive sections of the country during the second generation of the nineteenth century. In even better measure *The Congressional Record* would furnish an abundant source (thanks to the patriotic vocal activity of the representatives of the people), for illustration of American English of the period during which it has been issued. The needful thing is that a compiler should indicate clearly the region, the time, and the character of his source.

With reference to the work under discussion, it must be recognized that there is a great deal of valuable material in it. The periodicals and books from which it was gathered cover a wide range of territory and time. But along with that fact it must also be said that the sources used were by no means all-inclusive, and hence the material assembled is not a complete collection. Most of the periodicals from which citations are made cover each only a year or a few years. The materials gathered from novels could be augmented; that from journals of travel and description is reasonably complete.

Accepting the limitations that the author lists, as stated in the opening paragraphs of his words "To the Reader," and recognizing the necessary limitations that the nature of the work and the character and extent of the sources imposed, we have no hesitation in saying that the task is well done. It was not an easy task; in some respects it was impossible. There are many so-called Americanisms which are equally Britishisms; but the identity is not discoverable because the person making

the investigation can not be equally in touch with the literatures (written and not written) of each country. Let English publications and English recorded speech equivalent in amount and character be compared with American; it may then appear that certain expressions thought to belong exclusively to one country belong to both. The New English Dictionary, capacious as it is, does not give a portrait or map of English speech parallel with that gathered from newspapers and current novels. That a word or a meaning or a construction is not noticed in the N. E. D., then, is not always evidence that it is not British. It would be unreasonable, however, to expect one man to harvest both fields in person, and the N. E. D. furnishes a complete enough vocabulary for significant comparison.

The work fills about 1,000 pages, and includes 4,000 vocabulary terms and "about 14,000 illustrative citations." It is the most representative collection that we have seen, and has both interest and value. We confess to genuine entertainment as page after page recalled words and phrases, forms and senses, familiar to boyhood's days, but now seldom heard or otherwise brought up; and so are not only of interest, but of distinct value in that they give brief definitions and ample illustrations of words that have historical "nicknames" of many famous men (as "Little Giant," "Old Hickory," "Old Bullion"); of States and citizens of States (as "Hoosier," "Buckeye," "Badger," "Sucker," "Wolverine," etc.); of political parties, factions, organizations, etc. (as "Know-nothings," "Copperheads," "Tammany," etc.); and terms to which politics has given color or currency (as "roorback," "repeater," "Salt River," etc.). Sometimes current misconceptions are corrected, as, for example, the assumption that Mrs. Bloomer invented or introduced the bloomer costume, or that O. K. stood for Jackson's misspelling of all correct.

MR. TAYLOR'S "ANCIENT IDEALS"

Taylor, Henry Osborn. *Ancient Ideals*. New edition. 2 vols., 8vo, pp. 461-430. New York: The Macmillan Co. \$4.

A feature of the modern mind in scholarship is a passion for investigating the literary and religious remains not only of Greece and Rome, but of the oriental world lying to the far east of the Tiber and Acropolis. It is comparatively in recent times that the archeological treasures of Egypt have been revealed and described. Parr, Porson, and such German scholars as Johann Voss, and the Frenchman Brunk knew nothing of the lore to the unearthing of which the discoveries of Belzoni gave the first impetus. A vast amount of material in Egyptian and Chaldean remains has since then been made public, while India and China have yielded to students of comparative religion a rich vein of precious learning.

Mr. Taylor, in this second edition of his work, makes the ideals of humanity center in Greece. The background to Greek culture was that of Egypt and Chaldea, whose ideals, whenever adopted, were elevated, broadened, and beautified by the Greek mind. Of course, the subject of

(Continued on page 1390)

Seems almost black magic

Whisk!

If a wishing cap moved your clothes closet from town to town you wouldn't need a "Likly" Wardrobe Trunk.

But clothes closets have a habit of staying at home. And a "Likly" Wardrobe Trunk makes wishing unnecessary.

It is remarkably trim and compact. You hang clothes in. They stay flat, no matter how roughly the trunk is slammed about. Inspect one of these trunks at your dealer's and you'll realize what a marked

improvement it is over the plain box type of trunk that makes clothes so crumpled at the journey's end.

(No. 445 Wardrobe Trunk)

This wrinkle-forbidding "Likly" Wardrobe is called "The Hercules." In many respects it is even stronger than the heavy-fisted old Greek ever dared to be.

The foundation box is basswood. It is covered and lined with vulcanized hard fibre. Then it is bound on the edges with extra-heavy fibre. The metal protecting parts are of enameled cold rolled steel of unusually stout design. All trimmings are riveted on by hand. Prices \$62.50—\$65.00. (Add \$5.00 to these prices west of the Mississippi.)

See one of these trunks at your dealer's. And send for our catalog, which describes over 100 other "Likly" Wardrobes—the widest range of wardrobe trunks in the world. Prices from \$25.00 up.

(No. 52 Wardrobe Trunk)

You needn't fear burly hands that toss this "Likly" Steamer Wardrobe into tug boats, motor trucks, ocean liners and jinnikahs. It's a lusty traveler.

Its wardrobe system keeps wrinkles out of six or seven suits or gowns. Hangers for men, women, or the two types combined. Price \$35.00. (Add \$3 to this price west of the Mississippi.) This is one of our forty steamer trunk designs. All are described in our catalog.

(No. 446 General Purpose Trunk)

Covered all over with fire-and-water-proof fibre, this "Likly" Trunk defies the most violent traveling.

Notice the upper corner caps. They are of special "Likly" design and bridge over the whole corner. All metal protecting parts are of cold rolled steel, heavily brass plated. This trunk comes in five sizes. Details in our catalog. Prices \$18.00 to \$22.00. (Add \$3 to these prices west of the Mississippi.)

(No. 955 Country Club Bag)

A wag called this bag "the Tight Wad's favorite" because it gives so much for the money.

It is made of fine imported pigskin, embossed with a walrus grain. Lined with serge. Look at the moisture-proof pockets for toilet articles. The other side has three handy folio pockets. This bag is guaranteed for five years. Price \$15.00.

(No. 449 Gladstone Bag)

There are two sides to this "Likly" Gladstone Bag. You pack or unpack either one without disturbing the other. Notice the three useful pockets.

This handsome bag is heavily reinforced throughout. Comes in five leathers. Lining of either linen or leather. Guaranteed for five years. Have your dealer show you one. Prices \$23.50 to \$37.50.

(No. 600 Oxford Bag)

This bag is made of imported English oxbide. It is tough, yet light. We sew it over a feather-weight frame and line the bag with leather. It has three folio pockets, two short pockets, and a five-year guarantee. Prices \$20.00 to \$23.00.

This is one of the fine collection of Oxford Bags shown in our catalog.

If you've any travel in mind, you ought to send for one of our 128-page catalogs. It describes in detail the most varied line of luggage made to-day. And we'll tell you where to see "Likly" Luggage in your town.

REVIEWS OF NEW BOOKS

(Continued from page 1388)

Greek intellectualism has been well thrashed out by German and English scholars. The verdict of Jowett sums up the question when he declares that Greek intellectualism has entered so completely into the ideals of modern civilization that it operates with all the unconscious persistence of a natural force. But before reaching Western Europe the spirit of Athens had to be absorbed by the poets, orators, and philosophers of Rome. Thus it was carried even beyond the Tagus, to *Ultima Thule*, the British Isles—and then beyond Britain.

Mr. Taylor writes with enthusiasm of the ultimate development of human ideals in Christianity. His work is characterized by learning and broadness of views. We do not think he has sufficiently emphasized the conception of unity embodied in the church as an ideal that was carried out for centuries in Latin nations through the power and influence of the papacy. He treats Christianity as a moral force, although history teaches us that Christian Rome for centuries was the corner-stone of authority and the bond of unity in politics among contending nations.

Let us point out what we consider a more serious omission in this admirable work. Caesar and Tacitus have described more or less fully a race of people, living on the northern shores of Central Europe whose character and instincts, the tendency of whose customs, have become prominent factors in the character of those nations which at this moment are leading powers of the world. We refer to branches of the Teutonic race, including Germany and England. The *Nibelungen Lied* and the early literature of Scandinavian countries are considered by some scholars to embody the prehistoric ideals and traditions of the peoples in whose language they were written in comparatively modern times as Homer was modernized, under Pseudo-Dionysius, so as to bring to Athens the ideals of a dateless past.

Heine considered the *Lied* to have as its prevailing note *die Treue*—steadfastness, fidelity. Domestic life, respect for women, religious awe, and religious rites free from idolatry are fully described by the Latin author. We may well believe that the character they impress upon the conquering men of the north in ancient times persists as a saving ideal with those who are to-day among the dominating forces of the political, social, religious, literary, and artistic worlds. With this criticism, we shall dismiss a book which we have always read with interest, sometimes with delight, and can recommend as a safe guide to those readers who are interested in the subjects with which it deals.

The proof-reader in the index has not been sufficiently careful as to the accentuating of words under the heading, "Some Greek words commented upon." Indeed there are false accentuations in certain passages of the text and a misquotation from Homer, but we may say with Horace, as Byron has paraphrased the author of the "Ars Poetica":

"When frequent beauties strike the reader's view
We must not quarrel with a blot or two,
But pardon equally to books and men
The slips of human nature and the pen."

and virtues." Of George Moore: "To tell a simple story of simple lives is thrice as difficult a task as to relate, in huge and resounding prose, the astonishing happenings of kings and queens, dukes and titled dullards." Whistler, according to Mr. Huxner, "does not sound the morbid note of Poe. He is sane, and his strangeness is never bizarre. He is primarily concerned with essences. In the true sense, he is the delineator of the moral nature. With a veiled intensity that is absolutely magnetic in its power, he adumbrates the moral temperament of his model."

One of the most timely and interesting chapters of the book is given to consideration of new movements in art, including the new "post-impressionism" and such men as Gauguin, Van Gogh, Matisse, Picasso, and their revolutionary ideas. "Rhythmic intensity," we are told, "is the key to the new school; line, not color, is king. Not beauty, but, as Rodin said, character, character is the aim of the new art," and in all the ruck and welter of the new movements there are a few men (Henri Matisse, I think), whose work will stand the test of time, and to-day shows mastery, originality, obscured as it may be, by wilful eccentricities and occasional posturing to the gallery." He concludes, "I am in sympathy with revolutionary movements in art, but now I know that my sympathies have reached their outermost verge." It is a book charming in its personality, delicate and fascinating in touches, and has a style that attracts by its dignity and perfect technique.

OTHER BOOKS WORTH WHILE

Fitch, George Hamlin. Modern English Books of Power. 8vo, pp. 173. San Francisco: Paul Elder & Co. 1912.

This companion book to Mr. Fitch's "Comfort Found in Good Old Books" is composed of essays which first appeared in the *San Francisco Chronicle*. They were written to help readers of the paper learn to appreciate good reading and to form a taste for the best books. And unto this end they are sufficient. Students of literature who have grown gray in reading classics of course will find little of especial help in Mr. Fitch's sincere remarks on recognized masters. But those who are just beginning their acquaintance with the books will find the work a useful guide.

Münsterberg, Hugo. American Patriotism, and Other Social Studies. 12mo, pp. 266. New York: Moffat, Yard & Co. \$1.50 net, postage 12 cts.

With the exception of the first chapter on "American Patriotism," all the others in this volume first appeared in magazine form. They deal with "The Educational Unrest," "The Case of the Reporter," "The Germany of To-day," "The German Woman," "Coeducation," "The Household Sciences," "The German at School," "Psychology and the Navy." The chapters which deal with Germany are particularly informing and interesting. Not quite so much can be said for the other studies.

Putnam, George Palmer. The Southland of North America. Illustrated. Pp. 425. New York and London: G. P. Putnam's Sons. \$2.50.

This is a book of travels, both inland and maritime, made during 1912, and should

Dixon's Flake Graphite
goes to the cause
of friction

It smooths the bearing surfaces and prevents metallic contact.

DIXON'S
Automobile Lubricants

Dry graphite won't flow, so we combine it with the purest petroleum greases in several consistencies. Ask your dealer for Dixon's Graphite Grease No. 677—fine for differentials and transmissions. Stops the noise as well as the wear. Used by prominent drivers.

Send name and model of car for free book, "Lubricating the Motor," No. 247.

D X N
—MADE IN U.S.A.—

Make Your Razor Behave

To get that velvety, cool cutting edge, give it just a touch on the hone every day. That's the barber's way—stripping away worn blades. Your razor will set like a barber's if you use a

PIKE STROP-HONE

(Use Safely on Ordinary Razors)

Two or three strokes on the hone for the back. And because it works so well, these take hardly a second. This little honing makes less stropping necessary. So it saves lots of time for a better shave. Two razor strops (strops and hone) in each of our sets. At 50 cents (postpaid), or a full set of three (postpaid) for \$1.00.

A Pike Stone FREE

Send your razor and a few words about your honing and stropping to: **Pike Strop-Hone Co., 121 Main Street, Pike, N. H.**

arouse interest in the territory they concern. It gives "a realization of the fact that at our very doors lies an almost untouched treasure-land of fascinating possibility." From serious consideration of these pages one could acquire a valuable fund of information about the government, industries, products, finance, and commerce of Panama, Costa Rica, Nicaragua, Salvador, Honduras, and Guatemala. The reader's strongest impressions will come from the descriptions of people and places, characteristic habits and costumes.

Panama is now practically in our hands. The opening of the canal will bring Central America infinitely closer. No small area in this country or abroad "is more thoroughly worth seeing than Central America." The picturesque customs of tropical life are described with appreciative enthusiasm, especially the Southland's love for good music, its kindness to the traveler, its pride, and its defects. The reason for the Northerner's failure to get a footing in the business of the South is pointedly given; it comes from the attempt of salesmen to adhere to Northern methods and failure to study and understand Southern indolence and apparent sloth. The student, traveler, or reader who desires only to be amused will thoroughly enjoy Mr. Putnam's book.

Blakeslee, George H. [Editor]. Japan and Japanese-American Relations. Clark University Addressess. 8vo, pp. xi-348. New York: G. E. Stechert & Co. \$2.50.

In the family of nations there is probably no member so completely self-conscious, so sensitive to what it deems reflections upon its honor, and so alert to enforce respect for its position as the once "Island Empire" of Japan. By reason of its position with respect to the United States, with the stepping-stone formed by the Hawaiian Islands, so largely occupied by Japanese workers, our own relations with Japan must necessarily be very close either for friendship or for enmity.

The volume edited by Professor Blakeslee contains twenty-two papers which have been published in part in *The Journal of Race Development*, issued by Clark University, and present Japan from the view of American and Japanese scholars, professional men and merchants, giving an interesting insight into native and foreign views concerning this fascinating nation. The point of view is altogether sympathetic. When men like President Jordan, William Elliot Griffis, Dr. Asakawa, of Yale University, Congressman Redfield, and Dr. Berry, formerly of Doshisha Hospital, unite in a series of papers, one may feel assured that what is good in Japan has come to the surface. In the present crisis the reading of this book might serve to allay some jealousies and to quiet some fears. At the same time it would appear that the heaven of Christianity is working in Japan and that Christian ideas are being taken into account by the Japanese themselves. One must, however, realize that, in spite of Dr. Griffis's assertion that there is "no difference in the human nature of an Asiatic, a European, or an American," there is a tremendous difference in the viewpoint. It is not too much to say that the number of Americans who can understand, for instance, the patriotism of a Japanese, its root-ideas, and the completeness with which it possesses a native,

The Voice of Reconstruction

When a flood sweeps over a vast area, desolating the cities and towns which lie in its course, the appeal for assistance gets a unanimous response from the whole country.

With all commercial and social order wiped out, an afflicted community is unable to do for itself. It must draw upon the resources of the nation of which it is a part.

In such an emergency, the telephone gives its greatest service when it

carries the voice of distress to the outside world, and the voice of the outside world back to those suffering.

At the most critical time, the nearest telephone connected and working in the Bell System affords instant communication with distant places.

And always the Bell System, with its extensive resources and reserve means, is able to restore its service promptly, and in facilitating the work of rebuilding, performs one of its highest civic functions.

is small indeed. If the present volume succeeds in showing some of these ideas and enabling Americans to appreciate them it will have served its purpose.

Weed, Clarence M. Seeing Nature First. Pp. 309. Philadelphia and London: J. B. Lippincott Co. \$2.

Mr. Weed has made his case very strong by writing a delightful book on nature attractions. He has added illustrations in such profusion as to make the book irresistible. He takes up the seasons in rotation and tells of the flowers that herald the coming and enhance the beauties of the season. His style is poetic, and one wonders why such easily acquired delights should be so often neglected. Flowers, birds, insects, butterflies, and streams all form a part of the vivid and graphic word pictures. Many nature secrets are revealed as nature romances. The book reminds one strongly of Mr. Schmucker's "Under the Open Sky." Both are delightful.

Cosenza, Mario Emilio. Francesco Petrarca and the Revolution of Cola di Rienzo. Cloth, pp. xiv-330. Chicago: University of Chicago Press.

To most people Petrarch is known as the author of some celebrated love-sonnets. To many he is known as a great humanist, a lover of classical culture, and one who did more than any other man of his time to revive and perpetuate that culture. By very few is he thought of as a statesman seeking to promote *Italia una* in the midst of the petty conflicts of the Italian states and the papal courts. Mr. Cosenza's monograph gives the full setting of Petrarch's part in Cola's revolution, translating liberally from the correspondence of Petrarch and of Cola di Rienzo and from the archives of the Roman Court.

SAFETY first—then INCOME

6% A NON-FLUCTUATING BOND INVESTMENT

For SAVINGS or SURPLUS

¶ The chief advantage of a Bond investment is the fact that you *know* that you will receive a *regular fixed income* that can be counted upon in advance.

¶ The great thing about this Company's 6% Gold Mortgage Bonds is the fact that they are non-fluctuating—they are not affected by "money market" manipulations; because behind them is the most stable security in the world—select, improved, income-producing New York City real estate.

What's the Use of

Palliating Corns?

Why merely pare them, when they quickly grow again?

Why use old-time methods—liquids, plasters—just for brief relief.

A chemist has evolved a way to end a corn completely. It is used in Blue-jay plasters.

Blue-jay stops the pain at once, just like other methods.

But it also ends the corn. Within 48 hours the entire corn loosens and comes out.

No pain, no soreness. The treatment is complete and final.

It seems too good to be true. But every month a million corns are taken out in that way.

Try it on one of yours.

A in the picture is the soft B & B wax. It loosens the corn.
B stops the pain and keeps the wax from spreading.
C wraps around the toe. It is narrowed to be comfortable.
D is rubber adhesive to fasten the plaster on.

Blue-jay Corn Plasters

Sold by Druggists—15c and 25c per package
Sample Mailed Free. Also Blue-jay Bunion Plasters.

CURRENT POETRY

ALTHO many consider the position of Poet Laureate an anachronism, and altho, with less than half a dozen exceptions, its occupants have been writers of little repute, the recent death of Alfred Austin has caused much discussion as to the choice of a successor. The opinion which has the most supporters is that Alfred Noyes, whose "Tales of the Mermaid Tavern" has been extensively quoted in these columns, is of all living English poets the one best entitled to this distinction. Some think, however, that an older man should be laureate, and in this connection the name of Austin Dobson is mentioned. It is not certain that he would accept the honor should it be offered to him, and this may be said also of many of the other poets who are eligible—Stephen Phillips, John Masefield, Henry Newbolt, and Rudyard Kipling, to name only a few. A writer in the *New York Times*, after discussing a number of possibilities, says, "There is, of course, not the slightest chance of a woman becoming laureate, but this does not alter the fact that many consider that England has few poets of greater genius than Alice Meynell."

Mrs. Meynell's verse appeals strongly to all who are interested in spiritual poetry, but it has as yet by no means attained its full measure of popularity. Her "Collected Poems," just published in London by Burns & Oates, will, it is hoped, soon appear in America. Albert A. Cook makes it the subject of a long and enthusiastic appreciation in *The British Review* and quotes from it the remarkable poem which we give below. Surely, only a great poet could write with such beauty and simplicity on so tremendous a theme. Most readers of it will be ready to share the emotion of Mr. Cook when he asks, "What poem of the nineteenth century is more searchingly thoughtful, more massive in its intellectual hold?"

Christ in the Universe

BY ALICE MEYNELL

With the ambiguous earth
His dealings have been told us; these abide;
The signal to a maid, the human birth,
The lesson, and the Young Man crucified.

But not a star of all
The unimaginable stars has heard
How He administered this terrestrial ball;
Our race have kept their Lord's entrusted word.

Of those earth-visiting feet
None know the secret, cherished, perilous—
The terrible, shame-fast, frightened, whispered,
sweet
Heart-shattering secret of His way with us.

No planet knows that this
Our planet, carrying land and wave,
Love and life multiplied, and pain and bliss,
Bears as chief treasure one forsaken grave.

Nor in our little day,
May His devices with the heavens be guessed,
His pilgrimage to thread the Milky Way,
Or His bestowals there be manifest.

But in the eternities
Doubtless we shall compare together, hear
A million alien gospels, in what guise
He walked the Pleiades, the Lyre, the Bear.

Oh, be prepared, my soul!
To read the inconceivable, to scan
The million forms of God those stars unroll
When in our turn we show to them—a Man.

Have You Ever Wished For a Machine that Would Add Two Columns at Once?

ABURROUGHS DUPLEX will do it and also carry totals from one column to the other. For instance, it will give you separately each clerk's sales for the day (or week) and then automatically "re-cap" them, all in one operation. It will add debits and credits separately at same time and, in fact, carry on any two ordinary adding-machine operations at the same time. Today there are 150,000 people operating adding machines in this country who could save 20% more time than they are saving if they used the machine "that almost thinks"—

Burroughs Duplex Bookkeeping Machine

This "two-in-one" machine in a little more than a year has made a big "hit." 2,500 out of the 20,000 Burroughs machines sold last year were Burroughs Duplexes and we were behind on our orders nearly all of the last six months.

We are giving it more factory room now and can supply you more promptly.

This month we are making a special demonstration of the Duplex machine so that you may try it (gratis) in your business. Our representatives have machines for this purpose. We can't call on every one, but if you want to see if it will save you time, work and worry, write us so we may show you a Duplex. It will cost you nothing and put you under no obligation. Ask for Duplex Folder.

With equal faith, less convincingly displayed, Miss Spofford writes on a mighty theme in *Harper's Magazine*.

Immensity

BY HARRIET PRESERVE SPOFFORD

Now Science, clear-eyed as the day,
God's great familiar, with her Key
Of mighty messages, declares
The fire-mists of the nebulae—
The gauzy films that hang like dreams
Woven of glimmering glooms and gleams—
Are universes rolling free
Beyond the utmost bounds that be
Of outer dark the awful phares,
Beyond our stars and all our play
Of planet, sun, and Milky Way.

And at that vision into space
With such tremendous splendors wrought,
Where sovereign orbits interlace,
Writing great script on night's dark face,
The heart shakes with a threatening thought
That we, so something less than naught,
Beside that vastness have no place
In the creative care and grace.

Come, then, O Faith, come lightning-shod
To meet great Science! As a dove
Flashes her wing upon the blue,
Seeking for heights forever new,
The answering thought bring, like the rod
That broke in bloom, that heaven's wide love
Is constant as the sky above,
That near at hand or far abroad—
Before the great the small unawed—
Heaven painted in the drop of dew—
Thrilling with life in soul or sod,
Each atom feels the living God!

A legend always dear to poets is beautifully adapted by Mr. Hamilton Fish Armstrong in this poem which appeared in a recent issue of *The Bellman*. Mr. Armstrong is particularly successful in the stanza next before the last. The effectiveness of the lines is due partly to the skill with which the thought is phrased and partly to the glamour which is inseparable from the names associated with King Arthur.

Tintagel

BY HAMILTON FISH ARMSTRONG

Between twin headlands steep whose crests are
crowned
With gorge and heath; where clouds the ocean
bound,
Wreapt in pale mist a fairy island lies
Half sunk in flame, half balanced in the skies.

A dusky barge that slowly skirts the land
Points toward that isle, by unseen breezes fanned,
Spreads darkening wings before the falling night
And passes, leaving arrow-wakes of light.

Once Arthur passed through death to that blest
shore;

Yet here they wait for him to come once more,
His vessels gleaming bright with golden sail,
To fight for right and not again to fail.

Why should we tarry for the coming years?
Let Vivien lure and Merlin whisper fears!
Fix we our gaze above the black-bound lance
Of Mordred lurking there with earthward glance.

Skyward our vision, till we see the crown
Of flashing pinnacles on that fair town
Rising beyond the silver-watered strands,
Where, dragon-banners furled, King Arthur stands
And bids us enter Avalon.

The *London Bookman* has every month a prize competition in which several cash awards are made for the best poems received. As special arrangements are made for the convenience of foreign and colonial competitors, it is surprising that so few

a hall in some suburban town—I forget the name—where a political meeting was to be held. She waited there for hours in the snow, and when the meeting began she let herself down through a skylight, and, hanging there out of reach of the stewards, heckled the speakers through a megaphone.

HANS WAGNER'S DÉBUT

AFTER watching "Hans" Wagner beat the New York Giants one afternoon, a youngster remarked that "when Wagner hits the ball, the only time it stays inside the grounds is when he bunts, and then he knocks down the infield." The remark was more picturesque than accurate, but it is safe enough to say that the veteran Pirate shortstop has always worried the National League pitchers more than any other batter. Most hard hitters wait for the ball to come somewhere near a choice place, but Wagner hits them everywhere, and he never seems to be anxious to get his base on balls. His own story of how he broke into professional baseball was told to a reporter for the New York Evening Telegram, from which we quote:

I broke into baseball by posing as my brother "Al." We were playing ball around Mansfield, Pa. They call it Carnegie now. That's where I was born back in 1874. My brother received an offer from Canton, Ohio, before he was offered a place with the Mansfield, Ohio, club, both in the same league.

The day he got the second offer he turned to me and told me to go to Mansfield. I got there early in the afternoon, and a man named Taylor, who owned the team, recognized me. He had seen me play. The club was hard put for a third baseman, however, and Taylor decided to take a chance with me.

It so happened that Mansfield played Canton that day. My brother was in the line-up of the Canton team, and the pitcher, "Toots" Barrett, a left-hander, was also from Mansfield. They regarded me as pretty much of a "kid," and when Canton got away to a good lead early in the game Barrett "let up" in his pitching when I went to bat. He wanted to see me make good and figured that a couple of hits more or less would not affect his rating any.

I made a couple of hits in this way, and then came the ninth inning. Never will I forget it. Mansfield was three runs to the bad when we went to bat. They needed four to win. We filled the bases and it was my turn to bat.

Taylor was not "wise" to the fact that Barrett had been easing up when I had been at bat before and made a couple of hits or he might have sent in a pinch hitter. I made a couple of bingles, so he let me stick.

With the bases full Barrett meant to strike me out. It was too ticklish a time for "monkey" business. He shoved across a fast one and I knocked it over the fence for a home run and won the game.

It was just a case of the luck of things. That's it all the time. If the pitcher's

MAN'S attire must be faultless in every particular, else he is not well dressed. You *can't* afford to compromise on the collar question. You *won't* have to if you wear

Ide Silver Collars

2 for 25c — $\frac{1}{4}$ sizes — In Canada, 3 for 50c

Their style is matchless. They are beautifully and faultlessly made for fastidious dressers. Their style is as lasting as it is absolute—the Linocord Buttonholes assure the correct effect and set of collar every time it is worn, because they are *non-breakable* and *don't* tear out.

lucky, he gets you. If you're lucky, you get him. You know some fellows are born lucky. Others are born unlucky. So far as my batting is concerned, I guess I was born lucky, that's all.

While I have always regarded my job with Mansfield as my start in baseball, I had played before that. I have been playing ball as long as I can remember. A lot of fellows who afterward butted into the big leagues, or came near it, played around Pittsburg with men when I was a "kid."

My first assignment in baseball with a regular club was with a team out in Mansfield, Pa. We called ourselves the A B C team. I don't know why we called it that, but that was the name. We were all youngsters about fourteen or fifteen years old, and we played baseball every day from daybreak until dark. We used to play our games on Saturday afternoons.

Many times teams composed of players much older than we were came to play us and were tempted to return whence they came asserting that they did not want to play a bunch of "kids." Most of the time these same teams left well trimmed.

It was while playing with that club that I grabbed an opportunity to break into faster company. A young fellow named John S. Robb, Jr.—he's a big lawyer out in Pittsburg now, and we often discuss this—was playing second base on the Mansfield team in the Allegheny County League. For some reason or other he couldn't play one afternoon and the manager of the team, "Shad" Gwilliam, sent for my brother. I've forgotten why "Al" couldn't make it, but I went in his stead. If I remember correctly that was back in 1890.

Wagner played in the little "bush" league team for a while, but he did not like older company very well, and returned to his own team. He proceeds:

Then came my experience with Mansfield, Ohio. Now, I'll pick up the story where I left off after knocking that ball over the fence. This man Taylor's son owned the Adrian, Mich., team, and the club out there was hard put. So I was sent there as an infielder and captain.

I got homesick after a few months and quit the club. Most of the boys from home were playing with the Warren club, in the Iron and Oil League, and I joined the same team. Toward the close of the season I was made an offer by the Steubenville club, of the Tri-State League, and joined it. That was in 1895.

I went there as a sort of all-around player. I pitched for a while. I was so wild that I used to walk half the batters and strike out the other half. I had terrific speed and it was hard to get a catcher who could hold me. They borrowed "Pete" Lavelle from the Pittsburg club, of the National League, to catch me in a couple of games, thinking that it would steady me.

As a pitcher I was a failure. While in the games as a pitcher, however, I banded a couple of hits over the fence and they made me into an outfielder, playing me in center. George L. Moreland, now the famous baseball statistician of Pittsburg, was then manager of the club.

The following spring the Pittsburg club

The Bottle That Keeps Hot Liquids Hot 24 Hours, Cold Liquids Cold 3 Days.

Hot or cold drinks when needed while traveling, fishing, hunting, motoring, picnicing, etc.

Keep baby's milk at right temperature, or invalid's hot or cold drink by the bed, all night, without heat, ice or bother of preparation.

ICY-HOT CARAFE takes place of unsanitary water bottle and pitcher—ideal for night use—can be hung in tilting bracket attached to wall at bedside and refreshing drink obtained without leaving bed.

ICY-HOT JARS and ICE CREAM PAILS—pints, one and two quarts—keeps stews, meats, oysters, vegetables, etc., hot without fire—desserts cold and ice cream solid without ice for 3 days, in absolutely sanitary glass container.

The King of Vacuum Bottles—Yet Costs No More than the Ordinary—Accept No Substitute—There's No Bottle Just as Good.

The inner glass bottle is thoroughly protected against breakage—is easily removed, sterilized or simply replaced if broken. Perfectly sanitary—liquid touches only glass. Handsome nickel plated or leather covered cases. Many new exclusive features. See at dealers—look for the name ICY-HOT on bottom.

Pints, \$1.00 up; quarts, \$2.00 up.

Neither fire nor ice required—the heat or cold of liquids within the bottle cannot be affected by outside air. No chemicals, no batteries, just all bottle with hot or cold liquid and cork it.

Write for FREE Booklet fully describing the various styles of ICY-HOT Bottles, Jars, Auto, Carrying and Luggage Cases.

ICY-HOT Bottle Co., Dept. D, Cincinnati, Ohio.

ICY-HOT Bottle Several Styles Pints—Quarts, Icy-Hot Carafe 1 Qt., 2 Pts., 2 and 3 Qts.

Cedar Moth Bags

Filled with odorless, fragrant Red Cedar. Put up in attractive cloth bags. Especially prepared to meet the demand for a Sweet Smelling Moth Preventative of Lasting Quality. Strong, pleasant odor—very repellent to moths and insects of all kinds.

Fill your Cedar Moth Bags placed in your trunk, wardrobe or closet will make each equal to an expensive "Cedar Chest" sold only by mail—50¢ each or a lot for \$1.00, postpaid. BLUE RIDGE BALSAM PILLOW CO., Dept. C, Asa, North Carolina

signed me, and W. W. Kerr, who then owned the Pirates, wanted to farm me out to Kansas City, but I insisted that it was too far away from home, so he sent me to Paterson, N. J., in the Atlantic League. I played with Paterson all of that year and until June 20, 1897, when the Louisville club, owned by "Barney" Dreyfuss and managed by "Fred" Clarke, and of which Harry C. Pulliam, one-time president of the National League, was secretary, bought my services.

When I was leaving Paterson the "fans" of that city presented me with a watch. I still have it, and it's some watch.

During the winter of 1899 and 1900 the National League was cut from a twelve-to an eight-club league, and Mr. Dreyfuss purchased the Pittsburg franchise. He took some of the Louisville players to Pittsburg with him and I was fortunate enough to be among them.

Let's see—of course Clarke came along as manager, and "Tommy" Leach and Deacon Phillippi were among those who had been playing with Louisville and were taken to Pittsburg.

Well, I've been with Pittsburg ever since. Guess that about completes the yarn.

AN UNUSUAL TURK

THE love of indolence which critics charge against his race was not one of the weaknesses of Shefket Pasha, the Grand Vizier of Turkey, who was slain on June 11 by an enemy of the Young Turk party, who sought to avenge the death last winter of Nazim Pasha, for which Shefket was blamed. As War Minister in charge of the campaigns against the Balkan Allies he worked night and day, snatching a little sleep each night in the tent which sheltered his headquarters. It is said that he was urged to escape his enemies by a sudden flight from Constantinople, but, being a fatalist, he refused, saying, "What God wills will be." A sketch of his personality and his career from the pen of M. H. Donohue, the Balkan war correspondent of the *London Chronicle*, appears in a dispatch to the *New York Times*. We quote in part:

Shefket had many faults, but was handsome and generous to a degree. It is said of him that he never forgot his friends and rarely forgave his enemies. He lacked caution and discernment and had a tendency to insincerity.

Shefket, as I remember him, was a remarkable *causeur*, possessing, for a Turk, a very lively imagination. I have sat listening to him for hours, telling stories of his adventurous military life. The man had the true gift of the *raconteur*, and the most prosaic incidents, coming from his lips, sounded like a new version of the "Arabian Nights."

One of the dead man's weaknesses was

20,000,000 ELGINS

TWENTY million Elgins made and sold in fifty years! Now being produced at the rate of 3000 daily! Keeping in full-capacity operation the world's biggest watch works! Shipped to all parts of the world where time is measured!

Dependability has done this. Many of the first Elgins are yet in constant use—keeping every minute with Elgin faithfulness. Many have served two generations. Followers of every occupation have found them true. Rigorous tests of climate and service have added proofs of Elgin stamina.

LORD ELGIN, here illustrated, is the consummation of all this experience, all this skill and all these facilities. It is the watch for lifetime service. It is the correct model for masterful men. It is the thinnest watch made in America with an enamel dial.

Forty thousand leading jewelers of America—in every town and city—display, endorse and sell Lord Elgins. These jewelers are Elgineers—masters of watchcraft. They know good watches.

Let your local Elgineer show you a Lord Elgin and demonstrate its supremacy. He will also show you the G. M. Wheeler, a sturdy watch for men of rugged occupations.

an inordinate variety and love of the
picturesque, whether in an incident or a
uniform. He would pose ten times a day
before the camera, and was wont to stand
for amateur and professional photographers
with his head well thrown back, those dark
Arab eyes of his flashing like diamonds,
one hand on his hip, and the other grasping
firmly the hilt of his sword.

Altho loving power, Shefket is be-
lieved to have been drawn unwillingly
into the ranks of the conspirators who
planned the *coup d'état*. Once a party
to the conspiracy, he seemed to have lost
all sense of perspective. He flung military
discretion to the winds, broke off negotia-
tions, and light-heartedly embarked upon
the second campaign, which the Turks
were told was to reverse the inglorious
defeats of Kirk-Kilisseh and Lule Burgas
and preserve Adrianople to the Empire.
All the world knows how grievously
Shefket and his advisers disappointed their
countrymen.

Despite certain political differences,
Shefket preserved a certain attachment
for the murdered Nazim Pasha, and in
private never ceased to deplore the fatal
bullet which robbed Nazim of life and
Turkey of an able soldier. According to
the plan submitted for Shefket's approval
the *coup d'état* was to have been accom-
plished without bloodshed, but when the
band of conspirators and their supporters
rushed from Stamboul and invaded the
precincts of the Sublime Porte this under-
taking was forgotten; angry passions and
personal animosities surged uppermost,
and Nazim and his aide-de-camp, the hand-
some and accomplished Tewfik Bey, fell
victims.

From this moment Shefket realized
that his earthly days were numbered, and
that he was a doomed man. "Blood must
be requited by blood" was a saying not
unknown to the murdered Grand Vizier,
and he literally paid "measure for measure."
Ever since that January day when the
Cabinet of Kiamil was overthrown and the
Young Turks climbed back into power
Shefket daily lived haunted by the specter
of the assassin. Friends and sympa-
thizers of the dead Nazim had sworn to
take the lives of both the Grand Vizier and
Enver Bey, and if Shefket lived so long it
was perhaps because opportunities for
killing him were lacking.

Shefket was the best-hated man in
Turkey. Like most politicians, he was
hated by those whom in the course of
his administration he had driven from the
army and those whom his enmity had
sent into exile, or whom he had court-
martialled and put in a felon's cell; but the
one unforgettable crime for which Shefket
was tried and found guilty by the public
conscience of Turkey was participation
in the assassination of Nazim.

Well?—"Your wife gave a beautiful
address."

"Yes?" replied Mr. Meskton.

"She said it was woman's especial duty
to be kind to dumb animals."

"I heard about it."

"But you don't seem impressed."

"It doesn't seem to be anything that
interests me—not unless you are going
to put husbands in the dumb-animal
class."—*Washington Star.*

THE SPICE OF LIFE

The Test.—"Is she a good musician?"
"Very. She knows when to quit."
Detroit Free Press.

Listing It.—"How did you list the money that fortune-teller got from you?"
"I put it under the head of prophet and lost."
Baltimore American.

Are You a Captain?—WILLIE—"Paw, what is a captain of finance?"
PAW—"Any salaried man who can live within his income, my son."
Cincinnati Enquirer.

Anticipation.—JACKSON—"Whew! that's some cliff!"

JOHNSON—"Seems to fascinate you."
JACKSON—"Yes. That's the way my desk will look when I get back."
Judge.

Corrected.—IRATE PATRON—"I thought this railroad was for the benefit of the public."

RAILROAD OFFICIAL—"You're away off. The public is for the benefit of the railroad."
Cleveland Leader.

The New Mother.—"When you kissed your weeping mother good-by, and went out into the world to make your fortune, I presume her last tearful injunction was for you to be good?"

"No, make good."
Houston Post.

His Hint.—"Don't you believe every woman should have a vote?" asked the Sweet Young Thing.

"No," replied the Young Man. "But I believe every woman should have a voter."
Cincinnati Enquirer.

Lucky Meeting.—ANGRY INVESTOR—"Well, I've been out and seen that building lot I bought of you."

REAL-ESTATE MAN—"You're just the chap I want to see. What does it look like?"
Puck.

Business Failure.—TRAMP—"Yes'm, I wunst had a good job managin' a hand laundry, but it failed on me."

LADY—"Poor man! How did it happen to fail?"

TRAMP—"She left an' went home to her folks."
Chicago Record-Herald.

Happens Frequently.—We don't know who put the pun in punctuation, but we do know a whole lot of punctuation is put into punk.—*Berkshire Eagle*.

Terrible.—"Daughter and her beau must have had a terrible quarrel!"

"Why so, ma?"

"Five pounds of candy, a bunch of roses, and two matinee tickets have just arrived."—*Judge*.

Revenge.—FATHER—"You have no sense; I'm going to cut you off with a million."

THE SON—"If you do I'll disgrace the family by riding around in a second-hand auto."—*Philadelphia Bulletin*.

How it is Done.—OWNER—"What'll it cost to repair this ear of mine?"

GARAGE PROPRIETOR—"What ails it?"

OWNER—"I don't know."

GARAGE PROPRIETOR—"Thirty-four dollars and sixty-five cents."—*Puck*.

Polite Retort.—"You are getting very bald, sir," said the barber.

"You, yourself," retorted the customer, "are not free from a number of defects that I could mention if I cared to become personal."—*Louisville Courier-Journal*.

Choice of Words.—"What is that man's occupation?"

"Well," replied Senator Sorghum, "it depends on your point of view whether you say he is conducting a campaign of education or is just a plain lobbyist."—*Washington Star*.

Encouraging News.—Berlin is to have a fine new golf course. This is good news, for it is hoped that, in course of time, the Germans will follow our example by paying more attention to golf than to national defense, and then we shall not be so unfairly handicapped.—*Punch*.

Slump in Sight.—"Yessir," said the big man, "I'm opposed to the election of United States Senators by popular vote."

"My, I'm surprised to hear you say that," said the little man. "What are your reasons?"

"I manufacture dictagraphs," replied the big man.—*Cincinnati Enquirer*.

Feared the Other.—The man of great financial prominence had met with an accident.

"We'll have to probe," said the doctor. Just at that moment the man recovered consciousness and exclaimed:

"If it's a surgical operation go ahead, but if it's another investigation, give me an anesthetic."—*Washington Star*.

A Catch.—FATHER (angrily entering parlor at twelve-thirty)—"Look here, young man! Do you stay as late as this when you call on other girls?"

JACK (trembling with fear)—"N-n-n-no, sir!"

FATHER (appeased, as he leaves the room)—"That's all right, then! (Aside.) Thank Heaven! Mary has caught on at last!"—*Puck*.

KEEPS HOT
24 Hours

KEEPS COLD
72 Hours

This is the new Thermos bottle. It is cementless, jointless, and paperless, all absorbent material dispensed with. This new glass Thermos filler is seven times as heavy at the base as the old model. It is practically unbreakable by reason of the shock absorber at the base. The introduction of this shock absorber at the base is made possible by the new Walker-Burrows process of joined glass.

The base is full nickel, of the separable type, permitting the insertion of refill by the user in less than a minute. Refills at all dealers.

The new Thermos cold-out system has installed in our manufacturing plant at Norwich, Conn., equipment to secure a higher vacuum than has heretofore been possible, thus means bottles that will keep food and a greater length of time.

In these models the consumer secures the benefit of not only a greatly-improved product but a much lower price.

CURRENT EVENTS

Foreign

June 5.—The British Government decides to lay down three battle-ships of the present year's naval program immediately instead of next March, as intended. This is in consequence of the rejection by the Canadian Senate of the Naval Aid Bill.

June 7.—The Agrarian and Clerical parties are returned to power at the parliamentary elections in Prussia in undiminished strength.

The European Powers demand that the Balkan States demobilize their armies.

June 8.—Miss Emily Davison, the British suffragette, dies from the injuries received when she rushed on the race-track at Epsom Downs and stopped the King's horse.

June 9.—A new Hungarian Cabinet is formed with Count Tisza as Premier.

June 10.—The House of Commons passes the second reading of the Irish Home Rule bill.

Mexican rebels dynamite a troop train near Guaymas and kill 200 men, say dispatches.

June 11.—The Hamburg-American liner *Imperator*, the largest ship in the world, sails from Hamburg on her maiden trip to New York.

Sheket Pasha, Grand Vizier of Turkey, is assassinated.

The Parliamentary Committee which inquired into the British Government's contract with the Marconi Wireless Telegraph Company exonerates members of the Cabinet of any wrong-doing in the purchase of stock in the company.

Domestic

WASHINGTON

June 5.—The Senate Commerce Committee votes to defer reorganization of the customs service until January 1.

Secretary of State Bryan announces that Germany, Bolivia, and Argentina have so far approved his peace plan as to ask for tentative drafts of the treaties.

June 7.—Thirty-one employees of the Weather Bureau are reduced in rank and two officials suspended without pay, pending an investigation of alleged political activity in behalf of Chief Willis L. Moore's candidacy for the post of Secretary of Agriculture.

June 9.—The Supreme Court reverses the conviction in the case of the officers of the so-called Turpentine Trust.

June 10.—The Supreme Court, deciding the Minnesota rate case, holds that States have a right to fix intrastate rates so long as they do not make them confiscatory.

The President nominates Cornelius J. Ford, a union labor leader, of New Jersey, to be Public Printer.

The Supreme Court, in an opinion handed down by Chief Justice White, upholds the legality and the constitutionality of the so-called Newspaper Publicity Law.

GENERAL

June 5.—Thirty-eight of the forty-one strikers in Paterson charged with unlawfully assembling in doing picket duty are found guilty.

A Cincinnati court dismisses the case against George B. Cox, former political leader, and other officers of the Cincinnati Trust Company accused of cancelling a note which it was alleged had not been paid.

June 6.—Alexander Scott, editor of the *Weekly Issue*, a Paterson (N. J.) paper that has been supporting the cause of the silk-mill strikers, is sentenced to serve an indeterminate prison term of not less than a year nor more than fifteen years and to pay a fine of \$250 for "inciting hostility against the Government."

June 7.—William W. Wood, president of the American Woolen Company, is acquitted at Boston of the charge of conspiracy to injure the cause of the textile strikers at Lawrence, Mass., last year, by "planting" dynamite. In the case of Frederick E. Atteaus, a disagreement is reported, and Dennis J. Collins, who turned State's evidence, is found guilty on two counts and not guilty on four counts of the indictment.

President John P. White, of the United Mine Workers of America, and eighteen other officials are indicted in the Federal Court at Charleston, W. Va., on a charge of violating the Sherman Antitrust Law. The indictments charge that the defendants conspired with the United Mine Workers of America and with the coal operators of western Pennsylvania, Ohio, Indiana, and Illinois to raise wages in the West Virginia field so as to prevent this State competing with them in Western markets.

June 8.—The Rev. Dr. Charles Augustus Briggs, noted theologian, dies in New York City.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnall Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"C. A. W., New Corydon, Ind.—"Please give part of speech and construction of *place* in the sentence, 'A change has taken place.'"

In the sentence you ask about, *place* must be understood as the direct object of the verb *has taken*; it is a noun in the objective case. The relation may be clearer in such a sentence as "He took his place at the wheel."

"E. G. P., Tonopah, Nev.—"Is the past tense of 'attack' pronounced 'attacked'?"

The pronunciation you suggest is correct. To make the past tense of *attack*, one simply adds the sound represented by the consonant letter *t*.

"H. H. W., Greensboro, N. C.—"Kindly give the correct English for the following sentences: (1) 'Everywhere there was noise and the usual jostling life.' (2) 'To give to whomsoever has the effrontery to ask is not wise.' (3) 'We will feel better to all be together.' (4) 'Of course we have enough work to do, but the need for extra effort is so great as to much more than make up for the extra work involved.'"

(1) It is proper to use the singular verb in the first sentence you quote. The ground for that construction is either (a) that *noise* and *jostling life* are parts of one state of things, and this state of things is the real subject, or (b) that the speaker suggests and the hearer perceives not several things in a group, but things taken one at a time. It would also be proper to use a plural verb, *were*, suggesting the plurality of things in the scene that is recalled; but in the sentence cited the effect would not be so good.

(2) Use *whosoever*, because the word is subject of the verb *has*.

(3) The Lexicographer does not approve of "splitting the infinitive"; but not all persons who have ground for speaking with authority will agree with him. Hence the Lexicographer will not condemn it as an error to insert *to* between the sign *to* and the body of the infinitive *be*. But why not omit *all*? That relieves us of a "split infinitive" and at the same time improves the sentence; *all* is redundant.

(4) The fourth sentence illustrates the danger of admitting the "split-infinitive" construction. A simple case of it may not offend; but indulgence in liberty may lead to unrestrained license. "It seems to much more than make up for the extra work" should be rather "It seems to do much more than make up," etc. But the Lexicographer would recommend entire revision of the sentence his correspondent quotes. The idea the writer sought to impart is apparently not clearly thought out, certainly not carefully expressed.

"F. H., Jackson, Miss.—"What is the origin and meaning (by grammatical construction) of the expression, 'by and large,' as used in the sentence, 'It is by and large the most efficient system yet introduced?'"

The phrase *by and large* is a nautical term which in the United States has been given currency outside the technical world of its origin. As a nautical term, it is a combination of (1) *by* and (2) *large* in the nautical senses respectively of (1) *close to the wind* and (2) *free from—away from—the wind*. A ship is said to sail well *by and large* when it sails well whether going into or away from the wind—that is, in all conditions. Hence the phrase *by and large* in its wider (American) applications means "in general," "considered in all respects," or "from all points of view." The two words thus used are (grammatically) *adverbs*.

"W. S., Asbury Park, N. J.—"Please comment on the expression, 'I have not got any.' Is the prejudice against the word *got* well founded?"

In the sentence, "I have not got any," *got* is wholly uncalled for, unless it is understood that the speaker was to *get* (procure) some of the thing or things in question. If mere *having* (possessing) and not *getting* (procuring) is the idea to be expressed, the word *got* should be omitted. Further, "I have not any," though correct, is not so good as "I have none."

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnall Company (Adam W. Wagnall, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Coddily, Treas.; W. J. Funk, Sec'y), 354-360 Fourth Ave., New York

VOL. XLVI., No. 26

NEW YORK, JUNE 28, 1913

WHOLE NUMBER 1210

TOPICS OF THE DAY

THE SUFFRAGE CONQUEST OF ILLINOIS

INCOMPLETE as is the victory of the suffragists in Illinois, the press of the country nevertheless speak of it as an "important," "notable," "substantial," "amazing" triumph for their cause. Its importance, explains the *New York World*, "is measured by the fact that Illinois is the first State east of the Mississippi to give women votes. It is a triumph in 'the enemy's country' which should have a far-reaching influence." Not only do "the effete East and the conservative South lie before them," now that the suffragists "have crossed the Rubicon," but, the *Philadelphia Record* points out, "Illinois is the only first-class State, so far as population goes, that has as yet adopted woman-suffrage." Then there is the accompanying fact, emphasized by a Chicago daily, that now "the first American city of the first rank is to call its woman citizens into its councils." In Illinois, suffrage is granted to women, not by virtue of a constitutional amendment carried by popular election, but through legislative enactment. By the terms of the measure, women may vote for all offices not mentioned in the State constitution. This means that they may vote for Presidential electors, mayors, aldermen, municipal court judges, sanitary trustees, and most local officers, while they may not vote for governors and other State officers, members of the legislature, county or district judges, Congressmen or United States Senators. The act provides, too, that women may vote "upon all questions or propositions submitted to a vote of the electors of municipalities or other political divisions of this State," and that "separate ballot-boxes and ballots shall be provided for women." The antisuffragists are credited in the news columns of the *Chicago Inter Ocean* with an inclination "to smile over the limitation to 'statutory offices' and to claim that a grant of suffrage, without an amendment to the constitution, leaves the matter at the mercy of the legislature, with the possibility of a repeal at any session." But this measure of equality seems to the pro-suffrage *Chicago Tribune* "so large that hereafter Illinois may be more properly put in the equal suffrage than in the male-suffrage column." Furthermore, many editors believe that within a few years the Illinois constitution will so be amended that all officers will be elected by universal vote. Indeed, observes the *New York Telegraph*:

"The fact that women in 1916 will help to elect Presidential electors insures a respectful consideration of their other claims

by the politicians. No man seeking the office of Chief Magistrate in this Union will dare declare himself as openly opposed to suffrage. Illinois has twenty-nine votes in the electoral college."

While "the great change seems to have come suddenly," the strongly pro-suffrage *Chicago Post* notes, in fact, "it has a background of thought, of inspiration, of service as noble as that of any other hard-won advance." In this background are memories of Frances E. Willard, Jane Addams, Catharine Waugh McCulloch, and leaders of an earlier generation "who fought for suffrage when the fight meant ridicule and abuse." Back of them, *The Post* sees "the trooping ranks of women, young and old, who went to twenty-six legislatures at Springfield to make the plea that was granted yesterday at last." Continuing:

"It is the work of these women that made possible the coming of victory. But the final battle was won, if ever a battle was won, by the efforts of Mrs. Grace Wilbur Trout, president of the Illinois Equal Suffrage Association; by Mrs. Sherman M. Booth, chairman of its legislative committee, and by Mrs. Antoinette Funk, of the Illinois Progressive Service Board. These three women, ably assisted in the last days by Mrs. Medill McCormick, organized and carried through a 'people's lobby' more fair and more efficient than the general assembly had ever known. . . .

"Had these four women not gone to Springfield, planned their magnificent campaign and executed it so ably, Senate Bill 63 would never have gone through this assembly.

"To Mrs. Trout, Mrs. Booth, Mrs. Funk, and Mrs. McCormick suffragists of to-day owe as keen a debt of gratitude as that which they pay so generously to the leaders of the past."

This "unbeatable combination," we read in a press dispatch,

"started with forty votes, and it had to get seventy-seven to win. On the final roll-call it had eighty-three. Furthermore, it ended the fight with the respect and confidence of every legislator. Even the 'gray wolves' declared publicly that 'the women had played absolutely fair.'"

"It is a glorious victory," says Mrs. Funk. "The battle is over. And not a man who voted yes on the woman's bill will ever regret it." Mrs. Catharine Waugh McCulloch, who has given years of hard work to the suffrage cause in Illinois, who ably aided the "woman's lobby," and who, according to the *Chicago Tribune*, actually "wrote the bill that ran the gamut of the two branches of the legislature," calls the victory "the biggest thing that has happened east of the Mississippi since the Civil War." Yet, she says, as quoted in *The Tribune*,

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. *Both old and new addresses must always be given.* **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnall Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

"There is much work still ahead of us. We must continue to work unceasingly, so that we may eventually have full suffrage."

"The more the men see of us as voters, the more they will respect us as women."

"This victory may teach the English women the ballot may be

Copyrighted, 1913, by Henry Burdett Chamberlin.

NOW FOR A CLEAN SWEEP.

—French in the Chicago Record-Herald.

won without throwing stones. We have shown them a peaceful way of getting the vote."

Reference to the English militants was also made by Governor Dunne in a little speech congratulating the successful suffrage workers. He said:

"You were able to convince the Governor, the Lieutenant-Governor, the Speaker of the House, and the legislature in a quiet, forceful way. While your sisters across the sea were setting fire to buildings to gain the ballot and thereby exciting the contempt of mankind, the women of Illinois went about it in a different way. I welcome the womanhood of this State to a share in its responsibilities."

The Illinois women should also be complimented on their enemies, thinks the New York *American*. Lee O'Neill Browne's opposition to the bill, for instance, "supplies the best argument that has yet been made for woman's suffrage in this country," and "it is the protest of the politician of the Lorimer stripe against the cleaning up of politics that is sure to follow the granting of the franchise to women." Mr. Browne's final speech on the floor of the House was an eloquent appeal to his fellow Democrats not to "crucify" their party. He exclaimed:

"If this bill passes it will be ever remembered by you in the days to come, for it will change the political map of Illinois, wiping out all party lines. It will eliminate the Democratic party because the women of Democratic families will not vote. They and their husbands and fathers and brothers do not believe in this bill. The women who do vote will not be Republicans either. Search the lobby if you would find the answer. It has been the best and brainiest lobby you ever saw, I will admit, but are you sent here to crucify your party?"

Another helpful enemy, in the Chicago *News's* opinion, was the opposition of the liquor interests. The same opposition has often been discerned by suffragists in State campaigns; the extreme prosuffragist cartoon on the opposite page shows their version of the situation thus created. But to return to Chicago and *The News*:

"It is interesting to observe that the fight on woman-suffrage at Springfield was mainly a fight by friends of the liquor interests.

The feeling that women should be permitted to express themselves at the polls on the liquor question and on many other questions directly affecting the financial, physical, and moral welfare of the communities in which they live has had much to do with the outcome of their hard-fought campaign."

Now that the campaign is won, remarks the Albany *Journal*, with evident skepticism, "it remains to be seen what good will come to Illinois of the woman-suffrage law." This, say the Chicago papers, which generally favor the change, is for the women themselves to answer. Says *The Inter Ocean*:

"If they vote in approximately the same proportion as do the men, and if their advent into the political field brings about the reforms and improvements which they assert will follow, then they will have given strong reasons for the amending of the constitution so that they may have an unrestricted ballot. The women of Illinois are on trial, and their political future is in their own hands."

The suffrage leaders themselves, as reported in *The Inter Ocean*, predict "a general uplift in the entire political situation in Illinois, the abolition of the old-school politician of the 'ward-heeler' type, serious consideration of the 'wet' and 'dry' question, and a higher character of political office-holders." Nor is a practical program lacking for fulfilling these prophecies. Says Mrs. Medill McCormick in a statement sent to the press:

"The plan is to educate women not only along political questions of the day, but along the lines of all sorts of civic betterments. It is in this field that the women are now ready to do the most effective work, for municipal regulation is house-keeping on a large scale."

"A special committee on organization, representing all the suffrage associations in the State, is to be appointed within the next ten days. Its purpose will be to organize a non-political educational league in every precinct and ward of the cities, making a unit of the Congressional district. Speakers will be supplied by a speakers' bureau to address meetings held at stated intervals throughout the State."

In Chicago, says a leading woman settlement worker,

"We have already started the process of educating the women in the foreign wards. The members of the woman's club here

LITTLE MISS HORNER!

—Heaton in the Chicago Inter Ocean.

at the settlement-house are prepared to vote intelligently now. The campaign of education will go out beyond the settlement houses."

Upon the heels of the Illinois victory came another piece of encouraging news for the suffrage workers of this country, in

MRS. CATHARINE W. McCULLOCH.
Who sees the triumph of suffrage after twenty years of active work for the cause.

THREE MEMBERS OF THE "WOMAN'S LOBBY."
From the reader's left to right they are Mrs. Sherman M. Booth, Mrs. Grace Wilbur Trout, and Mrs. Antoinette Funk. The Illinois victory is generally attributed to their skilful work at the State Capitol.

MRS. MEDILL McCORMICK.
The other member of this efficient and successful lobby. She is the daughter of Mark Hanna.

LEADERS IN THE ILLINOIS FIGHT FOR VOTES.

the shape of the United States Senate Committee's report favoring a suffrage amendment to the Federal Constitution. This is generally looked upon as more valuable as an indication of a friendly attitude in Washington than as a preliminary to success in the national field. Indeed, thinks the *New York Globe*, "the attainment of the ballot for women will be accomplished more quickly and easily through separate action in the non-suffrage States."

DEMOCRATIC CURRENCY REFORM

EVERYBODY BELIEVES our banking and currency system should be made over, it seems, but disagreements about how to do it threaten to prevent its being done. Many question whether the President, who has put through the House a tariff bill that bears the imprint of his personality, can at this late day of the congressional session do the same for a banking and currency reform measure. Editors generally, in fact, seem to consider the making of a tariff law simple, compared to the solution of our banking and currency problem, and the *Boston Herald (Ind.)* thinks if President Wilson succeeds, "his achievement will be monumental." It adds a little pointedly that he will succeed if he can keep his own party in control, so that certain "oracles" will not rave "like wild men against any comprehensive measure of a modern or scientific character." The opposition the President will have to meet from his own party, we are told, is likely to proceed from what certain papers call more plainly "the Bryanites," who have "radical" ideas about currency legislation and from those Democrats in both houses who, for reasons of tactics or prudence, believe it inadvisable to rush a banking and currency bill through at the tag-end of a session, when the subject is one on which both legislators and the public need instruction and

understanding. So the whole matter turns on the pivot of Democratic unity in the Administration as well as on the deeper question of the correction of a currency system that is sweepingly described by some as "the worst in the world."

Altho much, if not all, responsibility for the Currency Bill is attributed to President Wilson, he has let it be known through press correspondents that, while the Administration's views are represented in it, yet it is "no man's bill," but the result of common counsel among currency advocates, Secretary McAdoo, of the Treasury Department, Senator Owen and Representative Glass, respectively chairmen of the Senate and House Banking and Currency committees, aided and advised by the President. An outline of the measure given to the press by Representative Glass, describes it as "a basis for legislative action . . . that will be gone over in detail for alterations, and whose intent is to accomplish three principal objects: a means for rediscounting commercial paper of specified types; a safeguarded basis for elastic notes; and machinery for doing foreign banking business." Altho many changes have been made and are being made in the

drafting of the bill, the essential features remain the same, we read in the daily press. One of the most striking of these is the provision for twelve or more Federal reserve banks, in as many regional districts, "which will rediscount paper, deal in Government securities, exchange and conduct Government fiscal operations." These banks, we are also informed, "would do no business with the public, but deal only with their member banks and receive deposits only from the United States." Stock in the reserve banks would be held by National banks and such State banks and

SPOKESMAN—"We have called to express our extreme gratitude for the bee-utiful fight you are making in our behalf."
—Johnson in *The Saturday Evening Post*.

trust companies as conform to standards, but the Government would hold no stock, altho it would control the reserve banks by a Federal Reserve Board of seven members, on which the banks would not be represented. The Secretary of the Treasury, the Secretary of Agriculture, and the Controller

of the Currency would be *ex-officio* members of this board and the four others would be subject to the appointment of the President and the confirmation of the Senate. Other provisions of the currency bill the *New York Tribune* (Rep.) sets down in brief:

"There will be no retirement of existing National bank circulation, nor of the existing 2 per cent. United States bonds used for circulation purposes.

"Every National bank is allowed to continue its note issue exactly as at present.

"In addition, the issuance of \$500,000,000 of emergency currency upon prime short-term commercial paper and other liquid collateral is authorized.

"The Federal board is authorized to prescribe rates of discount for the twelve reserve districts, in each of which is to be a reserve bank.

"All funds in the general fund of the United States Treasury shall be deposited in the Federal reserve banks within one year after the passage of the bill.

"Every Federal reserve bank is required at all times to have in its own vaults a reserve of not less than one-third of its outstanding demand liabilities."

The main objection to the Aldrich plan, the *Philadelphia Record* (Ind. Dem.) recalls, was that it "too greatly concentrated the banking power," and it notes that the present measure "embodies the chief advantages of the Aldrich plan without the Central Reserve Association, which was obnoxious to nearly all Democrats and to some persons not of that party." It is a great improvement on present arrangements and is "essentially conservative" in the judgment of the *Brooklyn Eagle* (Ind. Dem.), which says that "it will make the whole people, who have to be served by the banking system, real partners in the system," and hopes it will go through this session, because "any measure of reform in our banking and currency hodgepodge will be a matter of congratulation to the American people." Equally ready to approve is the *Philadelphia Public Ledger* (Ind.), which states that the people are firmly committed to the proposition of a new banking and currency law, and they want one framed

credit appears to be an avenue that will surely lead to the greatly desired elasticity in our currency."

Open opposition to the measure, however, comes from the *New York Times* (Ind. Dem.), which says that the excellent

THE FIRST MEAL?

—Bowers in the *Newark News*.

features of the bill "are taken bodily from the Aldrich plan," and that—

"It is in its departures from that plan that this bill gives cause for criticism, for grave apprehension. The promised advantages, and they are many, are to be secured by surrendering the banking business of the country, not to the regulation, but to the absolute control of the Government. Banking and politics would be one. All experience forbids us to assume with any degree of confidence that appointments made by the President and confirmed by the Senate would be made with that careful attention to the need of securing fit and experienced men which the great importance of the banking business and its delicate and easily disturbed relation to the industries of the country so urgently require. . . . The germinal principle of the bill appears to be distrust of banks and of bankers. We may assume that not only financiers and bankers, but business men generally, will take sober thought concerning the centralizing features of the bill and the spirit and the policy which have inspired it."

It is a matter of astonishment to *The Times*, moreover, in view of the existing hostility to a central bank, to learn from the report of the Owen-Glass plan that it would "so centralize the banking power of the country that most of the evils and few of the benefits of a central bank would be the result." Too much power is given to the Government, *The Times* adds, "that is, power and discretion are intrusted to politicians instead of to bankers." That the bill would put the banking system of the United States into politics is the opinion also of the *New York Press* (Prog.), which says that politics is "the last place on earth that the banking system of this or any other country ought to be," and remarks that the facts of the Administration's currency bill as now known "loom big, not with wisdom and promise, but with ignorance and warning." Suspicion clouds the mind of the *St. Louis Globe-Democrat* (Rep.) over any currency changes the Administration may attempt, because it questions whether Mr. Wilson will not be advised by Mr. Bryan, his Secretary of State, of whom it observes:

"There is nothing in what he said last December about fresh currency that indicates any material departure from his greenback position of twenty years ago. He has never said he was wrong in any of his paramount issues: free trade, free silver, greenbacks, imperialism, or the government ownership of rail-

"WHAT'S IT LOADED WITH?"

—Murphy in the *San Francisco Call*.

"without partizanship or sectional prejudice." To *The Public Ledger* the Owen-Glass bill appears "sane and remedial," and it explains that—

"A more centralized banking system and a currency that shall rise and fall as the exigencies of trade expand and decline appear to be scientific remedies for present financial ills. A scheme that makes the notes of business men a foundation for

roads. President Wilson has coincided with him every time in tariff revision. If it is to be the same in shaping a new currency system the rag baby will be found alive and kicking."

The press generally recognize the influence of Mr. Bryan in the currency conferences, an influence the *New York Journal of Commerce* describes as "insidious," but the whole proposal is summarily dismissed by the *Baltimore American* (Rep.), which says:

"At best the Wilson plan has but launched the currency question upon the seas of specific debate. The first reception given it by the Democrats is decidedly cold, as sentiment is strong for passing the tariff measure and closing up Congress. This will be done, and by the time Congress reconvenes in regular session sentiment will have riddled the Administration measure, and, perhaps, have brought forth something constructively better in being less complicated and less partizan."

The problem whether President Wilson can persuade Congress to consider the bill during the present session is to some observers of equal interest with the bill itself, and the *Philadelphia Inquirer* (Rep.) remarks that his program is threatened "by a great and growing opposition" in the ranks of his party that "with all his dourness he may not be able to overcome."

LESSONS FOR RAILROADS AND RATE-MAKERS

NO NEW PRINCIPLE for the guidance of railway magnates or public officials is seen in the Supreme Court's settlement of the Missouri, Arkansas, Oregon, and West Virginia rate cases, since these decisions merely follow the Minnesota decision of the previous week. Yet newspaper editors, again carefully scrutinizing the Supreme Court's views on State rate-making, discern more clearly certain lessons for the rate-maker and the railroad. "The 'lines of legality' are being laid down to the States in the matter of railway regulation," remarks the *New York Times*, "just as the law is being taught to the trusts in the industrial world." While the State rate-makers are confirmed in their rights of regulation, the

the Supreme Court calls a halt and gives warning "that State power, tho it exists, must be used rightly and in accordance with constitutional mandates." Then the railroad officials who applauded the Supreme Court's determination to let no State enforce a confiscatory rate, are warned by the *New York Globe* that

"This interesting doctrine, of course, means that the railroads

SOME LITTLE FUZZLES—BOTH SIDES CHEER.
—Ireland in the *Columbus Dispatch*.

allowed to charge the high rates must charge the lower ones or see their traffic vanish. It is thus established that the practical level of rates is to be one that will avoid confiscating the property of the best railroad. The vital question as to whether the efficient railroads would have the profit of their efficiency seems answered in the negative."

Twenty-three rate cases were decided by the Supreme Court on its last decision day before the summer vacation, notes the *New York Journal of Commerce*. State regulatory legislation was upheld, including

"two-cent passenger laws in Missouri, Arkansas, and West Virginia; maximum freight rate laws in Missouri and Arkansas, and freight rates out of Portland in the Oregon cases. The only exception to the sweeping approval of State statutes was in the case of several weaker roads in Missouri."

The hearing of the decisions on the question of State vs. national jurisdiction need not be again considered here, in view of Justice Hughes's statement regarding the eighteen Missouri cases that "the controlling question . . . is not to be distinguished in any material respect from that which was considered and decided in the Minnesota rate cases."

The Court's further contribution to the current discussion of valuation and confiscation is thus summed up by the *Philadelphia Public Ledger*:

"As in the Minnesota cases, the valuations presented by the roads affected by to-day's decisions were declared too high. The exception of three of the roads from the statutory rates came not from the correct valuation of the property of those roads, but from the fact that they were so unprofitable already, regardless of their value, that any further reduction in their revenues constituted evident confiscation. . . .

"In discussing the confiscatory aspects of the cases under consideration the court to-day almost went to the point of saying that, except in cases where from overwhelming circumstances confiscation is apparent, little short of a physical valuation of railroads would afford the needed evidence to sustain a plea of confiscation."

In its efforts to protect weak roads from confiscation, says

"MOVE OVER."
—De Mar in the *Philadelphia Record*.

Supreme Court in the case of four roads sets aside State-made rates as confiscatory. Thus, notes *The Commercial and Financial Chronicle*, the States are reminded that they are held "to rigid accountability for their acts." When they overstep the bounds,

THE "IMPERATOR," IN NEW YORK HARBOR.

THE RUDDER.

The German liner *Imperator* reached New York on her maiden voyage June 19. She measures 919 feet in length, 98 feet in beam, and has a tonnage of 50,000, some 5,000 more than the *Olympic*. She has 9 decks above the water-line, and makes a new record for luxury as well as size. The *Imperator* is driven by turbine engines developing 62,000 horse-power. Safety is provided by the construction of an inner hull, the division into 36 water-tight compartments, and an equipment of two motor-boats and 83 lifeboats. Over 5,000 passengers can be accommodated.

THE NEWEST "GREATEST SHIP AFLOAT."

The Wall Street Journal, the Supreme Court "has, in fact, given them no protection at all from the rates which it finds in effect confiscatory." This financial daily goes on to explain:

"On through business the weak lines must meet the rates made by other lines, or lose the traffic. On strictly local business, a small part of the whole, they are at liberty to charge higher rates than the State fixes for the comparatively affluent roads, but industries and settlers alike will go where transportation is cheapest. Again the weak lines lose. Even tho they should obtain some temporary advantage, the Court says in so many words that the State's officers may move to deprive them of it as soon as it has become substantial.

"In other words, the Supreme Court has done nothing toward settling the inevitable conflict, in rate regulation, between the interests of the weak carriers and the interests of the strong. Is a reasonable rate to be adjusted nicely to the needs of the best situated, oldest, and strongest carrier, with the sure result of putting the poor but honest and economically useful railroad out of the running; or is reasonableness to be judged by what the weaker carrier can live on, even tho some roads should make more than a bare living in consequence?"

"Is it to be assumed that, tho the States can not confiscate the weaker railroads by reducing rates, they may make rates which allow the stronger railroads to confiscate all the business?"

The same thought occurs to the *Baltimore News* and the *New York Sun*, *Times*, *Globe*, and *Evening Post*. Another critic, more representative of railroad opinion, *The Railway Age Gazette*, also regrets the Supreme Court's lack of clearness here. In referring to this it sets forth for its readers three views that have been advanced regarding the appraisal of land used for right of way and terminals. In view of the prominence of this topic the following paragraph is of interest:

"Some have contended that land should be appraised at its original cost to the railway. The Minnesota commission, in the valuation on which it based certain of the rates involved in this litigation, held that the proper basis for appraising land used for railway purposes was its present market value. A third view, and the one prest by the railways in this case, has been that land used for railway purposes should be appraised at what it probably would cost now to acquire it for railway purposes. Experience shows that the cost of acquisition for railway purposes is from 50 per cent. to 1,000 per cent. more than the ordinary market value. The Court apparently accepts the view of the Minnesota commission that the correct basis of appraisal is the present market value. The ruling is important. While it does not uphold the railway position, it puts a quietus on the contention that railways are not entitled to benefit by the increment in the value of their real estate."

This railroad weekly agrees with the railroad men who find in the rate decisions cause for encouragement. It concludes:

"On the whole, it is probable that when the decision is thoroughly analyzed, it will be found to have advanced the problem of regulation of rates toward a solution which will not be destructive of the rights and interests of railways and which will at the same time be satisfactory to the public. Furthermore, it should always be borne in mind that the courts fix only the minimum below which rates can not constitutionally be reduced, and that the lawmakers and public always have it within their power to keep them as much above the limit of confiscation as consideration of the public interests may indicate that they should be kept."

An eminent financial authority, *The Commercial and Financial Chronicle*, is also optimistic, taking the rather unusual ground that the strengthening of the State's arm is a boon to the railroads. Its argument develops into a lengthy attack on the Interstate Commerce Commission. To quote the last few sentences:

"No State body which has ever existed has been so unrelenting in its hostility to the railroads as this national body. . . . Yet in the hysteria of this week it has been seriously urged that escape from supposed injury at the hands of the States should be sought by turning over all their functions and authority to this single Federal body, which owes responsibility to no one and can not be called to account for its shortcomings. Better a thousand times State regulation, subject to Supreme Court control. To us the only disturbing feature in this week's decision is the broad suggestion in the opinion that Congress may confer upon the Commerce Commission some of the powers and functions now exercised by the State, it being within Congressional province to do this by virtue of the supreme authority which Congress possesses over interstate commerce. Our apprehensions on that score, however, are tempered by the conviction that there is very little likelihood that Congress will ever attempt to transfer distinctively State functions to the Commerce Commission."

There now remains for adjudication, notes the *Newark News*, the *Inter-Mountain* and *Shreveport* rate cases.

"In both of these sets of cases the Interstate Commerce Commission has set up its jurisdiction, and the question is whether it will be sustained by the Supreme Court. None of the cases thus far decided has involved rates upon which the Interstate Commerce Commission has upset a State-made rate, as in the *Shreveport* case, or the power of the commission to fix zonal rates, as in the *Inter-Mountain* case."

AMERICA'S SIXTH POLO VICTORY

WHILE JUBILATION is perfectly evident in the remarks of our editors on beating Britain at a British game, they do not forget to ask whether the victory was due to skill and muscle, or just luck. Perhaps it is only natural that no matter how they figure it out, they all find that "the best team won," and go on to moralize on the supremacy of the American athlete. Some of the London critics, however, fail to share this view, and lay the victory of our men to the fact that they have long played together, while the English challenging team "had never once played together on the same side" before landing on our shores. The American team, too, was somewhat disorganized in the second game by changes in the line-up necessitated by the injuries that kept "Monte" Waterbury from the field, so that the weakened team of defenders had finally, the *Chicago Inter Ocean* says, to "cut loose with such desperate individual play that victory was snatched from defeat in the seventh period." Between two well-matched teams, the *New York Evening Post* tells us, the victory will go to the one "with a capacity for something like a religious frenzy," and this is "a gift which is this nation's above any other when it plays." Just what is the "thrill" of polo may be felt in the account of *The Post's* sporting expert:

"In the midst of a great hush—forty-odd thousand men and

women voiceless and immobile—eight polo players, every man with his neck for sale, raged through the last two periods of the second, and, as it proved, the deciding game of the international match for the international cup, with the utter abandon and exalted disregard of physical consequences of beings incarnate. Fifteen grim, inexorable minutes with only the quick roll of hoofs, the sharp, musical click of hickory against willow, an occasional staccato outcry to tell one that it was not all a scene set in an immense vacuum. . . .

"When in that last hard riding period when the Americans abandoned for the time being their policy of defense, and with splendid disregard brought every man forward, brought up Milburn, who rode like a thunderbolt among the British backs, throwing them back upon themselves, and giving his side three clear shots at goal, two of which missed, not so much because of bad shooting, but simply because Fate had decreed against them, it seemed 'as tho the spectators would never draw a long breath again, and when, rising in fury, the British at length turned back the deadly, lance-like assault and carried the play to the American goal, the spectators were under a stress not altogether benign in its effects upon the human system.'"

The price the British paid for defeat is set down at "two years of hard work" in preparation and an expense of \$500,000,

a loss that evidently causes little dismay to the Duke of Westminster, backer of the British challengers, because we are informed in press reports that he "has only just started" and will challenge for another series of games to be played next year. Of incidental interest is the published statement that the gate receipts for the two games totaled nearly \$200,000, which may

THE OLD CUP COLLECTOR.

A POLO SCRIMMAGE.

An exciting moment of the second game of the international match. The six players, from the reader's left to right, are Waterbury (U. S.), Freake (Eng.), Milburn (U. S.), Ritson (Eng., Capt.), Whitney (U. S., Capt.), and Cheape (Eng.). The American players wear white shirts.

be considered an argument in favor of the New York *Sun's* declaration that "polo has taken root in the affections of the American people."

The *Sun* adds that altho the British lost, "they lost gloriously," and while it is to be regretted that actual defeat in the score came "in the infliction of penalties by a quarter of a goal," still "that was the fortune of war. In the first game the defenders lost a goal and a half by penalties and the invaders nothing. If goals scored for the two games are counted, the result of the series is: Americans, 12; British, 8; so that a clear superiority of four, irrespective of penalties, is established."

Minus the penalties, the official score for the first game reads: America, 5½ goals; England, 3. For the second game: America, 4½; England, 4¼. Passing from the question of figures, *The Sun* pays a tribute to the challengers' "clever and determined play" in the last game, "the finest that has been seen on either side of the water in an international series since the Americans captured the cup at Hurlingham." This happened in 1909, the New York *Times* reminds us, after the English had held the famous Westchester Cup for many years, and says that "so long as

the Big Four keeps its form," or the Big Five, as it is now with the addition of Mr. L. E. Stoddard, so long will America keep the cup.

No such athletic prowess is admitted by the London *Daily Telegraph*, whose New York correspondent says "nothing but luck" gave victory to the Americans, but the London *Times* holds that it is "idle and unsportsmanlike" to attempt to explain away the American victory "by any sophistical calculations as to the balance of luck in the two games," and relates that six times in succession in matches in 1909, 1911, and 1913 "we have been beaten fairly and squarely by America in a game which, as a result of the Indian experience of our young soldiers, we introduced to the rest of the world."

Nevertheless this will not be the last effort England will make to recover the cup, *The Times* gives warning, and says:

"Public interest in the duel between the two countries is great, and no doubt somebody will again come forward, as the Duke of Westminster has done, to undertake the heavy expense that is a necessary part of international polo matches. We shall then see how far we have profited from lessons of the past."

FOREIGN COMMENT

NO CANADIAN DREADNOUGHTS FOR ENGLAND

THE BOAST heard frequently in London music-halls that "we've got the ships, we've got the men, we've got the money too," has become obsolete since the naval race with Germany began, so much so, in fact, that the Admiralty has found it necessary to appeal to her dominions beyond the seas.

In the case of Canada she seems to have appealed so far in vain, for Mr. Borden's Naval Bill, which embodied a proposal to give to the British Admiralty three first-class battle-ships, has been thrown out by the Canadian Senate. The Senate has a Liberal majority and acted under the instigation of Sir Wilfrid Laurier, ex-Liberal Premier, and Sir George Ross, the Liberal leader in the Senate. Sir Wilfrid, whose policy is to build such ships in Canada and man them in Canada, involving a delay of six or seven years, has thus gained a victory, and the whole question of Canada's part in empire-defense is involved in a struggle between the Senate and the Dominion House of Commons, which passed the Bill. The Conservative organs assure us that Mr. Borden has one of two courses to take. He must either appeal to the people in a general election or a referendum, or else he must immediately take action to limit the veto power of the Senate, just as Mr. Asquith by his Parliament Act has dealt with the British House of Lords. Such Conservative papers as the *Winnipeg Telegram* express great indignation against Sir Wilfrid Laurier and his followers, and we read:

"Separation from Great Britain and the establishment of a republic in British North America is the obvious aim and purpose, the declared object, of Sir Wilfrid Laurier. We have now reached a crisis that is of vital importance to the Dominion and to the empire. The policy of the Liberals is a direct challenge to the loyal Britishers (of Canada)."

Another leading Conservative organ, the *Ottawa Evening Citizen*, does not take such a despairing view of the situation, but contents itself with advising the referendum—or a new arrangement of the Senate so as to make it a more representative body. To quote its editorial:

"The Borden Naval Aid Bill proposed the appropriation of \$35,000,000 for the construction of three dreadnoughts to be used by the British admiralty for naval defense. It was a specific proposal, allowing of no alternative save the future disposal

of the ships, and that was necessarily left to the future. Hence the referendum might in all justice and consistency have dealt simply with the affirmation or negation of the particular project. The simplest wording would have been something like this: 'Are you in favor of the passage of the Naval Aid Bill?' . . . If the majority do not favor that proposal, it can hardly be recognized as wise or profitable legislation.

Hence, while it would have been possible to have put several propositions concerning naval action before the people, it is yet to be shown why more than the one involved in the particular act should have been submitted or acted upon. A referendum of simple affirmation or negation would have served the full purpose of determining whether or not the people of Canada stood behind the Prime Minister."

They do stand behind the Prime Minister, declares the *Montreal Herald*, one of the most powerful organs in the Dominion, which professes to be Liberal, but is pronouncedly Conservative in the support it gives the Conservative Minister's naval policy. It denounces in no hesitating way "Canada's Failure" in the matter of the ship grant. The First Lord of the Admiralty has announced his intention to meet Canada's "failure," by building at once the three ships which the Canadian Liberals decline to build. The *London Times* editorially relates as follows the measures taken by Mr. Winston Churchill, in view of Canada's refusal to aid the British Navy:

"Mr. Churchill stated in the House of Commons yesterday that 'the situation brought about by the rejection of the Canadian Naval Aid Bill requires immediate action in order that the margin of naval strength necessary for the world-protection of the Empire may be adequately maintained for the autumn and winter of 1915 and in the spring of 1916.' To meet this situation, he announced that orders had already been issued to insure the commencement of the three contract ships of this year's program at the earliest possible date."

This proves, say the Canadian Conservative papers, that the emergency in European affairs upon which England based her appeal to Canada for help was a genuine thing, and not as the Canadian Liberals declare, a bogey called up by England as an excuse for laying her own burdens on Canadian shoulders. The *Montreal paper* continues:

"The effect of the Churchill announcement on the situation in this country will undoubtedly be to strengthen materially Mr. Borden's case. It makes abundantly evident the Admiralty's

PUDDLING IN THE NAVY MUDDLE; MUDDLING IN THE NAVY PUDDLE.

MADAME CANADA—"Come on home. This is a big boy's game, and besides, you'll get your feet wet and catch your death of cold."
—*Saturday Night* (Toronto).

WHEN THE YOUNG MAN FALLS DOWN, THE OLD MAN TAKES UP THE BURDEN.

JOHN BULL—"Well, there you are, Jack. I'll build the ships myself and pay for 'em, and take care of you into the bargain."
—*Daily Witness* (Montreal).

belief that the emergency—to use a well-worn expression—is sufficiently acute to render three extra dreadnoughts necessary two years from now. It was of the existence of such an emergency that the opponents of the Borden policy entertained the strongest doubts. To these doubts the Churchill announcement must be an effective reply.

"The *Herald* believes that there are thousands of Canadians who will be deeply stirred by the First Lord's speech. In this, in many ways the most important question Canada has ever been called on to face, party strife has cost us dear. The *Herald* believes that there was placed upon us a moral obligation to take our part of this particular burden of empire. Along with the moral obligation and involved in it there was as well a physical obligation of which the Churchill announcement has given ample proof. Canada has been thwarted in what we believe is her desire to meet these obligations. We have had months of party strife, terminating only with the close of the session. The total result of it all has been to leave us just where we were when it commenced. We can not feel that Canada's position in the eyes of the world has been enhanced thereby."

The *Toronto News* (Ind.) supports the Borden policy, says "Borden is justified" and, referring to Churchill's announcement in Parliament, declares:

"The British taxpayer is once more compelled to assume that portion of the Imperial burden that should properly fall upon Canadians. This decision of the Liberal Government in the mother country finally and absolutely justifies the Canadian Prime Minister's policy."

"The Government and the people of the British Isles may rest assured that Mr. Borden's policy has the approval of the great majority of Canadians, and that this will be made absolutely plain when the issue is submitted to the electors. It is probable that Mr. Borden will be able to take over the three ships now to be laid down long before they near completion. For the moment an irresponsible band of politicians has humiliated the Dominion in the eyes of the world, but when Canadians get the chance they will show that they are anxious to pull their own weight in the Empire, instead of remaining a burden on other British citizens."

The most important paper in Canada and the most widely read is probably the *Toronto Globe*. This paper, staunchly Liberal, declares that Borden has missed his opportunity. He should have built his ships, as he might have done under the Laurier Navy Bill, and left the people to decide whether they were to belong to Canada or to the Empire:

"Mr. Borden announces that before the dreadnoughts of the British program of 1913 are completed his Government will be in a position to assume their cost, and will do so. He need not have waited a day to carry out this policy. He could have laid down and paid for the vessels under terms of the Naval Service Act and left to the future the question as to whether the ships when completed shall sail under the British or the Canadian flag, and be manned by British or Canadian sailors. That issue can only be settled by the people of Canada, and Sir Wilfrid Laurier announced once again yesterday his readiness to go before the people for their verdict on the question: Shall Canada build, man, and maintain her own naval defense force, or shall she support the 'one-navy' idea of the empire reorganizers and contribute from time to time for the building and maintenance of that navy under the direction of the British Admiralty?"

"Meanwhile we are told that Laurier and his separatist fol-

lowers have prevented Canada from coming to the immediate aid of the Empire. That is absolutely and unqualifiedly untrue."

"Mr. Borden rejected the proposals of the Liberals and expressed his determination to force through the contribution. He did so in the Commons by gagging the opponents of the measure, and it was almost inevitable that in the Senate the measure sent forward by such unprecedented means should be halted in its passage until the will of the electors could be ascertained. Two methods of providing immediate naval aid for the defense of the Empire remained open to the Premier after the measure was hung up in the Senate: an immediate appeal to the people, or

the placing of a sum in the estimates for the commencement of the construction of dreadnoughts under the authority of the Naval Service Act of 1910. A statesman believing that there really was an emergency confronting the Empire would have unhesitatingly taken one course or the other. Mr. Borden's path was clear. The ball lay at his feet. His opponents had urged him to take a credit of thirty-five millions for the immediate construction of vessels for naval defense. But Mr. Borden did nothing at all."

Mr. Borden is accused of sacrificing Canada and the Empire to party. People whose votes he wanted would have turned their backs on him in the next election if he had carried out the Laurier plan, we are told, so he tried to force on Parliament a measure which they would not pass without first consulting the people. This is the opinion of a leading Ontario Liberal paper, the *London Advertiser*, which thus describes the Conservative conduct of affairs and predicts a Conservative defeat at the next election after a campaign in which—

THE MODERN SPHINX.

CHORUS OF NATIONS IN AWED VOICES—"What in the world will she do next?" — *Saturday Night* (Toronto).

"We shall hear little of reciprocity. We shall hear little of the merits of a naval contribution, of the demerits of a Canadian navy. But we shall hear a great deal about the disloyalty of the Grits. We shall be told day after day that Sir Wilfrid Laurier is trying to establish a Canadian Republic. It is very likely that the shoot-holes-in-the-flag allies of Mr. Borden will call upon all true Britons to rally round the flag, till the election is over. But the old scheme never works for more than one campaign. Founded on falsehood, operated by spiteful prejudice, stimulated by the hope of reward, supported by the money of subsidized papers and financial interests and voracious corporations, it will be promptly rejected by the common sense and true patriotism of the people."

The *Winnipeg Tribune* (Ind.) speaks with similar bitterness of the evil effects of party rancor at Ottawa and observes in substance:

"Many stupid things have been said during the naval debate. Many unfortunate statements have fallen from the lips of Canadian representatives, who seem to think it is the bounden duty of every member to talk, no matter whether he has any knowledge of his subject or otherwise."

"In the Senate yesterday the Conservative leader was most unfortunate in some of his language. Mr. Lougheed, laying down the government policy, said:

"If you refuse to adopt this policy of the Government you practically announce separation from Great Britain."

"Such language is vicious. The *Tribune* supports the \$35,000,000 contribution, and would welcome its approval by the Senate, but the man who does not believe in any war contribution may be as true a British subject as John Bright."

THE FATAL SUFFRAGETTE EXPLOIT AT THE DERBY.

Miss Emily Davison throwing the King's horse at Epsom on June 4. She died on June 8. This remarkable photograph was taken just at the moment when Miss Davison, the horse, and the jockey came down, and before she herself had touched the ground in falling.

THE BLAME FOR THE EPSOM TRAGEDY

THAT MISS EMILY WILDING DAVISON should have been arrested and taken away from the race-track on the Epsom Downs before she could do any mischief, is the opinion of many London papers. The feebleness of the Home Secretary is blamed for the whole affair. *The Times* thus summarizes the career of the poor enthusiast who brought about her own death, without, however, apparently disturbing the cheerfulness of England's great racing day, for the British public show little pity or sympathy for these reckless agitators. The following details of Miss Davison's career illustrate Mr. McKenna's vacillation, so flagrant as almost to warrant the charge of connivance sometimes made against him:

"She was sentenced to two months' imprisonment for a disturbance at Limehouse in 1909, but was released after hunger strike. In the same year she was sentenced to a similar term for stone-throwing in Manchester, but was again released after hunger strike; a little later she was imprisoned with hard labor for stone-throwing at Radeliffe and was forcibly fed. It was on this occasion that the hose-pipe incident took place in Strangeways Prison. She was released at the end of eight days. In November, 1910, she broke a window inside the House of Commons and was sentenced to one month's imprisonment, but, after hunger strike, was released in eight days. In December, 1911, she was sentenced to six months' imprisonment for setting fire to pillar-boxes at Westminster. In November last she was sentenced to ten days' imprisonment for assaulting a Baptist minister by mistake for Mr. Lloyd George at Aberdeen. She was liberated, however, after four days' fast."

Sir Robert Peel was asked by a correspondent how the Sir Robert Peel who was Prime Minister under Queen Victoria would have acted in the present Home Secretary's place, and he replies in the columns of *The Times*:

"Judging from his work at the Home Office when he was Secretary of State in the Cabinets of Lord Liverpool and the Duke of Wellington (and the consensus of opinion is that he was the strongest Home Secretary that has ever been and Mr. McKenna the weakest), I should say that when a suffragette had been convicted she would have had to have served her sentence—hunger strike or no hunger strike—for he was known never to have interfered with a sentence or to have asked for the clemency of the Crown in the case of a convicted murderer.

He was of opinion, rightly or wrongly, that trial by jury, and with it conviction, was the end of a criminal prosecution, and he could not interfere."

HOME RULE FOR IRELAND—AND THEN?

WHEN BURKE, at the end of one of his most thrilling periods, flung down a knife on the floor of the House of Commons, a look of horror appeared on the faces of those present, until Sheridan rose and excited a peal of laughter by his remark: "Well, there is the knife, but what have you done with the fork?" This describes the effect produced by the fiery and almost rebellious utterances made by such speakers as Sir Edward Carson, and the light manner in which the Government organs pass them by almost with a joke. Arms are pouring into Belfast, Lords This and That and generals and colonels of high degree are inveighing against what they consider the Government's "betrayal" of the Constitution and of the Orange Unionists. All this falls flat on the ears of a public who have seen Carson lampooned and Londonderry laughed at. Yet no

one affects to think that the situation is not a serious one. John Redmond has secured a great triumph, we read in the unanimous utterances of the press, tho some papers think the result has been obtained by fair means and others by foul. The Unionists are, in fact, staggered on seeing the Home Rule Bill of the Asquith Government pass its second reading, and the London press assure us that if Mr. Asquith remains in power it is bound to become law. The chief opponent of the bill, Sir Edward Carson, made a powerful but somewhat violent speech during the debate which preceded the division. He asserted that "betrayal was im-

printed on every section of the bill." It was, in fact, being passed in conspiracy with the Nationalists and in defiance of the Constitution. He concluded:

"The men of Ulster are in deadly earnest, and in the event of armed resistance would have the whole force of the Unionist party with them. Our duty is not here; we must help our people to organize. We shall not forget the wise counsel of Oliver Cromwell to 'trust in God and keep your powder dry.'"

The police have seized 4,000 rifles and bayonets, and 500 more rifles have been confiscated in Dublin consigned from London,

MILITANT SUFFRAGIST (after long and futile efforts to light a fire for her tea-kettle)—"And to think that only yesterday I burnt two pavilions and a church!"
—*Punch* (London).

says *The Daily Mail*, some of which were made in Italy. "They were consigned to Messrs. Carson and Co."

Speaking defiantly of this confiscation of foreign arms in the course of the debate, Sir Edward repeated his declaration of war to the knife and his profound confidence in Protestant Ulstermen, saying:

"You may seize their arms or send troops, but you will not settle the Irish question. You know that you are crowing about peace, when there is no peace, and you will fail in your object. For my own part, I will continue to support the Ulstermen and will take full responsibility for their resistance."

Unionist papers praise the practical wisdom of Mr. Bonar Law, the leader of the opposition in the House of Commons, who urges that the question of Home Rule be submitted to the vote of the country before the Government proceeds to measures that may plunge Ireland into conflict. He realizes, we are assured, that the cry of "civil war or the Union," is no empty threat. Says the *London Spectator*:

"In handling the Ulster question, Mr. Bonar Law, like a wise man, never rested his case solely on an abstract argument. He has always insisted that the threats of resistance by the people of Ulster are real threats, and can not be met by the Government thrusting its head into the sand and protesting that what it wilfully refuses to see, does not exist. Further, Mr. Bonar Law has always pointed out that if the Government mean to coerce Ulster the only proper and legitimate way of doing so is through a general election. In effect he has said to them, as we have said so often in these columns, 'Before any attempt is made to coerce Ulster by force of arms the Government must try the coercion of a general election. Till they have attempted to obtain from the country an assurance that it is the will of the electors that Ulster shall give way, they must, if they insist upon Northeast Ulster being driven from the United Kingdom, be guilty of bloodshed in no rhetorical, but in the most real sense.'"

Another Unionist view is presented by Sir Henry Blake in *The Nineteenth Century and After* (London). Sir Henry is a man of mark, having been a colonial governor in many British dependencies, and head of the Irish constabulary. He utters in a tone of conviction the following stirring words:

"Now let us consider the situation with which Great Britain may be confronted during the coming year. The Protestant population, grim and determined, drilled and ready, and prepared to shed their blood if needs be in defense of what they consider a sacred cause, calling upon Protestant England and Scotland to come to their aid, and the Orange lodges sounding the tocsin and urgently calling upon their brethren all over the world to answer to their appeal; while the Roman Catholics of Ulster arm for their own protection, and the Government considers whether an army shall be sent to coerce with fire and sword a Protestant population assembled under the folds of the Union Jack to resist forcible expulsion from the United Kingdom."

He believes, moreover, that as the Home-Rulers have the sympathy of a large section of the American population, so Irish Unionists are supported by the patriotic populations of Liverpool and Glasgow, and even by thousands in Canada and the United States.

In case of civil war in Great Britain will there be an Orange contingent from the Western World to engage in the struggle? After describing the "two armed populations" in the North of

Ireland and talking of reprisals in the four Protestant counties of Ulster, he proceeds:

"This is the Irish aspect of the near future. But what about England and Scotland? I am informed by an English member of Parliament who was present at the signing of the covenant that, deeply as he was impressed by the scenes in Belfast, he was still more struck when, on landing at Liverpool at seven o'clock on a cold and wet morning, he found at least one hundred thousand people assembled to greet Sir Edward Carson on his return. Will the fiery cross be answered in Liverpool or in Glasgow? In both we have conflicting elements that may arouse

religious strife to which Great Britain has happily long been a stranger. And what about Canada, in which there are, I am informed, about three thousand Orange lodges? Or the United States of America, in which thirty-seven hundred Orange lodges exist with an average membership of eighty? Will they endeavor to answer an Orange call? The answer to these questions is of vital importance to the stability and prestige of the Empire, and it is well to remember that the present restraint of the Orangemen and Unionists of the North is due to the guiding influence of leaders who have solemnly declared, and repeated at the opening of this Willowfield Drill Hall, that if the time should come when unhappily the Ulstermen must assemble with arms in their hands, they will be there to command and lead them. These men are no braggart agitators. The Duke of Abercorn has taken his full share in political work; the

Marquis of Londonderry has filled the office of Lord Lieutenant of Ireland. Sir Edward Carson, whose leadership is unanimously accepted, has been one of the chief law officers of the Unionist Government, and the names of those who attended the meetings and signed the covenant include men who have attained high rank in the Army. These men assert that any attempt to impose an Irish Parliament upon Ulster would be resisted, if necessary, by an appeal to arms. In pursuance of these resolutions the Orangemen of the North, as well as Unionist societies, have been making their preparations, openly but quietly, by drilling and by perfecting arrangements that would be necessary in the event of overt action if the forces to be used were to act as disciplined troops and not as an armed mob."

The confiscation of "loyalist" arms brings a smile to a writer in the *Unionist Morning Post* (London), who regards the number seized as insignificant, and remarks that "one consignment of arms has been captured, but only one, and the Government has locked the stable door when only one horse was left." But a very different view of it appears in the *Liberal Daily News*, which seems to think the Carson rebellion a solemn farce. It says:

"Yesterday a few more hundred rifles were seized in the course of smuggling into Ireland. The Ulster 'loyalists' hasten to assure the world that in spite of these 'misadventures,' the organization of 'resistance' will be continued with indomitable resolution. The rifles that have gone astray are but a few units of a great host, all carefully selected after the most exacting tests, and guaranteed to kill with the exactest ease and precision. Nevertheless, there are some skeptical individuals reckless enough to assert that the 'misadventures' may not have been so entirely accidental; rather that, like the drilling, the signaling, and the dispatch-riding, they are part of that elaborate façade—behind which there is nothing—intended to impress the susceptible with the terrible ominousness of 'Ulster's' resolution. The skeptics have something to go upon. There is the elaborate absence of precaution with which these arms have been smuggled in, like the dropping of the telltale fan in a pre-Bois comedy. Only one thing can be thought—that the army is a phantom, and the civil war melodramatic politics."

DRAWING THE LINE.

(Some Tory papers advocate deporting the militant suffragists.)
MR. BONAR LAW—"That's the way to treat rebellious lawbreakers, Carson—bring in a bill to deport them!"
SIR E. CARSON—"Yes—with a special provision for Ulster, of course."

SCIENCE AND INVENTION

THE HUMAN FLAW IN IRRIGATION SCHEMES

VAST TRACTS of land in the Far West, now valueless, can be made worth \$100 an acre by an expenditure of \$50 an acre. This would seem to be a good business proposition, and yet, we are told by *Engineering News* (New York, June 12), irrigation projects have too often failed. Some are successful, but irrigation bonds are in many cases practically unsalable, we read; bankers frequently refuse to finance such projects, and irrigation securities are shunned by many investors. What is the reason? The fault is not with the irrigation idea itself. In the decade since the passage of the Reclamation Act the bureau in charge of the government work has undertaken 29 projects, involving an expenditure of \$75,000,000. The Shoshone dam diverts the water to irrigate a valley of 150,000 acres that was a desert two years ago. To-day it has 200 farmhouses and three thriving towns, and 10,000 acres of it produced crops last year. In southern Wyoming the Pathfinder dam makes a reservoir whose waters irrigate a region twenty miles long and six miles wide, containing 1,500 families, and land-values there have risen more than \$4,520,000. And so the stories go. Chief Blanchard, of the Reclamation Service, paints an almost ideal picture of the life of the farmer in these resurrected regions, where the weather doesn't matter. Yet it seems that the farmers are not flocking in as fast as they ought to. Why? To a certain extent, no doubt, "wild-cat" schemes are responsible for this distrust, but according to the paper named above, the fundamental reason lies deeper. The trouble is not with finance, nor with engineering, nor with agriculture, theoretically considered. It is with the man who attempts to farm the irrigated land:

"There is one essential element in irrigation development which many shrewd capitalists who have undertaken irrigation work in the past twenty years have overlooked, and that element is the character of the purchasers of the irrigated lands.

"There are no doubt several millions of people resident in towns and cities who would be very glad to try the experiment of settling on an irrigated farm and enjoying all the delights so picturesquely set forth by the glowing prospectus writers, but a very small percentage of these people have the ready money to buy an irrigated farm at \$100 an acre, and an equally small percentage would know how to work such a farm profitably if they had it.

"The present situation is that the supply of irrigated land offered for sale has far outrun the supply of intelligent farmers who desire and are able to purchase such lands, and live upon and work them. In British India the irrigation works undertaken by the Government have been uniformly successful and have invariably returned a handsome margin of profit on the cost of the work; but British India is swarming with peasants who ask nothing better than the privilege of living upon and working land which yields them a bare subsistence. There is the greatest possible contrast between the irrigator of British India and the Americans in the Far West whom promoters of irrigation projects desire to place on the land.

"A very large proportion of land-buyers in the West have made money by land speculation. If the manager of an irrigation project can persuade land speculators to buy up lands at \$100 an acre on the ground that they are likely to be worth \$150 to \$250 in the course of two or three years, he is a lucky fellow. In fact, we are informed that where irrigation enterprises have turned out profitably to their promoters and investors, it has generally been because those in charge were shrewd enough to sell out at a sure profit rather than hold on to the land and wait for a rise.

"We should not be understood, however, as stating that there are no substantial intelligent farmers living on irrigated land in the West. On the contrary, there are a very great number of

them; but it requires large inducements to persuade enough of these men to move into a new country to fill up at once a large irrigation project.

"The development of an irrigation project is similar in many respects to the development of a tract of suburban land. Many an investor has learned by dear experience that it is impossible to build up quickly a suburban tract of large size and sell all the land at a large profit to *bona-fide* home-builders. . . .

"A good many engineers are of the opinion that it is easier to tackle all the engineering problems in building an irrigation works than it is to solve the human problem of managing the works after they are completed and keeping peace and harmony among the various water-users.

"Where an irrigation plant is permanently operated by a private corporation, there is apt to grow up antagonism of the water-users toward the company. Such antagonism toward corporations operating public utilities is a notable feature everywhere; but nowhere is it more injurious and dangerous to public welfare than in the case of irrigation companies. The welfare and very existence of the whole community are dependent on the supply of water available for irrigation. The whole community is endangered if the company which administers this supply becomes bankrupt so that it can not properly maintain and operate its plant.

"Because of this very general antagonism between the farmers and the corporation which controls the supply of water to their lands, the plan of having the farmers themselves own and manage the irrigation works on which they depend has been generally favored and is probably, on the whole, the best plan of control. Nevertheless, these water-users' associations also have their troubles. Personal jealousies and feuds and local politics too often result in incompetent men being placed in control of the works; maintenance may be neglected, and favoritism in the distribution of water may lead to litigation and loss."

But how about the government reclamation projects? Does not the very fact of government ownership and improvement obviate all the objections stated above? Apparently not, for if we are to believe this informant, a large portion of the land to which water is supplied on the Federal reclamation projects is not under cultivation because those who hold title to it have not actually settled upon it and gone to farming. Another large proportion of settlers who are living upon the land lack the capital or the ability to work their holdings successfully. The fact, we are told, is that while this work is free from the financial difficulties that hamper private enterprise, it has the same sort of difficulties to contend with in securing desirable settlement on the reclaimed lands. The financial returns from sales have fallen far below the amounts which would have been received by this time if the original plan had been successfully carried out. The reasons, the writer assures us, are substantially the same as those which have caused disaster to private irrigation companies. Is there a better way of doing things? He thinks that there is, and that it is now being practically illustrated on the other side of our northern border:

"It is of interest to contrast the difficulties above set forth in the sale and settlement of irrigated lands in the United States and the methods which are being pursued by the Canadian Pacific Railway Company in placing settlers upon its lands in the Canadian Northwest. . . .

"To make many of these tracts located in the arid regions cultivable, the railway company has engaged in irrigation work on a large scale; but instead of selling these lands to whoever may come, the railway company has adopted the policy of carefully selecting its settlers and future patrons. Agents of the company travel through eastern Canada and the eastern United States and select in country towns young farmers who have a good reputation for honesty, energy, and success in farming. After thoroughly investigating such men, the company makes them a

liberal offer to move to lands in the Canadian Northwest. We understand that to such men the entire capital necessary to make a start is furnished. The company erects farm buildings, breaks up the land, and puts in a first crop, so that the farmer from Ontario or New England when he moves to his new home and goes to farming has the great advantage of a complete going farm plant without undergoing for years the struggles and hardships of the pioneer life. He pays for his farm and home and stock year by year as he earns profits.

"By thus carefully selecting its settlers, the company insures not only financial success for them and for itself, but good social conditions in the new towns and communities it is creating. The emigrant moving to the territory knows that his life and property will be safe in his far-away new home.

"Of course it takes a very large amount of capital to finance land development in this way, but the capital is invested in a manner which makes the return upon it practically secure."

A RAILROAD ON A GLACIER

AN ALASKAN RAILROAD, the Copper River and Northwestern, runs for nearly seven miles over the lower end of the Allen Glacier, partly covered in this part with moraines and vegetation, altho at points the ice is visible. In an article contributed to *La Nature* (Paris, May 23), Prof. Laurence Martin, chief of the National Geographical Society's Alaskan expedition, describes this part of the road and recounts the dangers that it is running in its risky location. Fortunately, glaciers move slowly, and there is little peril of any sudden catastrophe.

Writes Professor Martin:

"During our visit in 1909, the ice was visible in six of the railway cuts on the terminal glacier; it was no longer seen a year later, altho it could be brought to light by digging slightly. In 1909 the railroad had been built on a sort of shield of morainic ballast, encased in the ice, which had been opened up with dynamite. It was found to be seriously changed in 1910, the sinking due to the melting of the ice varying from two to three feet in one place and to six or even eight feet in others. . . . The railroad men had endeavored to repair the damage by filling in. . . .

"Nowhere else in the world—at least to our knowledge—has a railway line been constructed for nearly seven miles on the edge of a still active or 'living' glacier. Here the layer of ballast which supports the ties and rails lies directly on the ice, and not, as at the Heney Glacier, several miles to the north, on a solid moraine.

"This perilous situation gives rise to continual accidents; sometimes the melting of the ice displaces the profile of the road; sometimes there are formed new streams, which involve a read-

justment of the whole system of support; once even the abutment of a bridge slid 16 inches toward the river, and a new one had to be built. As these difficulties are renewed every summer, it is very expensive to maintain the way, and the speed of the trains must be kept very low, altho the passengers are never in danger, as a very close watch is necessarily kept of the road.

"What makes the upkeep of the road still more risky is the possibility of a forward movement of the glacier. The road would be destroyed and all traffic stopt, for there would be no possible way of getting out. After the period of immunity of 67 years, which is attested by the vegetation, a movement of this kind may take place any day. The danger seems particularly imminent in the years that are just before us; the neighboring glaciers, Childs, Grinnell, and Heney, moved forward in 1910 and 1911, which suggests that the

snow fields to the west of the Copper River should determine a similar movement for the Allen Glacier, situated exactly between Grinnell and Heney. It would seem that such a movement is always of short duration, and even, if the push is not too powerful, that its whole force may be supported entirely by the interior mass, as was the case in 1906 with the Bigarré Glacier. It may be hoped that the edge of the glacier surface, on which the railroad is built, will not necessarily be destroyed.

"The future will tell what these prognostications are worth. At present, Mr. Caleb Corser writes that the forward movement began during the summer of 1912. The southern edge of the glacier has thickened and cracked, and in September it fractured, showing clear blue ice where a thin moraine covered the ice in 1911. On the northern side appeared the same thickening with formation of crevasses, and a progression of the glacier reaching, it is said, 2,500 feet.

"On the other hand, the largest of the streams on the north side has left the bed that it has occupied since 1911 and has cut a new one, nearly a mile to the west. It has swelled, and has frequently left its banks, which has disturbed the railway embankment built at this point on deluvial gravel. Nevertheless, by the end of September, 1912, the disturbance had not been sufficient to stop traffic.

"It may be asked why the engineers had adopted so dangerous a location. The reason is that it has the advantage of avoiding rock cuts, a tunnel, and two costly bridges over the Copper River. A serious error was committed, however, during the building of the road, by destroying all the vegetation along the track. If the alders had been left along the right of way, the melting of the ice would have been greatly retarded. This is so evident that it will prob-

ably be decided to undergo the expense of a new plantation. If it should happen that the railway is destroyed by the forward movement of the glacier, it would be quite safe to rebuild it, for after reaching its maximum this movement would be followed by a recession and would not occur again in at least a century."

A HINT FOR EARTHQUAKE FORECASTS

PROFESSOR OMORI, the great Japanese earthquake expert, thinks that earthquakes are caused, at least in many instances, by bulging of the earth's crust due to the pressure of its contraction. The crust finally fractures, with a shock, and returns to its normal level. The swelling and subsequent subsidence appear to the observer as slight local alterations in the sea-level, amounting at their greatest to only a few inches. In the scientific section of the *Journal des Débats* (Paris, May 22) we read that this may possibly lead to a method of earthquake-prediction. Says this paper:

"Is the sea-level constant? That depends on locality. In some places it scarcely varies, while in others it changes appreciably, often alternately in opposite directions.

"This is shown in two important memoirs published by Professor Omori, the well-known Japanese earthquake authority, in *The Bulletin of the Imperial Earthquake Investigation Committee*. Omori describes variations of sea-level ascertained from observations made from 1894 to 1910 at 10 Japanese stations. . . .

"From 1897 to 1899 the level rose about 2½ inches; . . . from 1900 to 1902 it fell about 1½ inches, rising again between 1902 and 1906, and then falling until 1909.

"Evidently these facts may be interpreted in two ways. We may suppose either that the level of the sea itself changes, or that what changes is the elevation of the land. . . . How shall we decide which is the changing element? Simply by observing that not far from stations where there is variation, there are others when there is none or where the movement is even in the opposite direction. In these conditions we can not well suppose a variation of the sea, as it would be noticed everywhere; so we must conclude that there is a change of elevation in the land."

Professor Omori supports this theory by facts observed in Europe, seismic observations in Japan having been made for too short a time to draw conclusions from them. It would appear that the great earthquake at Messina took place at a time when the sea-level was at a minimum; that is, when the land elevation was at a maximum. Just after the quake the sea rose; that is, the land fell. This is Professor Omori's idea of what really happened:

"For years the land had been gradually rising. That is to say, a part of the earth's crust, under pressure from the adjoining masses, squeezed by them, curved upward, just as a sheet of cardboard curves when grasped by the two hands and pushed together. Hence the lowering of the sea-level and the recession of the water abandoned by the rising shore. But in 1908, the

tension due to this upward swelling exceeded the crust's limits of resistance, and this evidently ended in a fracture, owing to which, with some crushing and friction—which explains the large number of shocks—the swelling flattened out and dropt, and the ground resumed its normal level.

"In these conditions, we may ask whether the progressive lowering of the sea-level (indicating an upward swelling of the land) does not constitute a warning of an approaching earthquake. . . . It would be premature to conclude this, evidently,

but it remains a fact that the earthquake of 1908 took place after a continuous sinking of the sea-level for nine years, that is, after a rising of the land. . . . In any case we must continue our researches and investigations, and the study will be a most interesting one."—*Translation made for THE LITERARY DIGEST.*

RAILWAY OVER THE MORAINES, SHOWING THE ICE ON THE LEFT.

THE DWARFS OF BERGAMO

THAT THE CITY of Bergamo, Italy, has an abnormal number of dwarfs of a peculiar type is as-

serted by Prof. Max Kassowitz, of Vienna, who was struck with this fact during a recent visit. From an allusion to the town in one of Shakespeare's plays, he is led to believe that this peculiarity is of long standing. The technical way of putting it is that there prevails in Bergamo "endemic micromelic dwarfism." In other words, the dwarfs of Bergamo have "large crania, broad in the vault, with the root of the nose depressed, and have short and twisted limbs." We read in *The British Medical Journal* (London, May 24) that Professor Kassowitz was only about two hours in the Upper Town of Bergamo, and yet he counted at least twenty of them there, tho he noted not more than one in the Lower Town. This paper goes on:

"The subjects were both adults and children, and it seemed to him that there were more women than men. They all had intelligent faces. He calls upon the medical men of Italy, and especially of Bergamo, to investigate this curious instance of endemic micromelic dwarfism, and refers to a possible, altho not a very probable, allusion to its occurrence in this same town in Northern Italy in Shakespeare's time.

"In 'A Midsummer Night's Dream,' Bottom, the weaver, says: 'Will it please you to see the epilog, or to hear a Bergamask dance between two of our company?' 'A dance of

clowns' then takes place. A 'Bergamask' is defined as a rude clownish dance, such as the people of the town of Bergamo were wont to practise, and there is evidence that the people of this town were spoken of commonly as clownish in manners and in speech. . . . There is another saying in which they are described as buffoons. . . . There is also some evidence that in stage representations the clowns were made of a stunted and contorted, dwarfish appearance. It will be interesting if the Bergamask doctors are able to throw any light on this matter."

THE POOR MAN'S MOTOR

THE UNITED STATES has led in the production of high-class motor-cars within the reach of men of moderate means, but it seems that Great Britain has already taken the next step, in the production of a "poor man's car," the "cycle-car" or "monocar," a one-seated motor, weighing less than 300 pounds and costing as low as \$275. Even below this is the so-called "auto-wheel," a motor attachment to an ordinary bicycle. From an article in *The Motor Age* (Chicago, May 22), we learn that the dream of the promoters of the cycle-car movement in England, where it has already made long advances, is a time when every able-bodied citizen will either ride or drive some kind of a power-vehicle. A tremendous interest in the possibilities of the "poor man's motor," we are told, in addition, is now being aroused in our own country. Says the paper just named—speaking first of the ordinary pedal-driven bicycle:

"In Great Britain there must be well over 5,000,000 in use, the number being added to each year by part of an output that is estimated as not fewer than 500,000 annually. This year there is something in the nature of a famine in bicycles. The next stage is the autowheel, a little auxiliary motor-wheel which trails alongside and slightly behind the bicycle to which it is attached and pushes it along. It seems likely to fill the gap between the bicycle and the motor-cycle. The motor-cycle and the motor-bicycle and side-car are the next stages which bring us to the cycle-car, followed by what are known as miniature cars, light cars, and then the motor-car proper, and of all these various means of mechanical progression, with the solitary exception of the pedal bicycle, the cycle-car seems likely to have by far and away the greatest number of devotees.

"Three years ago the number of manufacturers who had the idea of a simple motor of low first cost and economical to run could be counted on the fingers of one hand; to-day on the English market there are no fewer than 120 different machines offered at prices ranging from \$425 to \$925, and this does not take into account about a score of cycle-cars which have not penetrated beyond the market for this type of motor vehicle in France.

"Every week sees the production of two or three more entirely new machines, some incorporating very novel ideas, others merely copies of big cars reduced to a small scale. Every week sees more and more of these machines on the road, and on Saturdays and Sundays on each main highway from London at, say, twenty miles from town any number from half-a-dozen to a score will pass the onlookers in an hour.

"The attention they create is astonishing. There is an active organization known as the Cycle-car Club, which holds rallies, runs, and trials throughout the year, and at each of these motorists, motor-cyclists, and the non-motoring public collect in their hundreds, having come down to have a look at the wonderfully interesting little machines. It is impossible to leave a cycle-car, especially if it be what is known as the simple type, outside a hotel or restaurant while the owner goes inside for a meal without finding a big crowd collected around the machine when he emerges.

"The public is filled with enthusiasm for the new movement and takes the keenest interest in the performances of the little

machines. Some of these are small, compact, and very comfortable, the replicas of big cars; others strike out on original lines with a more sporting appearance and with either chain or belt-drive, but the biggest baby in the cycle-car world and the one which is creating the most public interest is the monocar, or single-seated cycle-car. It has been predicted that this eventually will prove to be the biggest phase of the whole movement.

"Three single-seated cycle-cars are now offered for sale, two at the price of \$275 and the other at \$420. One . . . is just a

tiny torpedo shell on four wheels with a little single-cylinder engine placed behind the back axle, which it drives by means of a short chain. In the original model, to start, the driver ran alongside it, lifting the exhaust valve as with a motor-bicycle, then dropping the exhaust valve and jumping in when the engine fired. In later models a clutch is fitted.

"It is very interesting to observe the emotions raised by these tiny little one-man-carrying motor-cars. Many people laugh and say how absurd they look.

"Others, who never have fancied the motor-bicycle because of its tendency to sideslip and its general instability, jump at once at the idea of a motor-bicycle on four wheels, which is what the monocar represents, and which costs but little more. . . .

"So far the popularity of the cheap American car has not made an impression on the development of the cycle-car, for the two machines appeal to entirely different classes."

From "Motor Age," New York.

HE BUILT THE FIRST CYCLE-CAR IN ENGLAND.

Harold Dew in his latest single-seater or monocar. It weighs under 300 pounds, is belt-driven, can make 35 miles an hour, and costs as low as \$275.

RECRUITING BY MOVING PICTURES

THE USE of attractive pictures of military life to aid recruiting is familiar to all. It has even been suggested that the colored posters commonly employed give rather too rose-colored an idea of the soldier's daily routine. He is shown in spotless uniform saluting a spick and span officer amid magnificent scenery—the private is never seen running a lawn-mower or carrying pails of water. The same objection can not be made to the moving picture, for it depicts actual scenes in camp or on the march. The plan has been used with success in the National Guard, and it is now proposed for the regular Army. Says Major R. C. Croxton, U. S. A., writing in *The Infantry Journal* (Washington, May-June):

"Boiled down to a cold business proposition, the United States wants about 30,000 men every year. It has certain advantages to offer and it requires certain things of the men wanted. What are these advantages and requirements and how can they best be made known to possible applicants? Among the advantages are good food, comfortable barracks, medical attendance, sure pay, sanitary habits, healthy exercise, chance to improve one's education, service in various parts of the world, increased pay and promotion if merited, retirement on three-fourths pay after thirty years' service, etc. The requirements are sound physique, rigid discipline, attention to duty, neatness, cleanliness, sobriety, and development of character so as to be useful to one's country in developing and shaping a machine which will be efficient either in preserving peace or in waging war. These things can best be shown to the men wanted by moving pictures with explanatory printing and brief lectures.

ARMY LIFE—THE IDEAL AND THE REAL.

The old-time fashion-plate posters, like the one on the left, supposed to attract recruits, are being supplanted by moving pictures of actual army scenes. The picture on the right is as near a moving picture as is possible to print here. It is being used by the recruiting officers in New York City.

"It is a fact that the Government has nothing to conceal from any prospective applicant as to any feature of the different arms of the service; on the contrary, all possible information is given to inquirers in order that they may decide, first, whether or not they want to enlist, and, second, which arm of the service will best suit their ideas. But it is also a fact that no officer or soldier can give to the average applicant a true idea of the service as it will appear to the recruit during the first few months of his enlistment. . . . The Government is in the market for men; it is advertising its wants. Certainly there is every reason why it should use the most economical and up-to-date methods in reaching the best class of men to fill its ranks, and to show such men as truthfully and completely as possible just what the service of a soldier means. Moving-picture parties, properly equipped, will produce better results at much less cost than now and will reach and attract a class which present methods seldom reach. . . .

"These pictures and slides would be interesting to all persons, of whatever degree. They would speak for themselves as giving a true idea of army life and the men attracted by them would undoubtedly prove better material than the service now attracts. . . .

"In the average town of from 20,000 to 200,000 inhabitants, nearly as many men would see these pictures in from three days to two weeks as notice the present advertising methods in a year. We would thus practically secure the entire recruit material of the town in one short visit and do so at less than half the present cost; and in addition each party would leave an educational advertising impression upon fully 300,000 people a year that would be cheap at ten times the cost. There is certainly no doubt that the proposed method would attract better men, nor is there a doubt that the men attracted would be less apt to desert or be run out by court-martial sentence. They would be shown practically all phases of the soldier's life and would come in with their eyes open."

Uncle Sam has been forestalled in these methods by the Michigan National Guard. In the same issue of *The Infantry Journal* in which Major Croxton's article appears, Major M. J. Phillips, Michigan N. G., tells of his success in the actual use of moving pictures. A board of five officers was named last summer to carry out the plan, and its practical accomplishment was left to Major Phillips, aided by the photographer. Says this officer:

"I knew that the impression is general that camp is a 'ten days' drunk,' at which the men spend the taxpayers' money in having a 'good time.' So there was no display of bottles or kegs, and no

horseplay. Our aim was to picture the Guard busy at interesting employment out-of-doors, at occupations requiring intelligence. We felt that pictures of this description would appeal to the parents whose influence is now keeping many young men out of the service. In short, we wanted to educate the public."

The cooperation of the moving-picture houses was secured by a brilliant plan that is thus outlined:

"After the films had been edited, titled, and assembled, I was ordered to visit each of the thirty-five company stations, or headquarters, in the State, and lecture with them, making my own itinerary and arrangements. The plan generally followed, except in two or three larger cities, was to show for two days at the leading moving-picture house or theater having projecting machine equipment. The house-manager could usually be induced to turn over his theater free of charge to the local company for its exclusive use the first day, in return for the use of the films for his own profit the second day. On the first day, members of the company, their friends, and prospective recruits and their friends, were admitted without cost. The next day, it was up to the general public, and they invariably responded with packed houses."

"After the first few days as an 'actor,' I discovered that the people are appallingly ignorant of things military, and so explained each foot of film shown. In addition, an introductory talk and a little address between each two reels were necessary. I carried about forty slides, including photographs of the Governor, the Lieutenant-Governor, other prominent men, and scenes not shown in the 'movies.' Two very valuable slides were a military map of Gettysburg and another model military map, showing a smaller expanse of country, on which roads, streams, hills, crops, woods, and farmhouses were correctly depicted. These were used just before the infantry reel, so that the audiences secured a good idea of what the military map, on which the problem was based, looked like. . . .

"The legislature has evinced a very kindly feeling toward the Michigan National Guard since we gave a special performance for them. The usual attempt on the part of some rural member to cut down our annual appropriation, thereby involving us in a protracted and exhaustive campaign, will not be made this session, thanks to the films."

"As to the general value of the exhibitions, they have, emphatically, fulfilled the purposes for which they were projected. Company commanders write that they have many desirable enlistments; that *esprit de corps* has been fostered, and that the standing of the company in the eyes of the home people has been raised greatly. Several companies have applied for return dates."

LETTERS AND ART

OUR \$600,000,000 MUSIC BILL

STARTLING FIGURES of what we pay for music are brought out in a new investigation of the question, "Are we a musical nation?" The figures are gathered by Mr. John C. Freund, editor of *Musical America* and *The Music Trades* (New York), and convince him that we are. The people of the United States, he discovers, spend nearly \$600,000,000 a year to gratify their taste for harmony. This total, he says, represents a conservative estimate, and does not include the box-office receipts of musical comedies. The largest item is \$230,000,000 found under the head of "musical industries"—musical instruments, sheet music, talking-machines, and records. Next comes \$182,500,000 for tuition, followed by \$55,000,000 for church music, \$35,000,000 for brass bands, \$30,000,000 for "concerts of all kinds, including recitals by artists, women's clubs, and symphonic orchestras," another \$30,000,000 for orchestras that play in theaters, \$8,000,000 for opera, and \$3,500,000 for musical publications and musical critics. These figures were laid before the recent convention of New York State Music Teachers at Saratoga in the course of Mr. Freund's discussion of the tremendous musical uplift which has taken place in this country during the past decade. Scarcely less interesting are some of the other statements and comparisons contained in his address, from *Musical America's* summary of which we quote as follows:

"Analyzing these figures, Mr. Freund said that he had obtained them after forty years' intimate acquaintance as editor of musical papers, by careful computation and with assistance from the census bureau in Washington.

"He said that this meant that this country spent annually for music three times as much as was spent on the Army and Navy, nearly three times as much as the postal receipts, within 20 per cent. of the hay crop, which is the biggest crop in the country, and within 15 per cent. of the cotton crop, which is the next largest crop. It meant also that there was spent for music four times as much as the value of all the agricultural implements in the country, three times as much as the value of all the poultry raised in a year, and 33 per cent. more than the entire output of the woolen industries.

"He said that a significant feature of the figures was that while a large amount in itself was spent for opera and concerts, especially of foreign artists, the amount was insignificant compared with what was spent for tuition, pianos, and talking-machines, which virtually meant 'music in the home.'

"Mr. Freund further pointed out that in this country, while we spend three times as much for music as we do for the Army and Navy, in Germany, which is considered the most music-loving nation on earth, they spend ten times as much on the Army and the Navy as they do on music. . . .

"Contrasting the present condition of the musical industries, Mr. Freund said that whereas about half a century ago we were

absolutely dependent on foreign countries for our musical instruments, especially our organs, we to-day were practically independent, and even exported pianos, organs, and other musical instruments to the extent of several millions annually, while in the manufacture of pianos, organs, harps, and guitars, we had not only surpassed the world, but our manufacturers had gained international renown. . . .

"He said that there were some 250,000 registered music teachers in the United States, about one-half of whom were found in the five States of Massachusetts, New York, Pennsylvania, Ohio, and Illinois. In the next group came Connecticut, New Jersey, Michigan, Indiana, and California.

"In the course of his address Mr. Freund said that it must never be forgotten that from 70 to 75 per cent. of all the money spent for music was spent by women. He said that as they had unquestionably formed the leading factor in the musical uplift in the country they would not only continue to do so but would, in the coming years, carry us to a higher plane of musical appreciation and culture, and, in this way, prepare the nation for an artistic growth which he said he scarcely dared to prognosticate, and that he believed the time to be coming when this country would be as independent, in a musical sense, of the rest of the world, while ever ready to welcome the great artists, as it had become first politically, then industrially, commercially, and finally financially independent.

"As an indication of the vast increase in musical interest, he contrasted the little attention given to music by the press throughout the country even fifteen or twenty years ago, with the columns devoted, in all standard publications, whether daily, weekly, or monthly, to musical affairs to-day.

"It must also not be forgotten, said Mr. Freund, that this country was forging ahead not alone in the amount of money it spent on music, not alone in the thou-

sands of persons interested in music, whether as teachers or ex-citants or in homes, but in the consequently rising standard which prevailed, and which, indeed, had gotten to such a point in our leading cities that it was no longer possible for a foreign artist or conductor, unless he was absolutely of the highest rank, to come here and win success."

"Facts like these are as significant as they are gratifying," remarks the *Philadelphia Press*, and in the *New York Tribune* we find not only acceptance of this dollar test, but a rather surprising tribute to the "mechanical music makers":

"This may be called a Yankee method of calculating a nation's artistic ability. Yet it is a highly interesting one and quite applicable to our case. No one could assert that we had been or were to-day a musical nation at all comparable to the Germans, for example. The question is, Are we becoming a musical nation? On this point the figures have a very real bearing.

"No amount of book-reading or school-training can ever make us musical any more than it can cultivate taste in any other art. The futility of that short cut is now well realized. 'Culture' of

JOHN C. FREUND.

Who convicts us of being a musical nation by the discovery that we spend nearly \$600,000,000 a year for music.

that brand has earned the scorn which it deserves. Living among beautiful things and the habit of hearing music belong in quite another category, however. The taste that is thus slowly developed is a real part of the mind and not a glib patter or a pose.

"Here is where our national expenditure for music must surely count in the end. And no one item is half as important as the two and a third millions spent on music, musical instruments, and all the miraculous range of mechanical music makers in which America leads the world. Certain lofty souls are inclined to smile sadly at these ubiquitous affairs. Yet they are actually disseminating music more widely than was conceivable before. And if we ever do become a musical nation we shall have these wonderful modern 'music-boxes' to thank."

A DANGER IN COLLEGE DEBATES

A DEMORALIZING TENDENCY in the present method of college debating contests is pointed out by Colonel Roosevelt in the first chapter of his autobiography, and is discussed in *The Outlook* and in a number of college papers. This method, says the Colonel, puts a premium on mental ingenuity and discounts conviction. In his indictment of this time-honored college institution he declares himself entirely out of sympathy with "debating contests in which each side is arbitrarily assigned a given proposition and told to maintain it without the least reference to whether those maintaining it believe it or not." Such debates "encourage precisely the wrong attitude among those who take part in them," since they "make the contestants feel that their convictions have nothing to do with their arguments." "I am exceedingly glad," he goes on to say, "that I did not take part in the type of debate in which stress is laid, not upon getting a speaker to think rightly, but on getting him to talk glibly on the side to which he is assigned, without regard either to what his convictions are or to what they ought to be."

"Is there something in Colonel Roosevelt's contention?" asks *The Harvard Alumni Bulletin*; and it prints, as a partial answer to its question, this letter from Mr. Hans von Kaltenborn, in which the writer describes his own experience as a debater:

"In my own case, after thinking, talking, and believing that Federal incorporation is about the most unsatisfactory solution of the trust problem, I was sent to Princeton to argue for Federal incorporation. The insincerity and artificiality of my speech was as apparent to the judges as it was to myself, and we lost the debate largely because my speech failed to carry conviction. Moreover, I have never ceased feeling thoroughly ashamed for having yielded to the persuasion of the debate managers. Throughout the trials, which extended over a period of several weeks, and in the course of which I spoke as I believed, points and illustrations suggested themselves spontaneously. In reading, my mind grasped quickly and eagerly everything that bore on my contentions. Having made the team . . . for three weeks—the most arduous and unpleasant weeks of my college career—I struggled to change my belief and to armor myself against it with an increasing array of 'proof.' When the day came

I went into the debate without joy or confidence. I came out feeling bitter and sick at heart over having brought defeat to my college without the consoling reflection that I had done my best."

"One give-and-take session with men who believe what they say and are permitted to say what they believe," concludes Mr. von Kaltenborn, "is better training than a dozen formal debates."

A LOSS TO LITERARY JOURNALISM

SUCH MEN as Francis Fisher Browne "make little noise in the world, and are seldom known in their own day, but posterity has a habit of finding them out," writes one editor, commenting on the recent death of the man who more than thirty years ago founded the *Chicago Dial*. The *Chicago* of 1880, which Mr. Browne had the temerity to select for the launching of a purely literary magazine, has been described as "a veritable hotbed of philistinism." Yet under the influence of his devotion and enthusiasm this incongruous venture so flourished that when he laid down its editorship a few weeks before his death *The Dial* had won and long held a place all its own among our publications. As the *Chicago Public* remarks, it is "probably the only purely literary paper that has survived in this country without other interests and unconnected with any other publishing venture." *The Dial's* independence of other interests, however, did not date from the beginning, since for the first twelve years it appeared under the imprint of the publishing house of McClurg & Co. It was in 1892 that Mr. Browne acquired Messrs. McClurg & Co.'s interest, *The Dial* at the same date being changed from a monthly to a semimonthly publication. In *The Dial* for June 1 we find the following tribute to its founder:

"His death has occasioned little comment outside the circle of those who in one way or another came in direct contact with his personality. Like all sensitive and finely grained natures, he made no claims for himself, preferring rather to work obscurely for high ends than to gain popularity at the slightest cost of lowered standards. He belonged dis-

tinctively to the older editorial school—the genial and scholarly and urbane type which, as long as Mr. Howells and Mr. Alden are with us, can not yet be termed extinct. . . . It can not be doubted that in the rolls of the future the name of him who has just left us will be found with that small but shining company of whom Curtis and Norton and Stedman are perhaps the chief recent exemplars—the men whose lives were given with quiet steadfastness to advancing the interests and enhancing the honor of culture in America."

In addition to his magazine writings Mr. Browne published a small volume of poems called "Volunteer Grain," and "The Everyday Life of Abraham Lincoln," and compiled and edited several anthologies.

While *The Public* characterizes him as "throughout his life a democrat, an open-minded radical, a living refutation of the idea that culture and democracy are incompatible," it seems

FRANCIS FISHER BROWNE.

Who founded, and for nearly a third of a century conducted, the *Chicago Dial*, "probably the only purely literary paper that has survived in this country without other interests and unconnected with any other publishing venture."

that his democracy did not make him subservient to the mob's point of view. Thus we are told by John Burroughs that "Francis Browne never went with the great crowd either in politics or literature or religion." To quote further from this tribute of an old friend:

"His keen sense of the real values in life kept him apart from the loud and scrambling multitude, and made him an inspiration to all persons of fine and heroic ideals. *The Dial*, which he founded and conducted so long, has been a distinct force in our higher civilization. He had one gift which I have never known equaled, and which probably was not possessed in the same manner by any other person of his time—I mean his prodigious capacity to absorb and repeat the best lyric poetry. His mind was a veritable anthology of all the best short poems in English and American literature. He did not have to memorize a poem as most of us do in order to retain it: he got it by a kind of spontaneous absorption, and it apparently required no effort of memory for him to recall it—it had become a part of the vital current of his life. I verily believe that without any apparent effort he could recite the greater part of the poetry contained in his selection called 'Golden Poems.'

"And this wonderful capacity to retain the poetry of other people did not stand in the way of his producing many fine poems of his own. His father before him was a poet, and the sacred fire gained rather than lost in the keeping of the son."

POETRY AND PROFITS

THE TRADITION that he who serves the muses must be content with rewards other than financial is rather startlingly confirmed by a recently published letter from Robert Browning to the officials of the British Inland Revenue. Altho this letter was written in 1880, when the poet was sixty-eight and his reputation had long been established, it reveals the fact that the profits he derived from his poetry were negligible, if indeed he was not actually out of pocket. Most of his work, he says, was published at his own expense, which "was never repaid." It is to be noted, however, that he did not sell his poems to magazines before publishing them in book form, and that the possession of "a little independence" relieved him of any necessity of exploiting his gift financially. Commenting on this letter *The Bellman* (Minneapolis) remarks:

"It does not follow from this that had Browning not possessed private means a callous world would have allowed the poet to starve to death in a garret. Under the spur of necessity his methods both of writing and of publishing would no doubt have been radically different. As it was, he deliberately turned his back on the mercenary side of his calling. 'I write poems,' he says, 'and no prose whatever, having never in my life written one line for a newspaper, review, periodical of any kind—with a single exception in the case of a magazine ten years ago or more.' The exception was a poem written for a charity, which derived five hundred dollars from its publication. 'My poems,' he adds, 'are unpopular and unsalable, being only written for myself and a certain number of critics whose approbation is satisfaction enough.'

"Had the poet chosen to exploit his wares he could no doubt have made a bare livelihood; but when all allowances are made for his indifference to pecuniary reward, the result is sufficiently astonishing. . . . His reputation had long been established, and Browning societies were busy up and down the land burning incense to their hero and dissecting and torturing his verses. From the sale of his works in this country, where they had a wide vogue, it is true that on account of inadequate laws of copyright he received no profits; but even so, one would have supposed that, however far he was from being a 'popular' poet, he would have met with sufficient appreciation in England to have secured him a modest competence.

"The moral seems to be that which Alfred Noyes recently preached to us and which he himself has put into practice with no small degree of success, that a poet, if he is to receive the pecuniary recognition to which he is entitled, must adopt the business methods that are applied to any other profession, not excluding, let us whisper it, the sweet uses of advertising. Only thus, unless, like Browning, he happens to possess 'a little independence,' can he escape the traditional lot of poets—a garret in his lifetime—and the Hall of Fame after his death."

OUR ARCHITECTURAL CHAOS

CHAOS, according to Ralph Adams Cram, one of our most distinguished architects, "is the only word that one can justly apply to the quaint and inconsequent conceits in which we have indulged since that monumental moment in the early nineteenth century when, architecturally, all that had been since the beginning ceased, and that which had never been before on land or sea began." Becoming more specific in his dates, Mr. Cram places the "monumental moment" here referred to somewhere in the decade between 1820 and 1830. "What happened, then, in 1825, what is happening now, what is going to happen?" he asks, and in answer to the first part of his question, replies (in the *July Yale Review*, New Haven):

"We all know what our own Colonial was like; perhaps we do not fully realize how varied it was as between one section and another, but at least we appreciate its simplicity and directness, its honesty, its native refinement and delicacy, its frequent originality. It isn't the same as English Georgian; sometimes it is distinctly better, and, however humble or colloquial, it is marked always by extreme good taste. If anything, it improved during the almost two centuries of Colonial growth, and when the nineteenth century opened it was still instinct with life. A half century later where were we? Remember 1850, and all that date connotes of structural dishonesty, stylistic barbarism, and general ugliness! Here is the debatable period, and we may narrow it; for in 1810 and in 1820 good work was still being done, while in 1840, yes, in 1830, the sodden savagery diluted with shameless artifice was widely prevalent. To me, this decade between 1820 and 1830 is one of the great moments in architectural history, for then the last flicker of instinctive art among men died away, and a new period came in. Such a thing had never happened before: it is true Rome never matched Greece in perfection of art; the dark ages after her fall were dark indeed; the second dark ages after the death of Charlemagne were equally black; while the transition from Gothic to Renaissance was not without elements of disappointment; but at none of these transitional moments were people absolutely wrong-headed, never was the work of their hands positively disgraceful. Even now we put their poor products in our art museums, where they are not outfaced by the splendid monuments of the great and crescent epochs. In a word, what happened about 1825 was anomalous; it happened for the first time; and for the first time whatever man tried to do in art was not only wrong, it was absolutely and unescapably bad."

For some examples of the chaotic architectural conditions that followed, Mr. Cram commends us to Fifth Avenue, New York. We read:

"A walk up Fifth Avenue from Madison Square to the Park, with one's eyes open, is an experience of some surprises, and equal illumination; and it leaves an indelible impression of that primal chaos that is certainly without form, if it is not wholly void. Here one may see in a scant two miles (scant, but how replete with experiences!) treasure-trove of all peoples and all generations: Roman temples and Parisian shops; Gothic of sorts (and out of sorts), from the 'Carpenter-Gothic' of 1845, through Victorian of that ilk, to the most modern and competent re-casting of ancient forms and restored ideals; Venetian palaces, and Louis Seize palaces, and Roman palaces, and more palaces from wherever palaces were ever built; delicate little Georgian ghosts, shinking in their unpremeditated contact with Babylonian skyscrapers that poise their towering masses of plausible masonry on an unconvincing substructure of plate glass. And it is all contemporary—the oldest of it dates back not two generations; while it is all wildly and improbably different."

Turning to the question, "What is happening now?" Mr. Cram finds the following styles contesting for the field: Three kinds of Classic, namely, pure Classic, Beaux Arts, and neo-Colonial; Gothic (of which Mr. Cram is himself perhaps the most eminent exponent); steel-frame; and Secessionist. "Each," he says, "is contributing something to the mysterious alembic we are brewing; and all we hope is that out of it may come the philosopher's stone that, touching inert matter, shall turn it

into refined gold—which, by the way, is the proper function of architecture and of all the arts." Becoming more optimistic as he turns to the future, he goes on to say:

"I believe all the wonderful new forces now working hiddenly, or revealing themselves sporadically, will assemble to a new synthesis that will have issue in a great epoch of civilization as unified as ours is disunited, as centripetal as ours is centrifugal, as spiritually efficient as ours is materially efficient; and that then will come, and come naturally and insensibly, the inevitable art that will be glorious and great, because it shows forth a national character, a national life that also is great and glorious."

"THE SHAKESPEARE OF JAPAN"

THIS TITLE is applied by his countrymen to Chikamatsu Monzaemon, who, born nearly a century later than Shakespeare, is credited with being both the creator of the Japanese drama and the most prominent figure in its history. His plays, of which the fifty-one still in existence are said to be only a portion, were first written for a marionette theater at Osaka. While they cover a wide range of subjects, the author seems to have had a predilection for tragic love episodes. These facts and those which follow are gathered from an article by H. Kazumi in *The Japan Magazine* (Tokyo, June). Chikamatsu's origin and early youth, we read, are still involved in some obscurity, but most of his biographers agree that he was born in 1653, of samurai stock, in the little village of Hagi, in Chosu, and that, like the great Japanese novelist, Bakin, he afterward renounced his class and became a *ronin*.

CHIKAMATSU MONZAEMON.

Father of Japanese drama. His countrymen compare him with Shakespeare, tho he is very far removed from the classical."

These *ronin*, or masterless samurai, says Mr. Kazumi, "were the terror of medieval Japan." Just how he came to turn his attention to play-writing is not made clear, but "in 1690 we find him associated with the marionette theater in Osaka," and here "he laid the foundation of the modern stage in Japan."

He died in 1724. Of the points of resemblance between Chikamatsu and Shakespeare Mr. Kazumi writes:

"In both, comedy frequently treads on the heels of tragedy, and prose is often intermixed with poetry. The language of monarchs and nobles is allowed to alternate with the speech of the common people. In both dramatists, there is a disposi-

"THERE IS A PREPONDERANCE OF MURDER."

Chikamatsu was fond of scenes like this.

tion toward the historical play. Both reveal a marvelous facility of language and both are tainted with the grosser element rejected by the more refined tastes of later times. But whatever may be said for Shakespeare, it must be held that Chikamatsu is very far removed from the classical. The portraiture of character is somewhat rudimentary, the philosophy of life is considerably wanting in originality and depth, and there is a preponderance of blood and murder that tends to reflect upon the audiences of his time. Chikamatsu loved to make the blood of his hearers curdle and their flesh creep, and they loved to have it so. As to the quality of the poetic portions of the plays of Chikamatsu there is no comparison with Shakespeare at all. Tho there are meter, rhythmical cadence, fit language, and some play of fancy, there is real poetry in but a very modest degree. Moreover, the habit of playing on words and using pivot words in his poems must be regarded as a serious blemish from a literary point of view, tho no doubt these characteristics added much to the enjoyment of the play by the people of the time."

Altho Chikamatsu's plays average about the same length as a Shakespearian drama, some of them are said to have been written in a single night. So moving were his *Shinju-mono*, or plays in which the victims die for love, that "stories are still told of how lovers died together after seeing them." We read further:

"To many students the works of Chikamatsu at first sight do not appear like dramas at all, but simply romances with an unusual proportion of dialog. All the *Jôzuri* contain a large narrative element of a more or less poetical character. The poetic part is chanted to music by a chorus, while the narrative is declaimed as the puppets perform. The dialog, which is often subordinate, merely forms a thread to connect the scenes represented by the puppets on the stage, and makes up for what is lacking in stage scenery. There is no doubt, however, that the works of Chikamatsu are real plays. They have a well-marked movement of plot from the opening scene up to the final catastrophe; and they abound in highly dramatic situations and appear designed with a view to spectacular effect. At any rate, the stage of Japan had never before seen anything like them; and so they won for their author the credit of being the creator of the Japanese drama.

"Most of the plays of Chikamatsu may be classified as *Jidai-mono* and *Sewa-mono*, that is, as historical plays and dramas of life and manners. The majority of them are written in five acts, tho a few are three-act plays. There are critics who hold that the number of acts was suggested by the Dutch then living at Nagasaki, but of this there is no evidence."

RELIGION AND SOCIAL SERVICE

HIGH-WATER MARK OF BIBLE DISTRIBUTION

THE BIBLE as a force for religion, for civilization, and even for the spread of commerce on the face of the earth, is dwelt upon with reverence and enthusiasm by the press, both secular and religious, in commenting on the Ninety-seventh Annual Report of the American Bible Society.

YAN AH YIOH, THE OLDEST CHINESE COLPORTEUR.

One encouraging feature of the report, according to the *Baptist Watchman* (Boston), is that "the life of modern nations is both opening new doors for the advent of the Bible and opening the old doors wider," and it instances the course of events in China and the results of the Balkan War as presaging "great changes in the attitude of millions of people toward the Scriptures." Moreover, the reports from home agencies, we read, show "steady and progressive action" in most fields, especially in those of the West. Mere figures may often seem "dry and uninspiring things," *The Watchman* admits, yet bids us consider that of the number of Bibles distributed at least a portion "have been read to spiritual advantage by very many people," while equally worthy of note is "the example of devotion, fidelity, and even heroism on the part of many who carried the book into isolated communities."

What these figures are appears from the report of the American Bible Society as follows:

"The total issues at home and abroad amount to 4,049,610 volumes. These consist of 399,734 Bibles, 713,891 New Testaments, and 2,935,985 portions. Once more we report an advance over the issues of any year in the Society's history. When we realize that this is more than twice the issues of five years ago, and that for twenty-five years preceding that the annual issues averaged 1,500,000, this very noticeable advance becomes significant, and is a tribute in itself to the living power of the Scriptures. Of the total issues, 2,107,859 volumes were issued from the Bible House in New York, which is an advance over the issues of last year from the Bible House of 270,503 volumes; and 1,941,751 volumes were issued by the Society's agents abroad, being printed on mission and other presses in Turkey, Syria, Siam, and Japan. The total issues of the Society in the ninety-seven years amount to 98,268,175 volumes."

The Episcopal Recorder (Ref. Epis., Philadelphia) says that this report is second in interest and figures only to that of the British and Foreign Society, which "issued during the year nearly seven million copies of the Scriptures in four hundred and fifty different languages," which comparison brings to mind the statement of the *Indianapolis News* that the latest figures on the general distribution of the Bible are "amazing in their magnitude." Year by year throughout the world, we read, the distribution increases and with each increase "comes an enlarged demand from the field," analyzing which *The News* has this to say:

"China and Japan continue to absorb most Bible distribution, altho the East Indian countries are close to them in demand. It is impressive to consider that many peoples without a written language received their first insight into such by the presentation of the Bible or parts in their spoken tongue. A pessimistic report was given the other day by a missionary of long experience in China. He said that the Chinese had as yet only a vague conception of Christianity. That may be true. But this distribution is having its effect, and it perhaps never will be known to what vast extent the political awakening in China was caused by the leaven introduced by the Bible."

The Society's statistics move the *New York Commercial* to the

DISTRIBUTING THE BIBLE BY BICYCLE.

This is one of the 902 colporteurs employed by the American Bible Society in the home and foreign fields. He is with a western agency.

following observations on the involuntary service rendered to commerce by the spread of the Gospel:

"The one has broken the path for the other where they have not traveled together. Not all the practises of commerce, it may be, are quite as much in accord with gospel teaching as they ought to be, but more than any other two forces in human life they have been and are conquering the world, and molding it to loftier ideals."

DR. BRIGGS AS A CONSERVATIVE

THE HERESY CHARGES sustained against the Rev. Charles Augustus Briggs twenty years ago by the Presbyterian General Assembly made an eminent theologian and scholar a national figure, even to the secular world, sent him into the ministry of another denomination, and caused Union Theological Seminary to declare its independence of the Presbyterian Church. Now his recent death moves many an editorial observer to recall with wonder the heat and bitterness generated by that famous trial, and to contrast the conservative attitude revealed in his writings with the popular conception of him as an extreme religious radical. They note, also, a growing spirit of tolerance in the religious world. Thus the *Chicago Post* remarks that Canada and the South are now practically the only two sections of the continent where outbreaks of "heresy-hunting" are conceivable; and the *New York World*, commenting on the "progress made in two decades in reading 'the rule of reason' into the Scriptures," remarks:

"By a coincidence of interest as affording a basis for comparisons in the liberalization of doctrinal tenets, only a few weeks before Dr. Briggs's death, four graduates of the seminary, one a son of Dr. Van Dyke, were accepted for ordination in the Presbyterian ministry notwithstanding their doubts on such cardinal points of doctrine as the literal interpretation of the virgin birth and the physical death of Lazarus. Dr. Van Dyke, in their defense, stated that belief in these old fundamentals of orthodoxy 'was not essential to the Christian faith,' and he denounced 'the new attempt to exalt the letter above the spirit in judging the fitness of men for the Christian pulpit.'"

In tracing the influences behind this change of spirit, says the *Brooklyn Eagle*, "not a little should be credited to what is popularly called 'the Briggs case.'" This case arose from an address on "The Authority of Scripture," delivered by Dr. Briggs, in 1891, when assuming the chair of Biblical theology in Union Seminary, where he had already served for seventeen years as professor of Hebrew. In this address he said that there were three sources of religious authority—the Bible, the Church, and reason. This amounted, in the opinion of his critics, to an invasion of the supreme authority of the Bible. Other statements made by him on the same occasion and afterward used against him in his trial were, that "errors may have existed in the original text of the Holy Scriptures;" that "many of the Old Testament predictions have been reversed by history;" that "Moses was not the author of the Pentateuch;" that "Isaiah was not the author of half the book which bears his name;" that "the processes of redemption extend to the world to come;" and "that sanctification is not complete at death."

Dr. Briggs was first tried by the presbytery of New York in 1892, and was acquitted. His critics then carried his case before the General Assembly, which met in Washington in 1893, and there he was convicted of heresy by 385 to 116, and removed from the ministry. As a result of the Assembly's action the seminary withdrew from the control of the Presbyterian Church, and became an undenominational evangelical institution. Dr. Briggs's views did not prevent his ordination a few years later as a Protestant Episcopal clergyman, altho he is said to have challenged that Church's claim to apostolic succession. He died

on June 8, at the age of seventy-two, having been a member of Union's faculty for forty years. During his long career as scholar and teacher he published many books on Old Testament exegesis, Hebrew lexicography, higher criticism, and theology.

"In certain points," says the *New York Independent*, "Dr. Briggs was as frankly conservative as in others he was progressive." The same paper adds:

"His older years have been given more to conserving the faith than to breaking new paths. Indeed, his last work, just issued, 'Fundamental Christian Faith,' is an exposition and defense of the Apostles' Creed and the Nicene Creed; for altho he had declared the Unitarian Martineau quite as worthy a Christian as Spurgeon, he never swerved from his defense of trinitarianism and the virgin birth."

Copyrighted by Hackett Studio
A "HERETIC" WHOSE BOOKS NOW SEEM CONSERVATIVE.

Altho Dr. Briggs was convicted of heresy twenty years ago because of his application of the higher criticism to the Old Testament, his later works rank him as "one of the most conservative of theologians."

His death seems to bring back no echoes of the old bitterness of those days when his opponents raised the cry: "Which will you believe—Christ or Briggs?" Thus the *Presbyterian Banner* (Pittsburg) refers to him as "one of the most noted Biblical scholars of the world," and "one of the few American scholars that have a reputation abroad," and declares that: "He rendered a large service to all churches in his Biblical investigations and writings, and his name will long be held in honor." And in *The Herald and Presbyter* (Presbyterian, Cincinnati) we find praise for his later works and only a mild condemnation of his "heretical" opinions:

"His recent work in which he defends the doctrine of the virgin birth is one of the strongest defenses of that essential doctrine. He was undoubtedly a man of much learning and scholarship, the author of many special volumes and the editor of various series of commentaries and other works, all on religious and Christian themes, and, while his contributions have been rich and varied, it will always be lamented by the friends of evangelical truth that he said so much in the years gone by to weaken the strong regard of his pupils and readers for the sole and unquestioned authority of the Holy Scriptures."

One scholarly secular paper, the *New York Evening Post*, is not deterred by the seeming paradox from picturing this convicted heretic as "one of the most conservative of theologians." We read:

"Greatly misunderstood as he was at the time, it is probable that the lapse of years has done little to correct the popular judgment of this great scholar. The judicious have known what his work was, but common repute continued to class Dr. Briggs as a radical in theology, whose views were dangerous to the peace, if not to the doctrines, of the Presbyterian Church. As a matter of fact, he was one of the most conservative of theologians. The 'heresies' of the last few years—those, for example, with which young graduates of Union Seminary have been supposed to be tainted—were anathema to Professor Briggs. A large part of modern theological speculation and development left him untouched—except as it filled him with righteous indignation. The very last book which he published contained attacks of the most severe kind upon rash innovators who would take away from the faith once delivered to the saints. In its thoroughly orthodox and traditional spirit, it might have been written by any of the theologians who prosecuted him for heresy—by Dr. Patton, let us say, or Professor Shedd.

"This suggests the complexities of Professor Briggs's position, and the causes of the strange misapprehension under which he long labored. Fundamentally, he was a scholar. His industry was for years almost cruel, so completely did he wreak himself upon study. And his range of attainment was vast. We suppose that no American teacher of his day had a wider or more

minute acquaintance with Semitic languages and the whole literature of investigation relating to them. Particularly did his labors in Old Testament criticism win for him recognition as one of the masters of them that know. . . . He flung himself with ardor into what was, in his earlier years, the new method of the higher criticism."

Dr. Briggs himself, says *The Evening Post*, "had no difficulty in reconciling the discoveries of scholars with reverence for the Bible as the inspired word of God," but "others in the Church could not do it";

"They honestly thought that he was destroying the doctrine of inspiration. They could not see how a Bible made up of superimposed and blended documents—shown graphically in the 'Polychrome Bible' published some years ago under the direction of Professor Haupt—could be an infallible rule of faith and practise. And they brought Professor Briggs to trial."

A KNOCK-OUT BLOW FOR OPIUM

MANY RELIGIOUS and secular papers construe the statement of Mr. H. S. Montagu, Under-Secretary for India, in the House of Commons, that "we are prepared to revise the treaty of 1911, and not send any more opium to China," to mean that the traffic in the drug will be wiped out in a comparatively short time. This new attitude of the British Government is regarded as being doubly significant because Yuan Shi-kai, President of the Chinese Republic, is quoted as saying that "no stone will be left unturned till opium is finally and completely suppressed in China." In his address Mr. Montagu said that two steps had already been taken. In 1907, the Indian Government, acting through His Majesty's Government, had agreed to put a stop to the Indian traffic with China on condition that China during the same time end the growth of the poppy within her own border. The treaty was modified in 1911 so as to accelerate the gradual suppression of the traffic. Mr. Montagu continued:

"Now, to assist China, the Indian Government is prepared to take a third step in advance. They have abandoned altogether the revenue derived from the sale of opium to China for this year, and are to-day selling no opium to China. I am in as proud a position as an Under-Secretary for India has ever occupied, in saying, for the first time in the modern history of India, that we are not selling an ounce of the poppy to China. When the present stocks are absorbed in, roughly speaking, a year's time, we shall have the treaty right, in response to China's own demand, to sell her 26,781 chests more, but I am glad to be able to tell the House that, notwithstanding this, and tho we might get something like \$55,000,000 revenue, we are prepared to revise the treaty of 1911, and not to send any more opium to China; but never again, with the single condition that China is steadfast in pursuit of her present policy."

"This declaration represents," thinks *The Christian Advocate* (Nashville), "one of the most significant and auspicious actions taken by the British Government since ten million pounds sterling was paid by way of compensation to the slave-owners of the West Indies when slavery was abolished." And *The Examiner*, a New York Baptist paper, remarks that "thus the long disgrace and reproach of a professedly Christian nation forcing the horrible traffic in opium upon a helpless and protesting people has been at last ended," and "the Government is paying a heavy price for its past iniquity, but the removal of the reproach is well worth the money." "The importance of this statement can not be exaggerated," says *The Methodist Recorder* (London); "its effect on the Government of China will be immense, and we may confidently expect that the drastic measures pursued there, both by stopping poppy-growing and suppressing opium-smoking, will be persevered in until the curse has completely disappeared from the land." The perplexing problem which confronts the reform movement just now is the

disposition of the opium already manufactured. Concerning this the Prohibitionist *Vindicator* (Franklin, Pa.) states:

"It is said that England will face a somewhat difficult financial problem in connection with this, since not less than \$75,000,000 worth of opium is now stored at Shanghai with loans to the amount of \$50,000,000 against it, advanced by Chinese bankers. England's only way out will be to appropriate sufficient money to purchase this whole stock of opium."

President Yuan, who is supposed to speak with authority for the Chinese nation, expressed his views in the following language when he announced his program:

"More important by far to the present generation of my people is the complete extermination of opium and the opium habit. China has been dying from this curse for more than half a century—fifty-nine years, to be exact. Her people, overcome by this vile drug, have been half asleep and have not known that they and their country were dying. Years ago the nation appealed for outside aid in its suppression, and the world knows what aid was rendered. The drug was forced upon us more than before. For nearly sixty years it has stood as a great crime of humanity. But we will stop it and free the land of the devouring scourge. Our National Assembly has already passed many laws regarding it, and these laws will be enforced. We are establishing an army, and that army will fight opium and opium-smugglers on all the frontiers of land and sea, opium dealers and subdealers in all of the cities and towns, and opium users everywhere."

The protests of some of the East India newspapers are not unlike those of American liquor interests wherever and whenever there is a fight to drive saloons out of business. They say the people who profit by the production of opium are the victims of "senseless agitators." They argue that Hindustan is "being robbed of her revenue merely to secure a monopoly for Chinese opium cultivators." The case for the Hindu poppy-growers is presented by *The Statesman* (Calcutta), an English paper:

"It is notorious that the production of native opium in China has continued despite the efforts, ostentatiously announced, of Chinese officials to put it down. It is not necessary to impugn the sincerity of the Chinese reformers. All we say is that their professions have not been made good by China as a nation."

"In one of the latest Chinese papers to hand—a Shanghai Republican organ, by no means likely to be prejudiced in favor of the opium trade—a telegram appears dated April 7, which states: 'Reports coming in from many quarters confirm the opinion that the present year's opium harvest in Kansu will prove a record one if the weather is suitable and there is no official interference.'"

"The Republican Administration, we are told, has been making strenuous efforts to suppress the cultivation; but apparently, after a year of these strenuous efforts, all that can be said is that they have met with 'considerable success in many districts'—success which, as we know, has been obtained in many cases only by the most ruthless coercion of an unwilling people."

Now, according to this writer and others, while China has been so delinquent at home, she has treated the opium exported from India in open contravention of Indo-Chinese agreements, the result of which, according to the same writer, is that "the stocks of Indian opium at Shanghai have accumulated to an extent which in January practically compelled the Government of India to suspend the sales of opium certified for export to China." It is to relieve this congestion, at present amounting to almost \$100,000,000 worth of the drug, that the East-Indian authorities have been compelled to kill the Indo-Chinese traffic. The writer thus condemns the Chinese for creating the successful *impasse*, and thereby forcing the hand of the British-Indian Government:

"India has made a great sacrifice of revenue—in other words, is consenting to check the progress of public works in this country—for the sake of ending the opium trade, merely stipulating that the Chinese shall do their share of the work by stopping their own production of the drug. It is reasonable to ask that the suppression of the evil complained of shall be a reality, and that India shall not be tricked in order to secure a valuable monopoly for China."

MOTOR TRUCKS

METALLIC WHEELS AND WOODEN WHEELS FOR TRUCKS

AS the wire wheel for pleasure cars is now much to the front in discussions, so is the metallic wheel for trucks. Thus far trucks in this country have usually been equipped with wooden wheels. Such changes as have been made began with the substitution of metal hubs for wooden ones; the motive here was to make possible the use of antifriction bearings. Metallic spokes next came in. Of various former steps in the industry and the trend nowadays, Arthur J. Slade writes in *Automobile Topics*:

"Since 1907, when the importation into America of one of the most successful European trucks began, the improvement in the design, as well as construction, of wood wheels has been very marked. At that time one of our leading wheel builders undertook to practically duplicate these European wheels with spokes about 5 inches in width, flaring at the outer end so as to form an adequate support for the felloe, and also of sufficient cross-section to insure a good shoulder on the end of the spoke against the inner surface of the felloe. Ever since that date the wheel builder in question has been manufacturing wheels, from designs similar to this, with great suc-

cess; and, altho some other wheel builders contended at the time that it was not feasible to produce wooden wheels of a size suitable to finish spokes of such unusual dimensions, the majority, if not all, of the

wheel builders catering to the motor-truck industry are now building wood wheels of this general type.

"As far back as 1858 and 1862, motor-trucks are reported to have been built, in an experimental way, with steel wheels. The cast-steel wheels were similar to those now being advocated by several manufacturers, having hollow spokes integral with hub and felloes. They were made of crucible steel and used a tire constructed from a combination of wood, steel, and rubber. About twenty 5-ton trucks were built and the wheels were found to be on the whole satisfactory. The disk wheels were made of boiler plate, riveted to cast-steel hubs and to a steel tire band. . . .

"In 1905 came out a line of trucks equipped with wheels made up of steel plates. In the interior of the wheels an electric motor was mounted, and this same construction has been followed up to the present date. At about the same time came out 5- and 10-ton capacity gasoline trucks equipped with wheels on which the tires were segments of rock elm and the side plates were steel disks.

"In 1906, a metal wheel was introduced to the market in Chicago. These wheels were built of side disks of steel, reinforced inside with structural shapes; the various members of the wheel being riveted together.

"Comparatively few well-known truck builders in this country are at present using metal wheels, and those who are using them have not previously used wooden wheels. The vast majority of motor-truck manufacturers, including those whose product dates back to the beginning of the motor-truck industry in this country, have used wooden wheels consistently, improving their design from time to time, but not abandoning a material for wheel construction which has on the whole proved entirely satisfactory.

"At the present time there is undoubtedly a general effort being made by manufacturers of parts for motor-trucks to add metal wheels to their product; and with the exception of one manufacturer, who proposes to build wheels of malleable iron, all of them are building their wheels of cast steel. What, then, are the specific advantages offered by metal wheels which should influence a motor-truck designer to specify metal construction rather than wood? . . .

"First, it is claimed by one of our members, who is chief engineer of a company about to place cast-steel wheels on the market, that 'It is now conclusively proved that

there is a distinct saving in tires on steel wheels. Some of the largest tire manufacturers guarantee as much as 30 and 40 per cent. longer life on steel than wood.' Inquiry made of the leading tire-manufacturing companies, verbally or by letter, has failed to verify that statement. The opinion of several tire company officials

FIGURE 10-4
A SCISSORS-GRINDING MOTORIST WHO IS RUNNING FOR OFFICE.

The above picture shows the motor-car equipment of a scissors-grinder in Los Angeles who recently became a candidate for a local office. One of the owner's methods in his campaign was to travel about the city in this car, combining scissors-grinding and saw-filing with the prosecution of his claims as a candidate. He took to grinding scissors and sharpening saws as a consequence of an accident which made him a cripple and dissipated what money he had saved.

seems to be personally in favor of metal wheels for the one reason that they are likely to be made accurately to size, but the tire companies positively decline to guarantee an added mile or even to express the opinion that added mileage can be expected.

"As to the question of accuracy of workmanship, it is entirely feasible for the wood-wheel manufacturers, under the present S. A. E. standards, equipping the wheels with S. A. E. hands, to work within the necessary tolerances and provide wheels which will have the accuracy required. Accuracy in workmanship is a question of care in construction and careful inspection, and the manufacturer who insists upon

FIGURE 10-5
A DEVICE FOR LOADING COAL TRUCKS FROM RAILWAY CARS.

The above cut shows a device now in use in Chicago. Coal, by this method, is hauled at the regular horse rate of fifty cents per ton. While a team of horses in one day can haul about twenty-five tons of coal, the motor-truck, equipped as above, with hoppers attached to the railway car, is able to deliver about one hundred tons a day. This large amount of work is made possible by the elimination of loss in waiting; the truck can be loaded in a minimum of time. When an empty truck arrives at the railway car, two or more filled hoppers are emptied into it until it is full. By the time the truck returns from a trip the hoppers are again ready to be emptied. By this means the truck is kept constantly in service.

A THREE-TON TRUCK THAT PLUNGED OVER A TEN-FOOT STONE WALL. THE ONLY DAMAGE A FLATTENED MUFFLER AND A TWISTED RUNNING-BOARD.

cess; and, altho some other wheel builders contended at the time that it was not feasible to produce wooden wheels of a size suitable to finish spokes of such unusual dimensions, the majority, if not all, of the

You know the Southern Pine

From the silent forest its fragrant and health-giving influence shall go forth throughout the land.

Its healing and soothing properties shall be embodied in thousands of cakes of Packer's Tar Soap.

Little children's tender skins shall feel its cleansing touch.

The luxuriant hair of maidenhood shall testify to its beneficent power.

Old men's snowy locks shall bear witness to its vitalizing influence.

And you who seek a clean, vigorous scalp and healthy lustrous hair will surely enjoy the active virtues of the Southern Pine in every cake of

accurate wood wheels conforming to S. A. E. standards has no trouble in securing them.

"Another claim made for metal wheels is that their strength is greater than wood wheels. Assuming the cast-steel wheels to be free from defects, and to have the chemical and physical characteristics recommended by the Iron and Steel Division, these wheels certainly develop marvelous resistance to shocks. I witnessed a test of such a wheel recently which was subjected to the impact of a weight swung as a pendulum against the side of the felloe and the wheel was deformed beyond the semblance of a wheel, and even then did not show any fracture. At the same time, as has been pointed out by the Iron and Steel Division, steel castings can not be inspected against blow-holes, and had the wheel in question contained some concealed defect, failure in testing would probably have resulted. As to the strength of well-constructed and properly designed wood wheels, the front wheel of a truck manufactured by one of my clients came in contact recently with a road obstruction with such impact that the strain broke the steering-gear, but the wheel was uninjured, and on another truck a rear wheel was subjected to such an impact that the axle spindle was bent without injury to the wheel. Therefore, on the question of strength, that of the high-grade wood is entirely adequate for commercial purposes.

"The contention is also made that the metal wheel will dissipate heat more effectively than the wood wheel. There has come under my observation no case in which a truck tire on a modern motor-truck has been injured by lack of heat radiation under service conditions. I assume that the heat developed in a solid rubber tire is due to the deformation of the rubber which comes in contact with the ground. This surface is in contact with the air and I should expect that the heat would be radiated through the air more easily than transmitted through the base of the tire to the wheel and thence radiated by the wheel, felloe, and spokes.

"The fourth point in considering the relative merits of wood and metal wheels is the comparative cost and weight. It would appear that the cast-steel wheels are both costlier and heavier than the wood wheels. The burden of proof seems to rest with the metal wheel manufacturer, that they have an economic advantage over the wood wheels, resulting in a financial saving to the owner of the truck equipped with metal wheels."

Further items pertaining to this subject are given in *The Horseless Age*. The writer refers to many attempts made by various dealers to introduce wheels of metal, but the net result at present is "that comparatively few well-known builders in this country use metal wheels." Thus far manufacturers have not felt themselves forced to adopt them. In order to bring about a radical change, metal wheels "must be shown to have some practical advantage."

MOTOR-BUSES HERE AND IN LONDON

The signing on May 28 by Governor Sulzer of a bill permitting other motor-stages than those now in use to be operated on the streets of New York, has been hailed in several quarters as "the breaking up of a monopoly." *Associated Press* remarks that the signing of this bill "opens a field to various motorcarrying companies, several of whom have plans for an invasion." One company which was formed in April announced its intention of running electric

Windsor, Ontario, Canada.

buses on Madison and Park Avenues for a flat rate of five cents, instead of the dime which has been exacted by the monopolistic company now in operation on Fifth Avenue. Other companies are heard of which profess an intention to run lines north and south on other avenues in New York.

This type of public conveyance in cities had its origin in Europe. In London the motor-bus has about eliminated completely the historic bus drawn by horses so long a dominant feature of interurban London transportation. The first motor-bus is believed to date from 1902. The number in service in London long since exceeded 1,000 and is now more than 3,000. Most early motor-buses were made in France and Germany. *The Horseless Age* prints a paper by T. V. Browne dealing with the experience of London with these vehicles, from which the following paragraphs are taken

"According to figures furnished by the commissioner of police, the number of motor-omnibuses licensed during 1912 for use in London was 2,908, so that with the subsequent additions there are now more than 3,000 of these vehicles in use in the metropolitan area, as compared with about 1,000 in Paris.

"The first requisite for the successful use of motor-omnibuses in competition with street trams is, of course, good roads, and in this qualification London and its environs are now second to no other town, and it is largely owing to this that the motor-omnibuses have been able to compete so favorably with the trolley-cars.

"Two main factors have principally conduced to the present efficiency of the petrol omnibuses as now running on the London streets, and these are, first, the insistence of the police authorities that the vehicles should comply with a high standard of noiselessness and reliability combined with a low maximum weight limit; and secondly, the determination of the constructors to produce vehicles capable of passing these tests. Cases have been known where vehicles failed to obtain a license to run solely on account of the hissing noise caused by the passage of the air through the carburetor inlet.

"The greatest difficulty in connection with the reduction of noise has been experienced with the change speed-gear. Extensive experiments have been carried out in the endeavor to minimize the sounds emitted by the indirect drives of the gears. The solution has been found by entirely replacing the spur-wheels except in the case of the reverse, by silent chain drives. These have proved to be quite satisfactory in every way in spite of the fact that the chain makers themselves were very pessimistic as to their use. The salvation of the whole arrangement is the shortness of the chains, so that with the few links employed the total stretch of the chain with wear is very slight.

"For some time great trouble was caused by the leakage of oil onto the roads from the crank-case, gear-box, and worm-gear case. It became necessary, in order to comply with the police regulations, to cast troughs below the joints to catch the oil which escaped from them. The joints were made as tight as possible by the use of brown paper, but the mechanics when overhauling the chassis often displaced the paper, so that leaky joints were rather the rule than the exception. This objection has now been entirely overcome by having the joints carefully scraped up by hand and then fitted together without the intervention of any jointing material.

"The road wheels are made from special steel castings with hollow spokes."

FEDERAL The Truck Triumphant

It is no longer necessary to argue that the most extravagant, inefficient motor in the world is the hay-fed, four-legged motor of pre-historic man—the horse.

That is now a universally accepted economic fact.

To the elements of commerce—such as railroads, the telegraph, steamships and the telephone—there has been added one more national institution—the motor truck. The transportation of freight has been motorized.

However, 1000 American manufacturers have gone further than motorizing their trucking departments. They have—

FEDERALIZED Their Transportation

1000 American business men have found in the Federal Truck the first motor driven vehicle to solve, scientifically and permanently, the problem of Reliable, Expeditious and Economical Transportation. We have tabulated records of the hauls, comparative cost, repairs and savings of Federal trucks.

When we Federalize a business man's transportation, we do more than sell him a Federal truck or a dozen Federal trucks. We analyze his transportation problem

and give him the experience and data of 1000 Federalized business houses.

We have yet to have reported to us a serious interruption of Federal Service—or a complaint of Federal quality—with 1000 Federal trucks in hourly operation. That record is unique—and conclusive.

We will put you in communication with owners in your own line—if you want the facts.

Let us send you the Blue Book of Traffic.

Price includes chassis, tools, etc.

\$1800

ment so freely offered
by our V. C. patrons

ANY time you see this equipment on a car do not hesitate to ask the owner or chauffeur about the anti-skid action and the general service behavior of

PENNSYLVANIA Oilproof VACUUM CUP TIRES

You will be told that such a thing as skidding on wet and greasy pavements is absolutely impossible with the Vacuum Cups—*impossible*.

You will be told that the oilproof quality—if those particular tires have encountered much oil—is a real tire saver—a real worry saver, too, when oil can't be avoided.

You will be told all this—or in words to that effect—and more.

And when you ask for the mileage, and weigh the quoted distance against the condition of the tires—you will understand why we attach to each casing a printed definite guarantee of

4,000 miles

The average service is far greater.

McCormick Power Plugs

(Total length of spark plug) are not "new" motor equipment but they do produce new efficiency in any motor car, truck, motor boat, motorcycle, gas, gasoline or kerosene engine.

More engine power—more firing power—more rapid and complete explosions, maintain full power—no points to wear or replace; test fuel—usually operate on better or cheaper mixture.

Maintain Full Firing Efficiency

Try for 20 days. Money refunded if not as represented. Price \$2.00 each net, postpaid. Mention size and model of machine. Further particulars on application.

McCormick Manufacturing Company

536 East First Street Dayton, Ohio

CURRENT POETRY

THAT the metaphor is an important element of poetry no critic would deny. Indeed, the successful use of figurative language is one of the tests of the poet; if he merely states facts in straight, unimaginative phrases his verses are uninteresting and generally, in spite of rime and rhythm, unworthy to be called poetry. And perhaps the highest—certainly the most difficult—type of poem is the one which is throughout a sustained metaphor. Some, but not all, of the parables of the New Testament are examples of this, and some Biblical scholars have so considered the Song of Solomon. A metaphor extending through a stanza is not difficult to sustain, but to carry it through a succession of stanzas, with no inconsistency or confusion, is not easy, and for this reason it seems to us that the poem which we quote below deserves particular attention. It appears in the July number of *The Yale Review*, a magazine which is gaining an enviable reputation for the high quality of its verse. In a manner somewhat suggestive of the late William Vaughn Moody, Mr. Benét has developed a lofty metaphor, developed it in stanzas that crash and ring like the sledge of the smith of whom he sings. Some little obscurity mars the poem at first reading, particularly in the eighth stanza, in the line "Not smith of dispensation I, but smith of truing." But this defect disappears when the poem is reread and the full force of the metaphor is comprehended. This is more than distinguished versification; it is poetry of a high order.

The Anvil of Souls

BY WILLIAM ROSE BENÉT

Above the darkening forest, from his red-doored smithy,

Loomed forth the huge artificer of all the years to be.

"Now, on the steep of vision, what wanderer (thou, I prithee?"

"I climb from Man to find the plan!" "Then learn of me!"

His sledge is oak and mountain crag. Its weight is thunder.

The souls are on his anvil laid like sword-blades bright.

His sledge's swing is lightning and cataclysmic wonder—

Its impact on the leaping soul both Morn and Night!

And this is the song that he hath for mighty singing:

"The blade that writhes beneath the sledge, white-hot—cold-blue!

The anvil—the anvil—the anvil's giant ringing;

And, hissing from its bath of stars, the soul steels true!"

The smithy's walls are lightened as by a forest fire; And first the smith was imaged wrath, and then vast peace!

His lineaments are joy and peace. His thews can never tire.

The starry bath beside his hand is called Release.

The souls are hot with flashing sparks. The souls have voices;

But drowned in the reverberance of that huge din.
And in his strength the smith is glad, and in his calm rejoices,
And flings the trued steel to Release, to hiss therein.

His face glows joy. His face is ever lightened
Not angrily, but glowing with the justice of his trade;
For lo, the dullest metal to beauty brightened—
The bent and dented, flawed and scarred, like blue steel made!

"For Man I toil—for men have no regretting;
So toil I, joying to be just to each for all.
As due them all, I true them all, no flaw forgetting;
And in a like perfection they hang upon my wall.

"For Man is mine, but men are not my doing.
So some shall writhe through furnace pain to dazzle whole;
Not smith of dispensation I, but smith of truing.
Hark! From the well-brink of Release chants soul on soul!"

"And what is called your anvil? You name names madly!"
"The state men flee and cling and flee—and would retest!"
For all the glory of mine anvil, heaven sings sadly.
The soul of all perfection knows mine anvil best!"

I keep within my heart this song of his for singing:
"The steel that writhes beneath the sledge,
white-hot—cold-blue!"
The anvil—the anvil—the anvil's mighty ringing—
And, hissing from its bath of stars, the soul steeled true!"

Many poets try to put social problems into verse, and few achieve real success. There are some notable exceptions. Mrs. Browning's "The Cry of the Children," being one. Katharine Tynan contributes to the London *Vineyard* some strong and beautiful lines on the campaign for the protection of children. The last stanza is splendidly resonant.

The Strong Fight

BY KATHARINE TYNAN

I build a strong tower for the children, the children,
With moat and portcullis I keep it still;
The foe clangs without, but within it the children
Sleep soundly and sweetly till cock-crow shrill.

I wage a Holy War for the children, the children,
My hand against the world that they may live.
I am cunning and crafty as the fox for her children;
Wise as the serpent lest the children grieve.

I build a warm fire for the children, the children,
To my tower oft beleaguered allies I call;
They shine like the sun to the eyes of the children;
God's men-at-arms keep us by gate and wall.

I leave in safe keeping the children, the children,
Down to the cities I take my way;
Past the walls and the sentry, alert for the children
I creep in the shadows like a beast of prey.

I gather rich stores for the children, the children,
The lowing of oxen is heard as I come,
I carry the sheaves in my arms for the children,
Oh, sweet on the hill-top the lights of home!

Unless the Lord build it, the house for the children;
Unless he be with me my labor's vain.
He has thought it and planned it, the fold for the children
Where the lambs be folded without fear or stain.

I fight the holy fight for the children, the children;
The sons of God glorious sit down at my board.
Tho the foes hem us in, shall I fear for the children
Fighting the strong fight in the Name of the Lord.

Number three of the Hupmobile week-end series

Ho for Camp Week-End!

As "the family car" struts through the last grove of gleaming birches, the welcoming about came from "Sue", lagging a pail of water from the smiling little lake. Meanwhile in "The House in the Woods" "Billy" was broiling tea and frying fish.

The boys had come out with the Hupmobile in the morning, bringing the "grab" and the blankets and fishing tackle and camera. Then—as soon as Dad got through at the office—the rest of the family were bundled into the Hupmobile and sped across country for an incomparable Saturday and a tranquil Sunday in that most relaxing of the family institutions—"Camp Week-End."

There isn't much to this "House in the Woods"—a cabin really of four rooms. From the rocky ridge across the lake you can see the city's pall of smoke. Yet you have found that these two days in the woods store up a week's health for the whole family; give the whole family a vital common interest; bring the youngsters closer to Nature, and, better yet, closer to you, their father or mother. "Camp Week-End" is better, cleaner and safer than the city streets.

This "House in the Woods" is the second best investment you ever made—second only to "the car of the American Family"—your Hupmobile.

The Hupmobile in the woods

Hupmobile

Hasn't it been your experience that *nearly everyone* thinks well of the Hupmobile?

Just notice, next time you hear a group discussing several cars.

See if it isn't true that the majority—no matter how little they know about the others—have a clearly-formed, good opinion of the Hupmobile.

Of course we have striven to that end—everlastingly.

We believe it to be the best car of its class in the world.

And we think that most people have come to the same conclusion.

Which, of course, is the strongest possible evidence that we are building the sort of a car we say we are—the sort of a car you ought to own.

and he won't tell. But his friends believe that his ambition is undiminished by his experience of the last few years; he may go more slowly and with a greater degree of care than formerly, but he has made up his mind to regain his grip on affairs, and he is able enough to do this.

In appearance he has changed a great deal. In former years he had a ruddy complexion; his face was firmer and plumper. He always dressed neatly and was never without a red carnation in his buttonhole. Dapper is the exact word for his appearance in those days. His face is still ruddy, but has not half the color it used to have. The red carnation is gone; he still dresses with care but more quietly.

No one knows that any exceptionally wealthy man is behind him. The banks and trust companies of Bath, Me., might furnish him with enough capital to give him a start, and they have plenty of confidence in him. Members of his family have some money, and they lent him the 15,000 shares of stock in the Hudson Navigation Company, which he pledged in the acquisition of a controlling interest in the company. He has plenty of friends who have confidence in his ability to "come back" who would back him to a substantial amount.

Morse did not have to put up any money of his own to get the Hudson Navigation Company, which was an old property of his. His sister owned 4,000 shares, and other members of his family brought the total to 15,000 shares. A syndicate, composed of John W. McKinnon, who had been president of the company since Morse was deposed in 1910; G. E. Shaw, his partner; Ladenburg, Thalmann & Co., George R. Sheldon and others, had 20,000 shares.

There are 80,000 shares of stock outstanding. The market price was \$18 a share. Morse bid \$25 for it, and his bid was accepted. In the same brisk manner of his earlier days he closed the deal, put up the 15,000 shares of his family for security for the purchase of the syndicate's 20,000 shares. He then controlled 35,000 shares, and almost all the other stock is in the hands of persons who are friendly to him.

We are told that the line has not enjoyed since the panic the prosperity of the old days, but it is believed that Morse can make the business a success. He made the American Ice Company and the Ice Securities Company pay huge dividends until he let them go. *The Sun's* story continues:

There is a tightness in his jaw that is noticeable. One can easily imagine that he has determined to make good in his chosen field. He is a strong believer in his own ability to make money, and it was this that carried him from his ice business in Brooklyn into Wall Street in 1890.

To become a power in the ice business, Morse first went back to Maine and cornered the supply of ice there. Ice companies had to buy their ice from him at his price. Some of them did but couldn't pay for it, so Morse took stock in payment. That gave him control of

The Dining-Car Beverage

Get the Welch habit—it's one that won't get *you*.

Wherever you are, in the diner, at the hotel, in your favorite club or cafe, the best away-from-home drink is

Welch's

"The National Drink"

It relieves thirst without creating more. It is a soft drink that has character to it. It is an appetizer and a refreshing, beneficial beverage when you are travel-tired.

It goes "to the spot" whether served plain or as the universally popular Welch Ball—made in a high glass. Fill half with Welch's, add lump of ice and charged water.

Always keep a supply in the house for the folks at home, and start by ordering a case today. Tell your wife to drop us a postal and get our free booklet of recipes.

If you cannot obtain Welch's of your dealer, we will write a trial order, and, upon receipt, mail it to you. For full particulars, please apply to:

the companies. When he formed the American Ice Company with a capital of \$60,000,000 he sent the price of ice up to 60 cents a hundred pounds at the piers. That invited competition, but when competitors got their ice to New York they found that Morse had closed every dock to them.

American Ice Company stock went up to 90, and up went the fortunes of Morse into the millions. The company had a few years of great prosperity, and paid 6 per cent. on the preferred and 4 per cent. on the common. Then the stock began to drop as fast as it had gone up, and stop paying dividends. Morse got out as active manager, remained quiet for a while until public indignation over the price of ice cooled, and then organized the Ice Securities Company. He took in the American Ice Company and other ice companies, paid 7 per cent. on the preferred for a while and sent the price from 34 up to 93 in less than a year.

In 1907 this company's stock dropt from 96 to 8½, after three dividends had been paid. Morse had sold long before the crash came.

Between his two coups in ice he had gone into the banking field and acquired bank after bank. An investigation after the 1907 panic showed how he did this. He simply put up the stock of one bank as collateral for a loan with which he bought the stock of another bank, and kept repeating this performance.

The shipping business also attracted him strongly. In 1901 he bought the People's Line to Albany. Then he went to Boston and bought all the lines that ran north from there. Next he bought the Metropolitan Line and ordered the Yale and Harvard built at a cost of \$1,000,000 each. Before long he had other steamers on the Hudson. Then he bought the Clyde and Mallory lines. All the time the banks he controlled were lending huge sums on the securities he was buying.

Then the United Copper pool, in which were Morse and the Heinzes and the Thomases, sent the stock up 20 points. Somebody entered the market with a lot of stock just when the pool seemed a success. The Heinzes say it was Morse, who, altho bound by an agreement not to sell, began to feed the market. The pool collapsed and the Bank of North America, which had lent Morse millions on notes made by clerks acting as dummies, began to totter.

Morse couldn't make good on a loan of \$500,000 and the United States District Attorney began an investigation which resulted in the indictment, conviction, and sentencing to fifteen years of the man who had controlled \$300,000,000. He served two years, and President Taft pardoned him on January 18, 1912. Since then, until his acquisition of the Hudson Navigation Company, he has divided his time between Bath and Europe in the search for health.

Mrs. Morse, to whose efforts goes the credit for getting her husband out of jail on a pardon, had worked night and day for his release, and since his release has always been with him. The doctors said he didn't have a year to live when he left Atlanta, but it would seem that they erred.

WHEN BREAD WAS PRECIOUS

AFTER-DINNER speeches in favor of international peace may do a great deal of good, but their efficacy is nominal when compared with the impression made upon the minds of intelligent people by the war paintings of famous artists like Vereshagin and the terrible stories of bloodshed on battle-fields and starvation behind the fortifications of besieged cities. That is a reason for quoting a London *Chronicle* man's story of the fall of Scutari. His realistic account of the sufferings of thousands and death of hundreds before and after the surrender to the Montenegrins might be used to advantage as a tract by the peace societies of Europe, Asia, and America. Read it:

And what weeks those last two were! The warships of the Powers, lying foolish and idle off the coast, were seen from the heights of Tarabosh, and inspired hope. But no help came, and the rumor spread through the town that they were Greek and Bulgar reinforcements. Europe babbled and unrolled coils of red tape—talked of rescue and did nothing. And in eight days over 300 people died of starvation. Indeed, only the fact that in the surrounding fields a large number of frogs, snails, and tortoises were found and used as food, saved a large part of the population.

And all the while, in defiance of Europe, the Montenegrins rained shells and shrapnel into the best quarter of the town.

BUFFALO LITHIA SPRINGS WATER

Challenges comparison with any other known mineral
water in the world on its record of results

DR. ROBERTS BARTHOLOW, Professor Emeritus of Materia Medica, General Therapeutics, etc., Jefferson Medical College, Philadelphia, said, in "Practical Treatise on Materia Medica and Therapeutics," 1899, that Buffalo Lithia Water "contains well-defined traces of lithia and is alkaline. It has been used with great advantage in gouty, rheumatic and renal affections."

DR. GEORGE BEN JOHNSTON, Richmond, Va., ex-President Southern Surgical and Gynecological Association, ex-President Medical Society of Virginia, and Professor of Gynecology and Abdominal Surgery, Medical College of Virginia, says: "When lithia is indicated, I prescribe Buffalo Lithia Water in preference to the salts of lithia, because it is therapeutically superior to laboratory preparations of lithia, lithia tablets, etc."

EDWARD M. EIDHERR, M. D., Ph. D., Ch. D., Ph. G., University of Vienna, Chicago, Ill., declares: "I have found Buffalo Lithia Water of undoubted service in the treatment of Uric Acid Gravel, Chronic Rheumatism and Gout."

Tailors, Dressers, and Suits Made
Satisfactorily, Individually, and Promptly

Every church, school, convent, and hospital was a mark. Two thousand wretched refugees were sheltered in the cathedral, believing it would be safe. But the guns of the Orthodox sought specially each Catholic building. A searchlight turned on the cathedral at night enabled the gunners finally to get the range, and 40 shells in and near it completely wrecked the finest building in these lands.

Horrible tales of suffering are told—of a woman and all her six children who starved to death; of another woman who, while cooking a few beans for her child, was struck by a shell which tore off both her hands and feet. The soldiers who came from the trenches to fetch provisions and ammunition hurried back thither, for the trenches were far safer than the town. The fire was directed on the civil population to force its surrender.

For the last 28 days no food was dealt out to this population. All was needed for the army. Two and a half pounds of maize rose to three dollars. Bread was made of linseed and all kinds of bran and cement, and caused acute diarrhea. And all this time two great ship-loads of relief stores, sent by Italy and Austria, were waiting off the coast. Yet the so-called Powers were powerless to save the town. Those stores wait still.

When the last rations of dry biscuit had been given to the soldiers three battalions threw down their arms. Then it was that Essad Pasha sent out a boat with a white flag to make terms of surrender.

And—such was the irony of fate—the boat had only left a short time when the Serbs sent in word that in obedience to the Powers they were withdrawing. Had the Powers but acted strongly a week earlier how differently things might have turned out! Essad was reluctant at first to yield.

So all that night a merciless bombardment was kept up on the town. Next day he surrendered, but made most ample and full stipulations as to the safety of the population—making special terms for sick and wounded, and for respecting the religious rights of the population; and demanded himself to withdraw with all his arms and the honors of war.

The Montenegrins, anxious to obtain possession of the town before the Powers could act, gave him all his terms. And in such a hurry were they that he should evacuate that they supplied him with a large amount of food to start away with at once. He evacuated Tarabosh and the other defenses in turn, and the Montenegrin troops took possession. Thus the town surrendered. Scarcely any large ammunition remained. By assault it could never have been taken. Its defenses were too strong. The battering to pieces of the town itself and the starving of the population finally gave the place into Montenegro's hands.

The tale spread by the Montenegrin official news that a big fight had taken place, and the Montenegrins suffered heavy losses, was a pure invention.

Montenegro occupied the town first chiefly by volunteer troops from abroad and by gendarmerie. With the eyes of all Europe directed on the town, the long-talked-of pillage of Scutari had to be abstained from. In fact, the wilder and more undisciplined troops were not ad-

mitted till some days later, and were only allowed to stay a couple of days.

Since then Montenegro has been striving feverishly so to "corner" the Scutarines that they will ask Europe for Montenegrin rule. Owing to the blockade no food can be imported save through Montenegro, and Montenegro has the people in her hands. The whole of the flour and corn and rice she can control. A small amount of food only comes in from the surrounding villages—but many of them are in need of food themselves.

Rations of bread and flour are dealt out to the poor, who sit in crowds waiting all day for the dole. No one can buy flour except in tiny quantities. Only Montenegro can feed the people.

They are in terror of a second famine. Common suffering has united Catholic and Moslem as they have never been united before. Both dread Slav dominion, and wait impotent, hoping for help from the Powers, while armed patrols march up and down the streets.

THE SPICE OF LIFE

High Notes.—Dr. Lloyd, of London, says Caruso's very bones are musical. Those 2,000 "bones" a night he received in the United States are musical also.—*Houston Post*.

Wild.—"Does your husband give you all the money you want to spend?"
"My goodness, no! Why, even I would not think of being that extravagant."
—*Detroit Free Press*.

Loquacious Diet.—MISSIONARY (to cannibal)—"What makes your chief so talkative to-day?"

CANNIBAL—"Oh, he ate a couple of barbers this morning."—*Minnesota Minne-Ha-Ha*.

A Riot.—WILLIE—"My father put down a disturbance last night."
BILLIE—"Is that right?"
WILLIE—"Yes; he ate a Welsh rabbit."
—*Yonkers Statesman*.

Why He Groaned.—A small pickaninny heaved a jug over the counter to the grocer.

"Mammy wants er dime's wuth er 'lasses," she announced.
Knowing the family ways, the grocer was inquisitive.

"Got yo' dime with you, Sally?" he asked.
"Yas, suh."

Thereupon the grocer went below to the molasses barrel in the cellar. It was a cold day, and the stream ran slowly from the spigot, but he whistled and stamped about for ten minutes to keep up his temperature as well as his courage. At last the jug was filled and his cold and lonely vigil ended. He returned and heaved the jug back over the counter.

"Lemme have yo' dime, Sally," he said.
Sally's eyes grew white and wide.

"Laws a mussy," she exclaimed, "if mammy ain't gone an' put dat dime in de bottom er dat jug."—*New York Evening Post*.

Lady Elgin

Lord Elgin

THERE are MANY MODELS of the PERFECT WATCH

The high, unvarying Elgin standard of excellence characterizes all the various models and styles—carefully planned to meet every individual requirement. Men and women in every walk of life will find an Elgin Watch exactly suited to their needs.

LADY ELGIN

—here illustrated—the perfect watch for women. The smallest watch made in America. Double roller escapement. Diameter corresponds with that of the new 5-cent piece now being coined by the U. S. Mint. Can be used on a bracelet or as a pendant. Tiny, beautiful and most dependable.

LORD ELGIN

—also illustrated—with double roller safety action. An extremely thin watch for men. Without a peer in dignified appearance and perfect timekeeping.

For railroad men—VERITAS, B. W. RAYMOND, and FATHER TIME—each a standard in its class. The G. M. WHEELER, a sturdy, well-built, handsome watch.

There are 40,000 jewelers in the United States selling Elgin Watches. They are known as Elginners. Go to your jeweler—your Elginer. Ask him to show you an Elgin Watch—the model best adapted to your needs.

ELGIN NATIONAL WATCH CO.
Elgin, Illinois.

GUARANTEED TO SUSTAIN 800 POUNDS

Unusual, Beautiful Architectural Effects

WITH usual roofing materials it is impossible to produce such a unique, attractive roof as that illustrated below. But with Reynolds Flexible Asphalt Shingles roll edges, that effects and rounded corners are easily made. Such a roof adds real distinction to a well-designed, well-built home, whether modest or most pretentious.

The fact that Reynolds Asphalt Shingles may be bent to any required form does not imply that they are flimsy or soon destroyed. On the contrary, they last longer than wood shingles. They cannot warp, split, crack, curl, drop or blow off. Sun, snow, rain, hail, fail to impair their usefulness or beauty.

Furthermore, Reynolds Asphalt Shingles are a real protection against fire. Flying sparks cannot set them ablaze. They save part of your insurance cost.

REYNOLDS Asphalt Shingles

Guaranteed for 10 years—
will last many years longer—

are made of crushed slate or granite securely imbedded in pure asphalt. Natural colors of garnet, red or gray-green which never fade and never need painting. We are the original makers of flexible asphalt shingles and tested them for ten years before putting them on the market. They are uniform in size—8 inches by 12 inches—and are laid four inches to the weather. Your building-supply or lumber dealer can get them for you.

Let us send you a booklet showing
photographs of modern houses

roofed with Reynolds Asphalt Shingles—signed opinions of the owners are included. Also opinions of leading architects and builders. Write for a copy TO-DAY.

Ain't It Awful?—Perseverance has won many a hard-fought victory that was really not worth the effort.—*Puck*.

True Courtesy.—LADY (at piano)—
"They say you love good music."
YOUTH—"Oh, that doesn't matter. Pray go on."—*Le Rire*.

Special Request.—"Please, teacher, mother says can Albert David sit by 'isself this mornin', 'cos 'e's got a touch o' the measles?"—*Punch*.

Trade Formula.—WOMAN (to druggist)—
"Are you sure this rat poison is good?"
"Certainly. It's cheap, palatable, and very nourishing."—*Fliegende Blaetter*.

Just a Listener.—IRATE INTRUDER—
"Look here, you've been in there half an hour and never said a word."

MAN IN THE TELEPHONE BOOTH.—"I am speaking to my wife, sir."—*Sketch*.

On a Payroll.—"How is our friend Grafton's position on that bill regarded?" asked one member of a legislature.

"Well," replied the other, "the general impression is that his position is a very lucrative one."—*Washington Star*.

Stung Again.—LANDLADY (to lodger)—
"Come into the kitchen, sir, and see the grand procession as it starts."

"I can see it well enough from my own room window."

"Of course, but I've let that."—*Fliegende Blaetter*.

Puzzled.—BESS—"Something that Jack said last night didn't sound just right."

TESS—"What was that?"

BESS—"I told him if he called me pet names I wouldn't speak, and he replied that he would call me dear at any price."—*Brooklyn Life*.

What Mother Did.—Percy Noodles says, speaking of automobiles, that when he asked the capitalist's daughter the other night how her father got his start, she replied that her impression was that her mother found him in neutral and cranked him up.—*Dallas News*.

Back-slap.—She finished a tirade at her friend, and ended with:

"There, I think I have made myself plain, have I not?"

"Made yourself plain, dear?" sweetly answered the once friend. "Oh, no, dear; you were born that way."—*Ladies' Home Journal*.

Heading Them Off.—Aunt Cindy was running around the yard in the rear of her cabin seeking to drive into her henhouse a dozen or so of chickens that seemed anxious to go anywhere but in the henhouse.

"Why do you go to all that trouble, Aunt Cindy?" asked a passer-by. "Don't you know that chickens come home to roost?"

"Sho', I knows it, white folks," answered Aunt Cindy. "an' dat's de trouble—dey's goin' home to roost!"—*New York Evening Post*.

INVESTMENTS AND FINANCE

THE FALL IN STOCK-EXCHANGE, JUNE 10, PRICES

DURING the week ending June 14, railway and industrial stocks fell to new low records since the panic of 1907. The Supreme Court decision in the Minnesota rate case brought upon the Stock Exchange a flood of liquidations in which practically all railroad and industrial stocks suffered serious declines. A table was printed in the *Wall Street Journal* showing the low prices for railways, on the day following the decision (June 10), as compared with the previous day's prices. Figures were also given to show the low prices reached in 1907. Following is the table:

Railroads:	June 10	High	Low	Low
	Low	1913	1907	1901
Atchafalpa	93	106 $\frac{1}{2}$	60 $\frac{1}{2}$	42 $\frac{1}{2}$
Baltimore & Ohio	90 $\frac{1}{2}$	106 $\frac{1}{2}$	75 $\frac{1}{2}$	81 $\frac{1}{2}$
Canadian Pacific	214 $\frac{1}{2}$	296 $\frac{1}{2}$	138	87
Central of N. J.	280	362	144	145 $\frac{1}{2}$
Chesapeake & Ohio	63	80	23 $\frac{1}{2}$	20
C. M. & St. Paul	98 $\frac{1}{2}$	116 $\frac{1}{2}$	93 $\frac{1}{2}$	134
Chicago & N. W.	123 $\frac{1}{2}$	138	126	168 $\frac{1}{2}$
C. C. C. & St. L.	44	54	48	73
Del. & Hudson	147 $\frac{1}{2}$	167	123 $\frac{1}{2}$	105
Denver & Rio Gr.	14 $\frac{1}{2}$	23 $\frac{1}{2}$	16	20 $\frac{1}{2}$
Erie	20	32 $\frac{1}{2}$	12 $\frac{1}{2}$	24 $\frac{1}{2}$
Great Northern pf.	115 $\frac{1}{2}$	132 $\frac{1}{2}$	107 $\frac{1}{2}$	167 $\frac{1}{2}$
Illinois Central	110	128 $\frac{1}{2}$	116	124
Kansas City Sou.	21	27 $\frac{1}{2}$	18	13 $\frac{1}{2}$

Western Maryland	32	46	6	6
Wisconsin Cent.	42	58 $\frac{1}{2}$	11	13 $\frac{1}{2}$

There was some recovery within a week after the decision, but the level remained low. John Moody, writing in his well known *Magazine* several days before the decision was rendered, declared that prices had then "reached a lower average than at any time since the spring of 1908," many prices having gone to "the neighborhood of the panic prices of 1907." Of the causes for the decline, he said:

"The causes are clearly apparent. While general trade conditions are not such as to cause extreme discouragement, it must be agreed that such disturbing factors as the Berlin situation, and the general stress of credit conditions in Europe, are not matters to be passed lightly by. Our own credit condition has been none too sound this year, but there is not such urgency here as on the other side of the water. While New York has found it difficult to float new security issues, London, Paris, and Berlin are all confronted with a far more troublesome situation. The absorbing power in those centers has been overtaxed for many months, and has finally almost reached the breaking-point.

"It is this foreign situation which has been the primary factor in unsettling all the world's markets during the past ten days, and the liquidation which started extensively at the close of May is directly traceable to this cause. The selling of Canadian Pacific by Berlin on so large a scale last week clearly precipitated the general down-

ward movement in the entire New York market.

"But this situation alone would not have been so serious were it not for the fact that certain local developments of the past month have helped the general demoralization in the New York market. Chief of these have been the disclosures in recent months of the new type of high finance which has characterized the flotation of a large number of the new industrial issues. The collapse in the prices of so-called 'high-grade' preferred stocks to figures representing little more than half their original flotation prices has naturally gone a long way toward creating distrust. And following quickly on the heels of the revelations in Rumely and others of this type, we had the St. Louis and San Francisco receivership. The latter, had it been due to ordinary causes, would not have been so disturbing, but when it was realized that the failure of this great railroad system was caused also by a species of 'high finance' and had nothing to do with the earning capacity or merit of the main property itself, extreme uneasiness developed throughout the entire length and breadth of Wall Street."

THE INCOME OF A RAILWAY AND HOW IT IS SPENT

Moody's *Magazine* prints the subjoined diagram to show the distribution which railways make of their gross earnings. It will be seen that labor gets much the largest part of the dollar, the next largest parts going for interest on funded debts and for materials, supplies, etc. Dividends call for one of the smaller parts; stockholders get about the same amount as the State gets as taxes. The shaded line which surrounds about three-fourths of the circle indicates that 75.5 per cent. of a railroad's gross earnings are paid out for operating expenses and taxes, leaving the remainder for interest on debts, rentals of leased lands, dividends, and betterments.

THE WAR BURDENS OF EUROPE

Not the least important factors in the heavy demands which have been made on the world's credit in late years are those due to war and preparations for war. A writer in the *Journal of Commerce* notes that the cost of the German Army and Navy in 1900 was \$203,500,000; to-day it is nearly double that amount. During that period, the military expenditures of Germany increased 45 $\frac{1}{2}$ per cent.,

their outlays for armies and navies. For eight great Powers—Germany, Austria-Hungary, Italy, France, Russia, Great Britain, Japan, and the United States—the total for military expenditures in 1900 was \$936,500,000; twelve years later the total was \$1,239,500,000. So also of naval expenditures; these eight Powers increased their outlays in the same period from \$436,000,000 to \$768,500,000. Stating the matter in a different way, the figures show an increase in military expenditures of 32½ per cent, and in naval expenditures of 75 per cent., the combined increase for the two purposes in these twelve years being 45½ per cent.

In contrast with these figures are those for the growth of population of the same eight countries. This growth was about 15 per cent, only, or one-third as great as the increased expenditure for armies and navies. The writer believes that, if to the total spent by these countries on armies and navies, he added the sum expended by smaller Powers there will be found a total outlay for armament in 1912 of \$2,500,000,000. Such was the cost of an armed peace, without reckoning the indirect cost due to compelling able-bodied young men to abandon productive occupations in order to serve in armies and navies. In Europe are about 4,000,000 men constantly under arms. If the economic loss thus caused by diminished production be placed at five dollars per man per week, or \$250 per year, the total loss to Europe from this source in 1912 would amount to \$1,000,000,000. This sum, added to the sum spent by taxpayers for armaments, gives us the prodigious total of \$3,500,000,000 annually expended.

THE GROWING ARMY OF SMALL INVESTORS

S. W. Straus, writing in *The Investor's Magazine*, dates the beginnings of investments "in a broad general sense" from the Civil War, when Jay Cooke found a market among the people for government issues with which to finance the war. Since that time, says Mr. Straus, the spread of the investment idea has been even more wonderful than the spread of savings-banks. It is estimated that the public now absorbs annually a sum approximately of \$1,000,000,000 in investment securities. Mr. Straus believes, however, that the field "is only beginning to be cultivated thoroughly."

It is only within the past six or eight years that financial houses had in mind any investors except those of large means. They did not advertise in order to attract the general public. Conditions have so changed that "buyers of investment securities are now numbered in the millions." Twenty or thirty years ago, a man of moderate means seldom thought of making an investment in anything except houses, lands, or speculative stock. A man with a few thousand dollars only was not sought by large investment houses which had sound securities for sale. It was in such conditions as those that "the get-rich-quick industry grew up almost overnight," Mr. Straus continues:

"During the last few years, three great forces have operated against the dam-

July Investments Meeting the General Demand for 6% and Safety

Unquestionable safety is the first requirement of the cautious and prudent investor. At the same time, confronting an increased cost of living, investment buyers justly insist on the highest interest rate consistent with perfect security.

For the investment of July funds in conformance with these requirements, we suggest First Mortgage Serial Bonds secured by downtown Chicago property of the highest class, whose safety is unquestionable, and which bear 6% interest. From our list of July offerings we have selected the following 6% bonds which we especially recommend as sound investments for income:

Fort Dearborn Hotel Building First Mortgage Bonds. Total issue \$50,000; value of property \$1,275,000. Building 17 stories in height, entirely leased for 50 years. Not rented \$7,000. Two and one-half times interest charges.

La Salle Building First Mortgage Bonds. Total issue \$50,000; value of property \$1,200,000. 12-story office building. Not rented nearly 3 times the interest charges.

Lincoln Avenue Building First Mortgage Bonds. Total issue \$100,000; value of property \$200,000. 11-story building, entirely leased. Not rented, earning three times interest charges.

Riverside Court First Mortgage Bonds. Total issue \$100,000; value of property \$200,000. Not rented more than ten and one-half times interest charges.

Denominations: \$100, \$500, \$1,000, \$5,000

We have purchased these bonds after careful investigation. They represent a type of security which we have sold for 31 years, during which time no investor has ever lost a dollar of principal or interest on any investment sold by us.

Call or write for our July Circular No. 747 B, and for the Investors Magazine.

gerous promoters. The first was that of publicity, for many magazines of national scope began a long series of exposures which put the public on their guard. The United States Government began prosecuting for fraudulent use of the mails. The third force exerted was by the great investment banks of the country, which began catering not only to the wealthy, but to investors of moderate and of small means.

"When a sound investment bond is put in competition with the ten-cent mining stock and the merits of the two are impartially compared, the mining stock stands little chance. So year by year, as the sales of worthless stock decreased, the sales of legitimate securities have grown.

"The United States is not yet a nation of investors in the sense that France is. It will be a long time before we see such a wonderful spectacle as was accorded in Paris last year, when the investing public subscribed more than three billion dollars to take up an issue of sixty million dollars of municipal bonds. In France every one is an investor—the scrub-woman, the chauffeur, the porter, the milk-man, each has a few sound bonds tucked away in a strong box. The majority of French bonds are issued in denominations of \$800, and most of these bonds are sold to small investors.

"We have not reached the French stage of thrift, economy, and providence, but we have made at least a good beginning. Sound bonds can be obtained in denominations of \$1,000, \$500 and even \$100, thus putting them within the reach of all investors, however small their means. The man with a few hundred dollars laid up in a savings-bank may purchase, if he wishes, United States Government bonds to net a little less than 3 per cent.; municipal bonds to net about 4 per cent.; standard railroad bonds to net as high as 4½ per cent.; the better grade of public utility and industrial bonds to net 5 per cent., and first mortgage real estate bonds to net 5½ per cent. and 6 per cent. All of these are forms of investment that are of tested, tried, and proved soundness. Bonds of any of these classes, if purchased from an investment banking house of experience, standing, and reputation, afford the investor perfect safety."

WHY THE "FRISCO" FAILED

John Moody writes in his *Magazine* of the causes which led to the appointment of a receiver for the St. Louis and San Francisco railway a few weeks ago. He attributes the failure mainly to unprofitable "feeders." While one of these—the Chicago and Eastern Illinois—is a substantial property, which on a proper capitalization would have no difficulty in showing good profits, the Frisco held it under terms which have proved to be "extremely costly." Mr. Moody says in detail:

"For the preferred stock the company paid in its own guaranteed certificates \$170 per share, and for the common stock \$250 per share, agreeing to redeem those certificates at these prices in 1912. It further obligated itself to guarantee the equivalent of 6 per cent. on the preferred stock and 10 per cent. on the common. Practically speaking the Frisco acquired an option on the Chicago and Eastern Illinois stock, paid no money down on the principal, but has been paying the equivalent of 10 per cent. dividends on the common and 6 per cent. on the preferred. When the record of actual dividends earned and paid by the Chicago and Eastern Illinois in the year ending April 30 is examined, it will be seen how disastrous an investment

Buy Bonds

Good bonds have all the elements of security of real estate mortgages. They are fractional parts of carefully drawn mortgages on improved and productive property and, in addition, are backed by the credit of prosperous business enterprises. They are readily salable at all times and the interest can be collected at any bank by presenting the coupons as they become due. Long-term bonds assure permanent investment of funds and save the trouble and possible risk of changing or renewing investments every few years.

May we offer suggestions for the investment of your money in high grade bonds which we have examined carefully and which we can recommend?

Correspondence is invited

and the Chicago and Eastern Illinois common pay as much as 10 per cent. It paid 5 per cent. in 1912, 9½ per cent. in 1911, 8 per cent. in 1910, 2 per cent. in 1909, 8 per cent. in 1906, 5 per cent. in 1905, and 8 per cent. in 1904. Thus, the Frisco has had to stand in the breach and make up these shortages year by year.

Even this condition, however, would not have scamped the Frisco, had it not been that since the close of the last fiscal year the Chicago and Eastern Illinois earnings have been steadily declining and no earnings are now in sight for dividends on the common stock. Thus we find that the collapse of the Frisco has been in no sense due to the operations on its own lines, but entirely because of the losses created by its subsidiaries.

In view of the causes of this company's downfall, it seems clear that any successful reorganization should first of all divorce the main system from these unprofitable 'feeders.' For without these 'feeders' the Frisco would not only be meeting its charges to-day, but would have no difficulty in showing surplus earnings equivalent to at least 10 per cent. on its second preferred stock, after payment of the full dividend on the first preferred.

There ought to be a good future for the Frisco system, if properly reorganized. It operates for the most part through a prosperous and growing territory; it gets high enough freight and passenger rates to show a good margin of profit; its freight haul is considerably longer than the average, and as in the past, it can be operated in the future with genuine efficiency.

This St. Louis and San Francisco collapse has served to bring to light a glaring defect in the present form of making railroad statements. Notwithstanding the rigid rules of the Interstate Commerce Commission, it is still possible for railroads to largely conceal serious losses from stockholders, by burying the telltale figures in the balance-sheets; and this has apparently been done, not only in the case of the St. Louis & San Francisco, but also by the New Haven, the Boston and Maine, the Denver and Rio Grande, and a number of other roads.

In the case of the Frisco, the chief 'singer in the woodpile' is the New Orleans, Texas, and Mexico division of the system. These lines consist of a rather extensive network of roads in southern Texas, some of which have been in operation for a number of years, and others recently constructed. The Frisco created a debt of approximately \$20,000,000 on these lines, in addition to certain mortgages already existing, and undertook to assume this debt. It was persistently stated at the time that great earning power was assured for these new lines and that they would from the start be an asset of great importance to the parent company. Instead of this, however, they turned out to be a liability, and failed to earn their charges by enormous sums.

In its 1910 and 1911 reports the Frisco gave no definite intimation of how affairs were progressing on these new lines, but as a matter of fact they were losing money all the time. Whenever statements of earnings were published, figures were presented under the heading 'All lines of system,' but never were the earnings of these Texas lines included in such reports. In the 1911 annual report of the Frisco it was briefly stated in the text that the new Texas line had lost \$843,002, but it was explained that this was added into the 'cost of property' since the road was not then in full operation. Thus this loss of nearly a million dollars was added in as an 'asset' of the St. Louis and San Francisco.

INVESTMENT SERVICE

The bond house of J. S. & W. S. Kuhn, Inc., has a wider field of usefulness than merely the buying and selling of bonds:

It renders a service that investors need. It aims to safeguard the interest of its clients in every way possible.

It endeavors to supply each investor with securities meeting individual requirements and makes certain that each investment is placed to the best advantage.

The advice and assistance of a house of this character is worth much to the man or woman who is interested in intelligently increasing the earning power of funds invested.

Write for Circular No. 443 describing high-grade bonds and short term notes yielding from 5 to 6% suitable for July investment.

Investment Bonds

YIELDING

4½% to 6%

The return on high grade bonds of active market has in (times past) ranged from 2½% to 4%. Today this normal yield has become threatened to the almost entire extent of 4½% to 6%. More than this: where investors, like most private investors, do not need the element of active market, so long as their investments possess a reasonably broad market, a yield ranging from 4½% to 6% is now to be had from issues of high standard.

During the year 1912 the net loss on these new lines was \$903,969. This loss was not charged to income, but was again 'buried' in the profit and loss account under the list of 'assets.'

NEW YORK NOW THE WORLD'S GREATEST PORT, SURPASSING LONDON

Later figures might change the conclusion, but, so far as they are now available, official figures for the commerce of the world's great cities place New York at the head. London, which for generations led all cities, now stands second; Hamburg is third, and Liverpool fourth. The element of uncertainty referred to lies in the fact that the latest figures for Hamburg, Liverpool, and some other cities are for 1911, while those for New York are for 1912. So far as London is concerned, however, New York leads beyond question, inasmuch as the 1912 figures are at hand for London as well as for New York. While it is possible that Hamburg or Liverpool, or even both, may have made greater increases than New York in 1912 over 1911, this is quite unlikely. Following are the figures for the ten great ports of the world, as given in the periodical called *The Nation's Business*. They are for a year's exports and imports as combined into one total:

1. New York, 1912	\$1,793,800,123
2. London, 1912	1,791,857,641
3. Hamburg, 1911	1,674,187,641
4. Liverpool, 1911	1,637,280,479
5. Antwerp, 1911	1,121,654,700
6. Marseilles, 1911	679,431,500
7. Havre, 1911	531,096,500
8. Bremen, 1911	501,146,540
9. Buenos Aires, 1912	479,536,241
10. Calcutta, 1911	410,128,320

Commenting on this showing, *The Nation's Business* remarks that the extraordinary growth in commerce which has made possible this supremacy for New York, "can be understood by glancing back fifty years." It adds:

"In 1862, the imports of the whole nation were \$189,356,679, or \$5.79 per capita, as against \$16.94 per capita in 1912. The total exports, both domestic and foreign, for 1862, were \$190,670,501, or a per capita of \$5.83, as compared with a per capita of \$22.41 in 1912. It will thus be seen that the commerce of the entire United States fifty years ago was less than one-fourth of the commerce of the single port of New York in the year 1912."

LOWER COMMODITY PRICES

Brodstreet's "Index Number" for June 1 indicated further recessions in commodity prices. The percentage of decline was not large; in fact, it was quite small, leaving the index number at 800.71. The significant fact in the decline was that it was the sixth consecutive decline since the high point reached in December last year. The decline has been very gradual, but constant. The "Index Number" is the lowest record of since March, 1912. A high level was maintained for months. This gives resistance to the lower tendencies in other commodities. The writer says further:

"Six groups descended during a month's time, while seven ascended. Live stock dropt principally because of a decline in the price of sheep. Textiles receded, largely on cheaper domestic wool. Metals declined all around. Coal and coke fell, owing chiefly to cheaper prices for Southern coke. Building materials went off, and chemicals and drugs show a rather sharp decline, this being due to lower prices for carbolic acid. Breadstuffs advanced, principally on crop or weather reports. Provisions show a trifling advance, the most noteworthy decline in this group, that furnished by butter, being counteracted by a rise in eggs and slight gains in other commodities. Fruits are up owing to dearer lemons. Hides and leather ascended because of a slight rise in hides. Oils moved up a little owing to an increase in cottonseed oil. Naval stores rose just a shade, principally on a higher price for resin, and the miscellaneous group reflects a very small advance, cheaper hops being counterbalanced by a rise in tobacco."

THIS YEAR'S DEPRESSION AND THAT OF OTHER YEARS

A writer, using the initials "O. R. S.," and who is referred to as a member of a New York stock exchange house, contributes to *The Bankers' Magazine* for June a short article in which he compares the financial depression of this year with conditions that prevailed in other years back to 1873. Without accepting the cycle theory of panics and depressions, he undertakes to point out certain ways in which present conditions resemble those of some other years. He accepts 1873, 1893, and 1907 as "panic years of the first class," but the years 1883 and 1903 belong rather to the class of secondary depressions, and it is to this class that the present year belongs. Following are interesting points in his article which we may assume to have been written at least a month ago:

"The panic of 1907 was of the first class and called, theoretically, for the recovery of 1908 and 1909. This in turn presaged, at some time during the succeeding three years, commercial liquidation and depression in business, with a tendency on the part of prices to return to the previous panic level, though this tendency has been modified materially in the past by the condition of the money market, by the rate of gold production, and by the accident of good or bad crops in any particular year."

"In our opinion we are now in this second period of liquidation so far as concerns the stock market. With regard to general business, a depression of more or less severity is certainly in prospect dependent upon the crop outlook, the political situation at home and abroad, and the ability of the money centers of the world to adjust themselves to the coming strain. This period of readjustment would not unlikely have reached its climax last year had it not been for the fortunate harvesting of exceptionally large crops, enabling us to put off the eventual reckoning."

Spend This Summer Sightseeing in Glacier National Park

THE new National Playground—Glacier National Park—invites you to spend your vacation among its mountains, its glaciers, cataracts and trout streams. The scenic grandeur of this 1,500 square mile amphitheatre located in Northwestern Montana, provides a memorable vacation trip.

Vacations—\$1 to \$5 per Day

A magnificent new hotel, operated in connection with the chain of Swiss Chalets throughout the Park, assures ideal accommodations. Tours through the Park by auto, stage, horseback, launch, or afoot may be made at \$1 to \$5 a day. Low round trip summer tourist fares via the Great Northern Railway to Spokane, Portland, Tacoma, Seattle and many other Pacific Coast points permit stop-overs at Glacier National Park. Special convention fares on certain dates.

This Literature Sent Free

A set of interesting booklets illustrating and describing the wonders of Glacier National Park, together with an attractive map-folder containing full information as to the cost of the trip, will be sent free to you upon request. Write for this literature before you make your vacation decision.

July Investments to Net 6 Per Cent.

FUNDS available at this time should be invested to secure safety and the highest consistent rate of interest.

A.R.E. 6's, the Gold Bonds of the American Real Estate Company, provide this combination. They are based on the extensive ownership of New York real estate, which has increased steadily in value for nearly 300 years and creates millions of new wealth every year.

The Company's buildings are located along rapid transit lines, in the direct path of New York City's growth, and in the extension of its business. It offers to investors its Gold Bonds, in these two convenient forms:

6% Coupon Bonds

(in denominations of \$100, \$500, \$1000, etc.)

6% Accumulative Bonds

For investing \$25 and upward annually to accumulate \$1000 or more.

Printed matter and map of New York City fully explaining these bonds will be sent on request.

We expect a greater demand for this 40 page, illustrated booklet on travel, than has ever been known for any other ever published for free distribution.

Mothersill's Travel Book tells you what to take on a business and what to take on a vacation and how to pack and how to travel. It gives you the latest information as to traveling conditions, routes, etc. in foreign countries—gives you the latest news—advises you how to travel—tells you who and how much to "tip." In fact this booklet will be found so valuable to all who travel or are contemplating taking a trip in this country or abroad.

Published by the distinguished, the famous Mothersill's Sewick Remedy as a practical hand book for travelers.

This edition is limited so we suggest that you send your name and address at once, and receive a copy. A postal card, giving B. L. Pierce, address our Detroit office for mail order.

MOTHERSILL REMEDY CO.
407 Henry Smith Bldg., Detroit, Mich.

Also at 19 St. Bride Street, London, England.

Is Your Business Transportation On An Efficient Basis?

Are you an owner of horse drawn trucks or delivery wagons?

If so, this talk directly concerns you.

Among the most important problems of modern business is the transportation of goods over roads or streets. Yet until recently many manufacturers and merchants have regarded this department of their business as the least important. While aware of wastes in the traffic service, they have too often regarded trucking and delivery as necessary evils. The significance of delivery expenditure is disclosed when the light of business efficiency is turned upon the transportation end of any business in which goods have to be moved.

Experience shows that comparatively few business men know how much their haulage costs them. This is true not only of the retailer with two or three wagons, but also of the manufacturer whose movement of goods runs into thousands of tons each year.

There are three ways in which to find out whether you are hauling your wares most efficiently:

First, you can make a careful and thorough investigation yourself. But when you undertake to do this you will find the task more difficult than is at first apparent.

Second, you can employ a business efficiency engineer who, if entirely competent, can tell you exactly how much per ton per mile it costs to handle your freights. He can also probably suggest economies and improvements. But business efficiency experts are not always easy to secure, and with small tradesmen their services entail heavy expenditures.

Third, you can write to the Motor-Truck Department of The Literary Digest. The suggestions we will make will be unbiased. Through us you can avail yourself of the traffic experts of one or more of the reliable motor-truck manufacturers and secure two important results: These engineers will determine for you, first, how much your deliveries are costing you; and, secondly, how much they should cost you if made by motor vehicles. Furthermore, they will tell you frankly if the motor-truck cannot successfully replace the horse. These services will put you to no expense.

The broad, educational work being conducted by the leading motor-truck manufacturers aims to show you what you are now doing, how to do what you are now doing better, and how to do what you cannot now accomplish.

The Literary Digest, whose patronage includes so large a percentage of manufacturers and business men (92,450 highly rated men of this class are now on our subscription list), has taken an active part in this educational work.

Hundreds of manufacturers and merchants have consulted our Motor-Truck Department. Our file of letters from these men includes communications from a great diversity of trades and industries, ranging from the retail merchant with a single delivery wagon to the executive heads of great factories. We have helped scores of these men and we are ready to help you.

If you will tell us as fully as possible about your haulage—of what it consists, average length of runs, how much you carry per load, monthly or annual cost of your delivery service (if such figures are available), we will analyze your problems to the best of our ability. There is no charge for this service.

Isn't it worth while to make this investigation? Competition makes it necessary to watch closely every operating cost. Are you getting the maximum return from your delivery expenses? If you are not, your competitor may be. We are ready to help and suggest. Isn't it worth your while to write us?

Motor-Truck Department

The Literary Digest

"The position of the market at the present time bears more resemblance to the secondary depression periods of 1903 and 1883 than to the first-class panic years of 1893 and 1873. In those depressions the trouble was the direct outgrowth of the strained money situation, due to the enormous overproduction of securities and unwarranted extension of credit by the banks on inadequate reserves, just as is the case to-day. There was no lack of business at either period and prosperous conditions ruled at the beginning of each year, but the strain on the banks proved too great and resulted then, as it most certainly will now, in forced liquidation.

"It is an undisputed fact that at the present time the security markets of the world are in a congested condition. In Europe the condition is probably worse than here. War, and the preparations for war, the hoarding of gold by both the banks and the people, coming at a time of constantly increasing demands for funds by governments and municipalities and corporations, have created a situation that the signing of a treaty of peace may alleviate but will not settle without subsequent liquidation. Already there are signs of a business reaction in England and Germany, which may eventually be severe, particularly in the latter country. In our own country we are without doubt headed toward a depression of more or less severity. The tariff agitation, the secondary in importance to the money situation, will also have a very disturbing and restraining influence on general business, and it is doubtful if its full effect has yet been felt or discounted.

"The immediate fluctuations in the stock market are always difficult to forecast, but the ultimate outcome, we have no hesitancy in saying, looks bad for the holders of securities. The trend is manifestly downward. Whether prices will reach the panic level of 1907 before a permanent recovery sets in, we would hardly venture to predict, but the tendency is certainly in that direction. The only modifying influence that we can see would be another big crop year, but even this might not have more than a steadying effect. The governing influence at the present time is money. Our legislators have left unheeded the warnings of 1907. Our currency is the same inelastic medium, and our banks will be in the same position as then in time of stress. We believe both the President and the leaders in Congress realize the seriousness of the situation, but the stress of politics has relegated banking reform to a position of secondary importance when it ought to be receiving the first consideration, and the reform when it comes may come too late to stay the storm. The menace of short-time loans, falling due on our normally tight money period, with little prospect of conversion, hangs like a pall over the bond market. In the stock market there is little to encourage either the investor or the speculator."

GOOD-WILL IN CORPORATIONS

Promoters in recent years have made much of good-will. Its inclusion as an asset dates back perhaps many years, but it was not until quite recent years that it was made to appear as a very large item in the assets of corporations capitalized for many millions. Some writers in financial journals are skeptical as to the values that are often placed on good-will. *The Financial World*, for example, remarks that this item "is worth only what the next person will pay for it, and is not a tangible asset." A writer in *The \$100 Bond News*, quoting this remark, adds that

good-will "is usually many times the figure the next person will pay for it." He adds that "much may be said in defense of good-will from the standpoint of a corporation." At the same time it has often been found to be an uncertain quantity. Following is a list of seven corporations, listed on the New York Stock Exchange, with their total capitalization, the amount named in their balance-sheets as good-will, and the high and low prices at which the stock has recently been quoted:

	Total Capital	Good-will	High	Low
Woolworth...	\$85,000,000	\$50,000,000	117 $\frac{3}{4}$	85 $\frac{1}{4}$
G'drich Rub'r.	90,000,000	60,592,650	81	28
Butt. Pub. Co.	14,647,200	9,865,065	40 $\frac{1}{4}$	27 $\frac{3}{4}$
Studebaker Co.	41,026,000	19,807,277	49 $\frac{1}{2}$	26
Sears, Ro. Co.	48,000,000	30,000,000	221	165
Und'rw'd T'p'r	13,500,000	7,995,720	115 $\frac{3}{4}$	79 $\frac{1}{4}$
In contrast,				
Gen. Elec. Co.	101,202,000		\$1118 $\frac{1}{2}$	134 $\frac{1}{2}$

THE COMING NEW DAY FOR THE ERIE

Ever since 1908, after the beginning of improvements in grades and the extension of double tracks on the Erie road, repeated predictions have been made as to coming large increases in traffic. Barring a few recessions due to floods or a coal strike, these predictions have thus far been well borne out. It is confidently believed that increases in earnings will continue for some time to come. The double tracking of the western line of the Erie, undertaken at a cost of approximately \$20,000,000, is now nearing completion. The entire line to Chicago will be ready, it is said, for the heavy movement in freight predicted for the coming autumn. Over seventy miles of new service tracking had been put into service by the end of May.

The gross revenue of the Erie for May this year was \$5,318,000; last year for the same month the revenue was \$4,285,000, an increase of about 24 per cent., due in part, however, to the cessation of trouble with the miners. For eleven months of the current fiscal year, the total revenue of the Erie was \$57,190,000; for the same period last year, it was \$51,463,000, or an increase of about 11 per cent. It is expected that the total revenue for the fiscal year ending June 20 will reach \$62,200,000, and possibly something more. Six years ago, when the important work in lowering grades was undertaken, the gross yearly revenue was only \$49,783,000. The growth from that point has been steady. President Underwood says it is the steady increase in Erie's earnings that makes "the foundation of his faith." If the crops this year shall prove to be all that they now promise to be "calamity-howlers may howl in vain." There can be no hard times, he says, "if the crops are anywhere near as good as they were last year." As soon as the company is able to profit from the facilities now so near completion, he believes a further increase of \$10,000,000 will occur in the road's business, making a total annual income of at least \$72,000,000, as against a total of only \$49,783,000 when the new work was undertaken. Following are figures which show how steady has been the growth in the Erie's income since 1908, the figures being for the month of May in each year, and for each fiscal year itself:

	May	Year
1913.....	\$5,318,473	\$62,200,000
1912.....	4,285,492	56,492,370
1911.....	4,834,975	56,649,908
1910.....	4,506,138	54,866,190
1909.....	4,289,265	50,541,162
1908.....	3,851,252	49,784,236

Mother and I in COLORADO

And it's a real "thriller," I tell you—a panorama to remember for a lifetime. Truly Colorado is full of wonders—and full of bracing, brilliant loveliness, too, where valleys and streams are simply enchanting.

Our happy vacation began on the Rocky Mountain Limited

—every morning from Chicago to Denver, Colorado Springs and Pueblo—

a train that is a one day's wonder in itself—only Colorado could make you willing to leave it.

We just ate and slept and basked in the observation car, sampled the library, listened to the music and let ourselves be waited on by the nicest attendants. It was delightful.

"The Colorado Flyer"

every morning from St. Louis, and other splendidly equipped, fast daily trains via Rock Island Lines from Chicago, St. Louis, Kansas City, St. Joseph, Omaha and Memphis for Colorado, Yellowstone Park and the Pacific Coast.

Low Fares Daily June 1st to September 30th

"Little Journeys in Colorado" and "Under the Turquoise Sky" are two books which make the way clear. Let me send them to you. L. M. Allen, Pass. Traff. Mgr., 8 La Salle Station, Chicago, Ill.

WALLACE IRWIN

Wallace Irwin, writer and lyricist, author of "Letters of a Japanese Schoolboy," etc., says:

"Tuxedo is always welcome. A pleasant smoke, a mental bracer—the ideal tobacco."

Wallace Irwin

WILLIAM COLLIER

William Collier, celebrated American comedian, now starring in his new farce, "Never Say Die," says:

"My pipe is always Tuxedo-filled. I tried other tobaccos before I discovered Tuxedo. Now there is no other."

William Collier

W. HAYDEN COLLINS

W. Hayden Collins, prominent in real estate, and member of Chamber of Commerce, Washington, D. C., says:

"I've compared Tuxedo with other tobaccos, much to the advantage of Tuxedo. It leads by a wide margin in purity and uniformity."

W. Hayden Collins

There is a Great Difference in Tobaccos

Tuxedo is the Mildest, Sweetest, Most Pleasant Smoke in the World, Because—

First—The makers of Tuxedo have always been willing to spend the money necessary to buy the mildest, choicest, most thoroughly aged, selected Burley tobacco.

Second—The makers of Tuxedo know exactly how to treat this Burley tobacco so that every bit of pleasantness and goodness remains in the tobacco and every bit of unpleasantness and harshness is taken out.

Tuxedo

The Perfect Pipe Tobacco

Tuxedo was born in 1904. Its first imitator appeared two years later. Since then a host of imitations have been born, and are clamoring for your patronage.

No imitation is ever as good as the original. No amount of advertising, no amount of bluster and bluff, can ever make an imitation tobacco as good as Tuxedo.

Until someone discovers the secrets of the Tuxedo process Tuxedo will remain without a rival. Those secrets are so carefully guarded that it is practically impossible for them to be discovered.

The greatest men in America—business men, professional men, lawyers, doctors, ministers, actors, sportsmen, athletes, engineers and men in every walk of life, smoke Tuxedo and recommend it as the most enjoyable, most pleasant and most healthful smoke.

If you are not a pipe smoker, you are denying yourself the greatest smoking pleasure known to man. One week of Tuxedo will give you more genuine, wholesome enjoyment than cigars—and at considerably less expense! *Try Tuxedo this week!*

YOU CAN BUY TUXEDO EVERYWHERE

Famous green tin with gold lettering, curved to fit pocket

10c

Convenient pouch, inner-lined with moisture-proof paper

HARRISON FISHER

Harrison Fisher, one of America's foremost illustrators, celebrated as the able exponent of the genuine "American Girl" type, says:

"I don't know a better relaxer, a better soother, a better source of inspiration, than a pipeful of Tuxedo. I have yet to find the equal of Tuxedo as a real smoke. It has surely served me well."

Harrison Fisher

JAMES W. LOYND

James W. Loynd, superintendent of the Prudential Insurance Co., at Philadelphia, says:

"I could not smoke a pipe until I smoked Tuxedo. I found it a cool, mild, even-burning tobacco of delightful flavor. As a source and relief after strenuous day, it is the 'Real Thing'."

James W. Loynd

GEORGE H. ROBERTSON

George H. Robertson, famous auto driver and Vanderbilt Cup winner, says:

"My chief solace after a long race—a pipeful of Tuxedo. It's the REAL smoke."

George H. Robertson
